Mr. CHURCH. Mr. President, I anticipate that certain objections will at once be raised to my proposal. However, within the context in which I have offered it I believe them to be answerable.

For example, the scientific fact may be that American, English, and Russian technicians, functioning at home, now are able to detect the fact of nuclear explosion anywhere in the atmosphere and determine much concerning it. Nevertheless, we must remember that the commencement of an international control system is the sine qua non of man's progress toward any feasible disarmament. Broadened nuclear testing controls, which we might seek in the future, and eventual inspection for prevention of the surprise attack are but milestones on the road to this goal. It is altogether probable that advancement here will come, if at all, only a step at a time. My proposal would be a first step, and the Geneva Conference may yet constitute the best opportunity left to take it. An international control system which functions, however limited its initial scope might be, is the urgent need.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CHURCH. I am delighted to yield to the distinguished Senator from Montana.

Mr. MANSFIELD. I was very much interested in what the Senator from Idaho had to say in the paragraph relating to broadened nuclear testing controls. The Senator said:

Broadened nuclear testing controls, which we might seek in the future, and eventual inspection for prevention of surprise attack are but milestones on the road to this goal. It is altogether probable that advancement here will come, if at all, only a step at a time.

The Senator from Idaho may recall that in speeches which I delivered on the 12th and 26th of last month on the question of Berlin and Germany I called the attention of the Senate to a number of possibilities. They numbered nine. The ninth possibility is as follows:

Point 9: It is essential that our policy, NATO's policies, do not exclude a careful consideration—may I repeat that word, "consideration"—of the Rapacki plan, the Eden plan for a demilitarized zone in middle Europe, or similar proposals in connection with the unification of Germany, predicated—may I repeat that word, "predicated"—or contingent upon the outcome of the conferences on surprise attack, and suspension of nuclear tests now going on in Geneva.

What I had in mind, and what I stated on February 12 and February 26, was that if we could achieve reasonable agreements among the powers holding these two conferences in Geneva we might consider, on that basis, the Rapacki plan, the Eden plan, or other plans which seek to bring about a denuclearization of both Germany and Czechoslovakia, as well as Poland, and eventually, and in due course, and under the right conditions, a withdrawal, or at least a thinning out, of troops eastward and westward.

So I am interested in what the distinguished Senator from Idaho has to say, because I believe that very likely he is talking along comparable lines.

The point is that if we are to consider proposals such as the Rapacki plan, the Eden plan, or other plans, there must be a quid pro quo. In my opinion the best quid pro quo we could achieve would be reasonable agreements in the conferences on atomic testing and on surprise attack.

So I hope that this statesmanlike effort by the Senator from Idaho will be heeded, and that from it will come, before it is too late, a reasonable solution to the difficulty in this particular area, which confronts not only the members of the "Nuclear Club," but, in their entirety, the peoples of the world as a whole.

Mr. CHURCH. I thank my good friend from Montana. By now we should be fully disenchanted with an approach to foreign policy which is founded upon some grand design. Progress in this difficult field will not come through the superimposition of one grandiloquent formula upon all the countries of the world. Progress will come fitfully, in little steps. We remember, Mr. President, not so many years ago, when the grand design was the liberation of the peoples of Eastern Europe, and our foreign policy of containment was criticized because it was not sufficiently vigorous or dynamic. That design of liberation was buried with a great many heroic Hungarians in the streets of Budapest.

Then we remember how it became the official doctrine in the State Department to base our foreign policy upon a principle called massive retaliation. That

principle was buried with many French troops at Dien Bien Phu.

Mr. President, there is just one way in which progress will be made in world affairs toward the goals that we would like to realize for the benefit of our children or our grandchildren, and that is by taking little steps. Right now the one place where it may be possible, in this bifurcated world, to take a step on which all can agree and which will serve the common interest of humanity, is at the conference table at Geneva.

Another objection to be anticipated is that this proposal is a futile one, in that the Russian behavior at Geneva makes it apparent that the Soviet Union does not really intend to agree to anything acceptable to the United States and Great Britain. It may be urged that the same considerations, which have prevented agreement within the framework of existing negotiations, would apply equally to my proposal. This may prove to be the case. Indeed, the evidence points very strongly in that direction. But we cannot know that the Russians will reject the proposal, unless and until it is offered and refused.

Throughout the negotiations to date, it is worthwhile to remember that Soviet spokesmen, from Khrushchev down, have repeatedly expressed their fears and suspicions concerning the movement of foreign inspection personnel within Russia. Their characterization of our position, as amounting to a thinly disguised attempt to gain military reconnaissance of their country, is based upon their propaganda specter of teams of technicians scurrying into every corner of their country in the guise of checking seismic disturbances, earthquakes, to see if they are nuclear in origin. This is why they say they want the veto; this is why they say they want the control stations manned with their own people; this is why they say they want our agreement to miles of redtape before inspection teams can move at all.

Under the control system I propose, the necessity for this movement should be largely, if not entirely, eliminated. Fewer control stations would be required, and fewer foreign nationals would need to be stationed in the countries involved.

If the Russians are negotiating in good faith, the lesser control system required to police a suspension of nuclear tests in the atmosphere only, would constitute a refutation of most of the objections they have voiced, since the conference began. It might even serve to allay the unreasoning fears that seem to lurk in the Soviet mind. The Russians were suspicious people long before the Communists achieved ascendancy. The czars maintained their own Iron Curtain.

Mr. O'MAHONEY. Mr. President, will the Senator yield for a question?

Mr. CHURCH. I am happy to yield to the distinguished senior Senator from Wyoming.

Mr. O'MAHONEY. I have been listening with rapt attention to the speech of the Senator from Idaho. He had started his speech before it was possible for me to come to the floor, and I have been reading the text of his speech from the beginning. I wish to compliment the Senator on his presentation of this very serious question. Because he has just now said "if the Soviet leaders are negotiating in good faith," I should like to ask him if he really sees any evidence that there is the slightest bit of good faith in the approach of the Soviets to any of the questions involving the freedom of people throughout the world?

Mr. CHURCH. I should like to say, in reply to my good friend from Wyoming, that I am very skeptical as to whether the Russians are in fact negotiating in good faith at Geneva. I believe the evidence all points to the contrary. The burden of my talk today is twofold. I make a proposal which I believe is in the interest of the United States and the free world and, indeed, in the interest of humanity everywhere. If the Russians are negotiating in good faith, which I doubt, then this proposal has the merit of undercutting the position they have heretofore taken at Geneva, and thus making it very difficult indeed for them to continue to maintain their objections which now make agreement impossible.

If, on the other hand, the Russians are, as I suspect, not negotiating in good faith, what better way is there to dramatically expose that fact to the world than to submit this proposal to them? It is a proposal which involves a minimal inspection system which could not possibly do any internal mischief inside Russia. If they reject it, it will be exceedingly difficult, even for those artful propagandists, to blame the failure at Geneva upon the United States and our allies.

Mr. O'MAHONEY. I am grateful to the Senator for his response, because it is important for us to realize that the aim and purpose of the Communist command is to do away with government by the people. They believe in government by dictatorship. They take this attitude, fundamentally, because they have no faith in the relationship between man and God. They do not believe that man is capable of improving himself. They are committed to establishing a world dictatorship which will make all people toe the line the Communists lay down. We must keep that thought definitely in mind in all our approaches to this problem.

Mr. CHURCH. I agree wholeheartedly with what the distinguished senior Senator from Wyoming has said. If I felt for a moment that the present negotiations at Geneva constituted a hazard to the free world or to the relative position of strength held by the free world vis-a-vis Russia and her allies, I would be the first to take the floor and urge us to terminate those discussions forthwith. I believe, as I have explained in my address, that we went to Geneva with an objective that would serve our interest and the interest of our allies, and yet one, owing to the peculiar nature of the problem, which gave us common ground to seek an agreement with the Soviet Union with respect to banning nuclear tests.

Mr. O'MAHONEY. Will the Senator from Idaho permit me to add that we went to Geneva with the interests of the people of Russia at heart?

Mr. CHURCH. Indeed, we did.

Mr. O'MAHONEY. The dictatorship of the Kremlin is not serving the welfare of the people of Russia—or of Siberia.

Mr. CHURCH. I agree wholeheartedly with that statement.

Mr. President, as I indicated in the course of my colloquy with the distinguished Senator from Wyoming, if the Russians are not negotiating in good faith at Geneva, as I strongly suspect may be the case, then what better way to expose their game than by offering them an international inspection and control system which can safely end the slow pollution of the atmosphere, without possibly doing them any internal mischief? By forcing the Russian hand, refusal to accept such a proposal would reveal their hypocrisy before the world.

But it may be urged, Mr. President, that the Russians might seize upon such a proposal as evidence to bolster the charge that the United States did not really support the ending of all nuclear tests, but always has wanted tests to continue, thus somehow absolving Russia from blame for the failure to reach agreement. I would give little credence to this argument. As I have already stated, it seems to me that the proposal I suggest would weaken, not strengthen, Communist propaganda. In any case, we know that the Russians will contrive to blame the United States for a breakup of the conference. Whatever occurs, their indictment of us will be artfully drawn and made to sound plausible. In some quarters, the Communist story will be believed, regardless of what the truth may be or what we may say about it. But this prospect should not be permitted to govern our decisions. As to these, we are, in the last analysis, accountable only to the trust we hold.

Mr. President, I have made this proposal, not in the spirit of criticism of the course we have heretofore taken in Geneva, but in support of it.

I believe that all nuclear weapons testing should be stopped, subject to a trustworthy control and inspection system, and that we should persist in our striving for this goal at Geneva. It is meant to be a constructive proposal which cannot jeopardize our present negotiations, but might possibly salvage something of value should their failure, as presently cast, become inevitable, and we are faced with the gloomy prospect of leaving the conference table empty-handed.

If there are cogent reasons rendering my proposal inadvisable, then I shall want to know what they are. The people, too, are entitled to know what they are. For we may still possess a momentous opportunity at Geneva, fast slipping from our grasp. It may not come again in our time.

Good conscience commands that we do our utmost there.

This is an anxious hour.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. CHURCH. I yield to the distinguished Chairman of the Committee on Foreign Relations.

Mr. FULBRIGHT. I wish to compliment the distinguished Senator from

Idaho. He has evidenced in the hearings before the committee a great interest in and an understanding of the matters he is discussing, but I think the address he is making sums up his views on this subject in a remarkably clear and convincing manner.

I think the Senator's suggestion is an excellent example of constructive statesmanship. I sincerely hope the Department of State and our representatives in Geneva will consider the suggestion seriously and will endeavor to do everything they can to persuade the Russians to agree to it.

I for one, wish to encourage the Senator from Idaho and all other Senators to analyze our problems in such a constructive manner, and to make constructive proposals. I particularly wish to emphasize this because I think there has been some misunderstanding of a remark or a short statement I made over the weekend. I certainly in no way intended to discourage any Senator from speaking upon matters of this kind on the floor of the Senate.

Again I compliment the Senator from Idaho for his most excellent statement.

Mr. CHURCH. I thank the Senator from Arkansas. I appreciate immensely what he has said, because I value his judgment so highly.

Mr. FULBRIGHT. One thing which the Senator is doing that I particularly like is his drawing attention to some fundamental facts which many persons overlook. He mentioned that the Russians had certain characteristics of suspicion toward foreigners and a kind of Iron Curtain long before the Soviets came to power. An understanding of that type of situation puts the matter in better perspective and, I think, gives us more hope for the future than if we attribute all the difficulties simply to the present regime.

Mr. CHURCH. I thank the Senator from Arkansas.

Mr. GORE. Mr. President, will the Senator yield?

Mr. CHURCH. Before I yield to the distinguished Senator from Tennessee, I wish to say, in reference to whatever remarks he may make, and regardless of how he may feel about the proposal I have offered, that my proposal was largely a result of the original thinking which was done by the junior Senator from Tennessee when he made his proposal a few months ago that the United States should unilaterally terminate atmospheric nuclear tests while retaining the right to continue weapons tests underground and in outer space. That proposal led me to the thinking which, today, I have attempted to outline on the floor of the Senate. I think the Senator from Tennessee knows this. I simply wanted to make it a part of the RECORD this afternoon. His proposal has been very seriously considered and, I understand, continues to be considered at the State Department in the highest councils of the Executive Government.

Mr. GORE. Mr. President, I had not asked the distinguished Senator from Idaho to yield with the hope of hearing his very generous remarks. I thank him genuinely.

I arose to compliment the Senator for a concise and able summary of the circumstances surrounding the Geneva Conference and an eloquent presentation of his views and concern.

As the Senator from Idaho has pointed out, the proposal which I made earlier and the proposal which he makes now are not dissimilar in character. There are some differences.

I should like, first, to express full agreement with the able junior Senator from Idaho with respect to the importance of taking the first step, as he refers to his proposal on page 7.

Many persons say that all that is needed is mutual confidence between the United States and Russia. I do not deny that confidence is needed. But confidence does not come merely by wishing for it. Confidence does not come because we acknowledge the need for it or because we deplore the lack of it. Confidence between the United States and Russia, between the people of the East and the West, in the context of the present world turmoil, must come step by step upon successive manifestations of fidelity to trust and the honoring of agreements.

In this regard, does not the able junior Senator from Idaho think that a fundamental characteristic of U.S. foreign policy in a conference such as that which is under way at Geneva must be goals which appear reasonable and attainable?

Mr. CHURCH. I do, indeed.

Mr. GORE. The goals set may not have been attainable from the beginning. The able Senator, in a statement on page 4 of his text, refers to certain minimum prerequisites.

Now the able Senator from Idaho lists a control system international in character. Would not he agree that an additional necessary prerequisite, according to the experts who early last year reached agreement in Geneva, would be a worldwide system of control and detection posts?

Mr. CHURCH. Since I cannot presume to know what may be technically required, I would say that the blueprint generally laid down last summer by the experts was one which, upon examination, it was felt would be sufficient to give us the necessary safeguards to enforce a suspension of nuclear testing. I believe it was upon that assumption that we went to Geneva in October.

Mr. GORE. As the able Senator from Idaho knows, at the Geneva conference, it was my privilege and honor to be one of the representatives of the U.S. Senate. As such, I studied in considerable detail the report of the conference of experts and some of the minutes of their proceedings; and I talked at considerable length with some participants in the conference. Upon those bases, I can assure the able Senator from Idaho that the system recommended by the experts was, in fact, a worldwide network of control stations, posts, and teams.

I should like to point out to the Senator from Idaho that neither side at Geneva, during the time I was at the conference, nor, to my knowledge, since my return, suggested the establishment in Red China of controls posts and inspection teams. As the able Senator will recall, the testimony before the Disarmament Committee demonstrates the necessity for the establishment in Red China of such inspection teams for adequate detection of underground tests. I take it that the Senator from Idaho recalls that.

Mr. CHURCH. I do, indeed, recall it; and I also recall participating with the Senator from Tennessee in the questioning.

Let me simply say that, although we may have been fully justified, all things considered, in taking at Geneva the position that the technical system contemplated was a sufficient one to justify the suspension of all nuclear tests, I submit as an added argument in support of the proposal I have made this afternoon that, whatever doubts there might have been with respect to the inspection system which was to be meant as a reliable detection safeguard against all types of nuclear tests, if the agreement actually arrived at were restricted to atmospheric tests only, then the possible gap which would be presented by Red China in such a system no longer would have the importance it might otherwise have had. I believe this is another argument for the general feasibility of the proposal I have made this afternoon.

Mr. GORE. Mr. President, again I find myself in agreement with the able junior Senator from Idaho.

I should like to characterize the proposal he makes as one for an attainable goal for the accomplishment of which we can have reasonable expectation.

Earlier I said there were differences between the proposal I had earlier made and the one the able junior Senator from Idaho now makes. If he will be so kind as to permit me to summarize briefly the proposal I made, the differences will readily be apparent.

Mr. CHURCH. I ask the Senator from Tennessee to do so, please.

Mr. GORE. Mr. President, after sitting at the table at Geneva, I found myself in such full agreement with some of the conclusions which the able Senator from Idaho now states—particularly his conclusions as to the intransigence of the Soviets and as to the necessity for the United States to improve, strengthen, and establish beyond peradventure of doubt its correct moral and political position in this important matter—that I suggested that the President of the United States save the conference at Geneva from the failure which I fear now impends, by announcing to the world that the United States of America, which constantly is blamed by the Soviets for contaminating the world's atmosphere and radioactive fallout, had stopped all atmospheric tests for a given period—say, 3 years; and then for our country to propose to negotiate at the Geneva Conference a permanent stoppage of such tests by all nuclear powers.

The able junior Senator from Idaho has omitted from his suggestion the unilateral action. I still think it would be a dramatic way for the United States to seize the initiative and to manifest to the world its good faith.

By his suggestion, the able Senator from Idaho has emphasized the importance of establishing an international control system. He has given more emphasis to it than I did in my proposal; and in that respect I believe he is correct. It would be an important first step. If we were to take this important first step, the conference might be saved from failure, and other steps might become feasible.

I think it will be easier, here in the United States, to place on the Russians the blame for failure of the conference, than it will be to fix that blame upon the Russians in the minds of the people of New Delhi, Bangkok, Indonesia and Africa.

Humanity the world over is watching the United States. The United States was the first to use the atom for destruction. So I believe it imperative that the United States be first and foremost in the use of the atom for the benefit of man, and also be first and foremost in curbing the contamination of the world's atmosphere which all mankind must breathe, and thus be first and foremost in seeking effective international control of nuclear weapons.

Mr. CHURCH. I could not agree more.

Mr. GORE. I thank the Senator. I have found his able remarks provocative and stimulating. I congratulate him, and wish to concur in all that he has said, with the addition of the prerequisite to which I have referred, and also to urge him again to consider the advantages to our country for the President of the United States, to dramatize if he so chooses, our position before the world, strengthening our moral and political position thereby, by taking a unilateral action for a given period as a manifestation of our good faith to all who might unfortunately doubt it, and then offer an agreement for permanent stoppage by all nuclear powers.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. CHURCH. I am pleased to yield to my esteemed friend the Senator from New Mexico.

Mr. ANDERSON. I commend the able junior Senator from Idaho for commenting as earnestly and as clearly as he has on the problem he has been discussing. I think we all recognize that the Geneva conference is in grave peril, if not in the utmost period of decay. I can only say I hope the President of the United States and others may follow along with the proposals similar to those the Senator from Idaho has made, and similar to the proposals of the very able Senator from Tennessee [Mr. GORE], that we do not just give up because we encounter disagreement, but that we continue to try to find places and bases upon which we may agree, and try at least to arrive at a proposal which can be acceptable, even if all the things which men might like to include in the proposal may not be included. This is a most difficult situation, and I think people may subsequently blame both sides for intolerance.

Certainly the shift which took place when it was learned our detection devices were not as good as we thought they were might have had some bearing on the outcome of the conference.

Without trying to prejudge what the verdict of history may be, I am glad the Senator from Idaho, as is true of the Senator from Tennessee, continues to hope that out of these negotiations there may be some benefit to mankind resulting from the search for an eventual solution.

I am glad the Senator from Idaho has taken this opportunity to discuss the problem very frankly on the floor of the Senate.

Mr. GORE. Mr. President, will the Senator yield?

Mr. CHURCH. Yes.

Mr. GORE. The able Senator from New Mexico, who is Chairman of the Joint Committee on Atomic Energy, has emphasized that which I was remiss in not emphasizing—the good to come to the world's humanity in reaching agreement upon curtailing further radioactive fallout. I had emphasized earlier the importance of squaring ourselves with world public opinion. The more important objective is that to which the able Senator from New Mexico has just referred.

I shall not undertake here to discuss the hazard of radioactive fallout. I do not know whether it is as serious as some suggest, or less serious. Suffice it to say that world public opinion is concerned about it and that the United States of America is held in major part responsible for the contamination which now exists.

Mr. CHURCH. Would not the Senator agree that the very fact that there is disagreement in this field by the experts themselves is ominous in itself? Regardless of the qualitative appraisal we make, the fact that the experts themselves disagree is enough to alarm the world, and rightly so.

Mr. GORE. I agree. The potential of the hazard is recognized by all. The degree of the hazard is where the disagreement occurs.

Mr. CHURCH. That is correct.

Mr. GORE. So here is a hazard to all mankind for generations to come; and it was the United States that used the first atomic weapon. It is the United States that has exploded most of the nuclear weapons. It is the United States that has released into the world's atmosphere the largest amount of radioactive material.

Therefore, as I said earlier, I think it is imperative that the United States be first and foremost in curbing this hazard.

The Senator from Idaho has, in the opinion of the junior Senator from Tennessee, performed a signal service by bringing this matter to the attention of the Senate.

I was pleased to hear the junior Senator from Arkansas make the statement which he made in correcting the misinterpretation which some persons had placed on his own remarks, because I believe that a Member of the United States Senate owes it to his country to communicate to his country sentiments and views which he regards as vital to its security. That must be one of his foremost considerations.

Mr. CHURCH. If I may interrupt, it is, is it not, the constitutional function of the Senate of the United States to advise and consent in the field of foreign policy—consent to the ratification of treaties, and advise with respect to all aspects of foreign policy? So it is, I should think, incumbent upon the Senate generally and upon each individual Senator individually to do as the Senator from Tennessee has suggested.

Mr. GORE. I agree; and I should like to conclude my overextended trespass upon the time of the able Senator, by referring to his statement that the proposal I had earlier made has received consideration and is still receiving consideration. I can certainly vouch for its having received consideration, for which I am grateful, and I am sure it is still being considered.

In that regard I should like to say that in the conference which I was privileged to have with President Eisenhower on this subject I found him to be generous, patient, understanding, and concerned. I do not think he could have been more concerned about a problem than he appeared to be with regard to this problem. I am grateful for the opportunity to undertake to make a contribution.

Mr. CHURCH. I thank the Senator very much for his valuable contribution to the discussion of this important subject this afternoon.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. CHURCH. I now yield to the Senator from Alaska.

Mr. GRUENING. The distinguished Senator from Idaho has made a most useful and important contribution toward solution of the impasse in which we as representatives of the free world, and representing ourselves in our negotiations with Russia, find ourselves. The Senator's proposal is so logical and so sound and in its very nature so minimal that it seems difficult to realize there could be any belief that the other party to the negotiation, our opponent in the cold war, will be able to reject it. As the Senator stated, if our opponent continues to be evasive—as the distinguished senior Senator from Wyoming pointed out, there seems to be little reason to expect or hope that the Russians will negotiate in good faith—and if the Russians reject the proposal, it will be a demonstration to the entire free world that we in the United States at least are trying to achieve progress, that we will not desist from our efforts but will continue to try to negotiate, reducing our proposals to the absolute minimum of what seem to be attainable in the hope of achieving some small progress.

I want to further express my great agreement with the comments of the distinguished Senator from Idaho that our gains in this field, with the ultimate objective of world peace, will not be made along the lines of a grand design, which during the last 6 years has proved demonstrably so futile, but will be achieved in a series of small gains here, there, and everywhere, advancing by inches, trying to establish a new forward position on a great variety of fronts.

As the able Senator from Tennessee has pointed out, we in the United States

took the lead, rightly or wrongly, in projecting nuclear warfare upon this world and that we have therefore a special responsibility for trying to end it. If this proposal of the Senator from Idaho is not accepted first by our own State Department and later by our opponents I hope we may have an opportunity to experiment for a time, at least, with the unilateral cessation of nuclear tests and the pollution of the atmosphere, with a clear understanding that if this shining example, which would do us so much credit in the world, is not followed, we will be free to resume tests, a calamity which I hope will not be necessary.

The able and distinguished Senator from Idaho has made a most useful and constructive proposal in a field which overshadows and supersedes all other in importance—the problem of survival.

Mr. CHURCH. I thank my good friend the Senator from Alaska very much for the remarks he has made.

I should like to conclude, Mr. President, by explaining why the approach which I have taken differs from the approach suggested by the distinguished Senator from Tennessee. It seemed to me that, in what may now be the death agonies of the conference at Geneva, there was an urgent opportunity, which was quite possibly slipping away from us, to achieve a breakthrough at the conference table which would establish an essential first step toward international controls, which must in the future constitute the basis of any progress we can possibly make toward the great goals of prevention of surprise attack and general disarmament.

Therefore, I have made this suggestion within the context of the deliberations now going on at Geneva, which are possibly in their closing hours. In doing so, I do not mean that I disagree with the proposition put forward by the distinguished Senator from Tennessee. As the Senator knows, that proposition has my sympathy and my support.

Mr. DODD. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. GRUENING in the chair). Does the Senator from Idaho yield?

Mr. CHURCH. I am happy to yield to the distinguished Senator from Connecticut.

Mr. DODD. I congratulate the Senator on his informative and eloquent statement. I find myself in complete agreement with it. I think this discussion helps all of us. I know it helps me.

I recall a similar suggestion of the Senator from Tennessee some time ago. I remember reading it with great interest.

What is particularly appealing to many of us, I think, is the idea that perhaps in these ways we can begin to achieve an understanding with our opponents in the world. What is proposed seems to me to be such a way. I think the Russians will find it very difficult to offer a logical and sensible reason for opposing the suggestion the Senator from Idaho has made.

I wish to compliment the Senator for having made a real contribution to a better understanding of the problems which face us in the world.

Mr. CHURCH. I am very grateful to the Senator for his statement. I will say to the Senator at this time publicly, as I have tried to say to him personally, I read his stirring and powerful statement in defense of the official position that we are taking with respect to Berlin, and found it as moving a statement as any I had heard delivered on the floor of the Senate in my time here.

Mr. President, I yield the floor.

EXHIBIT 1

U.S. SENATE,
COMMITTEE ON FOREIGN RELATIONS,
February 25, 1959.

Hon. CHRISTIAN HERTER,
Acting Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: The fateful negotiations now in progress in Geneva are being watched by an anxious world. The United States is once again demonstrating its good faith. We properly seek the suspension of all types of nuclear tests under a trustworthy international system of inspection and control.

I address this letter to you out of grave concern that Russia's continued intransigence may soon stalemate the negotiations at Geneva, causing our best efforts there to come to nought.

It is my understanding that the current difficulty at Geneva centers upon the following aspects of the Russian position:

(1) The Soviet demand for reserving a veto power over the operations of the proposed international control commission.

(2) The Soviet insistence that control posts be self-operated, that is, managed by nationals of the governments within whose territories the posts are located.

(3) The Soviet advocacy of procedures that would easily frustrate prompt action by the commission in dispatching inspection teams to make necessary on-the-spot investigations of subterranean disturbances suspected of being nuclear in nature, or of preventing these essential at-site investigations from occurring at all.

Obviously, unless the Russian attitude toward these matters changes, no reliable inspection and control system, capable of policing the suspension of all types of nuclear tests, is possible. Thus the Geneva negotiations are threatened with impending failure, one that might well foreclose our last hope for progress in this critical field.

If the conference fails in its objective to establish a workable international control system that could end all further nuclear tests, the responsibility for that failure will be clearly Russian. But if such an eventuality cannot be avoided, I would hope that the United States might make one final effort to salvage something, for humanity's sake, from the long labors that have brought us to this conference table.

As a last resort, in order that the conference might not break up accomplishing nothing, I would strongly urge that the United States make this final proposal: An agreement to suspend all further nuclear tests in the earth's atmosphere, enforced through an international control system sufficient to detect any violations. Such a proposal would exclude, for the present, any agreement involving suspension or control of subterranean or extra-atmospheric nuclear explosions, neither of which contribute to the pollution of the air, the principal cause of so much world concern.

I would anticipate that certain questions will be raised as to this proposal. Within the context in which I make it, I believe them to be answerable.

For example, it may be urged that, technically speaking, no international control system is required for the detection of atmospheric nuclear explosions. American, English, and Soviet technicians, all functioning at home, may now be able to detect the fact of nuclear explosion anywhere in the atmosphere, and determine much concerning it. Nevertheless, the commencement of an international control system to accomplish this objective is the sine qua non of man's progress toward any feasible disarmament. Broadened nuclear testing controls, to be sought in the future, and eventual inspection for prevention of surprise attack, are but milestones on the road to this goal. It is altogether probable that advancement here will come, if at all, only a step at a time. My proposal would be the first step, and the Geneva conference may yet constitute the best opportunity left to take it. An international control system which functions, however limited its initial scope might be, is the urgent need.

Another objection to be anticipated is that this proposal is a futile one, in that the Russian behavior at Geneva makes it apparent that the Soviet Union does not really intend to agree to anything acceptable to the United States and Great Britain. It may be urged that the same considerations which have prevented agreement within the framework of existing negotiations, would apply equally to my proposal.

This may prove to be the case, but not necessarily so. Soviet spokesmen, from Khrushchev down, have repeatedly expressed their fears and suspicions concerning the movement of foreign inspection personnel within Russia. Under the control system I propose, the necessity for this movement should be largely, if not entirely, eliminated. Fewer control stations would be required, and fewer foreign nationals would need to be stationed in the countries involved. In any event, it would seem that we ought not anticipate failure as a reason for abandonment of new proposals, even before making them.

Finally, it may be urged that the Russians might seize upon such a proposal as evidence to bolster the charge that the United States did not really support an ending of all nuclear tests, and so, somehow, to absolve Russia from their blame for failure to reach agreement. The answer to this, I think, is that the Russians, in any case, will contrive to blame the United States for a breakup of the conference. Whatever occurs, their indictment of us will be artfully drawn and made to sound plausible. In some quarters, they will be believed, regardless of what the truth may be, or what we may say about it. But this prospect should not be permitted to govern our decisions as to the course we must take.

In making these decisions, Mr. Secretary, I am sure you would be the first to agree that we are accountable, in the last analysis, to the trust we hold. It will be upon our conscience always, if we do less than the utmost in our quest to salvage something of value from the conference table at Geneva.

Sincerely,

FRANK CHURCH,
U.S. Senator.

ANNIVERSARY OF NEBRASKA'S ADMISSION TO THE UNION

Mr. CURTIS. Mr. President, March 1, 1959, is the 92d anniversary of the admission of the State of Nebraska as one of the United States of America. We Nebraskans call this important day in our State's history Founders Day.

At this point, I should like to stress the fact that the word "founders" has a large "S" in the minds of my fellow Nebraskans. "Founders," to us, is definitely plural. No single individual, no small group of individuals, made possible our statehood. That attainment was made possible by the mutual effort, the com-

mon sacrifice, of every man, woman, and child who had lived in what is now the State of Nebraska up until the time we entered the Union.

We have been called the Cornhusker State. That is true. We are a large corn producer. We have been called the Beef State. That, also, is true. Our cattle contribute to the lives of Americans and to people in the far corners of this earth. We have been called the Tree-Planter State. That is true, too. From a relatively treeless prairie, we have become a State of trees. The very institution of Arbor Day sprang from a Nebraskan's heart and mind.

Yet, I have still another name for Nebraska.

My name for it is, "The Neighbor State."

In 1832 the first artist to interest himself in the Nebraska region, George Catlin, wrote:

> There is no more beautiful prairie country in the world than that which is to be seen here. In looking back from this bluff toward the west, there is one of the most beautiful scenes imaginable. The surface of the country is gracefully undulating, like the swells of the ocean after a heavy storm, and everywhere covered with beautiful green turf. * * * The soil in this region is also rich and capable of making one of the most productive countries in the world.

Catlin, the artist, saw beauty. Other Nebraska pioneers—men and women who wanted to make homes in Nebraska—had different viewpoints. They saw these same beautiful prairies ablaze with destroying fire. They heard the war cries of Poncas, Omahas, Pawnees, Otoes, Sioux, and Cheyennes. They cowered in their sod houses while the white terror of the blizzard roared outside. They felt the heat that withered their first crops. They saw clouds of grasshoppers fall upon them, clouds that shut out the sun.

Yet these pioneers loved the soil on which they built their homes. In spite of suffering, anguish, even the death of their dear ones, they stayed. No quick riches came. There was no gold, no silver. These pioneers had faith in Nebraska soil and in its power to produce.

One of the favorite subjects of frontier art has been the protecting ring of buffalo bulls—and, within that ring, the cows and the calves. Not even the most savage of prairie wolves could break through that formation.

Nebraska pioneers learned by observation. They formed their own protective ring. They relied on instant and complete community cooperation. And such reliance paid off. Without it, they would have perished. With it, they survived.

The more than 100,000 Nebraska pioneers who homesteaded their land since 1862 lived that way.

Times changed. Farm-to-market roads, a Nebraska first, penetrated remote rural regions. The crossroads settlement became a town; the town became a city; the city became a metropolis. Blizzards, prairie fires, hostile Indians, lost their immediate and terrible danger.

Still, the feeling of interdependence—of neighborliness, if you will—remained with the sons and daughters of Nebraska's pioneers. People who could trace their ancestry to the Deep South lived side by side with neighbors whose forefathers came from the bleak and rock-bound coast of New England. Nebraskans of French origin lived next door to Nebraskans of German origin. What is more, they liked it. There are neither Swedes, Danes, Norwegians, Irish, nor Czechoslovaks in Nebraska. There are some 1,414,000 neighborly Nebraska Americans.

That is why, to me, Nebraska will always be the Neighbor State.

We Nebraskans are justly proud of the products of our soil and our toil. But it is one product—definitely in the singular—of which I, as a Nebraskan, am most proud.

Alexander Pope, the English poet who lived and wrote more than two centuries ago, left us a deathless line.

He wrote:

> The proper study of mankind is man.

In that same vein, I say today—on Nebraska's Founders Day, 1959,

> The greatest, the noblest, product of my native State, my home, is—Nebraskans.

VIRGINIA'S STAND AFFIRMED

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a letter written to the New York Times by Mrs. Genevieve Clark Thomson, daughter of the late Champ Clark, one of the greatest Americans to serve as Speaker of the House of Representatives.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VIRGINIA'S STAND AFFIRMED—HERITAGE OF HER HISTORY LINKED TO VIEWS ON CONSTITUTION

To the EDITOR OF THE NEW YORK TIMES:

Your distinguished Washington correspondent Arthur Krock recently referred to Virginia as "the proudest State in the Union."

Certainly a Virginian with an inferiority complex is a rarity, but Virginia's pride and freedom from a feeling of inferiority are not without foundation. Hers is the oldest civilization in North America.

Our Declaration of Independence was written by a Virginian, Thomas Jefferson. Our victorious Revolutionary armies were captained by a Virginian, George Washington. Our Federal Constitution was fathered by a Virginian, James Madison.

Virginia refused to ratify the Constitution until assured that a Bill of Rights would be added. And the first 10 amendments to the Constitution, now popularly known as the Bill of Rights, were largely the handiwork of Virginians James Madison, George Mason, and Richard Henry Lee.

It is not surprising, therefore, that Virginians should feel that they have as much understanding of and respect for constitutional government as Chief Justice Warren, a second-generation American, or Justice Frankfurter, a naturalized citizen.

And certainly they have as much as Gunnar Myrdal, the Swedish sociologist upon whose views Chief Justice Warren so heavily leaned in composing his fateful opinion of 1954 on desegregation.

Nor would Virginians agree with another of Dr. Myrdal's opinions contained in the same volume to the effect that the United States Constitution is outmoded and should be junked. In fairness, let us assume that the Chief Justice doesn't agree with this opinion, but that he is merely a superficial reader.

It was kind of the Times to commend Virginia for its good manners in a time of deep distress. Most Virginians would, I think, echo the words of Daniel Webster when told of a eulogy passed upon him: "It does me but simple justice."

Now as one citizen of Virginia, if I may do so without discourtesy, I say to the Times: "Look Homeward Angel" to New York, the stench of whose race relations now pervades even the provinces. We have nothing like it in Virginia.

GENEVIEVE CLARK THOMSON.

GAYLORD, VA., *February 5, 1959.*

FEDERAL CIVILIAN PAYROLL

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement prepared by me regarding the Federal civilian payroll.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BYRD OF VIRGINIA

The regular Federal civilian payroll for the first time in history is now running in excess of a billion dollars a month as a constant average.

Payroll for Federal civilian employees in the first 6 months of the current fiscal year (July-December 1958) totaled $6,219,196,000. This would be an annual rate approaching $12.5 billion.

The number of employees changed very little in the first half of this year as compared with the same period last year, running at approximately 2,361,000; but payroll costs, reflecting recent pay raises, were up nearly 11 percent.

The all-time Federal civilian employment peak was reached in the last year of World War II, 1945. In that year employment averaged more than 3.5 million and the payroll totaled a little under $8 billion.

As compared with 1945, civilian employment by Federal agencies is down approximately 33 percent; the payroll is up more than 56 percent; and the per capita average pay has been increased 133 percent.

These figures are taken from records compiled by the Joint Committee on Reduction of Nonessential Federal Expenditures.

For the coming fiscal year the budget contemplates an increase of more than 72,000 over last year in employment by Federal civilian agencies, exclusive of civilian employment by the military departments, which has been gradually declining.

I recommend reduction in current civilian employment by Federal agencies of a minimum of 150,000. This would be little more than 6 percent. It could be accomplished without impairment of a single essential function.

UNSUNG PUBLIC SERVANTS

Mr. ERVIN. Mr. President, on February 26, 1959, Dr. F. W. Reichelderfer, Chief of the Weather Bureau, issued a press release and accompanying citation commending 21 of our voluntary weather observers who have assisted the Weather Bureau in observing and reporting weather conditions for more than 50 years. Two of the persons so commended are residents of North Carolina, one of them being Mrs. Charles Edward Taylor, of Southport, and the other Mr. Barry C. Hawkins, of Highlands. These 21 faithful, unsung, and uncompensated public servants merit the thanks of the Nation.

On behalf of the Honorable ALTON A. LENNON, who represents the district in which Mrs. Taylor resides, and on behalf of the Honorable DAVID M. HALL, who represents the district in which Mr. Hawkins resides, and myself, I ask unanimous consent that the release and accompanying commendation be printed at this point in the body of the RECORD.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

VOLUNTARY WEATHER OBSERVERS PRAISED

Dr. F. W. Reichelderfer, Chief of the Weather Bureau, Department of Commerce, today reported that the Weather Bureau now has 21 cooperative observers who have taken weather observations daily for more than 50 years. Three of these 21 voluntary—and unsalaried—weather observers have taken daily observations for more than 60 years.

A special citation edition of the Weather Bureau's daily weather map (published on Thursday, February 26) has been issued in honor of these 21 veterans of the nationwide corps of 7,000 cooperative weather observers who take and record weather observations every day of the year—including Sundays and holidays—without any compensation whatsoever. On the back of the regular daily weather map of this date are printed brief service highlights of these remarkable senior citizens.

Dr. Reichelderfer said that without the daily records of these cooperative observers our knowledge of the climate of the United States would be meager.

The Chief of the Weather Bureau added that this weather observing work is an outstanding example of people serving their Government without pay, and he thought their daily but unsung efforts merited the applause of their fellow citizens.

Weather Bureau meteorologists said that these daily weather records made through the years are in constant use in many ways. Such reports are, and will continue to be, important in helping solve weather related problems concerning industry, commerce, and agriculture.

The dean of the Weather Bureau's voluntary weather observer corps is Mr. Barry C. Hawkins, of Highlands, N.C., who has taken daily observations for more than 67 years. His period of personal service is only 5 months shorter than the entire history of the Weather Bureau as a civilian agency. Mr. Hawkins was born in Ohio in 1874, came to North Carolina in 1883, and took his first weather observation there on November 1, 1891. Weather Bureau climatology officials say that throughout Mr. Hawkins' entire period of service his weather records have maintained an exceptionally high standard of accuracy and dependability. For many years Mr. Hawkins walked 10 miles to mail his observation reports to the Weather Bureau.

The cooperative weather observer with the second longest service record is Father Adelhelm Hess, of the Benedictine Abbey at Conception, Mo., whose observations date back to 1894. Father Hess, a former professor of Greek and Latin, received a special letter of commendation from President Eisenhower in October 1954.

The third longest service record of the entire country is Mr. F. O. Alin, of Fullerton, N. Dak., who began his observations on January 1, 1898. During Mr. Alin's 60 years of weather observing, he never missed an observation. He has recorded temperatures from 113° above to 44° below zero. Mr. Alin has been honored by Meritorious Service Medals and by special letters of citation from the Chief of the Weather Bureau and the Secretary of Commerce. The entire town of Fullerton, N. Dak., held a community celebration in March 1957 to honor Mr. Alin's outstanding service record.

The dean of women observers is Mrs. Charles E. Taylor, who has been a cooperative observer in Southport, N.C., since March 1900. She also has the fourth longest service record of all observers. Mrs. Taylor earned the nickname "Hurricane Hazel Heroine" because of her valiant all night efforts to warn her neighbors before Hurricane Hazel struck Southport at dawn on October 15, 1954. In February 1955 she was presented a 50-year award as a weather observer by the Secretary of Commerce, and given a special citation by the Chief of the Weather Bureau.

Shortly after April 9, 1955, Mrs. Taylor was surprised to receive a letter from the White House, in Washington, and which read:

"DEAR MRS. TAYLOR: I have learned from Secretary Weeks of your long and devoted service as a cooperative observer for the Weather Bureau. In providing regular reports during the past 55 years on the weather conditions in your locality, you have made an important contribution to the work of the Bureau and to the welfare of your fellow Americans.

"Along with congratulations on your outstanding record, I send my thanks for your very unselfish service.

"With best wishes,

"Sincerely,

"DWIGHT EISENHOWER."

The help of cooperative weather observers to record the Nation's climate was started early in the last century even before the Weather Bureau was established in 1891. Dozens of individuals who had been taking observations at scattered locations were urged by the new Weather Bureau to continue, and hundreds of additional citizens in all parts of the country and from all walks of life soon volunteered to make local weather observations and keep records of climatological data. More than 7,000 citizens now are taking weather observations without pay. The Weather Bureau furnishes observation instruments such as rain gages and thermometers, and also supplies the record forms on which the observations are logged at least once daily. Observers are drawn from all ranks of life, and by their constant and faithful service have made available to all users an invaluable storehouse of weather data.

Each observer gives an average of about 15 minutes a day to take and record the observations, to answer numerous questions from neighbors in the community about the local weather, and to complete and mail the regular monthly reports. It is estimated that the total time contributed by each observer to the Government over a 50-year period amounts to about 600 eight-hour workdays. The daily services of the thousands of voluntary observers would add up to about 80,000 full 8-hour days of work each year provided our citizens without cost.

In some cases observers from a single family have continued an unbroken series of daily observations for extraordinary long periods of time—the observer work being passed on from one generation to the next. For example, members of the Stern family at Logan, Iowa, have been taking weather readings for 77 years. Miss Amy Stern, present observer, is the granddaughter of the first weather observer at Logan. Carlos Call, present dean of California cooperative observers, has taken daily observations at Fort Ross, Calif., for 52 years and his father (George W. Call) recorded rainfall at the same place from 1874 to 1907. The combined family observation record is now 85 years.

At Rome, Ga., four generations of the Tower family have taken weather observations for nearly 100 years.

Mrs. Jessie T. White, of San Jon, N. Mex., on February 1, 1959 joined the ranks of those who have completed 50 years of daily observations. She graduated from college at the age of 57, and has been a schoolteacher, newspaper editor and rancher. She rides horseback each month to mail her monthly weather reports.

When Walter Eckert, dean of the cooperative observers in the State of Washington, arrived from New York 69 years ago the town of Grapeview in Mason County was called Detroit. Mr. Eckert selected the name "Grapeview" after noting "that all of our mail kept going to Michigan." He was also Grapeview's postmaster for 35 years.

Mr. Irwin Draper, of Red Lodge, Mont., has measured more than 5,600 inches of snowfall in his entire observing career of 56 years. He figures that is enough snow to bury the tallest building in Montana.

Mr. Ralph E. Weber, cooperative observer at Oakland, Md., since September 1903, read the lowest surface temperature ever recorded south of the Mason-Dixon line. It was a bitter cold 40° below zero, and occurred on January 13, 1912.

In addition to the basic job of weather reporting, cooperative observers are occasionally invited to perform a wide variety of special reporting jobs. Some of these jobs in recent years include: (a) reporting dates of the stages of development of various plants to assist in special agricultural studies; (b) telephoning special reports to designated collection centers to assist research work on the development and forecasting of tornadoes; and (c) reporting on the accuracy of weather forecasts.

NAMES, ADDRESSES, AND LENGTH OF OBSERVING RECORD OF THE WEATHER BUREAU'S 21 VOLUNTARY WEATHER OBSERVERS WHO HAVE TAKEN DAILY WEATHER OBSERVATIONS FOR MORE THAN 50 YEARS

F. O. Alin, Fullerton, N. Dak., 60 years.

J. M. Anderson, Manti, Utah, 56 years.

Charles E. Barret, Anchorage, Ky., 58 years.

Carlos A. Call, Fort Ross, Calif, 52 years.

Irwin A. Draper, Red Lodge, Mont, 57 years.

Walter O. Eckert. Grapeview, Wash., 52 years.

Dr. William B. Fulton, Dadeville, Ala., 52 years.

Louis Hardtla, Philo, Ohio, 58 years.

Barry C. Hawkins, Highlands, N.C., 68 years. (Mr. Hawkins is the dean of the entire observer corps.)

Father Adelhelm Hess, Conception, Mo., 65 years.

Plummer F. Jones, New Canton, Va., 54 years.

Michael Kangerga, Henderson, Tex., 51 years.

J. Smith Lanier, West Point, Ga., 53 years.

D. Paul Oswald, Hagerstown, Md., 57 years.

Mrs. Pearl Smith, Brownwood, Tex., 54 years.

Edward H. Stoll, Elwood, Nebr., 54 years.

Hugh A. Storer, Alton, Kans., 51 years.

Mrs. Charles E. Taylor, Southport, N.C., 59 years. (Mrs. Taylor is the dean of women observers.)

Ralph E. Weber, Oakland, Md., 56 years.

Mrs. Jessie T. White, San Jon, N. Mex., 50 years.

Mrs. Gertrude M. Woods, Palmetto, Tenn., 54 years.

OUR VOLUNTARY WEATHER OBSERVERS—7,000 CITIZENS IN ALL PARTS OF THE COUNTRY MAINTAIN GOVERNMENT WEATHER RECORDS WITHOUT PAY

Keeping a record of the climate of the United States is a big job. The act which established the Weather Bureau went into effect July 1, 1891. This law said that the Weather Bureau, among other things, would take "such meteorological observations as may be necessary to establish and record climatic conditions in the United States." This was a large order for a small Bureau. At that time the Weather Bureau had very

few paid observers, and the daily weather map showed only sparse reports from any place west of the Mississippi River.

From 1870 to 1891 the weather service in the United States had been operated as a part of the Signal Corps of the U.S. Army, and this experience had demonstrated that it would require thousands of weather observers to keep an adequate record of the climate of a country as large as the United States. The Weather Bureau therefore followed the plan begun by the Signal Corps, and encouraged citizens in all parts of the country voluntarily to make local weather observations and keep records, and mail them regularly to the Bureau. Today there are over 7,000 citizens taking observations without pay. The Weather Bureau furnishes the rain gages and thermometers and the record forms on which the observations are entered. Observers are drawn from all ranks of life, and by their constant and faithful service have made available an invaluable treasure of data. These data are in constant use to help solve problems of industry, commerce, agriculture, and recreation, as well as to obtain answers to such far-reaching queries as, "Is the climate changing, and if so, how?"

It really is a remarkable service. So many people, in all parts of the country, freely give of their time to make the necessary observations and reports every day in the year, year after year, some of them for 40, 50, and even 60 years. This means that if each observer gives an average of 15 minutes a day to take and record the observations, answer numerous questions about local weather, and make the regular monthly reports, the total time contributed to the Government over a 50-year period amounts to over 570 workdays. On the same basis, the services of all these observers would amount to over 79,800 full 8-hour days of work each year. We know of no other cooperative enterprise that even remotely compares with the climatological service of the Weather Bureau; that is, where the time of those persons cooperating is required every day in the year including Sundays and holidays.

In some cases the observations have been continued for a long period of time in one family, the work being passed on from one generation to the next. For example, members of the Stern family at Logan, Iowa, have been taking weather readings for 77 years. Miss Amy Ann Stern, present observer, is the granddaughter of the first observer at Logan.

In addition to the basic job of weather reporting, cooperative observers are occasionally invited to perform special jobs. Some of these in recent years include: (a) Assisting in a phenological study in Western States by reporting dates of stages of development of various plants, (b) assisting in research on the development of tornadoes by telephoning a special report to a designated collection center under certain weather conditions, and (c) assisting the Bureau in a study of the verification of forecasts.

Cooperative observers are frequently known as the local weathermen, and their readings are used as checks for unofficial thermometers and rain gages. Observers have great pride in their work and take considerable pains to arrange for a substitute observer when they are ill or plan to be away, so as to maintain continuity of data. For example, before a 30-year observer in Kansas was recently hospitalized she arranged for a substitute observer. When the substitute also became ill, the observer arranged for a second substitute to take the observations and for a hospital nurse to phone the rainfall amounts to the proper Weather Bureau office. In another case, an observer in a Western State sold his mine and made plans to move away but when he found that this meant the weather station would be closed, he changed his plans and got a job with the new mine owner.

The survey made in 1958 shows that there are 21 cooperative weather observers who, in February 1959, will have served continuously 50 years or more. Notes regarding these observers follow:

F. O. Alin was cooperative observer at Fullerton, N. Dak., from January 1, 1898 until October 24, 1957 when he gave up the work temporarily after he fell and broke his hip. During his 60 years as weather observer he never missed an observation. He now has a substitute observer, but is looking forward to taking his own observations again. Mr. Alin was born in Sweden on September 18, 1869. He came to this country in 1887 and attended school in Duluth until 1889, when he filed a claim near Fullerton. In April 1957 he was honored for his outstanding accomplishment at the Fullerton Auditorium with a Meritorious Service Medal and letters from the Chief of the Weather Bureau and from the Secretary of Commerce.

J. M. Anderson is serving in his 51st year as cooperative observer at Manti, Utah, and is the oldest observer in point of service in Utah. He has lived his entire life at Manti, where he was born February 28, 1875. He was recently honored for completing 50 years of cooperative weather observing on June 8, 1958. His son Leslie, who lives on the adjoining property, now assists occasionally in the weather program.

Charles E. Barret has been taking weather observations officially at Anchorage, Ky., since September 1903. His father, John J. Barret, was appointed the observer at Anchorage in the fall of 1900, but almost immediately his duties were assumed by his son. In reality, therefore, Mr. Barret's weather service dates from the fall of 1900 to the present time, with the exception of two 9-month periods while he was away at college. Faithful weather service has been rendered by this family for over 58 years.

Carlos A. Call, now dean of California cooperative observers, began his observational program at Fort Ross, Calif., in March 1907. His father, George W. Call, had been recording rainfall there since 1874, which makes the combined family record now in its 84th years. Carlos Call was born in Fort Ross on June 2, 1880, and still lives in the family home. His rainfall records have long been in demand by the Fort Ross community, and the California Wool Growers Association of which he is a member.

Irwin A. Draper was born at Livingston, Mont., on July 8, 1883, and has served as cooperative observer at Red Lodge, Mont., since December 2, 1902. He recently estimated that the snow he has measured during his 56 years of observing, if piled in one heap, would bury the tallest building in Montana. A check of the record indicates he has measured around 5,600 inches of snowfall in his observing career. Mr. Draper is dean of Montana cooperative observers.

While still a youth, Walter O. Eckert's interest was aroused by wind shifts and changes in weather conditions, and this interest remains high. Born in Auburn, N.Y., in 1877, he moved to Washington State in 1890 and settled where he now lives. He became cooperative observer for Grapeview, Wash., in October 1907, and has the distinction of having served longer than any other currently active observer in his State.

Dr. William B. Fulton is the oldest observer in Alabama in years of service. He was born in Mobile, Ala., on October 24, 1869. He is a graduate of Howard College, Birmingham Dental College, and Birmingham Medical College—now the Medical Department of the University of Alabama. He moved to Dadeville, Ala., in 1906, and began as cooperative weather observer in October 1907. He has taught how to test seed for germination at various farmers' meetings.

Louis Hardtla became the official weather observer at Philo, Ohio, in October 1901, having made unofficial weather readings since 1892. In the 1890's employment around Philo was very scarce during the winter months, and there was plenty of time for interesting discussions in the grocery stores and copper shops. Since there were many arguments as to who had the keenest razor, and the most dependable watch or thermometer, Mr. Hardtla decided to apply for appointment as cooperative weather observer so that he might settle all future arguments about the weather. His authority has not since been questioned. His neat handwriting is worthy of special mention.

Barry C. Hawkins, Highlands, N.C., has served more than 65 years at the station at Rock House (his home). He is the dean of the Cooperative Observer Corps, his period of service being almost as long as the history of the Weather Bureau as a civilian agency. Mr. Hawkins was born in Ohio in 1874, came to North Carolina in 1883, and has resided there ever since. His first weather observation was taken on November 1, 1891, and throughout his period of service his records have maintained an exceptionally high standard of excellence.

Father Adelhelm Hess' service as a cooperative weather observer dates back to November 1894. Father Hess was born in the mountains of Switzerland in 1874 and came to Conception, Mo., in 1897. Here he was ordained in 1897, and became a professor of Latin and Greek with the sidelines of a country pastor, electrician, and weather observer. Under date of October 30, 1954, Father Hess received the following letter from President Dwight D. Eisenhower:

"I have learned that on November 1 you will complete 60 years of unselfish, devoted service to our country as a cooperative observer for the Weather Bureau—that during this period, without compensation, you have faithfully provided information necessary to record climatic conditions. Such service is truly commendable. I am pleased to express to you my congratulations and gratitude for the service you have rendered our Nation."

Plummer F. Jones, who has been observing since March 1, 1905, is dean of Virginia's cooperative observers. He started at Arvonia, but in 1913 moved the weather station to its present location at New Canton, Va. A graduate and postgraduate of William and Mary College, and a graduate of Union Theological Seminary at Richmond, Mr. Jones is a retired Presbyterian minister.

Michael Kangerga has been keeping the rainfall records at Henderson, Tex., for a period of over 50 years, since the station there was established in July 1908. He has also kept the temperature records for the past 17 years. Mr. Kangerga was born October 4, 1873, in Croatia, then a province of the Austro-Hungarian Empire, and now a part of Yugoslavia. He immigrated to Henderson at the age of 14, and has made his home there ever since. His brother joined him in Henderson, and they formed a business partnership which has lasted to the present time. Their first venture in business was a general mercantile store. Since their business was vitally dependent on the well-being of the farmer, and the farmer in turn was dependent on the weather, Mr. Kangerga requested an appointment and made his start as a rainfall observer.

J. Smith Lanier, who began his service as cooperative observer at West Point, Ga., in the early part of 1906, has made many outstanding contributions of service to his community. He has always lived in or near West Point, having been born just across the Alabama line in Chambers County.

D. Paul Oswald was born March 15, 1886, on the family farm in Chewsville, Md. In May of 1898 his father consented to the establishment of a weather station at his home as a hobby and education for his sons. D. Paul Oswald began sending in weather obseravtions in February 1902. In January

1948 he moved to Hagerstown, Md., where he still makes his daily observations at the weather station called Chewsville-Bridgeport, a combined name of the two stations he has operated. He was recently on the science program closed circuit television for Washington County schools, and has for decades provided weather facts to local newspapers and radio stations.

Mrs. Pearl Smith has been taking weather observations at Brownwood, Tex., since July 1905. She was born in Waco, Tex., on April 9, 1880. Her adult life has been spent as a wife, mother, homemaker, and cooperative weather observer. She has also been active in church and Sunday school work throughout the years.

Edward H. Stoll began taking weather observations in October 1905. His weather station is located on his farm, 10 miles south-southwest of Elwood, Nebr., which has been his home since he came there from Kansas in 1888 at the age of 2 years.

Hugh A. Storer, cooperative observer at Alton, Kans., was born in 1889, and has lived his entire life on the farm homesteaded by his father. He has served as cooperative weather observer since March 1908. He has also served 21 years on the local school board, was secretary-treasurer of the Osborne County Farmers Union for 16 years, served in the Kansas Legislature from 1937 to 1945, and was county commissioner for the third district from 1953 to 1957.

Mrs. Charles Edward Taylor has been a cooperative observer in Southport, N.C., since March 1900, serving as Jessie M. Stevens previous to her marriage to Mr. Taylor in 1909. Mrs. Taylor was born in Chicago on September 22, 1879, moved to Southport in 1888, and is active in church and civic work. On February 23, 1955, in Washington, D.C., she received a 50-year award as a weather observer.

Ralph E. Weber, cooperative observer at Oakland, Md., since September 1903, has the second longest period of service of any present Maryland observer. He was born in March 1887 in Oakland, and has lived all his life on the family farm. Here he makes his daily weather observations, and here he read the lowest surface temperature ever recorded south of the Mason-Dixon line, 40° below zero, on January 13, 1912.

Mrs. Jessie T. White, cooperative weather observer at San Jon, N. Mex., is completing her 50th year of cooperation with the Weather Bureau, having taken over the weather station at Son Jon on February 1, 1909. Born in Corydon, Iowa, in 1880, she moved to San Jon in 1905. She graduated from college at the age of 57, and has been a schoolteacher, newspaper owner, editor, and rancher.

Mrs. Gertrude M. Woods has been cooperative observer at Palmetto, Tenn., since August 1905, at which time she succeeded her father, R. S. Montgomery, who had been weather observer there since 1883. Her name appears in publications as "Mrs. Ross Woods." She has always been interested in her duties as an observer, and read a paper entitled "Duties and Experiences of a Cooperative Observer" before the American Meteorological Society meeting in Nashville in 1927. Reporting on this meeting, the New York Times carried a feature story on Mrs. Woods' work as a cooperative weather observer.

FARM SUBSIDIES

Mr. WILLIAMS. Mr. President, on February 23 and 26, I placed in the RECORD two reports, each of which showed our present agriculture program was definitely not benefiting the small family-type farm, but rather benefiting largely the corporate-type farm and underwriting absentee ownership.

I was not alone in those conclusions. I quote from the President's state of the Union message of this year, delivered to the Congress on January 9, 1959:

> Outlays of the Department of Agriculture for the current fiscal year, for the support of farm prices on a very few farm products, will exceed $5 billion. That is a sum equal to approximately two-fifths of the net income of all farm operators in the United States.
>
> By the end of this fiscal year it is estimated that there will be in Government hands surplus farm products worth about $9 billion. And by July 1, 1959, Government expenditures for storage, interest, and handling of its agricultural inventory will reach a rate of $1 billion a year.
>
> This level of expenditure for farm products could be made willingly for a temporary period if it were leading to a sound solution of the problem. But unfortunately this is not true. We need new legislation.

In a message sent to the Congress under date of January 29, 1959, the President emphasized this same point and again called to our attention the fact that under the existing law the major benefits of this program are going to the very large farmers. I quote from the President's message to the Congress on that date:

> The price-support and production-control program has not worked.
>
> 1. Most of the dollars are spent on the production of a relatively few large producers: Nearly a million and a half farms produce wheat. Ninety percent of the expenditures for price support on wheat result from production of about half of these farms—the largest ones.
>
> Nearly a million farms produce cotton. Seventy-five percent of the expenditures for cotton price support result from production of about one-fourth of these farms—the largest ones.

Since my remarks of last week, I have received a telegram from Mr. R. P. Parish, president of the Delta Council of Mississippi, claiming that my remarks were misleading and that actually the Government had made money on these price-support programs that I had criticized. I shall, upon Mr. Parish's request, place his telegram in the RECORD; however, at the same time I shall point out the full story and show the complete fallacy of his argument that this is a profitable program for the American taxpayers.

Last Thursday the chairman of the House Agricultural Committee also quoted the same cases as Mr. Parish and attempted to make the same claim; namely, that I was in error when I said that these programs were costing the taxpayers millions in subsidizing these large farm operations. I respect his opinion favoring these large subsidies to the large farmers, but I cannot let stand unchallenged his argument that the Government is making money on such a ridiculous operation.

I could not help but notice that the chairman of the House Agriculture Committee in attempting to defend these large subsidies was talking both ways at once. In one breath he launched into a tirade against the administration by charging that the Government had lost over $900 million in supporting the cotton program alone under this administration. I quote his statement:

> We have lost in the last 6 years on the cotton program approximately $900 million.

Then in the same speech he made the fantastic claim that on the individual farmers mentioned the Government in supporting their cotton crop was actually making a profit.

That is ridiculous, and I shall take the same cases which he and Mr. Parish mentioned and prove it.

First I shall read the telegram, and in each instance point out the rest of the story as it relates to each case mentioned in the wire. I will show the fallacy of any claim of a profit.

The telegram is as follows:

> GREENVILLE, MISS., *February 26, 1959.*
> Senator JOHN J. WILLIAMS,
> *Senate Office Building, Washington, D.C.:*
> Reference your statement that large corporate operators have received major benefits from farm program. Your source of information gave only part of story. Delta and Pine Land Company of Scott, Miss., cited as recipient of second largest farm subsidy in 1957, used price supports to promote orderly marketing. This company placed 7,919 bales of cotton in the CCC loan for which they received an advance of $1,167,502.35. Every single bale of this cotton was withdrawn from the loan before end of marketing year and sold on market. Government collected $17,370 interest payment plus carrying charges, thus making a profit. Interest was paid on every dollar for every day it was used.

I repeat one sentence of this claim. The "Government collected $17,370 interest payment plus carrying charges, thus making a profit."

In the past 3 years the farmers of the country have produced a total of 35,737,000 bales of cotton. The national production figures are as follows: For 1956, 13,310,000 bales; for 1957, 11 million bales; for 1958, 11,427,000 bales, or a total of 35,737,000 bales.

During the same 3-year period the Government lost over $800,000,000 in supporting the price of this cotton. That is an average cost to the taxpayer of $22.30 per bale for every bale of cotton produced during the 3-year period.

No one will dispute the fact that the only reason that this corporation or any other individual was able to sell cotton in the open market and obtain prices whereby they could repay the loans was by virtue of the fact that the Federal Government, under Public Law 480 and other laws, was buying a large percentage of the cotton and subsidizing its export. This relieved the pressure upon the market, but at an $800 million loss to the American taxpayers.

This subsidy operated as follows: In 1956 we exported 7,200,000 bales of cotton, at a loss of $400 million to the taxpayers.

In 1957 we exported 5,700,000 bales, at a loss of $281 million to the taxpayers.

In 1958 we exported 3,300,000 bales, at a loss of $126 million to the taxpayers, or a total loss to the American taxpayers in the past 3 years of approximately $807 million in supporting the prices of cotton.

Our total cotton production during the 3 years referred to was 35,737,000 bales.

That means that during the past 3 years the taxpayers have spent an average of $22.30 a bale on every bale of cotton produced, in order to support the cotton market.

I may say in passing that this $800 million item does not include soil bank payments, acreage reserve payments, or any other payments to the farmers.

Now, let us take the case of the Delta & Pine Land Co., of Scott, Miss., wherein it is claimed that the Government is making money. In 1957 that company placed under loan 7,919 bales and borrowed $1,167,502.35. It repaid this loan with interest of $17,370; but the Government, in order to support the market at a level whereby the company could profitably sell this cotton lost on this amount of cotton an average of $22.30 a bale. This loss must be charged to all the cotton produced in the country. It would not be fair to charge it to a particular part of the production; namely, that cotton which is exported. This cotton support program is a program for all the farmers. Therefore, on the 7,919 bales which the Delta & Pine Land Co. produced in 1957, the loss to the American taxpayers was $22.30 a bale, or $176,593.70.

Giving them credit for the interest which was paid would reduce that amount to $159,223.70. It is being rather charitable to give credit for the interest payments, because, after all, the Government borrowed the money which it loaned in this instance, and the Government was also paying interest at the same time.

Even overlooking that fact, we are still left with a figure of $159,223.70 loss on this one company's operation in 1957.

In addition, the Government gave the same company a direct check of $20,761.20 as a subsidy under the soil bank program. This was for acreage which it agreed not to plant. Thus the total cost to the American taxpayers of supporting prices with respect to this one farm, including their subsidy checks received during 1957, amounts to $179,984.90.

The Delta & Pine Land Co. and others who are defending their operations try to show a much different picture. They claim that if the loans are paid we should consider that there is no loss, and I suppose by that line of reasoning if the loans are not repaid, they should be charged as total losses.

I do not think that is fair, but suppose momentarily we accept that argument and apply that argument solely to the Delta & Pine Land Co.

What is the story? In 1955, Delta put under loan 11,773 bales of cotton, for which they borrowed from the Federal Government $1,974,356.12. They repaid the loans on 6,894 bales of cotton or a total of $1,193,081.96, leaving a balance on their loan from the Federal Government of $781,274.16. This they have not repaid. The Government took the cotton for payment and exported it at a loss of nearly $50 per bale. What have they to say about this loss? My computation of $22.30 is much more charitable than charging the whole cost to particular lots. I have here a memorandum which was received from the Department of Agriculture only a few moments ago, calling attention to the fact that the Delta & Pine Land Co., which has been paid so much out of our American agricultural program, is not even an American-owned company. It is a wholly owned English company. It is a U.S. corporation wholly owned by the Fine Cotton Spinners & Doublers, Ltd., Manchester, England. The American taxpayers have been subsidizing this British company on its farming operations here in America to the extent just outlined.

Therefore, I am not very much concerned about their criticism of our agricultural program. I am amazed to find Members of Congress defending the spending of the American taxpayers' money to support the farm operations in the United States of a large British corporation. This was a program which was intended for the benefit of the small American farmer. I would welcome yielding to anyone who would wish to defend such an operation, either on the floor of the Senate or anywhere else.

There are a lot of small American farmers, American taxpayers, and consumers who will be asking for an explanation. Yet this is the law and the administration has been unable to get Congress to correct it.

Mr. O'MAHONEY. Mr. President, will the Senator yield for a question?

Mr. WILLIAMS of Delaware. I am glad to yield.

Mr. O'MAHONEY. Will the Senator state that point again? I did not hear him state the nature of the business carried on by the British company. Is it an agricultural company?

Mr. WILLIAMS of Delaware. The memorandum I have shows that it is a wholly owned English company. It is owned by the Fine Cotton Spinners, Ltd., Manchester, England. It is a U.S. corporation, incorporated in the United States, but it is owned wholly in Great Britain.

Mr. O'MAHONEY. What is its primary business? Is it primarily an agricultural corporation?

Mr. WILLIAMS of Delaware. All I know is that they borrowed money from the Federal Government under the loan program they placed under a guaranteed loan, 7,919 bales of cotton, for which we advanced $1,167,502.35.

The report claims they own general stores, gins, elevators, and many other assets around Scott, Miss.

This is one of the small farms about which so many crocodile tears are being shed.

Mr. O'MAHONEY. The only reason I interrupted the Senator to make my inquiry was that earlier in the day, in a private conference with the Senator from Delaware, he showed me a list of corporations receiving payments under the Agricultural Act, and that list showed the Ford Motor Co. of Detroit, Mich., as one of the companies.

Mr. WILLIAMS of Delaware. That is correct.

Mr. O'MAHONEY. That is a company which is not an agricultural company. It is an automobile manufacturing company. The Senator's list, as I recall, shows that that company received more than $13,000 for not engaging in raising corn and wheat upon a small acreage.

Mr. WILLIAMS of Delaware. The Ford Motor Co., of Dearborn, Mich., in 1957, was paid a subsidy check under the soil bank program in the amount of $13,649.40 for agreeing not to raise wheat and corn on 309.8 acres.

I ask again what kind of agricultural program do we have if we can justify, in the name of the small American farmer, a payment to the Ford Motor Co. of any amount of money for agreeing not to farm?

Mr. O'MAHONEY. I agree with the Senator. I am glad he brought up the matter.

Mr. WILLIAMS of Delaware. Likewise we find that the Mississippi State Penitentiary received $71,000 for agreeing not to raise cotton on a thousand acres. I did not know that a penitentiary fell into the classification of a small farmer. This story is full of similar illustrations of how the large operators and absentee owners are profiting under the existing law.

It is about time that we recognize this fact, and as the Secretary of Agriculture has told us in committee time and time again, the agricultural laws of the country need a general revision. Certainly by no stretch of the imagination can we let go unchallenged the ridiculous claim that the program is making a profit. It is clearly shown that in the case of the Delta transaction, the Government took over some of the cotton and that the taxpayers lost on the operation. I should like to continue reading from the telegram, which will be placed in the RECORD in its entirety at a later point:

Dan Seligman, Shaw, Miss., pledged 1,291 bales of cotton for which he received a loan of $173,631.68. Mr. Seligman withdrew 1,205 bales of cotton and sold it on the market, leaving only 86 bales in the loan. He paid the Government $2,111.50 in interest.

Again it is inferred that on that loan the Government made money; however, I say again that in 1957, in order to support the domestic market, the Government exported 3,300,000 bales, at a loss of $126 million.

If we take the average cost of supporting all cotton we find that in the case of Mr. Seligman, a loss of $22.30 for 1,291 bales of cotton gives a total of $28,789.30, then subtract $2,111.50 in interest paid and again I say that is being charitable, because the Government paid interest on the money that it loaned—we get a total net loss, as far as the taxpayers are concerned, of $26,677.80.

That is still not the whole story on Mr. Seligman. He was also paid in 1957 by the U.S. Government $59,992.80 under the soil bank program for cotton which he agreed not to grow on another 804.8 acres. From the standpoint of the American taxpayer, therefore, in 1957 Mr. Seligman's operations cost $86,670.60, which it would not have cost the American taxpayers if that farm had been closed down.

I am not saying that the farm should be closed down, but let us admit the true cost of keeping it going. Let us not kid

ourselves about making money on this kind of operation. If our Government keeps on making money in that way under our agricultural program, we may very well wind up going bankrupt.

I challenge anyone to dispute my claim that in the past 3 years we have spent over $800 million in supporting cotton prices in the United States.

That is a far cry from a profit.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CAPEHART. Would the Senator like to have a colloquy on the whole subject? I feel, as he does, that something should be done about the matter. I wish I were wise enough to know exactly what it ought to be. The matter about which the Senator is speaking relates to the support prices paid by the Government on, I presume, the 12 basic commodities.

Mr. WILLIAMS of Delaware. Today I am speaking primarily on cotton and rice.

Mr. CAPEHART. The purpose of the support-price program when it started 20 or 21 years ago was to reduce production; is not that correct?

Mr. WILLIAMS of Delaware. That was the intent. The program was supposed to reduce production, but it has resulted in the biggest surplus of commodities the Nation has ever known.

Mr. CAPEHART. The act is still in force. Under the act, we said to a farmer: "If you have been growing corn on 100 acres and will reduce your planting of corn to 80 acres, when you get ready to harvest your crop we will lend you the money at a parity price." In those days it was 90 percent. Then we said: "If, one year later, when you get ready to sell your corn, or if you want to sell it in the meantime, and the market price is more than the parity price, you can sell the corn in the open market and pay off your note at your local bank. If the price is less at the end of 12 months or whenever you get ready to sell the corn, you can come to us, we will cancel your note, and you can deliver the corn to us."

That kind of program has been in effect for many years. Big farmers and little farmers have been participating in it. The end result has been that surpluses of various products have been accumulated to the value of about $9 billion.

The principle underlying the act was that reduced production would raise the general level of prices on all farm products. But the act has failed to do that, because farm prices today are very, very low.

The Senator from Delaware is objecting—and I think rightly so—to the fact that the big farmer has received considerable money from the Government. I am not trying to defend the big fellow, because I think he would have much preferred to be left alone. But if the big fellow does not participate in these programs, then certainly there will never be any reduction in production, because it is the big fellow who plants the bulk of the acreage and raises the bulk of the products.

If we eliminate the big farmer from participating, then, or course, there will be more production, and the prices will be lower, if the theory that reduced production will increase prices is correct.

So we come back, do we not, to the main point that the whole farm program, the whole idea of reduced production, was all wrong in principle in the first place?

Mr. WILLIAMS of Delaware. We come back to the point that the law as it is presently written does not work in the best interest of the bona fide farmers. I think we had better recognize that fact. I stated in my remarks the other day that the fact that the large farmers are participating is certainly not illegal. The law reads that way. Congress wrote the law with the full intention and the full knowledge that the large farmers could participate. I, myself, think that is wrong, and I offered amendments to correct the situation at the time. The administration has also opposed this policy but, whether it is right or wrong, it is the law. The law needs to be changed. The only way it can be changed is to call the situation to the attention of the people, and let them tell Congress whether they like it or not.

Unquestionably, the major portion of the benefits of the present law are going to the large farmers. That condition will have to be changed. It cannot be justified in the interest of the small farmer.

I want to do something to help the small farmer, but this law is not the answer.

We cannot justify a program which will support a British-owned corporation in its farming operations in America to the amount of nearly $6 million in just 3 years. To pay thousands of dollers to a foreign-owned corporation to grow farm products in America is ridiculous.

How can we justify a program which pays the Ford Motor Co. $13,649.40 not to grow corn and wheat? That is just as ridiculous as a suggestion that we pay the farmers not to manufacture automobiles?

Is it not about time that some of those who are so vocal in defending this British corporation in its large subsidy begin thinking of some of the American farmers in their own districts?

Mr. CAPEHART. In order to enable the big fellow, about whom the Senator is speaking—the corporation—to participate requires the same compliance and accordingly requires him to make a sacrifice by reducing the number of acres which he had planted in cotton.

Mr. WILLIAMS of Delaware. He had to comply with the rules. That is not much of a sacrifice when you consider that the taxpayers guaranteed him a profit. Also on other acres they could grow other crops and even get them supported.

Mr. CAPEHART. Will the Senator agree that if he had previously planted a thousand acres of cotton he would have had to reduce the planted acreage to 800 in order to participate in the program? Will the Senator agree that that is so?

Mr. WILLIAMS of Delaware. I do not know what the percentage of reduction was, but he had to comply with the quotas.

Mr. CAPEHART. I know a man who had a 640-acre farm, all of which he planted in corn. In order to participate in the program, he had to reduce the acreage planted in corn to 421 acres. That left some 220 acres which he could not plant to corn, because in order to participate in the program he had to plant only 421 acres. I do not know whether that was a sacrifice, but it did reduce his production acreage. It was necessary for the farmers to do something of that kind in order to be eligible to borrow money at a given price. Is not that correct?

Mr. WILLIAMS of Delaware. I do not know how much they cut acreage on cotton. Let me read the figures of what assistance this British-owned firm has received.

In 1954 they placed 7,054 bales of cotton under loan and received $1,292,-472.25.

In 1955 they placed 11,773 bales under loan and received from the Government $1,974,356.12. Of this amount only $1,193,081.96 was repaid.

In 1956 they received a support loan of $1,446,605.67 on 8,967 bales of cotton.

In 1957 they received a loan of $1,167,-502.35 on 7,919 bales.

That is about $6 million which the taxpayers have advanced in the form of loans on cotton produced to guarantee a profitable operation for a corporation which is not even owned by American citizens.

This is one of the so-called little farmers who are reaping the benefits under this program.

Mr. CAPEHART. I was trying to bring out the facts surrounding the situation. As the Senator said a moment ago, nothing illegal was done. I was trying to bring out the fact that Congress passed a law in 1938, in which we said to the cotton farmer—let us talk about cotton, since this case has to do with cotton—the big farmer, the little farmer, the middle-sized farmer, and the corporation farmer—if you will reduce your cotton acreage so much, we will guarantee you X cents a pound for the cotton. In order to get this guarantee, you must reduce your acreage.

The weakness of that plan has since proved, as the Senator's figures indicated in the case of the British company, that while the acreage was reduced, the production was not reduced necessarily. Even though the acreage planted may be reduced, the farmer may have used much more fertilizer and raised more of a crop on a fewer number of acres. Or he may have enjoyed exceptionally good weather which, plus the extra fertilizer, enabled him to raise a greater crop.

So the first mistake which was made in the Farm Act was in referring to acres and not units of production. Had we based the act upon units of production, then the farmer would have been paid for that production, regardless of the number of acres utilized in achieving such production.

That was the first mistake which was made. The Congress dealt in acres, notwithstanding the fact that production on acres varies considerably depending on the weather, the amount of fertilizer used, and the manner in which the ground is tilled and many other variable factors. In the case of corn, for example, the amount of production varies, depending on whether hybrid seed corn is grown.

Having made such a mistake, the Congress now comes to the question, What shall we do about it? Shall we eliminate the big farmer from the program? I think every big farmer would favor being eliminated from the program. But the farmer who plants a number of acres, and who would be called a large farmer does not know whether he should or should not comply. If the law says he should not, I think it will make every big farmer in the United States happy. Then the big farmer will proceed to grow more of his product. He will till every acre, fertilize to the greatest extent, and grow every conceivable bushel of corn or bale of cotton. The result will be an even greater production which will further glut the market, and will result in even lower prices for the little farmer.

Mr. WILLIAMS of Delaware. Certainly we are not going to say that we are going to support his prices no matter how much he grows.

After all, the mandatory supports are provided by the Government for only the six basic crops. There are many other agricultural commodities for which there are no supports and on which there are no restrictions. The farmers who produce the unsupported crops are making out as well or better, and certainly the taxpayers are better off. The bulk of American agriculture is being produced without the benefit of any of these supports or restrictions.

Certainly we do not need an agricultural program which uses the taxpayers' dollars to support corporate-type farming or absentee-ownership farming. I own a farm, too; but I do not think either the Senator from Indiana, who also has some farmland, or I should be supported in our farm operations. We are not farmers.

The Senator from Indiana and I are absentee farmers. The program was not intended for our benefit or for the benefit of those in similar positions.

In the case of families who live on their own farms and engage in farming operations, I will go along with a program to help them. But in the case of absentee ownership and large corporations such as the ones I have pointed out today as benefiting under the program I will have no part.

This is especially indefensible when we consider that one operation had its ownership outside the United States. Likewise, I will not defend a program under which the Ford Motor Co. of Detroit, Mich., is paid not to grow corn and wheat. That is foolishness.

Mr. CAPEHART. I am in agreement with the able Senator from Delaware; I do not disagree at all as to all that.

I am trying to make a contribution, if I can, about the original purpose of the Act and why it failed. I believe it failed because it dealt in acres, rather than in units of production.

Personally, I would be perfectly willing to vote tomorrow to freeze the $9 billion surplus of agricultural commodities that we have, and to deny the Government the right to sell it, except in starvation cases. In fact, I would be willing to vote to repeal all farm parity price laws. I, myself, would be willing to do that; and I would have the courage to vote to do it, because I believe that in the long run the farmers would be much better off, providing, of course, that we adopt the same sensible, practical, conservative conservation reserve program now in operation.

But my point is that I do not think we should condemn one who has many acres for participating in a program in which he participated because he wanted to help reduce agricultural production in the United States, in order to raise the prices of all agricultural commodities—which was the purpose.

Mr. WILLIAMS of Delaware. I am not condemning them. I have said that it is legal, but I am pointing out where the money is going, and I am condemning the law on which that authority is based. I propose that the law be changed. That is the reason why I am addressing the Senate today.

Mr. CAPEHART. How does the Senator from Delaware propose that it be changed?

Mr. WILLIAMS of Delaware. First, let us adopt the recommendations of the Secretary of Agriculture. They may not be the cure, but his proposals are certainly a step in the right direction.

The Senator from Indiana, I am sure, will agree that the Government is not making money from the support programs in the case of any of these commodities. Certainly when the Government has paid in the last 3-year period more than $800 million to support the price of cotton alone, it is time to take inventory. Whether these payments are made under Public Law 480 or under the Commodity Credit Corporation, so far as the taxpayers are concerned the program makes no difference. It is costing them an average of $22.30 a bale for every bale of cotton that has been produced in the last 3 years. That fact must be recognized, and it cannot be disputed. I am sure that the Senator from Indiana will agree with me that any claim that the Government is making money under this program either on cotton and rice or any other commodity, is not correct.

Mr. CAPEHART. I did not realize that anyone was claiming that the Government was making money on it.

Mr. WILLIAMS of Delaware. Oh, yes; that is the reason I am speaking here today.

Several parties are claiming that when the cotton was sold in the domestic market and the proceeds were used to pay off the loan with interest there is a profit for the Government. This claim is being made even in the face of the fact that millions of dollars are being lost.

Mr. CAPEHART. In other words, they say they had the cotton put under seal, then borrowed the necessary money from the local bank, and later paid off the note, including the interest. Is that correct?

Mr. WILLIAMS of Delaware. Yes; and they say the Government is making money on that program when the loans are paid off. They conveniently try to ignore the fact that the Government is buying this cotton to support the market and by so doing has in the past 3 years alone lost over $800 million on its cotton-support program.

Mr. CAPEHART. I presume that the Government might be making money on that specific transaction.

Mr. WILLIAMS of Delaware. On that specific transaction they collected a few thousand in interest, and at the same time they are losing millions in the other office on the same crops.

Mr. CAPEHART. But the way it works——

Mr. WILLIAMS of Delaware. They boast that the Government collected a little interest and they ignore the real loss which runs into millions.

Mr. CAPEHART. But it works in this way: If a farmer produces a certain number of bales of cotton, and if he has complied with the acreage controls, then he goes to the local bank and borrows from it the money, in the normal way, and signs a note for the money he borrows. He can either pay off the note at any time he wishes, or, if the market price of the cotton on which he borrowed the money—I refer to the price per unit; for instance, the price of a bale of cotton—is lower than the support price, he can deliver the cotton—deliver it physically—to the Government.

Mr. WILLIAMS of Delaware. That is right.

Mr. CAPEHART. Then the Government steps in and pays the local banker the note. But these people claim, as I understand, that they paid off the note before it came due.

Mr. WILLIAMS of Delaware. In one instance the Delta & Pine Land Co. paid it off; in another year they did not.

Mr. CAPEHART. Does the Senator from Delaware refer to the interest?

Mr. WILLIAMS of Delaware. Yes; they call the interest a profit.

It is my contention that the overall cost to the U.S. Government, in supporting the cotton crop under all programs combined must be averaged across the board. The net overall cost is the answer.

Mr. CAPEHART. Yes; I think that would be true, from the standpoint of the Government.

Mr. WILLIAMS of Delaware. From the standpoint of the Government and the taxpayers.

By the same token, in the case of a farmer who left his cotton under loan and did not pay off the note, it should not be said that the entire transaction represents a loss any more than it should be said that all of it represents a profit when it is paid off. The existence of either a loss or a profit must be determined on the basis of how much the Government pays out in support of that farm product under all programs. Only in that way can a correct determination be made as to the existence of either

a loss or a profit. On that basis the Government has sustained a loss of over $800 million on cotton and it has sustained a loss on every cotton farmer. That is true because all farmers benefit from the program—both the farmers who sell their products on the domestic market and those who place them under Government loan.

I repeat again—it is perfectly ridiculous for anyone to maintain that the Government made money by supporting the cotton crop of a farmer solely on the premise he paid off his note. If anyone wishes to challenge that statement I would be glad to yield. Under most of these programs a large percentage of the loans might be repaid but the Government itself makes that possible by purchasing the cotton or other crops at artificially high prices in the open market. This boosts market prices and makes it possible for the borrowers then to sell their cotton and pay off their loans. But both transactions considered together represent an overall loss.

Mr. CAPEHART. Does the Senator from Delaware advocate that all farm programs be completely eliminated?

Mr. WILLIAMS of Delaware. No; but I do not think the Government should subsidize the production of the large farms, and I think the existing law should be amended lowering the support prices and placing limits on the amount of assistance for any one operator.

Mr. CAPEHART. In other words, is the Senator from Delaware advocating that, in the case of any one farm—whether one owned by the Ford Motor Co., or one owned by a British company or one owned by an individual farmer—we permit the one who operates the farm to borrow not in excess of a certain number of dollars each year?

Mr. WILLIAMS of Delaware. I would place a limit and restrict all benefits to bona fide family-type farmers.

Mr. CAPEHART. Does not the Senator from Delaware realize that if that were done, it would be better to have no program at all? And if that were the case, the little farmer would be subsidized 100 percent, because if we were to permit the large farmers to produce all that they could—in the case of either corn, wheat, or other crops—there would be even greater production than there is at the present time, and therefore the prices would be lower than they are today. In my opinion, the net result would be to accomplish nothing at all, other than to subsidize the small farmers.

Mr. WILLIAMS of Delaware. The Senator from Indiana has a right to his opinions; but I do not agree with him.

I do not believe it would be found that under such a program the large farmers would plant large acreage as freely as they are doing now, when they can place in the Government's storage bins all the crops they produce and can place them under loan at a high guaranteed price.

If it be true that the farmers would produce just as much, with low prices, then why did we establish during the war the agricultural program with high supports as an incentive?

Mr. CAPEHART. The Congress should not have done it; it was not necessary.

Mr. WILLIAMS of Delaware. I believe that during World War II, when the country needed increased agricultural production, high supports were in order as incentive payments, and the record shows that the farmers responded. But today, long after the war is over, we are still making the high incentive payments, regardless of the size of the farms.

Mr. CAPEHART. I should like to disagree there with the able Senator from Delaware.

Mr. WILLIAMS of Delaware. The Senator from Indiana has a perfect right to do so.

Mr. CAPEHART. My best judgment is that, regardless of whether supports are paid or are not paid, the American farmers, particularly the large farmers who use power equipment and similar facilities and must operate their farms in any event, will till every available acre to the maximum extent and will grow every dollars' worth they can grow, on the theory that the lower the price, the more units they must produce in order to obtain more dollars with which to meet their expenses. For example, if corn is going to sell for $1 a bushel, such a farmer will cultivate the corn and will fertilize it in such a way that he can obtain, let us say, 100 bushels an acre, because thereby he will obtain $100 a year per acre.

If he can get $1.50 for a bushel of corn if he grows 65 bushels per acre, he is getting the same number of dollars. That is where I disagree with Secretary Benson. If I understand Secretary Benson's philosophy—I think I understand it, and if I am wrong, I hope he or somebody else will correct me—it is that the lower the price, the more farmers will be forced out of farming, the marginal farmers will be forced out, the less the bigger farms will raise; therefore, production will be controlled. There will be less production on the market, and the price will go up.

I disagree in this respect with the philosophy of Secretary Benson and would say also that I am not an absentee farmer, as the Senator from Delaware has made reference to some of the farmers as being; I sign the checks and pay the bills and participate actively in the management and control of my farm.

Mr. WILLIAMS of Delaware. The Senator from Indiana lives in Washington and draws a salary, the same as I do. I call both of us absentee farmers.

Mr. CAPEHART. I understand.

Mr. WILLIAMS of Delaware. I am merely pointing out that neither the Senator from Indiana nor the Senator from Delaware needs the agricultural program.

Mr. CAPEHART. I agree. I am trying to arrive at the best way to improve the program. I hope we can engage in a colloquy, and get into the RECORD how the whole program operates and how it works.

However, I disagree with the Senator, and I disagree with Secretary Benson that if the farmer who has the acreage is eliminated, production will be reduced. I say production will be increased. If I can give a personal example, I do not have a big farm, but I will say I am going to till every acre every year regardless of price. I am going to use fertilizers and cultivation methods that will produce for me more units.

I am doing the same thing in cattle feeding and hog raising. I am feeding cattle on the basis that I can make $30 a cow or $30 a beef, whereas 20 years ago if a farmer who was feeding cattle did not make $60 to $75 a beef, he thought he could not stay in business. We are going to feed more cattle and try to make $30 on each one, so we can get the same amount of dollars we used to get when we were making $60 to $75 on each beef.

Mr. WILLIAMS of Delaware. The Senator has just said that, as a farmer, he would cultivate all of his acreage, produce all of the crops he could, and use all the fertilizer possible to increase production, regardless of price. All I can say is that he would not make a success of farming by following such practices. I am sure that if the Senator in his manufacturing business increased his production to the maximum, whether such production could be sold or not, and marketed such production regardless of price, he or anybody else would soon end up in bankruptcy, just as the U.S. Government will by pursuing this policy.

Mr. CAPEHART. Since the Senator is getting personal——

Mr. WILLIAMS of Delaware. I am not getting personal.

Mr. CAPEHART. I may point out that I have been in the business of manufacturing radios and television sets.

Mr. WILLIAMS of Delaware. I am sure the Senator manufactured and sold them according to the market.

Mr. CAPEHART. That is right. Since the Senator is getting personal, let me say this. I think this is one of the problems involved in the Senate. I think it is one of the problems involved in the United States. The Senator from Delaware is a big chicken farmer. He raises chickens by the tens of thousands. He is interested in a high price for his chickens and a low price for feed.

Mr. WILLIAMS of Delaware. Would it interest the Senator from Indiana to know that I am not producing broilers? Furthermore, I have not accepted any subsidies from the Government under any of the farm programs. Now let us get back to the subject.

Mr. CAPEHART. Neither have I been connected with any manufacturing business for a long while.

Mr. WILLIAMS of Delaware. Any man, whether he be a farmer or in business operates according to the margin of profit. The less the margin of profit, the less the incentive. I do not think we can get away from that principle.

I know we debated this question 2 or 3 years ago, when certain amendments were proposed. The Senator from Indiana took the other side of the question. He had a perfect right to his argument that this program should not be restricted to the small farmer. My own position is that we should not support these large types of operations. To support that position I am trying to point out that, with the administration of the law as it is written, the major part of the benefits are going to the large operators. One cannot get away

from that point statistically. Whether it is right or wrong is a question for Congress to decide.

I should like to continue reading the telegram and answer their claims. The wire next refers to the Woolfolk Farms, Tunica, Miss. This company in 1957 pledged 1,051 bales of cotton, for which they received a loan of $155,787.12. Nine hundred and eighty-six bales of this cotton were withdrawn and sold, leaving 65 bales in the loan. Interest paid amounted to $2,120.76—again the assumption is that this represented a profit to the Government because interest was paid on the loan.

In order to sell that cotton in the domestic market, the domestic market was supported by the U.S. Government and the American taxpayer. At the national average cost of the cotton support program, it cost a total of $23,437.30 on those 1,051 bales of cotton. In addition, there was paid to this same Woolfolk Farms $40,500 in the same year not to grow cotton on another 500 acres.

I just say there is not enough money in the Federal Treasury to be paying out $40,500 to one farmer not to grow cotton on 500 acres, and then advancing another $155,000 to guarantee profitable operations on the rest of his farm.

Members of Congress can defend that kind of operation all they please. The President has estimated that this year it is going to cost $5 billion to underwrite the cost of our agriculture program unless the law is amended. We ought to recognize the problem we face and correct it. The fault is right here in the Congress.

Mr. CAPEHART. I am not defending it. I am against it. As I said, I would vote to repeal the existing parity price laws and freeze the surpluses tomorrow. I only raise the question to get into the RECORD what I thought was a constructive description of the operation of this program and to point out that we have a terrific problem before us, and to discuss the best way to handle it.

Others may disagree with me; the Senator from Delaware is one of them. He may well be right. I may well be wrong. I know Secretary Benson feels the same way, as do others who possibly are wiser than I am. My conclusions are based on my experience from being raised on a farm, as one who is engaged actively in farming, as one who has participated from time to time in the program. My best judgment is that the lower the price goes, the more acres are going to be tilled and the more production there will be. Of course, we can get to the point where all the farmers can be bankrupt. I am not talking about a price which will automatically bankrupt the farmers. I am talking about what might be considered low prices, such as exist at the moment, because the average farmer is getting about a dollar a bushel for his corn. This price may not necessarily bankrupt the farmer, but it is a low price.

My feeling is that the farmer is going to grow just as much, or maybe more, if the price is low.

I agree with the Senator 100 percent that the so-called support prices, when acreage rather than units are supported, have outlived their usefulness. That program has not worked. It has cost the American taxpayers billions of dollars. We now have surpluses amounting to $9 billion. Therefore, we ought to do something about the problem. I, for one, am perfectly willing to join with the Senator from Delaware or any other Senator in repealing the parity price support law and that we freeze the surpluses.

I would not do that without freezing the surpluses. If we will freeze the surpluses and take them completely off the market, except for possible use in conditions of starvation, I think the American farmers and particularly the little farmers will be much better off than they are under the existing law. I know the taxpayers will be better off.

Mr. WILLIAMS of Delaware. I do not think there is quite the difference of opinion between the Senator and me as might appear from the debate. We both agree that the present law is not working and that Congress should act promptly to correct these inequities.

Mr. CAPEHART. It is not working. I have said that for a long time.

Mr. WILLIAMS of Delaware. It would not be practical to repeal all the laws relating to surpluses and to dump all of these products on the market, but we can begin by taking certain necessary steps.

Mr. CAPEHART. That is correct. We would have to freeze the surpluses.

Mr. WILLIAMS of Delaware. We are both in agreement that something should be done to work out a solution. I hope, even though we may not agree as to all of the details that as a result of the debate we can devise a more constructive agricultural law. We cannot afford to keep on paying $4 billion to $5 billion a year in this manner. These heavy expenditures are not of benefit to the small farmers. This program is not helping the family-type farmers. They do not receive the benefit from the huge amounts we spend on these operations.

I read again from the telegram wherein a claim is made with which I am in complete disagreement. I quote:

> The CCC loan program is not a subsidy. It is designed to provide farmers with the opportunity to market crops in an orderly manner and thereby prevent seasonal gluts and sharp breaks in farm prices.

This program is a subsidy.

Mr. CAPEHART. That possibly is the best part of the program.

Mr. WILLIAMS of Delaware. Yes, but we cannot get away from the fact that the CCC loan program, Public Law 480, and all these programs, must be treated as a combination, and as a combination they are a subsidy program for agriculture.

I can agree fully with the theory that this is only one of many subsidy programs. I was in Delaware some time ago and made the statement that other segments of industry are subsidized to a comparable degree. I think the time has come, particularly in the light of our present budget condition, when we must recognize that these subsidies have gone too far. We must roll these programs back in order to protect the American taxpayer as well as American industry. I am not referring only to this program. There are segments of the mining industry, the aviation industry, the merchant marine, and many others today which enjoy the benefit of checks for subsidies from the taxpayers, and I think this procedure should be reviewed and revised.

Mr. CAPEHART. I believe the Senator agrees with me on at least one item. I have proposed legislation, of course, with the purpose of making certain that the Federal Government will not loan money to anyone at an interest rate lesser than that which the Government pays on its borrowings. I think the Senator will agree that is one thing we ought to do.

Mr. WILLIAMS of Delaware. That would be one phase of a subsidy program. But after all, let us be realistic. That is only a minor part of the overall problem with which we have to deal.

Mr. CAPEHART. Of course.

Mr. WILLIAMS of Delaware. It is a small part.

Mr. CAPEHART. It is a small part. The farm problem is a much greater problem.

Mr. LANGER. Mr. President, I call for the regular order.

Mr. CAPEHART. What is the regular order?

Mr. WILLIAMS of Delaware. Mr. President, I have a perfect right to yield to the Senator from Indiana for a question.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I now yield to the acting majority leader.

Mr. SPARKMAN. I should like to ask the Senator from Delaware a question, but I want to predicate it upon a brief statement.

First, I have greatly enjoyed the colloquy we have just heard. I certainly agree we are badly in need of new basic farm legislation. I think one of the best bills which has been introduced—I have not heard it mentioned in the discussion—is a bill introduced by the Senator from Indiana. I am a cosponsor of the bill, as are a good many other Members of the Senate. I refer to the bill which provides for adequate research into the use of farm products. It seems to me we are going to have to do a great deal of that before we succeed in getting rid of our surpluses.

I am in sympathy with what the Senator from Delaware is advocating, which is some control with reference to the payments to the big corporate concerns. However, I have seen efforts made repeatedly in the Senate to control that matter, and we have always had the greatest difficulty in drawing a clear line.

The Senator from Delaware was not present in the Chamber during the morning hour, when I made a very brief statement relating to one of the examples referred to in the table the Senator had printed in the RECORD the other day. I refer to a farm in a little place called Sardis, Ala., which was listed in the table offered by the Senator from

Delaware the other day as having received a loan of $156,778, if I remember the figure correctly.

I noticed in the press report in the Montgomery Advertiser, following the publicity in connection with the matter, a statement that one of the owners of the farm brought out the fact that there are 190 tenant families on the farm and not a single dollar of the money went to any of the owners of the farm, but all of the money went to these 190 individual families.

The entire farm has a cotton allotment of some 1,400 acres, and the 190 tenant families grew 750 bales of cotton which were put into the loan program, but every dollar of the money went to them. I think I am correct in saying that the people who own the farm live on it, and are not what we might call absentee landlords. They simply do not grow cotton. The 190 families are dependent upon the program.

Instead of that case actually being what it appeared to be from the table, and instead of the money going into the hands of a big farm operator, the fact is the money went into the hands of 190 small individual farmers.

I do not know how one is going to make provision for that situation. If the Senator from Delaware has some suggestion as to taking care of a situation such as that, I should like to hear it.

Mr. WILLIAMS of Delaware. That sounds like a New Deal trickle-down theory. If there are over 100 families who have cotton acreage——

Mr. SPARKMAN. There are 190 families.

Mr. WILLIAMS of Delaware. If there are 190 families who have the cotton acreage upon which the payments are being made, why were the checks not made out directly to those families? Why is this money siphoned through one man? One cannot get away from the fact that based upon the report furnished by the Department of Agriculture—I understand there is no question about it—Dr. J. B. Hain, of Sardis, Ala., put 906 bales under loan and received a check for $156,778.95. Why should we have an agricultural program which has to brokerage down through any individual for 190 families in the hope that a part of the proceeds will trickle down to the real farmers.

Mr. SPARKMAN. My understanding of the matter is that the Department of Agriculture requires the owner of the farm to be tied in with the tenants on the farm, unless there is a clearly defined operation which gives complete control of the matter to the tenant himself. My understanding is that if there is anything like a percentage operation, sharecropping, or anything of that kind, with the owner retaining part control over the matter, the request has to go through the owner. Perhaps the Department of Agriculture can handle that.

Mr. WILLIAMS of Delaware. It has to be approved by both, but checks due the tenant can be paid to the tenant.

Mr. SPARKMAN. I certainly would agree that if it can be done safely and without too much trouble administratively, it would be better to have the payments made directly to the 190 tenants on the farm. That would give a clearer picture of the operation.

Mr. WILLIAMS of Delaware. I do not know how the loan was handled, but as I understand the program, a large percentage of the loans on cotton were repaid, but they were repaid only because of the ability to sell the products in a domestic Government supported market. That domestic market is supported by taxpayers' money. It means not only higher taxes but also higher consumer prices for cotton goods.

The cost may or may not be justified, but at least let us recognize that there is a cost. There is no profit.

Mr. SPARKMAN. Mr. President, will the Senator yield further to me?

Mr. WILLIAMS of Delaware. I yield to the Senator from Alabama.

Mr. SPARKMAN. I do not know what the figures are as of this date, but I do know that a year or so ago I saw the figures, and, so far as cotton is concerned—and we are speaking of cotton in connection with these particular payments—the program had not cost the Government anything, but the Government had actually made a profit from its cotton operations.

Mr. WILLIAMS of Delaware. No——

Mr. SPARKMAN. I do not know what the situation is today, but I know that a year or so ago that was the case.

Mr. WILLIAMS of Delaware. No. You are in error.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. To support my statement I quote no other authority than the chairman of the House Committee on Agriculture, Mr. COOLEY, who, even while taking exception to my statement, still called attention to the fact, rather critically, that in the past 5 years the support program on cotton alone had cost $900 million. I quoted a figure of $835 million for the past 3 years.

Mr. SPARKMAN. Was that for cotton?

Mr. WILLIAMS of Delaware. For cotton; yes. That is a matter of record.

Mr. SPARKMAN. It may very well be; but up until recent years the Government had actually made a profit on its operations in connection with cotton.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. First let me reply to the Senator from Alabama, and then I shall be glad to yield.

I quote the statement of Representative COOLEY last Thursday, in which he was referring to statements which I had made:

> That under the present administration we have lost in the last 6 years on the cotton program approximately $900 million.

The figures I placed in the record were approximately $835 million, but the chairman of the House Committee on Agriculture might have had an extra year or two in his calculations. I considered only the past 3 years. The major part of the losses occurred in 1954, 1955, 1956, and 1957.

Whether payments should be made without any regard to the size of operations is a point on which there may be a difference of opinion. But there can be no difference of opinion on the fact that we are not making money on this program. We are not making money, and I have little patience for those who try to claim that we are.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. SPARKMAN. Let me say to the Senator from Delaware that I do not wish to be understood as arguing that present programs are adequate.

Mr. WILLIAMS of Delaware. I understand that.

Mr. SPARKMAN. I do not believe they are. I think we should continue to work and search for some kind of program which will better the present condition of the farmer.

Mr. WILLIAMS of Delaware. On that points we are in complete agreement.

Mr. SPARKMAN. I thank the Senator.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JOHNSTON of South Carolina. I agree that probably in the past few years we have lost a great deal on the price support program. We have been operating under what is called a flexible program.

I should like also to invite the attention of the Senator from Delaware to the fact that until 1953 cotton price supports were at 90 percent. The Government made money on its operations in that field. It made more than $260 million on the cotton program in existence prior to 1953.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I should like to reply first to the reference of the Senator from South Carolina to the argument that the Government had been making money on cotton prior to 1953. I do not have the figures as to the exact operations at hand although I will say that we must not forget that in the early 1940's the Government was in a position with regard to excessive inventories similar to that in which it found itself 4 or 5 years ago. War broke out, and overnight the inventories became very valuable. As they were unloaded and paid for by other agencies for export to our allies and for other purposes naturally there was a profit on any inventory.

What we need is an agricultural program geared to benefit the small family-type farm and not to the theory that we must have war every 5 or 10 years to bail us out of our surpluses. We want a peacetime agriculture program. We are naturally concerned because we have a $9-billion surplus of agricultural products; however, we all know that if we were to have war tomorrow those surpluses would be an asset, but we cannot maintain such a tremendous inventory waiting for a war. I think we should maintain a reasonable surplus. We do not want a war to come in order to make a profit on our agricultural products.

There is no disputing the fact that during the past 3 years our cotton program alone has cost the American taxpayers more than $800 million, or an average of $22.30 on every bale of cotton

produced in America in the past 3 years. In the face of that unchallenged fact and just because loans in connection with one particular program may have been paid back with interest it is absurd to say that we are making money on the operation. That repayment was made possible only by virtue of the fact that another agency put up the money to buy the cotton and then withdrew the cotton from the domestic market and exported it at a loss of over $800 million to the taxpayers.

Furthermore, it is an unchallenged fact that the major percent of the price-support benefits of this cotton program went to the very large farmers.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CAPEHART. I think we have made a constructive contribution to the farm problem this afternoon. It is a serious problem.

In my opinion, unless we find some way to cure the situation, other than taxing the American people several billion dollars a year to support agriculture, we are going into a terrific economic tailspin one of these days. Perhaps it is not more than a couple of years away.

I, for one, am very desirous of avoiding such a situation. I am thinking very seriously at this moment of a program which would involve freezing our surpluses, doing away with our price support program, and appropriating perhaps a billion dollars a year, which is about 25 percent of what we are spending at the moment for so-called conservation controls, which means taking 100 million acres out of production, including entire farms. Then I would propose that we spend a reasonable sum—$100 million or $200 million—which is about one-fifth of what it costs each year to store our surpluses—to find new uses and new markets for farm products.

We are going to cure this situation in one of two ways—either by reducing production to the market level, or by finding new uses and new markets, so that our large production can be absorbed by the market.

As a businessman, I know that there are only two ways to increase business. One is to sell more to one's present customers. This seems to be impossible at the moment. The other is to find new customers.

We must find new uses for farm products. In the meantime we will have to show a great deal of courage in Congress in doing the thing that ought to be done, and I think that is the freezing of surpluses, except to people who are hungry. We must get away from the costly price support program about which the Senator has been talking. It has not only been costly, but it has not accomplished the purpose it was supposed to accomplish. It has been discriminatory, in that the big farmer has received a great deal of money and the little farmer has not received so much. The big farmers did not violate any law. The situation arose because of what is inherent in the law, inasmuch as we try to control acres instead of units of production.

Therefore I wish that the Senator from Delaware and others will give careful consideration to the program of freezing surpluses and carrying perhaps $9 billion in surpluses, and taking them off the market, just as we do in the case of strategic materials, which cannot be sold except by act of Congress.

I believe that if we do that we will be better off. I do not like this particularly, but we must be realistic. We find ourselves faced with facts. What are the facts? The facts are that we have followed a support program for 20 years, under which we have accumulated a $9 billion surplus. Nevertheless we still have comparatively low farm prices. Something is wrong somewhere.

I believe we ought to have the courage to face the situation. We will have to take some drastic steps in respect to the farm problem. Otherwise we shall go into an economic tailspin. I remember that back in the 1920's—1925 and 1926 and so on—manufacturing and the general economy was pretty good. We were going big guns. However the farm prices were low for several years during that time. Finally we had a crash.

History may well repeat itself unless we in Congress have the courage to do what is necessary. The two things that are necessary are these. First, from the long-range point of view, we must find new uses for farm products. From the short-range point of view, we must freeze surpluses and go into some sort of conservation program under which we will take acres completely off the market, and take them out of cultivation for a given period of time.

If we have the courage to do that we can correct the situation the Senator from Delaware is talking about. It is not good. The big farmers do not like it. The little farmers do not like it. The big farmer is caught between the devil and the deep blue sea: "Shall I comply with the acreage restrictions and borrow on my crops and cooperate with the Government and other farmers, or shall I grow all I can and thereby contribute to the surpluses and thus further lower the prices of the little farmers?"

We cannot shoot the big fellow because he happens to own X number of acres. That is in accordance with the American system; there is no law against a corporation being in the farming business. There is no law against Henry Ford owning acres of land. He had the right to produce as much as he could or to put the acres into the acreage reserve and say, "We will not produce anything on those acres."

Therefore we have a very serious problem facing us. We ought to face the issues. The issues are very serious. The Senator from Delaware has been doing a good job in dramatizing the weaknesses and the ineffectiveness of the program. I hope that what we have said here today in our colloquy between the able Senator from Delaware and myself and other Senators will help dramatize the necessity for changing the law. After all, Congress passed the law.

Mr. WILLIAMS of Delaware. Yes.

Mr. CAPEHART. We are sitting in the Chamber of one of the bodies of Congress that passed the law. Only we in Congress can change the law. The Secretary of Agriculture cannot change the law. The President cannot change it. We and we alone are the only instrumentality in the world that can change the law. We ought to change it, in my opinion. We ought to dramatize all the weaknesses of the law, as the able Senator from Delaware is doing. That is the only way we are going to dramatize the law, by showing the country and the press and other Members of the Senate how serious the problem is, and what drastic steps we will have to take.

I again congratulate the able Senator for dramatizing the situation. I hope he will join with me and others—or I will join with him, it does not make any difference which way it is—in being courageous about this matter and in taking some very drastic steps, because it will take drastic steps, unless I am badly mistaken, to cure this whole problem.

Mr. WILLIAMS of Delaware. I appreciate the contribution of the Senator from Indiana. Unquestionably he is entirely correct when he says that the solution of the problem lies in Congress. The Secretary of Agriculture, who has repeatedly recommended a change, has no alternative other than to administer the law as we write it. My criticism is not directed against what those people have done. We, in Congress, have made it possible for them to do it. The only way in which we can get the law changed is to show the people of America what this program is costing them. We must explode the theory: "Well, so what? It does not cost anything." Some even dare to claim that we are making a little money.

The fact is that we are not making money, and every Member of Congress knows it.

There is one other example of further interest to Senators, I am sure, which I should like to mention. First, I ask unanimous consent to have printed in the RECORD at this point the entire telegram from which I have been reading.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

GREENVILLE, MISS., *February 26, 1959.*
Senator JOHN J. WILLIAMS,
Senate Office Building,
Washington, D.C.:

Reference your statement that large corporate operators have received major benefits from farm program. Your source of information gave only part of story. Delta & Pine Land Co., of Scott, Miss., cited as recipient of second largest farm subsidy in 1957, used price supports to promote orderly marketing. This company placed 7,919 bales of cotton in the CCC loan for which they received an advance of $1,167,502.35. Every single bale of this cotton was withdrawn from the loan before end of marketing year and sold on market. Government collected $17,370 interest payment plus carrying charges, thus making a profit. Interest was paid on every dollar for every day it was used. Dan Seligman, Shaw, Miss., pledged 1,291 bales of cotton for which he received a loan of $173,631.68. Mr. Seligman withdrew 1,205 bales of cotton and sold it on the market, leaving only 86 bales in the loan. He paid Government $2,111.50 in interest. Woolfolk Farms, Tunica, Miss., pledged 1,051 bales of cotton for which they received a loan of $155,787.12. Nine hundred and eighty-six bales of this cotton were withdrawn and sold, leaving 65 bales in the

loan. Interest paid amounted to $2,120.76. M. S. Knowlton Co., Pertshire, Miss., pledged 1,075 bales for which they received a loan of $155,438.80. Mr. Knowlton withdrew 1,008 bales, leaving 67 bales in the loan. He paid interest amounting to $2,197.44. J. G. Adams & Son, Hughes, Ark., pledged 3,024 bales to the loan and received an advance of $420,343.70. He withdrew all but 318 bales and sold it on the market. He paid $2,871.82 interest. The producers rice mill of Stuttgart, Ark., cited by you as receiving largest 1957 subsidy, is a cooperative composed of 400 individual grower members. Price supports averaged less than $4,000 per member. The CCC loan program is not a subsidy. It is designed to provide farmers with the opportunity to market crops in an orderly manner and thereby prevent seasonal gluts and sharp breaks in farm prices. Small farmers actually derive more benefit from the program since they are not in a position to protect themselves from price fluctuations. This information respectfully submitted in interest of full understanding. We hope you will see fit to include it in the CONGRESSIONAL RECORD.

R. P. PARISH,
President, Delta Council.

Mr. WILLIAMS of Delaware. I quote further from this telegram wherein I am criticized for what I said about the Producers' Rice Mill, Inc., Stuttgart, Ark. That corporation in 1957 borrowed $1,460,902.11 on 254,075 hundredweight of rice.

The argument is made that this is a cooperative owned by the membership and therefore should be above criticism. If they wish to join in a cooperative that is their business, but that does not change the fact that the Government lost money. This program on rice is also costing a great deal of money. In 1957 the total production of rice in the country was 42,935,000 hundredweight. On that national production, in order to hold the prices at an artificially high level for the consumers and for the farmers of this country, we spent a total of nearly $47 million. This was broken down as follows, $1.9 million under Public Law 480, in donations to foreign governments, the Commodity Credit Corporation loss in 1958 was $6.2 million. Under title I of Public Law 480, which are sales for foreign currency, we sold $53.3 million worth of rice on which we recovered $14.5 million. That left a loss under title I of Public Law 480 of $38.8 million.

The total loss to the taxpayers was $46.9 million. This averaged $1.09 per hundredweight of rice for each hundredweight of rice that was produced in the United States in 1957. Therefore on the Producers Rice Mill, of Stuttgart, Ark., the Government lost a total of $276,941.75 so far as their operations were concerned in supporting the rice grown by this organization.

We cannot escape the fact that the cost of the program, whether it is rice, cotton, corn, or any other commodity, must be assessed against the total amount of the commodities which have been produced in the calendar year. They must be averaged out. I think that this analysis clearly establishes that not by any stretch of the imagination can any of these programs be called profitable. If there be anyone who does claim differently I would like to hear from them.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a series of editorials supporting the criticism which I have made of the program.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Feb. 24, 1959]

IT HELPS WHAT FARMERS?

All that money you taxpayers have been pouring out in billion-dollar gobs to help the "little" farmers mainly is going to the big, corporation, factory-type farms. The little fellow just gets the hind end of it.

Senator JOHN J. WILLIAMS has nailed this fact again in a report to the Senate.

The biggest beneficiary of farm subsidies in 1957 was the Producer's Rice Mill, Inc., of Stuttgart, Ark. The Government gave this outfit $1,460,902 to prop up the price of rice. (You taxpayers pay again in the higher cost of any rice you buy.)

This $1,460,902 one company got, says Senator WILLIAMS, was double the subsidies the Government paid out to all the farmers for all their crops in the whole State of Pennsylvania. (The last farm census showed 128,876 farms in Pennsylvania.)

Just three of these big corporation farms (two in cotton and one in rice) among them got more than $3.4 million in subsidies in 1957. This was more than all the subsidies paid on all crops to all the farmers of Pennsylvania, Maryland, Delaware, and New Jersey. (The last farm census showed 190,359 farms in those four States.)

"The high rigid support program," said Senator WILLIAMS, "is little more than a Government guarantee on the operations of corporate-type farming and actually encourages and underwrites absentee ownership to the detriment of the small farmers."

To see how right the Senator is, take a look at Marshall McNeil's Washington dispatch on page 3 and see how only 54 of these big corporation farmers got nearly $14 million in Government handouts in a single year.

[From the Washington Evening Star, Feb. 24, 1959]

HELPING THOSE FARMERS

The biographical sketch on Senator WILLIAMS, Delaware Republican, in the Congressional Directory notes that he was "born on a farm" and that before entering politics he was in the "grain business." Now beginning his third successive term in the Senate, Mr. WILLIAMS has demonstrated on many occasions a high level of ability to get at the kernel of issues. He has done so again with a few facts and figures on how the whole "Rube Goldberg" structure of high, rigid farm price supports operates on behalf of the poor and the "little" farmers.

Mr. WILLIAMS has submitted to the Senate a Government report on where the really big crop subsidy money went in 1957. The biggest payment, of nearly $1.5 million, went to a "farmer" named the Producer's Rice Mill, Inc., of Arkansas, to encourage the production and high price of rice. The next, of $1.2 million, went to the Delta & Pine Land Co. of Mississippi for growing cotton, and the third, of $854,000, to Westlake Farms of California, for some more cotton.

"The high rigid support program," Mr. WILLIAMS noted, "is little more than a Government guarantee on the operations of corporate type farming and actually encourages and underwrites absentee ownership to the detriment of the small farmers."

Mr. WILLIAMS' information and observations were inserted in the CONGRESSIONAL RECORD with "no objections."

[From the Philadelphia Inquirer, Feb. 25, 1959]

BIG FARMS REAP PRICE SUPPORT PLUMS

When Senator JOHN J. WILLIAMS, Delaware Republican and one of the Nation's most articulate and courageous foes of governmental waste and extravagance, speaks out on the inequities of the present farm price support system his words merit close attention.

This goes, in particular, for his speech on the floor on Monday, when he demanded a change in the price support law on the ground, specifically, that it discriminates against the small farmer and in favor of the big grower.

His revelation that three big farm operators in Arkansas, California, and Mississippi received in 1957 support payments totaling $3,400,000 is startling. But it is shocking to learn that these three payments to big growers exceeded the total paid in that year to all the farmers of Pennsylvania, New Jersey, Delaware, and Maryland.

We hear a great deal about the necessity of protecting the family-type farm and helping the small farmer to make ends meet at a time when prices of nearly everything the farmer must buy is increasing in price. But here is a situation in which not the small farmer, but the farmer with thousands of acres, is the chief beneficiary of Government largess.

Furthermore, such huge payments to a few growers can scarcely help but encourage the consolidation of farmlands into bigger and bigger tracts and promote absentee ownership.

It seems to us that Senator WILLIAMS is right in saying that the "support program as the law is now written is definitely not in the best interests of the bona fide American farmer." In addition, of course, is the fact that under this system crop surpluses amounting to more than $9 billion, a tax charge against the whole Nation, have been piled up in storage.

What is needed, at the very least, is a revision of the price support law to bring about fairness to the small farmer—and an end to the million-dollar favors handed out to a few owners of huge farm operations in the South, Midwest, and West.

[From the Delaware State News, Feb. 25, 1959]

CORPORATION FARMING

(By Jack Smith)

Our senior U.S. Senator from Delaware, JOHN J. WILLIAMS, is at it again.

And this time he has taken to task the policy of high rigid price supports for agriculture.

The other day Senator WILLIAMS read into the CONGRESSIONAL RECORD some amazing facts—which indicate that the healthy hunk of tax dough we have been paying out, thinking we were helping farmers, has gone to big farm corporations.

There is a definite tendency toward the larger farm. The cost of investment in equipment is making the small farmer, the individual who really built this Nation, obsolete.

But this doesn't mean that all our farm land will be eventually owned or leased by huge corporations—along the lines of General Motors. Here in Delaware there are many fine examples of the medium size farm where the farmer, with adequate equipment, is able to till the soil and make a decent living for himself and his family.

And sure enough, in States like this where acreage is privately owned is where you find the greatest resistance to Government help and subsidy. Like the small businessman, which he is, the farmer would like to make his own way with a minimum of interference.

So it is from the extensive acreage of the Middle West where you get the demands for aid to agriculture. And it is a program that has seen great excesses and, getting beyond control, has cost the American taxpayer many billions in the past few years.

Senator WILLIAMS, in the report he had read into the RECORD this week, advocates that the high rigid price support program be repealed and that the Secretary of Agriculture "be given greater discretionary authority to lower support prices on basic crops."

The Williams report shows that just two operators received over 2½ million support on two basic crops produced in 1957. The first, the Producer's Rice Mill, Inc., Stuttgart, Ark., received Government support on rice produced in 1957 in the amount of $1,460,902.11.

The second, the Delta & Pine Land Co., Scott, Miss., received $1,157,502.35 government support on cotton which they produced in 1957.

"As a comparison," Senator WILLIAMS says, "I call attention to the fact that these two operators received from the Government in support of their 1957 crops over five times as much as the total amount of price support received by all the farmers of the State of Delaware on all the crops they produced in 2 years—1956 and 1957.

"These two companies alone in 1957 received more in price support for their crops than did all of the farmers in the State of Maryland combined.

"The $1,460,000 which one of these companies received in support of their rice crops in 1957 represents an amount double that which was received by all the farmers in the State of Pennsylvania on all their crops for the same year," the Delaware Senator pointed out.

"As a further comparison there were three companies—one in Mississippi, one in Arkansas, and one in California—which received over $3,400,000 in price support operations on the 1957 crops. That is greater than the total amount received on all the crops produced in 1957 by all the farmers in Delaware, Maryland, Pennsylvania, and New Jersey.

"There were 18 large operations in the United States any one of which in 1957 received over four times as much as the total amount received on all the crops by all the farmers in our State of Delaware last year.

"I cite these figures with the comparisons to emphasize that the Government's price support program as the law is now written is definitely not in the best interests of the bona fide American farmer. Instead of being in the best interests of the family type operation, the Federal Government under the present law is with the taxpayers' money encouraging and financing the consolidation of the farms under absentee ownership," Senator WILLIAMS concluded.

[From the Philadelphia Evening Bulletin, Feb. 26, 1959]

THE POOR FARMERS

Going down the list of those poor farmers who were helped by the Government in 1957, Senator WILLIAMS of Delaware finds two who fared sumptuously. One was a firm in Arkansas that received $1,460,902 on rice, and the other a firm in Mississippi that drew $1,157,502 on cotton. The Senator read a long list of firms that were handed checks from the Treasury of over a million dollars.

There is no charge of fraud in these transactions. They are simply the result of the working of our price support and subsidy programs. The larger the firm the higher the payments.

The idea of a subsidized agriculture was born of the necessity to help out farmers who were going into bankruptcy. It has now grown to the point of aiding large corporate establishments. Programs that have so far departed from their original objective call for a sharp revision.

The millions of dollars these firms receive from the Treasury are only one item in the general taxpayer burden. The housewife pays again in higher food prices when she goes to market.

[From the Washington Daily News, Feb. 27, 1959]

TAKE AND TAKE, YOU PUT

Senator JOHN J. WILLIAMS has put another silly face on the farm laws.

Earlier in the week he gave the Senate a list of 54 corporation-size farming outfits each of which—quite legally—had collected $100,000 or more (up to nearly $1.5 million) as price supports on crops grown in 1957.

Now he informs the Senate that 10 of these same corporations also had collected—quite legally—amounts ranging from $20,761 to $125,942 in the same year for taking land out of production.

In sum, 10 corporations got nearly $3.5 million for growing crops and the same 10 got an additional $557,000 for not growing crops.

Most of them got paid for not growing the same crops they got paid for growing. Four got checks from Uncle Sam for not growing different crops.

The corporations take their crops to Government storehouses and take home a check, charged to you taxpayers. The Government rents the storehouses, you taxpayers pay the rent. Corporations take some of their land out of production, you taxpayers pay them for that.

This is supposed to stabilize agriculture and save the family farm. But the big farms get the most subsidy because they raise the most crops. And they get the most from the soil bank because they have the most land to spare for it.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. GRUENING. I should like to ask the Senator one or two questions which have been raised in my mind by the Senator's very able presentation with respect to some of the oddities, what might be called the believe it or nots, in our farm program. I should like to ask, first, how much the farm program has cost the American people, in the Senator's opinion.

Mr. WILLIAMS of Delaware. The estimate furnished by the President in his message to Congress is that in the current fiscal year it will cost about $5 billion; and I have no reason to dispute the figure.

Mr. GRUENING. Does not the able Senator believe that the elimination or the reduction of that program would be a very helpful step toward balancing the budget?

Mr. WILLIAMS of Delaware. Certainly. I think the time is long overdue when some recognition should be given to the extravagant cost of this program. As I have said before, I do not think the $5 billion which is being spent is accruing to the benefit of bona fide American farmers. It is going largely to the very large farmers.

Then the Government offered the soil bank proposal to the farmer and said, in effect, "If you will cut back 20 percent or 30 percent, we will pay you so much an acre." The large farming operations can better afford to do that because all they need to do is to run a combine or a tractor into a shed and lay off two or three men. But a small farmer, having one combine, one tractor, and one corn-picker, cannot, with any degree of efficiency, reduce his operations. If he does, his cost of production will increase. So he cannot take advantage of this program.

I grant that the law does not spell out that the program is for the benefit of the large farmers, but it just works out that way unless we enact limitations. The small family farmer cannot afford to participate in these programs because he cannot cut his acreage allotments. The Government is spending each year millions of dollars to support the big farm operations and thereby enables them to buy up the little farms with the taxpayers' money.

I have no objection to any individual or corporation buying and owning as much land as he or it can pay for and operate under our American economic system. I believe in that system. But I do not believe that the money of the taxpayers should be used to foster or to aid in the goal of absorbing neighboring farms. If a farm operator wants to do that, let him do it with his own money.

Mr. GRUENING. Does the Senator believe there is an economic or a moral justification for paying farmers or others for not growing a crop?

Mr. WILLIAMS of Delaware. There is a legal obligation, and I am here advocating a change in the law.

Mr. GRUENING. Did I understand the Senator correctly to say that he thought there was something improper or not quite right about a person who was employed elsewhere, such as in Washington, drawing payments as an absentee landlord for not growing a crop on his farm?

Mr. WILLIAMS of Delaware. I did not say it was improper or illegal. The law as written and as it was passed by Congress provides that absentee owners may collect the benefits just the same as bona fide family farmers. Amendments were offered on the floor of the Senate to correct that situation. Congress in its wisdom, or otherwise, rejected those amendments. No limitations were placed on the payments. That which those men are doing is 100 percent legitimate, and Congress is responsible.

The criticism should be against Congress. Having passed the law, then, if we do not like it, we have been negligent in not correcting it.

The Secretary of Agriculture before our committee has repeatedly called this situation to our attention and has urged the enactment of legislation which would correct it. He testified before the committee again the other day urging that we do something to change the law—at least to eliminate some of these abuses which I am mentioning today. When I say "abuses," I say it advisedly, because while I think the practice is wrong, even though Congress authorized it, I do not say it is immoral or illegal.

Mr. GRUENING. But the Senator would say it is undesirable.

Mr. WILLIAMS of Delaware. Absolutely. I think the law should be corrected. I do not think the money of the taxpayers should be used to finance or

encourage absentee ownership. There is nothing wrong with absentee ownership. I defend it. I own a farm, and I defend the right to do so. But the Federal Government should not be called upon to help me operate the farm. I am not a farmer and do not claim to be. I do not think absentee owners should be defined as farmers. I do not think anyone who earns his living away from the farm should be defined as a farmer. I do not think a farm program of any description is needed to subsidize such persons.

Mr. GRUENING. Does the Senator mean that a person living away from the farm should forego the receipt of the taxpayers' money to pay him for not growing something?

Mr. WILLIAMS of Delaware. I do.

Mr. GRUENING. Would the Senator wish to comment upon the newspaper reports about the payments made to President Eisenhower for not growing corn or wheat on his farm at Gettysburg?

Mr. WILLIAMS of Delaware. Such payments would have been eliminated by amendments which I offered in the Senate but which were rejected by Congress.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. O'MAHONEY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE NECESSITY FOR A NATIONAL FUEL AND ENERGY POLICY

Mr. O'MAHONEY. Mr. President, I wish to state for the record a situation which seems to exist with respect to the effort the Government has made, through Congress and the executive branch, to prevent the domestic petroleum and coal industries from being undermined by the imports of crude petroleum and petroleum products.

FORMER EFFORTS TO CURB IMPORTS HAVE FAILED

Early last week I introduced a bill to provide that Congress should seek ways and means to stimulate the domestic production of petroleum and coal. The bill was sponsored by a large number of Senators and was referred to the Committee on Interior and Insular Affairs. The reason for the introduction of the bill was that, although an effort has been made since 1955 to place restraints upon the importation of petroleum, including residual fuel, the effort has not been a success. Congress, in extending the Reciprocal Trade Agreement Act in 1955, included a provision authorizing the President to establish restraints, provided it appeared to him that the national security was involved. As it happened, a finding to that effect was made. The Special Cabinet Committee on Energy Supplies and Resources Policy, under the chairmanship of the then Director of Defense Mobilization, reported in that year as follows:

Since World War II importations of crude oil and residual fuel oil into the United States have increased substantially, with the result that today these oils supply a significant part of the U.S. market for fuels.

The committee believes that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense. There would be an inadequate incentive for exploration and the discovery of new sources of supply.

The purpose of the bill which my cosponsors and I introduced was to do precisely what the report of the Director of Defense Mobilization advised, namely, to provide an adequate incentive for the exploration and the discovery of new sources of supply both of petroleum and of coal. That has not been done.

Two orders have been issued as a result of the provisions contained in the extension of the Reciprocal Trade Agreements Act. Both of them have resulted in increasing supplies.

Perhaps it is proper to say that these orders restrained the rapid increase which previously was occurring. But there were substantial increases, so that today the position of the domestic petroleum and coal industry is far worse than its position was in 1955, when the action was taken.

ANOTHER FINDING REGARDING NATIONAL SECURITY REQUESTED BY OCDM

Recently, however, because the two previous orders were not adequate to do the job which the Congress and the Executive desired to do—because the President signed the bill Congress proposed—the Department of State and the Department of Defense called upon the Government agency which deals with the national security, the OCDM, to make another finding. Great secrecy has been thrown around the findings of that group. It was announced at the White House, last week—as I recall, it was either on Friday or on Saturday morning—that a report had been received from Governor Hoegh, who is the head of this agency. The newspapermen asked at the White House for the text; but they were not given the text. They asked whether Governor Hoegh had freedom to speak. The reply was that he has the freedom of speech, but that there was very much doubt as to whether he would answer any questions on this subject; I am told that was the response by Mr. Hagerty, the press representative of the President, to the press representatives of the public, when they sought the news and appeared at the White House.

COOPERATION OF CABINET COMMITTEE SOUGHT IN PRESERVING OIL AND COAL INDUSTRIES

On last Thursday, following the introduction of this bill, I submitted, for printing in the RECORD, a telegram which I had sent the previous day to the Chairman of the President's Cabinet Committee on Oil Imports. The chairman happens to be the Acting Secretary of Commerce, Adm. Lewis Strauss. My telegram was dated February 25, and I shall now read it, as it appears on page 3032 of the CONGRESSIONAL RECORD of Thursday, February 26, 1959:

While Prime Minister Macmillan was sightseeing in Moscow yesterday the Soviet dictator shocked him and all the western allies by the restatement of Khrushchev's threat that any violation of the borders of East Germany would be regarded by the Soviet Union "as the beginning of war." The Soviet troops leave Berlin before the end of May. We must be ready for the consequences. If war comes we must have a self-sufficient supply of petroleum and coal in full development. Mandatory controls can be successfully imposed only by Congress.

Mr. President, I interrupt the reading of the telegram to say that that was an expression of my opinion. The controls which had been in existence were voluntary ones, and voluntary only. They were criticized by many very able lawyers, both in and out of the Government, on the ground that they would undoubtedly result in violations of the Sherman Antitrust Act, because voluntary agreements among alleged competitors cannot very successfully be made without resulting in violation of those laws, even though, when the voluntary agreement is made, the representatives of the President do not gather all the importers together in one room.

I return now to the telegram which I sent to Secretary of Commerce Strauss. After saying, in the telegram:

Mandatory controls can be successfully imposed only by Congress—

I went on to say:

I invite you, as Chairman of the President's Cabinet Committee dealing with this matter, to cooperate with the Members of Congress who sponsor the legislation introduced this week in both the Senate and the House "to encourage the development of petroleum and coal reserves within the United States."

CABINET COMMITTEE CHAIRMAN PREFERS TO HANDLE PROBLEM BY EXECUTIVE ORDER

Mr. President, yesterday there came to my office a letter from the Secretary of Commerce. The letter is dated February 27, 1959, and is addressed to me. It reads as follows:

I appreciated receiving your telegram of February 25, 1959, with reference to the necessity of adequate control of imports of petroleum and its products in the interest of national security. Your message reached my office during my absence from the city on yesterday, hence the delay in this acknowledgement.

As you are undoubtedly aware, the Director of the Office of Civil and Defense Mobilization is about to submit to the President his most recent findings with reference to the impact of the present rate of importation of petroleum and petroleum products on the national security, as required by section 8 of the Reciprocal Trade Agreements Extension Act of 1958.

The Special Committee To Investigate Crude Oil Imports, established by the President, is prepared to act promptly upon whatever findings are forthcoming and expects that such action will be recommended to the President very shortly after the submission of those findings. If mandatory controls appear to be indicated, it is my belief that they can best be instituted by Executive proclamation for the reason that they would be more flexible than legislation if changes as a result of experience with the

program later should appear desirable in the national interest.

With best regards,

Sincerely yours,

LEWIS STRAUSS,
Secretary of Commerce.

EXECUTIVE IS ASSUMING LEGISLATIVE POWER

Mr. President, I regard this letter as wholly in harmony with the developments which have been taking place in recent years, by which the executive branch of the Government tends to assume to itself the lawmaking power which is granted by the Constitution of the United States to the Congress. This letter is a polite and gentlemanly one, and it is very clear. I think the last paragraph deserves rereading—as follows:

> The Special Committee To Investigate Crude Oil Imports, established by the President, is prepared to act promptly upon whatever findings are forthcoming and expects that such action will be recommended to the President very shortly after the submission of those findings. If mandatory controls appear to be indicated, it is my belief—

That is the expression of the opinion of Secretary Strauss—

> that they can best be instituted by Executive proclamation for the reason that they would be more flexible than legislation if changes as a result of experience with the program later should appear desirable in the national interest.

Mr. President, I think Members of Congress will be interested to know what "flexibility" means in the mind of the Secretary of Commerce. How does it happen that in this hour of international turbulence, which perhaps threatens a third world war, the Secretary of Commerce addresses to a Member of the Senate of the United States a letter in which the Secretary expresses the opinion that executive action is preferable to legislative action because the former is more flexible.

IMPORTS PRODUCED BY AMERICAN CAPITAL SENT ABROAD AFFECT DOMESTIC PRODUCTION

Now, the history of this importation business, with which the domestic industry has been struggling shows a great reduction in the production of coal and petroleum within the continental borders of the United States. Because of that reduction, the producers of these commodities are finding themselves threatened by the increasing importation of these products made abroad by American capital, sent to foreign countries to seek out new petroleum fields, to build new refineries, to make petroleum products, and to export those products into the United States, where the market here will make profits for the importers.

Many years ago the Supreme Court of the United States, in the well known Standard Oil case, ordered the Standard Oil Co. to divide into its several units. It was regarded by the Supreme Court of the United States, in the decision handed down by Chief Justice White, as a combination in restraint of trade, which was forbidden by the Sherman Act, and so those companies had to divide. Within a very short time some of those units which had formerly been combined in the original Standard Oil Company of New Jersey became more wealthy, from the production of petroleum in the United States, than the Standard Oil Co. itself had been before the decision.

These companies, units created as a result of the decision by the Supreme Court, have been combining abroad, have been uniting again abroad, to develop the petroleum which they import into the United States, and which the President's Committee on Energy Resources found are threatening the security of the United States. In spite of that finding, these imports are being brought into the country, inundating our own productive capacity.

I regard this letter which has been read as a challenge to the constitutional right of Congress to legislate. We do not yet know what former Governor Hoegh has reported to the President, but rumor has it that a new order has already been written, that it may be mandatory; but nobody knows what the limitation will be. We do know that the importation, for example, of residual fuel, to the detriment of the coal-producing States of the Union, has been rising under the voluntary program. But nobody knows, and it may be that even the President himself may not know, what the President's committee has recommended.

WE ARE FACED WITH SERIOUS THREAT OF WAR

Oh, the Secretary of Commerce says it is something more flexible than Congress could do. Mr. President, ever since the Deputy Premier of Soviet Russia was in the United States making his tour from State to State, and meeting the people here and meeting the people there, the United States has been concerned, and all of the free world has been concerned, with the Berlin threat. Khrushchev made the threat, and he set a deadline. He said that if the Western allies crossed the boundaries of East Germany to enter Berlin, where the Western allies have the right to be, it would be an act of war. I do not think the dictator of the Kremlin will go that far, but I call attention to the fact that if it be an act of war, and if the Soviet Union undertakes to use the superior manpower which it has available close to Berlin to resist the rightful entry of the Western allies into West Berlin, such entry will mean war.

MODERN WAR IS ECONOMIC WAR

Long before we began to talk about the cold war now going on between Soviet Russia and the United States, everybody knew that modern war is economic war. We know that when we reflect on the huge debt which this Nation carries.

The people of the United States contributed to the war effort by the purchase of savings bonds, by the purchase of long-term Treasury bonds, by complying with rigid regulations that denied them the use of commodities like gasoline. When we were engaged in war, the people were ready to pay all the sums necessary. They were ready to bear all the sacrifices necessary to fight for human freedom.

FAILURE OF OIL PROGRAM HAS ALLOWED INCREASED IMPORTS RATIO

Now we note that, by reason of the failure of the voluntary oil program, the production of these vital national security fuels—petroleum, petroleum products, and coal—in the United States has been seriously obstructed.

I have exact figures, Mr. President, which are perhaps worth reading into the RECORD at this point.

All efforts to limit crude oil imports in the interest of national security have so far depended upon voluntary compliance. Although this program succeeded in halting the rapid upward rise of such imports, nearly a million barrels still enter this country every day. This total is still far in excess of national security limits. Moreover, the increases in imports of other petroleum products, particularly finished and unfinished products other than residual oil, have more than offset this slight decline in crude oil imports.

During the last six months of 1958 these other petroleum products constituted about 17 percent of total petroleum imports. As a result, the ratio of total petroleum imports to domestic crude oil production has continued to rise since the attempted restrictions of 2 years ago. In 1957 imports were 22 percent of domestic production. In 1958 they were slightly in excess of 25 percent. In January 1959, total petroleum imports soared to nearly 2 million barrels daily, almost 30 percent of domestic crude oil production.

IMPORTERS OPPOSE ANY RESTRICTIONS

The showings which have been made in presentations to Governor Hoegh by some of these importers make it clear that they are absolutely opposed to any restriction whatsoever. Some of these companies have filed their briefs to say that the importations must not be limited and that we must continue without voluntary or mandatory controls. That is an argument which is good enough for days of peace, Mr. President, but it is not an argument which is good enough for days of threatened war.

FUEL IS NEEDED TO WAGE WAR

Everybody knows that fuel—coal, petroleum, gasoline, residual fuels, and all the rest of these products—is essential to the manipulation and the use of modern weapons of war, not only tanks and airplanes but also missiles, whether they be intercontinental ballistic missiles or intermediate range missiles. They all need fuel.

We now know, we cannot deny the fact, that Soviet Russia leads the United States in the production of intercontinental ballistic missiles, missiles which can be fired from Soviet territory to reach this territory of ours. But the Secretary of Commerce says he does not want Congress to have any part in determining the policy that the United States should follow. If Congress shall not have any part in it, how can the people of the United States be sure and certain that what is being done in their defense is proper? It is common knowledge in Washington that those who

would like to make huge profits in the American market and who want the imports to come in without any restraint whatsoever are concerned more with the private profits of their companies than they are concerned with the defense of the United States. We cannot prepare for a shooting war or carry on an economic war by allowing our domestic industries to be undermined and destroyed by imports from abroad. If we allow this decline in production to continue, as it has been, we will lose the required know-how.

OIL INDUSTRY FAR WEAKER THAN IN 1955

I should like to continue with a line or two from the statement.

During 1958 domestic petroleum demand was 2.8 percent above that for 1956. Despite this fact, domestic crude oil production dropped from 7,151,000 barrels per day in 1956 to 6,704,000 barrels per day in 1958. That was a decline of 6.3 percent. Exploration and discovery also declined during 1957 and 1958. Exploratory crew activity was 19 percent below the 1956 level, and even further below the 1953 peak. The number of exploratory wildcat wells drilled declined for the second consecutive year to a level 26 percent below that for 1956. Total well completions were 16 percent below 1956, representing more than 9,000 less completions than in the 1956 record year of 58,000. Total footage drilled was also 16 percent below the 1956 level, and the number of active rotary rigs was down more than 26 percent.

Because of our failure to curb excessive imports, the industry is far weaker now than it was when the President's Cabinet Committee made its recommendations in 1955.

FLEXIBLE PROGRAM OF EXECUTIVE HAS HURT THE COUNTRY

"Flexible" is the word the Secretary of Commerce uses, and the Secretary is Chairman of the President's committee. He says "flexible." Well, flexible though Executive action has been, it has been destructive of the vital needs of the United States of America domestically and internationally. Our industry and our Defense Establishment are both suffering. More than that, Mr. President, with the petroleum industry declining and the coal industry also declining, income by way of taxes to the Treasury of the United States is falling.

These two industries and all who are engaged in them are waiting with bated breath for the announcement from the White House as to what the oil import program will be—as to what will be this flexible program which can vary up and down. Unless it is very much more successful than the two orders heretofore issued, it will be flexible to the detriment of domestic industry.

CONGRESS, NOT EXECUTIVE COMMITTEES, WAS GIVEN LEGISLATIVE POWER

Let the RECORD show that when the fathers of the Constitution established this Government they created the Congress in the very first article of that instrument, and declared in that instrument that all legislative power granted therein was to be vested in a Congress of the United States—all legislative power, not a part of it, not even any small part to make it more flexible.

The theory of the founders of this Government was that the people, through their representatives, are the source of legislative power—not a couple of Presidential committees operating behind closed doors.

I have been told by some of the representatives of those who have been protesting against the failures of control that when they have gone to a high official in one of the departments and asked to know what was going on, they were told, "We cannot tell you, because that information must be released by the President."

When they asked, "Shall we make our presentation to the President?" they were told "No, no, no. Do nothing of the kind."

LEGISLATIVE POWER IS EXERCISED BEHIND CLOSED DOORS BY ANONYMOUS APPOINTEES

We are drifting into the delegation of legislative power into the hands of the Executive, to be exercised in the name of the Executive by persons whom no one knows. We know the names of the members of the President's Committee, but who are the experts who gather around and draw the flexible mandatory plan? And who will be favored in the flexible mandatory plan?

The only proper way is the American way. The American way is stated in the Constitution. It is a danger to the United States of America and the aspirations of all mankind for freedom and control over their own Government when a Cabinet officer writes to a Member of the U.S. Senate who, with colleagues, has introduced legislation to impose mandatory control, and says in that letter:

> If mandatory controls appear to be indicated, it is my belief that they can best be instituted by Executive proclamation for the reason that they would be more flexible than legislation if changes as a result of experience with the program later should appear desirable in the national interest.

THE PEOPLE ELECTED CONGRESS TO MAKE THE LAWS

The Congress of the United States will be in session for a long time if the international crisis continues as it now exists. The Congress of the United States is composed of men and women elected by their people in their States and districts. They are trusted by the people in their States and districts to have a knowledge of the needs of the country and the ability, in open hearings, the record of which can be read by all, to define, among other matters, the pattern of restriction of oil imports.

If the United States wishes to have a program to stimulate and develop its fuel resources in this great period of threatened war, which may destroy the very freedom for which we all aspire, the Congress must not permit the Executive to assume legislative power on the basis of the argument that the Executive is more flexible. We can look to Nikita Khrushchev and realize that executive power is more flexible; but it is not more free.

OUR FORM OF GOVERNMENT MUST BE PRESERVED WITH ITS SEPARATION OF POWERS

If the system which our forefathers gave to the world—a government of the people with divided powers—is to be preserved, we must preserve it here, and we must preserve it against the claims of executive representatives who think they are better than the Congress elected by the people of the United States.

They are not better, Mr. President. There may be many more able men, perhaps, but that I doubt. For years I have been associated with Members of the Congress on the floor of the House and in the Senate. I have associated with men in the executive branch of the Government; and I know that in both branches of our Government there are many men of high ability and patriotism.

But we are drifting because we do not hold our minds and hearts steadfast upon the nature of government by the people. That is the sort of government which the Soviet dictators wish to destroy. We cannot successfully prevent its destruction if we imitate some of their policies by disregarding the open forums of the Senate and the House and allowing our policies to be determined behind the closed doors of any agency of the executive branch of Government.

As I say these words, the President has not yet issued the new order. It may be lying on his desk. I do not know. Some of the members of the press think it is, and some of them think it is not. But that is not the way to show the peoples of the world who aspire to free government that we want free government. We cannot show them that we want free government by allowing these policies to be determined behind closer doors by the Executive act of a President who is operating upon the advice, not of the Congress, elected by the people, but of private advisers whom he has selected, and who in many instances have never passed the test of the ballot.

If we stand before the aspiring peoples of the world as the leader of free government, we must make sure that we have a government in which the Congress and the Executive work together, and not a government in which spokesmen for the Executive say to the Senate and the House, "You are not flexible enough for us."

Mr. HRUSKA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HRUSKA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MEDICAL CARE FOR THE AGED

Mr. HICKENLOOPER. Mr. President, a plan of treatment for persons over 65 years of age with reduced incomes and modest resources constitutes one of the Nation's most urgent health problems. This has become true because of the great number of such persons who are living longer, thanks to

medical advances. There are, in fact, 15 million persons who are over 65 years of age living in the Nation today. In Iowa there are approximately 300,000, the highest percentage—11 percent—of senior citizens per capita in the Nation.

On December 4, 1958, the house of delegates of the AMA passed the following resolution:

That the American Medical Association, the constituent and component medical societies, as well as physicians everywhere, expedite the development of an effective voluntary health insurance or prepayment program for the group over 65 with modest resources or low family income; that physicians agree to accept a level of compensation for medical services rendered to this group, which will permit the development of such insurance and prepayment plan at a reduced premium rate.

The Iowa State Medical Society, on February 22, made Iowa the first State to offer at reduced rates to its senior citizens medical and surgical insurance protection through its Blue Shield plan. Such coverage will be offered for an average charge of $2.50 a month for each subscriber if he is in a low income bracket. Additionally, insured families with incomes up to $5,400 will have the full cost of certain medical-surgical expenses reimbursed. Previously, this full-type protection was offered to families with incomes under $3,600. A $5,400 income in Iowa is almost the median family income. Therefore, it is expected that 50 percent of Iowans are presently eligible for full coverage under this plan. In the last few months commercial insurance companies have also brought onto the market new and exciting noncancelable contracts to cover aged persons.

I congratulate the Iowa physicians for these progressive and positive actions. This is Iowa's second major positive step in solving the vexing problem of improved health services to all citizens of the State. Last summer, in cooperation with the Iowa Hospital Association, the Iowa Nursing Home Association, and the Iowa State Dental Society, the Iowa State Medical Society formed the Joint Council for Care of the Aged.

It is my view that local programs of this kind, wherein all medical groups participate, will prevent the growth of government-dominated medicine. A well-written editorial of the Des Moines Register corroborates and better states my views, and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Des Moines Register, Feb. 27, 1959]

MEDICAL CARE FOR AGED

The Iowa State Medical Society deserves congratulations for its new program of low cost medical insurance for persons over 65 who find it a hardship to pay medical bills.

The society is taking the lead in attempting to solve one of the country's most vital health problems. The plan calls for some financial sacrifice on the part of doctors. It's an experiment which, if successful in Iowa, probably would be adopted in many other States.

The plan was approved Sunday at a special meeting of the house of delegates of the medical society. Some details remain to be worked out, but the program is expected to be put into effect by April.

The insurance will be written by Blue Shield, the nonprofit insurance plan of the medical society, and will be available to persons over 65 years of age. If the combined income of a man and his wife is less than $3,000 a year, the couple will be entitled to full-service coverage. An individual can qualify if his income is under $2,000.

The cost to the insured will be about $2.25 to $2.75 per person per month. Income from insurance charges would not be sufficient to pay in full the medical fees which doctors ordinarily charge. So the doctors will accept lower fees to be set by Blue Shield. The fees are expected to cover only overhead costs.

Blue Shield is working with Blue Cross to provide insurance which will cover both hospital and doctor expenses for the elderly at a cost of $6.50 to $7 a person a month. Blue Cross insurance, sponsored by the Iowa Hospital Association, covers hospital costs.

The elderly, who have retired from jobs that paid them a regular income, have less ability to pay medical and hospital expenses than people of working age. But they are more likely to incur heavy medical expenses. It's tragic if they don't get medical care because they can't afford it or if they are forced to become charity patients.

It is estimated that 210,000 of the 300,000 Iowans over 65 years of age will be eligible to take part in the new Blue Shield program. A high percentage of them now have no protection against heavy medical and hospital costs that may come at any time. A 1957 survey made by the National Opinion Research Center of the University of Chicago showed that nationally five out of every eight persons 65 and over had no health insurance protection.

A nation as prosperous as the United States, with highly skilled medical doctors and splendid hospitals, will not just do nothing about the problem of health care for its senior citizens in low income brackets.

Unless programs of the kind the Iowa society plans can be made truly effective, the Government will sooner or later take over the problem in response to general public demand. This is what the American Medical Association fears and why it recommended last December that doctors reduce fees to persons over 65 who have low incomes.

The AMA is bitterly opposed to the Forand bill in Congress. This calls for the Government to provide free hospital, surgical and nursing home insurance for everyone eligible for social security benefits. It would cost $835 million a year. The AMA fears it would lead to free health care for everyone and Government control of medicine.

The Iowa society is taking the best way to fight socialized medicine. It recognizes the gravity of the problem of providing health care to the elderly at costs they can afford and is attempting to do something about this.

Mr. HICKENLOOPER. Mr. President, the editorial estimates that the annual cost of the Forand bill will be $835 million. The sponsor of the bill estimates a more realistic cost of $2 billion a year.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KEFAUVER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CAUSES OF INFLATION

Mr. KEFAUVER. Mr. President, I think I need not discuss the evils arising from the inflation with which the Nation is now confronted. We are all familiar with the distress that is being caused to persons having fixed incomes, especially to women who must leave their families and work in order to supplement the family income.

The fact that the United States is losing considerable of her foreign market, due to the fact that prices have risen so high that in some areas we have not been competing as successfully as we have in the past, is well known to Members of Congress, to the Executive, and to the public.

I have been heartened by the interest which Members of Congress, both in the Senate and the House, have shown in trying to deal with this problem. It has been encouraging to note so much interest shown and action indicated by the Chief Executive, even though it may come at a late time.

The chief commodity to be considered in determining whether or not there will be inflation is steel. One thing which is quite certain, and on which I think most economists agree at present, is that this is not a demand, cushion inflation. It is not being caused to any great extent by the existence of an amount of money in excess of the commodities which can be purchased. There is an ample supply of commodities of almost every kind.

Even though business has improved, many plants at present are not operating at full capacity. In other words, the business concerns could produce more. We know also that there is continuing large unemployment, about 5 million persons being out of work. So there is unused plant capacity and widespread unemployment.

Mr. President, this is not inflation of the classic pattern. What we have been seeing is a rise in prices. On the one hand, labor says that its wages have not increased to any great extent beyond the increase in productivity.

Business says that most of the price increases have been due to wage increases. But, Mr. President, whoever is to blame, whoever is responsible for bringing about the present situation, is a matter of history.

The important point is that we do something about it now. The important need is that in the Congress and in the executive branch of the Government, including the procurement agencies, and in business and in labor, the facts be obtained, and that then there be unity in an effort to prevent a continuation of the merry-go-round we have been on during the last few years.

We know that in 1957, when the price of steel rose substantially about the first of June, there was a round of inflation. We know that in the case of the prices of almost all other products, the price of steel is an important factor—for instance, in the case of the price of automobiles, farm machinery, tin cans, hairpins—almost all of which use substantial amounts of steel. Thus, when the price of steel rises to any extent, that price rise tends to pyramid as it is passed from

industry to industry. So, when the price of steel rose about $6 a ton about the middle of August of last year, there was another round of inflation.

Mr. President, I think both business and labor should look at the situation in this way: It does not benefit labor a great deal to obtain a little larger wage increase than the increase in productivity if within a few months there is to be a general rise in prices, with the result that the dollar buys less, so that the wage increase which labor has secured is wiped out by an increase in the cost of the things that those who labor have to buy.

On the other side of the picture, it does not help business any to demand very large profits and to have profits set at high levels, and then to have the prices of all other commodities geared to that amount of profits, if in securing those profits, and thus in being able to pay larger dividends, the value of the profits and the dividends is reduced by means of a decline in the value of the dollar.

Furthermore, Mr. President, industry has another big stake in this matter, in that, somehow, it must keep down prices, in order to retain its foreign market and, if possible, to increase its foreign market.

So both industry and organized labor has a great stake in attempting to stabilize prices, in order to stop the leapfrog inflation we have been experiencing.

Of course, as I have previously indicated, the greatest sufferers from such inflation are those who are not in either industry or labor; the greatest sufferers are those on fixed incomes, pensions, and life insurance policies, who do not have the bargaining power of labor union members, and have not saved enough money to tide them over difficult times.

So, Mr. President, it is of tremendous importance to our economy that everyone do what he can to see to it that there is not an increase in the price of steel at the expiration of the steelworkers' contract the end of June of this year.

I have proposed that the steelworkers not request a wage increase larger than the increase in their productivity, with the increase in productivity to be determined, if necessary, by an impartial board. That would be step 1. I have proposed that the steelworkers not request more than that, provided the steel companies do not increase their price for steel. But if, notwithstanding that position, the steel companies nevertheless were to increase their price for steel, then of course the unions would be free to try to secure their share of such an increase.

Mr. President, I know this may not be satisfactory or agreeable to Mr. McDonald—in fact, he said it was not—and I know it may not be agreeable to Roger Blough, the chairman of the board of the United States Steel Corp., or to others in the steel industry. But I hope that before the time runs out they will give the matter further consideration and prayerful consideration, because it seems to me that this is a time when something must be done, and it is a time when something can be done. The uncontroverted record is that in the 1940's there was a more-than-average increase in the price of unregulated products which are not produced by concentrated industries; there was an above-the-average increase in the price of textiles, lumber, and farm products, which are competitive, and the price of which is usually regulated by the demand. But since 1953 the situation has been the other way around; in other words, the large price increases have been in the case of the products of the concentrated industries and the administered industries—for instance, in the case of steel and products which use steel, rubber, copper, aluminum, and other industries in which there is concentration.

The prices of the products of the competitive industries have fallen below the average price. The prices of textiles, farm products, and other products are below the average price. Only the fact that the prices of farm products and textiles have been below the average price has kept the cost-of-living index from rising any more than it has. The one industry in which prices have shot away up above the average price is the steel industry, which is substantially responsible for the large price increases in the products of other administered industries.

Mr. President, this matter is not just the business of Mr. Blough or Mr. McDonald; it is the public's business. Whether there is another round of inflation will depend on what they do. Whether we shall have a sound economy will depend upon the statesmanship they exhibit in the coming few months.

It should also be pointed out that the U.S. Government is, of course, the largest customer of all lines of business. The Government is having trouble balancing the budget. We know that the cost of munitions is rising frightfully, and the cost of everything else the Department of Defense procures—whether oil, steel, tanks, or guns—has been rising. So today we have to spend much more for Department of Defense "hardware" than we have had to spend at any other time during peace. Therefore, if the present situation continues, it will mean higher taxes and a lower standard of living for everyone.

I think I should point out that whereas we have had an increase of approximately $36 billion in the gross national product—according to the 1958 figures—as compared to the situation in 1955, if that increase is measured in terms of 1955 dollars we find that we have had an increase of only $1 billion in the gross national product.

Today the average person receives, in terms of money, a little bit more than he was receiving in 1955—that is to say, if we make the measurement in terms of the 1958 dollar or in terms of the value of the dollar in recent times. But if we make the measurement in terms of the value of the dollar in 1955, then we find that every person in the United States is $7 worse off today than he was in 1955. So it will not help business or labor or anyone else to have the present spiraling inflation continue.

I know that labor and business may not like to have Members of the Senate talk about this problem. We have given this matter a great deal of study and consideration in the Antitrust and Monopoly Subcommittee, of which I have the privilege of being chairman, but I feel we must speak out, because I think this is the No. 1 issue before the American people today. I think we have a formula at the present time—at least, if the steel industry will hold down prices and if the workers will not ask for any wage increase over productivty increase—that will in the long run be more beneficial to management and to labor than if there were continued what has been happening in the past. I think the influence of public opinion must be brought to bear in this very important matter.

I know this may not happen, and I hope it will not happen, but we have been hearing more lately about wage and price controls that we have in some time. As a matter of fact, some people are advocating such controls as perhaps the only way by which we can control inflation. However, wage and price controls cannot be put into effect only in the steel business or as to workers in a particular industry, because wage and price controls would have to be put into effect for products which go into steelmaking. I think the result of price and wage controls all through our economy would be a frightful thing. There would be regimentation which might have a tendency toward socializing our industries.

During a time of war we can, of course, take extreme measures of that kind; but we certainly do not want to take such a step now. If inflation continues on and on and on, and the demand for such controls becomes greater and greater, we may come to such controls one of these days. I think now is the time to do something about the problem.

I think I should point out that for 26 months before the entry of the United States into World War II we, of course, had the kind of demand pressure which makes for inflation—a scarcity of goods and a great deal of money. There was a tendency to inflation in such a condition. The President of the United States used the force of his office, by means of conferences, by public appeals, by appeals to the patriotism of business and labor. Without any sanction of law, for 26 months, before the OPA was actually put into law by statute, the price line was held without very many price increases at all. There was very little increase in ceiling prices during that time.

Leon Henderson, I believe, was the OPA Administrator, but there was no law establishing the Administration. The President of the United States and others used the force of their offices to try to hold down prices and to bring reason to business and labor. They were successful in doing it. I am encouraged by some of the statements showing the concern of the President over the problem of inflation. I hope President Eisenhower and the members of his administration will use their great influence and great effort in holding down, not merely wages, but prices, in an effort to stabilize economic conditions during these very precarious times.

Mr. President, in the New York Times of Friday, February 27, 1959, there was published a very good article on this subject, discussing the whole problem, written by that very able columnist, Arthur Krock, which I ask unanimous consent to have printed in the RECORD following my remarks; and I yield the floor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STEEL WAGES, PRICES, AND THE COST PLATEAU
(By Arthur Krock)

WASHINGTON, February 26.—A question asked of the President at his news conference yesterday, and his reply, lifted the curtain only briefly on the next great inflationary threat to the domestic economy. This threat will be resolved or will materialize in the outcome of the oncoming wage negotiations in the steel industry.

If, as Senator Kefauver proposed and the President accepted in principle, steel wage adjustments are made on the criterion of equivalent increases in productivity, no new and powerful inflationary pressure should be the consequence of the negotiations. But if wages are again increased in disregard of the productivity factor, on the cozy pay-and-pass-on-to-the-public technique which industry has often employed to avert a strike, the general price scale will make a jet takeoff from the plateau where for some time prices have been resting from their long and steady climb.

The last similar threat, was dispelled when, after a technical strike lasting only 6 hours, the Ford Motor Co., and the United Automobile Workers made a 3-year contract that became a pattern for the industry. The outcome was creditable to the company and Walter Reuther because, though it resulted in some automobile price increases, these were governed by the moderation and sense of responsibility for maintaining a stable economy that prevailed on both sides of the bargaining table.

In a recent speech John S. Bugas, the Ford official in charge of labor relations, reviewed the negotiations, and much of his comment is worth the serious attention of the steel industry and its unions. He explained there had been better communication and a better organized exchange of views among the major auto companies on industrywide issues raised by the UAW. And he said:

"In the no-contract period the union made every effort to see to it that no incident developed into a serious strike * * * the company was equally diligent to avoid incidents which would lend credence to a charge that it sought to provoke a strike. * * *

"If we had ignored the public interest * * * made unlimited concessions and raised wages or other labor costs beyond reasonable levels, we would have contributed to another cost-push inflationary surge, higher prices with consequent buyer resistance, lessening of production and * * * unemployment. On the other hand, if we resisted union demands just because they were union demands, and took an uncalled-for strike * * * it could contribute just as much to an economic slowdown."

Here is a responsible formula for the steel companies and their unions, an important part of which was the close liaison maintained between the three major automakers during the long negotiations in 1958. This—plus the tempering effect on the union of the recession and unemployment—helped greatly to produce a much more moderate settlement and price increase than for many years had resulted from similar negotiations. Moreover, if the steelmakers allow themselves to be pushed out of the same position to avoid a strike they will also put Reuther on the defensive in his own union for making the reasonable settlement he did. And that could end in galloping inflation after violent strikes and a disastrous loss of essential production.

But if the steelmakers are to erect as firm and comprehensive an industry front as the three major auto companies did against the original excessive UAW demands (in 1956 Reuther set his immovable goal at something above an increase of 18½ cents an hour), they need to know in advance what the role of the Federal Government will be in event of a strike. Often in the past the Government, with factfinding boards, high-level conciliation and other activities for the purpose of reopening plants, has put heavy pressures on essential industry to yield to unreasonable and inflationary union demands. If the steelmakers are left to conclude that this would happen again they might well prefer the easier course of acceding to such union demands, and passing the costs on to the public, to being forced to do this very thing by Government pressure.

Also, if the steel unions come to this same conclusion, that a strike—perhaps even the imminence of a strike—will bring this Government pressure on the industry, they will be humanly tempted to get excess profit from it.

Mr. PROXMIRE. Mr. President, I commend the senior Senator from Tennessee, who is leading the fight on inflation. I think he is doing an excellent job, not only in the instant case which he has just discussed with such persuasiveness, the battle to keep prices of steel from rising, but also he has done an outstanding job in focusing national attention on the peculiar nature of the present inflation. The present inflation is an administered price inflation, an inflation which is taking place in a few industries, a few industries in which a very few companies have the power and the discretion to increase prices, and have been doing so.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. KEFAUVER. I thank my distinguished colleague for showing his interest in the subject and for the statement he has just made. I know he has studied this matter carefully, and he has given me and members of the Antitrust and Monopoly Subcommittee many worthwhile suggestions in connection with the whole problem. We are grateful to him.

Mr. PROXMIRE. I thank the Senator.

TAX EVASION

Mr. PROXMIRE. Mr. President, this morning's Washington Post carries a story by Philip Stoddard Brown entitled "Tax Audit Reveals Evasion Is Rife." This article discloses that our Federal Government is losing some $2.6 billion yearly through tax evasion.

The article suggests to my mind that Congress would do well to explore the advantage to our Federal Government and to honest taxpayers of an investment in additional tax auditors. In my State of Wisconsin we have found that income tax auditors repay the Government $20 for every dollar they cost by uncovering tax evasion and requiring delinquents to pay up. Of course, in addition, more vigorous enforcement puts all tax evaders on notice that the Internal Revenue Bureau means business. At a time when our Government urgently needs more revenue to balance the budget, this may be an extremely helpful lead.

Mr. President, as a result of this excellent article, I am writing to the Internal Revenue Department to determine precisely what percentage of income tax returns are audited, the costs of auditing, the recoveries traceable to tax auditing, and the additional revenue that may be derived from doing a far more thorough income tax auditing job than is being done now.

Mr. President, I ask unanimous consent that this article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX AUDIT REVEALS EVASION IS RIFE

(By Philip Stoddard Brown)

The cost of those great social events of Washington's winter season that get reported in the society pages of this newspaper are, I should guess, tax deductible in most cases—or paid for by governments out of tax revenue. Certainly in these days of steeply progressive income taxes few people can afford to spend $5,000, or even $1,000, of after-tax income for a single party.

But it piques my curiosity how some private hosts and hostesses justify such expenses as ordinary and necessary and directly related to their business or professional duties.

What a difficult task Internal Revenue has to determine the motives and circumstances of entertainment. Should 60 rather than 70 percent of the expenses of a dinner party 4 years ago be allowed as a deduction? Was business or pleasure the main purpose of a trip to New York or Paris?

MAZE OF DEDUCTIONS

The whole domain of tax deductions has become a weird maze. The taxpayer can't even be expected to produce receipts for contributions at church services, for taxi fares and gratuities, or for every meal, telephone call, business magazine, and postage stamp. How, then, can Internal Revenue decide, within wide limits, whether stated deductions were actual expenses? And even where receipts exist, are they valid and do they represent a business, rather than personal, expenditure?

Well, you can't run a tax-collecting outfit by simply accepting the word of each taxpayer. Yet, in many cases you have to do just this. You can't probe behind every figure.

Taxable income might be defined, I suppose, as income that is taxed. Often it is just a plausible figure. Sometimes it is a compromise suggested by the Internal Revenue examiner. The arithmetic must be accurate and the books should be in order, but there's lots of scope for doubt, argument, and estimation in the original entries for expenses, depreciation, and receipts. Was that $5.27 for a business luncheon on April 16, 1956, with Joe Bloke, a lawyer and old friend, really to discuss tax problems or just social?

To be sure, there can be no question about many receipts and expenditures. But where expenses equal, say, 90 percent of receipts, taxable income can be cut in half by neglecting to count 3 percent of income and inflating expenses by slightly over 2 percent. Tax liability is reduced by more than 50 percent.

The amount of understatement of taxable income in the returns of business and professional people may surprise many salaried people whose returns are fairly straightforward.

TWO AND SEVEN-TENTHS BILLION DOLLARS MORE

Recently, the results of a very special audit by Internal Revenue of 36,000 representative returns for 1949 were published. The audit indicated that a similar examination of 6.7 million business and professional returns for that year would have increased net profits by 20 percent and yielded $2.7 billion additional revenue.

Some indicated changes in net profit from that reported are as follows:

	Percent Increase
Manufacturing, total	17.5
Lumber and wood products, except furniture	39.4
Printing and publishing	13.5
Transportation, communication and utilities	25.9
Trade, total	26.4
Department stores, general merchandise and dry goods	36.5
Package liquor stores	37.4
Eating and drinking places	32.0
Automobile dealers	25.6
Lumber, building supplies and coal	11.5
Services, total	11.2
Hotels	36.7
Barber and beauty shops	8.9
Auto repair and garages	21.4
Amusement services	87.1
Professional and social services, total	7.1
Accountants	2.9
Physicians	7.0
Dentists	8.1
Legal services	4.3
Finance, insurance and real estate	10.9
Insurance agents	7.1
Real estate	21.0
Construction, total	18.5
Agriculture and related industries, total	23.1

If the average firm engaged in amusement services understates its taxable income by 46 percent, its perturbing to speculate how much understatement individual firms must get away with. Actually, evasion is greater even than the above figures indicate.

The understatement of profit indicated by this audit is only what fairly experienced examiners might uncover. As Marius Farioletti, who prepared an excellent paper on this remarkable audit, makes clear: Additional errors would have been found if more time had been allowed for examination and if the examiners had been even more experienced. Also, it is likely that there are errors that even the most experienced examiners would not uncover.

CONSULTANTS SWELL GROSS NATIONAL PRODUCT

The income tax has become so complicated—as well as messy—that more and more small proprietors and professional people retain tax accountants. Last week, a friend told me that he pays $1,500 a year to his tax consultant. "My business isn't very big, but there are a lot of tax angles. It's a case of either my attending to my business, or reading all those reports of a tax advisory service that I used to subscribe to, but not both."

Well, the hiring of tax consultants—like the hiring of anybody else—increases gross national product. So the more the better. Gross national product hasn't been rising so fast of late, despite all that research and development going on in Detroit to achieve a shatteringly new look for the 1961 and 1962 model cars.

One returning vacationer is reassuring. He tells me that Florida can be counted on to boost gross national product this year. One of many projects is the building of a mile-long sandy beach along the coral reef of Key West, by trucking sand from somewhere way off. So maybe we can keep ahead of the Russians, after all—provided they don't step up their hiring of accountants even faster and don't haul around even more sand.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO THURSDAY NEXT

Mr. DIRKSEN. Mr. President, pursuant to the order previously entered, I move that the Senate adjourn until 12 o'clock noon on Thursday next.

The motion was agreed to; and (at 5 o'clock and 21 minutes p.m.), in accordance with the order previously entered, the Senate adjourned until Thursday, March 5, 1959, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 2, 1959:

FARM CREDIT ADMINISTRATION

The following-named persons to be members of the Federal Farm Credit Board, Farm Credit Administration, for terms expiring March 31, 1965:

Glen R. Harris, of California.
J. Pittman Stone, of Mississippi.

U.S. DISTRICT JUDGE

Harold K. Wood, of Pennsylvania, to be U.S. district judge for the eastern district of Pennsylvania, vice William H. Kirkpatrick, retired.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 2, 1959:

DEPARTMENT OF THE ARMY

Courtney Johnson, of Indiana, to be Assistant Secretary of the Army.

IN THE ARMY

The nominations of Richard G. Ament and 393 other officers, which were confirmed today, were received by the Senate on February 12, 1959, and may be found in the Senate proceedings of the CONGRESSIONAL RECORD for that date under the caption "Nominations," beginning with name of Richard G. Ament, which is shown on page 2260, and ending with the name of Harold D. Zumbro, which appears on page 2262.

IN THE NAVY AND MARINE CORPS

The nominations of Louis R. Abraham and other officers for appointment in the Marine Corps and in the Navy, which were confirmed today, were received by the Senate on February 2, 1959, and may be found in full in the Senate proceedings of the CONGRESSIONAL RECORD for that date, under the caption "Nominations," beginning with the name of Louis R. Abraham, which occurs on page 1585, and ending with the name of Toshiko Motomatsu, in the Navy, which occurs on page 1592.

IN THE REGULAR AIR FORCE

The nominations of John W. Wichman and 198 other officers for appointment in the Regular Air Force, which were confirmed today, were received by the Senate on February 12, 1959, and may be found in full in the Senate proceedings of the CONGRESSIONAL RECORD, under the caption "Nominations," beginning with the name of John W. Wichman, which occurs on page 2262, and ending with the name of Larimer J. H. Lenhardt, which is shown on page 2263.

The following additional nominations for temporary appointment, in the Air Force as brigadier generals, were confirmed today.

U.S. AIR FORCE

The following-named officers for temporary appointment in the U.S. Air Force under the provisions of ch. 839, title 10, of the United States Code:

To be brigadier generals

Col. Benjamin G. Holzman, 1102A, Regular Air Force.
Col. Richard L. Bohannon, 19067A, Regular Air Force, Medical.
Col. James G. Moore, 19074A, Regular Air Force, Medical.
Col. Edward J. Hopkins, 1180A, Regular Air Force.
Col. Frank W. Gillespie, 1215A, Regular Air Force.
Col. Frederick R. Terrell, 1221A, Regular Air Force.
Col. Norman L. Peterson, 1291A, Regular Air Force.
Col. Charles E. Jung, 1037A, Regular Air Force.
Col. Richard P. Klocko, 1327A, Regular Air Force.
Col. Neil D. Van Sickle, 1442A, Regular Air Force.
Col. Robert F. Worden, 1510A, Regular Air Force.
Col. Robert G. Ruegg, 1620A, Regular Air Force.
Col. Loren G. McCollom, 1632A, Regular Air Force.
Col. Robert H. Curtin, 1643A, Regular Air Force.
Col. Joseph T. Kingsley, Jr., 1702A, Regular Air Force.
Col. William E. Creer, 1742A, Regular Air Force.
Col. Joseph H. Moore, 1836A, Regular Air Force.
Col. Eugene B. LeBailly, 1920A, Regular Air Force.
Col. Jerry D. Page, 2052A, Regular Air Force.
Col. Stephen D. McElroy, 2058A, Regular Air Force.
Col. Ariel W. Nielsen, 2067A, Regular Air Force.

(NOTE.—The above appointments were made during the last recess of the Senate.)

HOUSE OF REPRESENTATIVES

MONDAY, MARCH 2, 1959

The House met at 12 o'clock noon.

The Reverend Wayne E. Scott, pastor, Hillcrest Baptist Church, Hillcrest Heights, Md., offered the following prayer:

Our dear Heavenly Father, we pause just now for divine power and divine guidance. We thank Thee for our great American heritage, but, most of all we thank Thee for our Christian heritage, made possible by Thy gift in Christ.

We are grateful for the privilege of making laws, but God help us to realize that the highest law is God's law. Might each law that is passed here today have as its purpose the purpose to bless people.

We pray for every single person that is here, for the people that they represent. Give to each Congressman and Congresswoman wisdom beyond all human degree. We pray, our dear Heavenly

Father, that each shall have the spirit of Christ as they participate in the discussion on the floor here and in smaller groups.

Help each of us to realize that the highest mandate is not the will of the people but the will of God. We pray for these and other leaders as they face the Berlin crisis and other crises in the future. God, give them the right answer. Help and teach us to realize that the ultimate purpose in life is to make preparation for the life to come.

These things we ask in Christ's name and for His sake. Amen.

The Journal of the proceedings of Thursday, February 26, 1959, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries.

CREDIT ON FEDERAL INCOME TAXES FOR CONTRIBUTIONS TO PUBLIC OR PRIVATE EDUCATIONAL INSTITUTIONS

Mr. GRANT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. GRANT. Mr. Speaker, I have today introduced legislation providing credit on Federal income taxes for contributions to public or private educational institutions.

This is a new approach not only to the educational problem but indirectly to the integration problem as well and if adopted will injure no one but would be helpful to all in that it will assure the operation of all schools, whether public or private and whether integrated or not.

We all realize that something must be done in this crisis. I am sure that the majority of this Congress does not want Federal control of education; however, there are danger signs along the road that we are traveling. Let us examine the problem and ascertain just what we are interested in. Is it to help the education of the youth of this land, or is it to take over both the minds and social life of the children of this Nation? If it is only to help education, then we should be willing to allow a credit against the tax. It is just that simple.

The proposed legislation would place a limitation upon such credits by providing that such credit for any 1 taxable year shall not exceed 30 percent of the taxpayer's adjusted gross income for such year in the case of an individual or 15 percent of the taxpayer's adjusted gross income for such year in the case of a corporation, or $1,000, whichever is greater.

OFFICE OF ALIEN PROPERTY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce.

To the Congress of the United States:

I transmit herewith, for the information of the Congress, the Annual Report of the Office of Alien Property, Department of Justice, for the fiscal year ended June 30, 1958.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 2, 1959.*

SUBMISSION OF BUDGET ESTIMATES

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. ULLMAN. Mr. Speaker, I have today introduced for appropriate reference legislation which would require the submission of budget estimates so as to separate operating expenses from capital investments. I am pleased to report that Senator WAYNE MORSE, Democrat, of Oregon, is introducing an identical bill in the other body.

The legislation I am proposing underlines the current confusion which exists with regard to the annual budget. At the present time, both operating expenses and capital investments are intermingled and no distinction is made between the two. I think it is high time we organize our national budget in a more businesslike way.

Every private corporation operates with full knowledge of which outlays are made for current operating expenses and which are made for investments. Under the present budget system, we have no knowledge of such elementary facts.

It is the purpose of the bill which Senator MORSE has introduced in the other body and I have introduced here to provide such information. Let us see which expenditures will bring a definite repayment into the Federal Treasury and list them separately from those bringing no fixed return.

I want to point out that our legislation will in no way upset the present budgetary form. Rather, it will provide an additional statistical tool designed to aid in the evaluation of proposed expenditures.

Mr. Speaker, I am very hopeful that as the Joint Economic Committee carries on its valuable study of the problem of inflation, it will also focus attention on the value of establishing a capital budget. I think such a study would do much to clear up some popular misunderstandings about the budget, about its state of balance and about its effect on inflation.

OREGON'S MAJESTIC DOUGLAS-FIR

Mr. PORTER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, the State tree of Oregon is the majestic Douglas-fir. It is a prime factor in my State's economy. The Fourth Congressional District contains more Douglas-firs than any other part of the world. From the Douglas-fir comes such items as lumber, plywood, structural timbers, and other products vital to the Nation's housing industry.

In this Oregon centennial year it is possible for every interested person to have a Douglas-fir of his own.

The Blitz-Weinhard Co., of Portland—Oregon's only and largest brewery—has embarked on a modest international program. The company supplies without cost upon request an "Oregon Do-It-Yourself Kit." Each kit contains a Douglas-fir seedling about 2 years old. The fir is about a foot high.

Today it is my privilege to present to each Member of the House and to the Members of the other body a Douglas-fir. It is no good except for planting at this time. It needs water and tender loving care and will fit nicely in a flowerpot for a time. We Oregonians hope all of you will join us in this modest reforestation plan which has enlarged our "Keep Oregon Green" slogan to "Keep the World Green."

THE FLEMMING FORMULA

Mr. METCALF. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. METCALF. Mr. Speaker, Secretary Flemming, of the Department of Health, Education, and Welfare, has brought to Congress a new proposal which he says will help meet the shortage of more than 140,000 classrooms. However, in order to build the 75,000 classrooms that Mr. Flemming says will be built under his formula for Federal aid, State constitutional and statutory debt limits will have to be revised, and basic tax concepts of many States will have to be changed.

Mr. Flemming's talents are being wasted by being confined to education. He should go to work for Clark Griffith. He could announce that the Senators will top the American League and win at least 110 games. This would be done by permitting the Senators to use a modified 37-millimeter gun instead of a pitcher at all home games and to field 11 men instead of the usual 9. Of course, such a procedure would require a change in the rules of baseball and consent from the other American League clubowners in addition to the perfection of a Flemming pitching machine. But those are minor problems. The question still arises, however, whether behind such pitching and fielding the Senators

would get enough runs to win half their games. Even the Flemming formula has not solved that problem yet.

CEREMONIES DEDICATING THE MODERNIZED WASHINGTON POST OFFICE

Mr. REES of Kansas. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. REES of Kansas. Mr. Speaker, I am calling the attention of Members of the House to the invitation of Postmaster General Summerfield to attend ceremonies dedicating the modernized Washington Post Office at 10 tomorrow, Tuesday. The post office building is located near the Union Station. This facility is the finest and most modern post office in the world. We hope you will take a few minutes' time to go down and inspect the building as well as attend the ceremony. Transportation will be provided. Buses will be located between the two office buildings ready for loading at 9:45. Postmaster General Summerfield is desirous that Members attend the ceremony and inspection of the building. The ceremony and inspection will last approximately 30 or 40 minutes. We hope you can be there. I know the Postmaster General will appreciate it.

TAXPAYERS' REVOLT AGAINST EXCESSIVE SPENDING

Mr. MACK of Washington. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. MACK of Washington. Mr. Speaker, I have good news this morning for economy-minded Members of Congress. My news is that a grassroots revolt has started in the State of Washington against excessive and extravagant spending by the State and Federal Governments.

I received 344 letters this morning from citizens of my district urging less extravagant spending by Congress and demanding that no new State or Federal taxes be levied on taxpayers.

Press reports from my State report our Governor has received 10,000 of these taxpayers' revolt letters. Other Congressmen from my State have been flooded with these taxpayer revolt letters.

I hope this grassroots taxpayers' revolt will spread to other States. If it does, the prospects of a balanced budget will be vastly improved.

INTERPARLIAMENTARY JUNKETEERS

Mr. GROSS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. Mr. Speaker, when it was announced last Wednesday that the Interparliamentary Union would hold a meeting, the minority leader [Mr. HALLECK] asked a few questions concerning the organization. It was my observation that he did not get very lucid answers, and I would like to report further to the minority leader.

The meeting was held, as scheduled, last Friday morning and a goodly crowd was there. At that time I attempted to ascertain whether the American delegation of House and Senate Members, who flew with the greatest of ease to the meeting in Rio de Janeiro last summer, voted for some of the resolutions which were adopted which would send more money abroad and saddle more obligations upon the already well-drained U.S. Treasury. Those present were either unwilling or unable to answer.

But there was no unwillingness on the part of many of those present to offer themselves as sacrifices to some nice fat junkets to foreign lands later this year—at the taxpayers' expense, of course.

Mr. Speaker, the Interparliamentary Union represents junketeering at its congressional best, and I will have more to say on the subject when the appropriation bill comes along—if the appropriation for that cause is not buried so deep that it cannot be found.

INTERPARLIAMENTARY UNION

Mr. COOLEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Speaker, when the gentleman from Indiana [Mr. HALLECK], the minority leader, inquired about the Interparliamentary Union last week, I referred him to the remarks of the late Honorable Dan Reed of New York whose final report on the activities of the American group of the Interparliamentary Union was inserted in the RECORD on the day before he passed away. If the gentleman from Iowa or the minority leader or any other Member of Congress is interested in the affairs of the Interparliamentary Union, I commend Mr. Reed's remarks to your consideration. When the gentleman from Iowa made an inquiry at the group meeting last week, he was then advised by me that while I was not at the Rio meeting that I would obtain for him a copy of the minutes of the meeting showing exactly how the American delegation voted on all resolutions that were presented at that time, and I shall still be glad to comply with the gentleman's request.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. GROSS. The gentleman is well aware that any number of people were present at that meeting who were at the Rio meeting and who could have answered the question.

Mr. COOLEY. The gentleman propounded his inquiry at or near the end of the meeting. I am sure nothing was done in secret. I am sure all information can be obtained.

Mr. GROSS. They had not even elected officers.

REPORT ON H.R. 1011

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce may have until midnight to file a report on the bill H.R. 1011.

The SPEAKER. Is there objection?

There was no objection.

CONSENT CALENDAR

ACQUISITION OF ADDITIONAL LAND ALONG MOUNT VERNON MEMORIAL HIGHWAY

The Clerk called the first bill on the Consent Calendar, H.R. 2228, to provide for the acquisition of additional land along the Mount Vernon Memorial Highway in exchange for certain dredging privileges, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. SAYLOR. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

HANDLING OF STUDENT FUNDS IN INDIAN SCHOOLS OPERATED BY THE BUREAU OF INDIAN AFFAIRS

The Clerk called the bill (H. R. 3648) to regulate the handling of student funds in Indian schools operated by the Bureau of Indian Affairs, and for other purposes.

The Clerk read the title of the bill.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior may authorize officials or employees of the Bureau of Indian Affairs to accept and to disburse deposits of funds of students and student activity associations in schools operated by the Bureau of Indian Affairs. Such deposits shall be accounted for under rules and regulations prescribed by the Secretary of the Interior.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TO REVISE, CODIFY, AND ENACT INTO LAW TITLE 39, UNITED STATES CODE, ENTITLED "THE POSTAL SERVICE"

The Clerk called the bill (H. R. 2339) to revise, codify, and enact into law title 39 of the United States Code entitled "The Postal Service."

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, reserving the right to object, last week the members of the objectors' committee on both sides of the aisle had inserted in the CONGRESSIONAL RECORD a statement as to the rules which the members of the objectors' committee would endeavor to follow in this Congress in the consideration of bills placed on the Consent Calender. If I read correctly the report of the bill now before the House it perhaps is unfortunate that the report bears certain language which would appear to cause the legislation to be ineligible for favorable consideration on the Consent Calendar. There appears in the report at page 2, the beginning of the last paragraph, the following statement:

Several of the Departments suggested a number of substantive changes to existing law. Many appear desirable to the Post Office Department. For the most part, however, they are not within the scope of legislation of this nature, but are more properly handled in legislation considered by the legislative committee having jurisdiction of the subject matter.

I would like to ask the gentleman from Louisiana [Mr. WILLIS], if the Committee on the Judiciary made any changes in the substantive law in the measure which they now present to us.

Mr. WILLIS. I would say the policy of the committee is to deliberately avoid making changes in substantive law. In the passage which the gentleman read many changes are recommended, but a number of those changes we had to object to on the very basis of avoidance of making substantive changes. I would say to the gentleman that these bills are not brought out overnight. In some cases it takes years to codify a particular title. All Government agencies, in this instance particularly the Post Office Department, and even the Department of State, where foreign mail is involved, all interested department agencies collaborate in the preparation of these bills. The Bureau of the Budget must approve. The committee, in this instance the Committee on Post Office and Civil Service, handling the legislation in point, collaborated with our committee, and the final work is an agreement all the way around to be sure that we try to carry out the very point that the gentleman is inquiring about.

Mr. ASPINALL. As I understand then, there are no real important changes made in the substantive law.

Mr. WILLIS. That is correct.

Mr. ASPINALL. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

Mr. WILLIS. Mr. Speaker, in view of its length and, as usual, I ask unanimous consent that the bill be not printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentlemen from Louisiana?

There was no objection.

The Clerk read the committee amendments, as follows:

Page 52, in the chapter analysis strike out "3555. Reduction in salary step or level." and insert "3555. Reduction in salary step.";

Page 102, strike out the catchline and the first sentence of section 3555 reading:

"§ 3555. Reduction in salary step or level

"The Postmaster General may reduce in salary step or salary level an employee whose efficiency falls below a fair standard or whenever it is necessary for purposes of discipline."

and insert:

"§ 3555. Reduction in salary step

"The Postmaster General may reduce in salary step clerks or carriers whose efficiency falls below a fair standard or whenever it is necessary for purposes of discipline."

Page 168, in the first lines of paragraphs (1) and (2) of § 6409, strike out the word "continental."

The purpose of the committee amendments is to insure that the existing law is restated without substantive changes.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DESIGN OF THE U.S. FLAG

The Clerk called the bill (H.R. 75) providing for the design of the flag of the United States.

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 1 and 2 of title 4, United States Code, are amended to read as follows:

"§ 1. Flag; design

"The flag of the United States shall have thirteen horizontal stripes of the same width, alternate red and white, with a union consisting of as many white stars on a field of blue as there are States in the Union.

"§ 2. Same; additional stars; dimensions

"(a) Whenever a new State is admitted to the Union the President shall cause a plan to be made setting forth the positions of the stars in the union of the flag. He shall also cause to be fixed the proportionate dimensions of the constituent parts of the flag.

"(b) The addition of each new star to the union of the flag shall take effect on the 4th day of July next succeeding the admission of a new State.

"(c) All flags of the United States on hand on the 4th day of July next succeeding the admission of a new State may be continued in use until unserviceable, but all flags manufactured for use after that date should conform to the design and specifications adopted pursuant to this section."

SEC. 2. Items 1 and 2 of the chapter analysis of chapter 1 of title 4 are amended to read as follows:

"Flag; design.

"Same; additional stars; dimensions."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DEFINING THE TERM "ORGANIZE" AS USED IN THE SMITH ACT

The Clerk called the bill (H.R. 2369) to amend section 2385, title 18, United States Code, to define the term "organize" as used in that section.

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2385 of title 18, United States Code, is amended by adding at the end thereof the following new paragraph:

"As used in this section the term 'organize,' with respect to any society, group, or assembly of persons, includes the recruiting of new members, the forming of new units, and the regrouping or expansion of existing clubs, classes, and other units of such society, group, or assembly of persons."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EXTENSION OF ESPIONAGE LAWS

The Clerk called the bill (H.R. 1992) to repeal section 791 of title 18 of the United States Code so as to extend the application of chapter 37 of title 18, relating to espionage and censorship.

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 791 of title 18, United States Code, is repealed.

SEC. 2. The analysis of chapter 37 of such title is amended by deleting the following: "791. Scope of chapter."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ADDITIONAL PEREMPTORY CHALLENGES IN CIVIL CASES

The Clerk called the bill (H.R. 2978) to amend section 1870 of title 28, United States Code, to authorize the district courts to allow additional peremptory challenges in civil cases to multiple plaintiffs as well as multiple defendants.

Mr. FORD. Mr. Speaker, reserving the right to object, I would like to ask a question of a member of the Committee on the Judiciary, this bill having come from that committee. I notice that this legislation, or legislation comparable to it was pocket vetoed by the President a year ago, primarily for the reason that section 2 was added by the other body. In my examination of H.R. 2978 I see no such provision at the present time.

Mr. WILLIS. That is correct. The pocket veto addressed itself to a nongermane section attached to the bill in the other body. That section is not in this bill.

Mr. FORD. This is the bill as it was approved by the House a year or two ago?

Mr. WILLIS. Yes. It is requested by the Department of Justice and approved by the Bureau of the Budget.

Mr. FORD. Mr. Speaker, I withdraw my reservation of objection.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section

1870 of title 28, United States Code, is amended to read as follows:

"§ 1870. Challenges

"In civil cases, each party shall be entitled to three peremptory challenges. Several defendants or several plaintiffs may be considered as a single party for the purposes of making challenges, or the court may allow additional peremptory challenges and permit them to be exercised separately or jointly.

"All challenges for cause or favor, whether to the array or panel or to individual jurors, shall be determined by the court."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COLORING MATURE ORANGES

The Clerk called the bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of Citrus Red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances.

Mr. BOLAND. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

LIMITATION ON LIEUTENANT GENERALS IN THE MARINE CORPS

The Clerk called the bill (H.R. 3323) to establish a peacetime limitation on the number of lieutenant generals in the Marine Corps.

Mr. GROSS. Mr. Speaker, reserving the right to object, I have several question I should like to ask concerning this bill. First of all, as I understand, this would give the rank of lieutenant general permanently to three officers of the Marine Corps.

Mr. KILDAY. That is correct, but will the gentleman allow me to explain the bill briefly?

Mr. GROSS. Certainly.

Mr. KILDAY. In the first place, in the Officer Personnel Act of August 1947, provision is made for two lieutenant generals in the Marine Corps. That same law, the Officer Personnel Act, contains a provision which suspends the number during periods of national emergency. The national emergency declared incident to Korea is still in effect, and the Marine Corps now has on active duty five lieutenant generals.

After the Officer Personnel Act of 1947 was passed Congress changed the authorized strength of the Marine Corps by which they were limited to two lieutenant generals. The total authorized strength of the Marine Corps was set at 7,000 officers and 100,000 enlisted men. Subsequent to that time the present law fixing the strength of the Marine Corps was passed placing the strength at 400,000. That was after Congress had fixed the number of permanent lieutenant generals at two. The strength of the Marine Corps was increased very materially to consist of not less than three combat divisions and three air wings with a strength not to exceed 400,000, and, importantly, we changed the organization of the Marine Corps to require that they maintain three divisions and three combat wings.

So the bill would make provision for five permanent lieutenant generals. It would not increase the number of lieutenant generals now on duty in the Marine Corps nor, very importantly, would it change the total number of generals in the Marine Corps. These extra three would be charged to the total strength of the Marine Corps.

Mr. GROSS. You would make the three grades of lieutenant general permanent?

Mr. KILDAY. That is correct; it would become permanent. It will increase the permanent lieutenant general strength in the Marine Corps from two to five.

Mr. GROSS. What is the present strength of the Marine Corps? It is about 185,000?

Mr. KILDAY. I think 188,000 or a little less.

Mr. GROSS. In 1942 they had 143,000 approximately?

Mr. KILDAY. Yes.

Mr. GROSS. In 1942 there were 137 colonels and above in the Marine Corps; in 1959 there are 573 colonels and above in the Marine Corps.

Let me ask the gentleman why the number of colonels and generals has increased over three times the total Marine Corps growth?

Mr. KILDAY. First of all, may I say that while I do not have the figures before me as to the strength of the Marine Corps in 1942, for the purpose of this discussion I am willing to accept the figures that the gentleman from Iowa has mentioned.

There are a number of reasons for having more officers in these grades now than even during wartime, primarily because of the action of the Congress of the United States in passing the Officer Personnel Act of 1947. We were attempting at that time to prevent the loss of many highly trained and experienced officers.

We did a number of things to provide for that. The first thing we did was to increase the percentage of star ranks. We increased the percentage of generals and admirals from one-half of 1 percent to three-quarters of 1 percent of the total officer strength. In addition to that, we provided that men who had reached the grades of lieutenant colonel and colonel could remain on active duty for stated periods of 26 and 30 years total service. Those two things are material here.

In addition, there was at that time in the Marine Corps a situation as to colonels that the Commandant of the Marine Corps would not permit anyone to be appointed as a colonel who had less than 18 years of service. There were not enough available for that grade.

Mr. GROSS. By increasing the number of lieutenant generals from two to five does that mean a general increase in numbers of Marine Corps officers?

Mr. KILDAY. No. As I stated before, there is a provision in the Officer Personnel Act as to the total number of generals which the Marine Corps may have. That is not increased by this bill. So there can be no increase in the total number. There can only be the increase in the permanent law of the number of lieutenant generals now on active duty.

Mr. GROSS. Would there be increases in the grades of a number of officers if these lieutenant general grades are made permanent?

Mr. KILDAY. No; that would not be true. That is controlled not only by the percentage distribution of the Officer Personnel Act but by the Arends Act known as the Officer Grade Limitation Act.

Mr. GROSS. Can the gentleman give me any idea of the ages of the officers that are here proposed to be promoted?

Mr. KILDAY. Offhand, I do not know. They are, of course, the most senior generals of the Armed Forces. I would say somewhere in their fifties.

Mr. GROSS. Somewhere in their fifties?

Mr. KILDAY. I think they are all in their fifties or thereabouts.

Mr. GROSS. Are any of these officers who would be given permanent rank drawing flight pay?

Mr. KILDAY. I think there is one.

Mr. GROSS. A newspaper account the other evening said two. I wonder if that figure is correct.

Mr. KILDAY. There may be two, I would not be certain about that, but, of course, this bill does not affect them.

Mr. GROSS. If this legislation is not passed these three lieutenant generals will eventually have to go back to major generals; will they not?

Mr. KILDAY. No. They will finally retire and they will retire in the highest grade satisfactorily held. So they would retire as lieutenant generals.

Mr. GROSS. The Navy has a habit of promoting its officers a grade just before they retire, is that not correct?

Mr. KILDAY. No; I do not think so. The Senate has control of confirmations, of course, and they have been riding pretty close herd on them with reference to that.

Mr. GROSS. Well, I doubt they are riding such close herd as the gentleman thinks.

Mr. KILDAY. I think what the gentleman has in mind is another provision of law that we repealed some time ago where men, because of a combat citation in their record in the past, were retired one grade higher than the grade which they actually held at the time of their retirement. But, in 1949 we repealed that as to any person for any commendation earned after December 31, 1946.

Mr. GROSS. But there is nothing to prevent promotion just before retirement, is there, in the law today? There is nothing to prevent promotion, so that these gentlemen, if given the permanent grade of lieutenant general, could be,

before retirement, promoted to full general and draw that retirement?

Mr. KILDAY. The gentleman is confused. These men, having served a sufficient period of time already as lieutenant generals, no matter in what grade they may be serving at the time they retire, will retire as lieutenant generals, the highest rank satisfactorily held. That is true of every member of the military service, where he serves in a temporary grade higher than his permanent grade, if he serves satisfactorily in that grade, and that is usually defined to be 6 months of service in that grade, and then he retires in his temporary grade with the pay of his temporary grade, so this would not affect that at all.

Mr. GROSS. Does the gentleman think that we should, under the circumstances that exist in this country, logically add three more permanent lieutenant generals to the Marine Corps?

Mr. KILDAY. We are not adding a thing to the Marine Corps, and under the conditions which exist in the country and in the world today, I do not believe we should take any action that would indicate any diminution in the power or striking ability of the Marine Corps. I do not think we can afford to do that.

Mr. GROSS. Why do you want to give them this permanent rank?

Mr. KILDAY. Well, I would say to the gentleman, why should we not? In 1947, with a total strength of 100,000, we limited them to two lieutenant generals. At that time the authorized strength was 100,000 enlisted men and 7,000 officers. We changed it materially here in the Congress. We provided that the Marine Corps shall at all times consist of three combat divisions and three combat wings, so that when you increase the organizational strength and the number of organizations, when you provide for the number of divisions, then you have got to have the higher ranking officers in order to command that organization. That would be true even though your total strength was less. If you have three divisions at half strength, you would still have to have three division commanders, just as you have to have three division commanders when you have three divisions at full combat strength.

Mr. GROSS. May I ask the gentleman this question? If these three officers were to retire, would they retire as major generals or lieutenant generals?

Mr. KILDAY. Lieutenant generals.

Mr. GROSS. As lieutenant generals?

Mr. KILDAY. Yes.

Mr. GROSS. They would be retired without any further action by Congress?

Mr. KILDAY. That is true under present law.

Mr. GROSS. I want to go back to this flight pay business for just a moment, because I think that very serious attention needs to be given by the Congress.

Mr. KILDAY. I do not understand why the gentleman refers to flight pay in connection with this.

Mr. GROSS. Because the whole cost is going to be greater. The gentleman knows if these three are elevated to lieutenant generals, they will retire under any condition, at least as lieutenant generals, and the cost to the taxpayers will be greater.

Mr. KILDAY. I believe the gentleman is thinking of an old law.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice so that I may have more time to study it.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MAINTENANCE AND TRAVEL EXPENSES OF JUDGES

The Clerk called the bill (H.R. 2909) relating to the maintenance and travel expenses of judges.

Mr. FORD. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The SPEAKER. That is the last eligible bill on the Consent Calendar.

COLORING ORANGES

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the bill (S. 79) to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of Citrus Red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances, be recommitted to the Committee on Interstate and Foreign Commerce.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, the bill, S. 79, which passed the Senate unanimously, was reported favorably and unanimously by the Committee on Interstate and Foreign Commerce on February 23, 1959.

Through inadvertence, the calendar bill print of S. 79, as reported by the Committee on Interstate and Foreign Commerce—Union Calendar No. 13—is incorrect. The print set forth the bill as it was introduced in the Senate rather than the bill as it was passed by the Senate. The bill as passed by the Senate contains a number of amendments which were requested by the Food and Drug Administration to make clear beyond any doubt that this legislation is temporary emergency legislation which will become inoperative with the enactment of general legislation concerning food color additives.

My request for recommittal of S. 79 is made for the purpose of having a corrected calendar bill prepared.

THE LATE HON. J. HARRY McGREGOR

The SPEAKER. The Chair recognizes the gentleman from Ohio [Mr. HESS].

Mr. HESS. Mr. Speaker, all Members of the House and especially those of the Ohio delegation, I am sure join with me in the tribute of respect to the memory of our former colleague, J. HARRY MCGREGOR, who has been called from us.

HARRY MCGREGOR was born in Ohio, was educated in its public schools and colleges, and served in the First World War from Ohio. He was a member of the Ohio Legislature from 1935 through 1940. During his service, he was floor leader and Speaker pro tempore.

He came to the House of Representatives on February 27, 1940, to succeed our late colleague, the Honorable William Ashbrook; and served successively from the 77th Congress through the 85th Congress.

HARRY MCGREGOR'S interest was the welfare of the people of the district he served so long. He was interested in the needs of the older people. He was interested in the farmers of Ohio and of the Nation. He was interested in the veterans of our wars; and through his own military service, was a member of all of the veterans' organizations of Ohio.

His was a long, active, and useful life. He gave unstintingly of his time and his enormous capacity for work, to the improvement of the condition of the people of his district and of the State and country.

Unsung work for public welfare and the common good may lack glamor; but what is lacked in glamor was filled for him with the affection, understanding, and good will of the people in whose causes and for whose welfare he labored so unselfishly.

We of the House of Representatives shall miss his calm, wise, and sober counsel, his willingness to give of himself; and his stanch and steadfast loyalty to the causes for which he stood.

Now he rests in his beloved State of Ohio in the midst of friends and family. We, his colleagues, share the void to which everyone feels at the passing of so fine a friend, so dedicated a public servant of us all.

To his children, we extend our deepest sympathy, confident that the memories HARRY MCGREGOR left will be a consolation to his bereaved and a warm and affectionate memory to the people whom he served. I have lost a friend and Ohio a loyal and courageous son.

Mr. Speaker, I yield to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, I wish to join with the chairman of the Ohio delegation [Mr. HESS] in paying tribute to our former colleague, the late lamented J. HARRY MCGREGOR.

It was my high privilege to know HARRY MCGREGOR and his fine family; his wife, his son, and two daughters, throughout almost a lifetime.

I believe our first acquaintance, between Mr. McGREGOR and myself, came about just after World War I had ended. He served the State of Ohio ably and well in the Legislature where his services were such that when the Congressman from the 17th Ohio district then sitting as a Member in this Chamber passed away, Mr. McGREGOR was selected, and elected in a special election, to represent that great Ohio district here. He did so, for practically 20 years, in a way which won him great renown and high respect.

HARRY McGREGOR in private life engaged in highway construction and other contracting work. That experience fitted him especially well to serve as a member of the House Committee on Public Works, where he was one of the real leaders in giving to America not only a splendid interstate highway system, many river and harbor improvements, the St. Lawrence Seaway, and numerous effective flood control projects in various States. The country as a whole is indebted to him for his service in these particular fields. In fact, these great public works, which have been made effective since HARRY McGREGOR came to the Congress, stand as memorials to him today.

His sudden passing last October came as a shock to all of us who knew him, loved him, and served with him here in the House of Representatives. We have all suffered a great loss, but that loss is an especial one for the Ohio delegation, and for the people of our Ohio. To his two daughters, his son, and his grandchildren, we extend our deepest and most sincere sympathy in the great loss that has been theirs.

Mr. McCULLOCH. Mr. Speaker, will the gentleman yield?

Mr. HESS. I yield.

Mr. McCULLOCH. Mr. Speaker, I rise with heavy heart to say a few words about my good friend, the late J. HARRY McGREGOR, longtime Member of Congress from Ohio, who left us much too soon.

HARRY and I were close friends and legislative colleagues for almost a quarter of a century. We were both members of the Ohio House of Representatives from early 1935 until HARRY was elected to Congress in early 1940. During that time, he was minority whip and then majority leader. HARRY was an energetic whip and was a persuasive and effective majority leader. He seldom, if ever, failed in his goals as a majority leader.

During his service in the Ohio House of Representatives, he sponsored and was the leader who caused to be enacted into law, school and highway proposals of lasting benefit to Ohio.

His interest in the conservation of our natural resources and his tireless and effective work for flood control is well known to all leaders in this field.

Finally, those who served with him in the Congress well know his fine leadership in all public works, and particularly, in the field of public highways.

An enthusiastic and effective legislator and a great and good friend has left us. Thousands will knowingly and countless millions will unknowingly miss a legislator who has done so much for so many. His fine family has the sympathy of friends everywhere.

Mr. GARY. Mr. Speaker, I rise to join my colleagues in paying tribute to our dear lamented friend, HARRY McGREGOR. He was a dedicated Congressman. He served his district, State, and Nation well.

I had the pleasure of having many contacts with him at various times. Although he was of a different political persuasion, he was always considerate, courteous, and gracious. He endeared himself to the Members of this House, on both sides of the aisle. We all mourn his loss which will be severely felt in this House.

Mr. HESS. Mr. Speaker, I yield to the gentleman from Louisiana [Mr. BROOKS].

Mr. BROOKS of Louisiana. Mr. Speaker, I rise at this time to place a wreath on the grave of our departed friend, HARRY McGREGOR. I knew HARRY well. I saw him often in the course of his work, although my committee assignment was different from that of our departed friend. It was always a pleasure to work with him. He was kindly, friendly, always courteous, and he was most competent. I worked especially with him on the highway program to which he devoted many, many long, tireless hours of effort in most unselfish service to the country that he loved so well.

There is a saying asked in the form of a question to the effect "Where, oh where, are the snows of yesteryear?" The snows of yesteryear are gone. They are melted. They are in the streams and forests and farmlands and the richness of the Nation."

So likewise the ability, the sincere achievements, great energies of this great American HARRY McGREGOR who has left us are to be found in the achievements that he supported and the accomplishments which he passed on to the people of America. Now our citizenry is richer and more capable and happier because of his having been a Member of this great body.

Mr. HESS. Mr. Speaker, I yield to the gentleman from Ohio [Mr. HENDERSON].

Mr. HENDERSON. Mr. Speaker, I desire to join with his friends in paying tribute to HARRY McGREGOR, for many years our colleague here in Congress.

Geographically, HARRY McGREGOR was closer to me and my district than any other Member of Congress, because he lived in the extreme southern part of his district, just adjacent to my own district.

In many other respects HARRY McGREGOR was closer to me than any other Member of Congress. When I first met him I formed an opinion that stayed with me throughout our association together, that here was a man, dedicated to his district and to his Nation, determined in the course that he would take. I liked him and his manner.

HARRY took great pleasure in life. One thing that set him apart was the jollity, the laughter, and the smile of HARRY McGREGOR. We saw it on his face and we knew it was in his heart. You could watch HARRY McGREGOR come into a room with that smile as if by magic, it was imparted to all who watched his face. They became filled with the same sense of lightheartedness that so characterized HARRY McGREGOR.

I watched his work on the floor and the dedication that he displayed. His words in debate carried an insistence that the truth be known. We felt impelled to follow what he demonstrated to be the best course for our Nation.

He was fair, he was able, in his efforts to be of service to his district.

His wife had come from Muskingum County of the 15th District, and Mrs. McGregor and her Congressman husband were known, loved, and held in great esteem in that portion of my district. Whenever I traveled through that area I was constantly being asked: "How is HARRY McGREGOR?" "How is Mrs. McGregor?" And on many occasions his friends there told of the great work that HARRY had performed in behalf of the constituents of his district.

The service that he rendered for those of his district is just one part of HARRY McGREGOR'S life. Here on the floor of Congress, he worked for them. He also worked for all America. Many of the great public works and highways throughout the United States are monuments to the service and foresight of HARRY McGREGOR.

But in his children and his grandchildren we have the living characterization of HARRY McGREGOR'S personality.

They miss him, but they are strengthened and comforted by the realization that he was a great man who served his Nation well. We miss him, too.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. HESS. I yield to the gentleman from Florida.

Mr. CRAMER. Mr. Speaker, it is with a heavy heart that I join today in the eulogies for our late departed colleague, HARRY McGREGOR, with whom I was privileged to serve as a member of the minority on the Public Works Committee, having been a member of that committee since I was elected to Congress some 5 years ago.

HARRY McGREGOR was a great public servant; HARRY McGREGOR was an outstanding American; HARRY McGREGOR was the ranking minority member of the Roads Subcommittee of the Public Works Committee, and through his sponsorship of legislation the great interstate and other Federal-aid highway systems came closer to fruition than at any time previously. It was through his efforts and sponsorship of legislation that the forerunners of the great 1956 Interstate and Defense Highway Act came into being. It was his bill, his sponsorship of legislation in the Republican 83d Congress that resulted in the passage of the forerunner of the great Highway System Act in the 84th and the 85th Congresses. This great Interstate and Defense Highway System is a monument and a tribute to HARRY McGREGOR. He was more interested and qualified in this subject, I venture to say, than any

other Member of the House has been in recent years.

It was indeed a pleasure to serve with him, and it was my great pleasure and privilege to come to know of his ability and dedication on the Public Works Committee. He succeeded as ranking Republican member the Honorable George Dondero who in his turn served with equal ability and distinction.

J. HARRY MCGREGOR was a man of deep conviction, he was a man of sound judgment. He was a man who did not hesitate to get up on the floor and present those principles in which he believed and to fight for them. He was a hard-working and aggressive man, and as a freshman and since I have deemed it a high privilege to serve with him. He gave the greatest leadership and encouragement to me as a member of the Public Works Committee. His understanding of the problems faced by new Members, and his helpfulness to them will linger long not only in my memory but also in the memory of many others in the Congress who came to know him and seek his wise counsel in recent years. It is a high honor for me to join in these eulogies of our departed colleague. He was a great man, an outstanding American J. HARRY MCGREGOR.

Mr. CHENOWETH. Mr. Speaker, will the gentleman yield?

Mr. HESS. I yield to the gentleman from Colorado.

Mr. CHENOWETH. Mr. Speaker, I want to join my colleagues who have paid tribute to the memory of J. HARRY MCGREGOR today. I extend my sympathy to the members of the Ohio delegation for the great loss which they have sustained in the passing of our departed colleague, for whom we had such great affection.

I was shocked and saddened last year when I learned of his untimely death, which was an irreparable loss to all of us who knew him.

HARRY MCGREGOR was a Member of the House when I came here and I soon recognized him as one of the outstanding Members of this body. He was an able, capable, and efficient legislator. He worked diligently and conscientiously upon all legislation before his committee, as others have mentioned here today. Whatever he did he did right.

I know that our former colleague, the Honorable William S. Hill, of Colorado, would join in these eulogies to HARRY MCGREGOR if he were here today, as they were very close friends over the years. It was through Mr. Hill that I learned to know HARRY MCGREGOR better and to more fully appreciate his sterling qualities.

HARRY was always congenial and affable. He spread good cheer wherever he happened to be and it was a real pleasure to visit with him.

Mr. Speaker, we can ill afford to lose men like HARRY MCGREGOR in these critical times. His passing was not only a great loss to his district, but to the State of Ohio and to the entire Nation. He was truly a great American, a fine public servant, and a Christian gentleman.

Mr. LEVERING. Mr. Speaker, will the gentleman yield?

Mr. HESS. I yield to the gentleman from Ohio.

Mr. LEVERING. Mr. Speaker, it is now my high honor to represent the good people of Ohio's 17th District, the district that was so well represented by the late J. HARRY MCGREGOR for some 18 years. I take this time to join with his other colleagues here in the House in paying tribute to his memory and to extend my sincere sympathy to the members of his family who survive him.

Many of you who have been here for a long time knew J. HARRY MCGREGOR more intimately than I and I know that you, too, can attest to his unfailing courtesy, generosity, and hard work. He faithfully reflected the views of his district, and was considered a stalwart for good government. The high caliber of his representation of the people in our district was reflected by the strong support he invariably received at the polls time and time again.

Although I was his political challenger for the past 10 years, I greatly admired and respected Congressman MCGREGOR personally and for his views on public problems.

Back home he was known personally to thousands of people. J. HARRY MCGREGOR was a people's Congressman. The people felt close to the late J. HARRY MCGREGOR. They felt at all times that they could sit down with him and talk over personal problems, their fears and their hopes for this great country.

I think his practice of going into the district and holding conferences, informal in nature, at the court houses and other places was a most commendable one. This is important if we are to have true representative government in America. It was being close to the people and learning what the people at the grassroots really thought of the issues, great and small, before this country.

The Ohio delegation in Congress, in my opinion, has indeed lost one of its most esteemed members, and the 17th District has lost an able and dedicated spokesman. His family, his two daughters, Mrs. Monroe Horst, Mrs. Warde Butler, and his son, Harry Laird McGregor, have lost a devoted father.

I know that those of you who knew him best in the House of Representatives and in the Senate will join me in this tribute to his memory.

GENERAL LEAVE TO EXTEND REMARKS

Mr. HESS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the life and character of the late J. HARRY MCGREGOR.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SCHENCK. Mr. Speaker, it is with a heavy heart that I join with my good friend, the chairman of the Ohio Republican delegation, Mr. HESS, in paying tribute to a departed friend and colleague.

J. HARRY MCGREGOR was a warm and friendly man and a devoted public servant. Prior to his election as a Member of Congress, he served with distinction in the Ohio Legislature. Here in Congress he made invaluable contributions to the legislation before the Public Works Committee. With all his work, however, he was never too busy to help others. Time and again I recall his assistance when I was new here, and I treasured his counsel. Those of us who knew him realized his great loss when his beloved wife, Twila, died earlier last year. The McGregors had always been a happy, loving couple. Now he has gone to join her, united again in God's love. To his daughters and son I want to extend my deepest sympathy.

Mr. BAUMHART. Mr. Speaker, during the heat of the past congressional campaign, on October 7, 1958, I was deeply shocked to learn of the sudden passing of one of my best friends and colleagues in the House, J. HARRY MCGREGOR, of the 17th Ohio District. It was impossible to express my sadness to the House since we were in recess, but I and my fellow Members want to speak of him today, and to extend our heartfelt condolence to his daughters, his son, and their families.

HARRY was preceded in death by his beloved wife, Twila, by less than a year, and it was well known to his friends and family the deep burden of grief he carried.

HARRY was my predecessor as "Whip" of the Ohio delegation, and I will always cherish a photograph now hanging on the wall of my office in which he is pictured turning the symbolic whip over to me.

It was my privilege to serve with him in the Ohio State Legislature, where he served the State of Ohio in the house of representatives from 1935 through 1940. During that period of time he also served as minority whip and secretary of the finance committee, as well as majority floor leader and speaker pro tempore. HARRY'S career in Washington in the U.S. House of Representatives was no less distinguished, he being elected at a special election in 1940, and reelected to the 77th on through the 85th Congresses. He proved his dedication to good government through all his outstanding public service. He will be a man long remembered not only for his personal warmth and sweetness of character, but for his complete honesty and integrity. I well remember how many of the staff people with whom he came in daily contact admired and respected him. This combination of personal warmth and dedication to the principles of good government is often difficult to attain, but we all will remember HARRY for these qualities.

He will be sorely missed by all his colleagues.

Mr. BETTS. Mr. Speaker, it is difficult to adequately express one's feelings at the loss of a friend. J. HARRY MCGREGOR was my long-time personal friend. Our friendship began back in the Ohio General Assembly when we were both members of its house of representatives 20 years ago. Our close association over the years gave me ample opportunity to observe the character and ability of HARRY MCGREGOR. He was

a courageous statesman and met every issue openly and without flinching. His qualities as a leader were shown on many occasions but particularly as majority floor leader of the Ohio House of Representatives and the ranking Republican member of his committee in Congress.

HARRY MCGREGOR was respected and admired by his friends and associates both in and out of public life. An example of the esteem in which he was held was the honors which he received as a member of the Masonic Order.

But more significant than any of these accomplishments was the fact that he was in every sense of the word a family man. He and his wife were a devoted couple and with their three fine children made a typical American family. With his many friends and colleagues I share their sadness at his passing.

Mr. MINSHALL. Mr. Speaker, it is a personal privilege to salute the memory of our late colleague, J. HARRY MCGREGOR.

He was more than an able Member of Congress—he was a trailblazer with the courage of his convictions. Future generations will thank HARRY MCGREGOR for his magnificent leadership which gives them the vast Interstate Highway System so essential to our Nation's commerce and defense. None of us who served with him in the 84th Congress will forget his brilliant fight to achieve this victory.

HARRY MCGREGOR will be remembered, too, as an outspoken opponent of sprawling bureaucracy, particularly in those areas where public power threatened the just and legitimate rights of private enterprise. His philosophy of Federal assistance was Lincolnian.

Long before it became popular and expedient, HARRY MCGREGOR fought communism. He waged a vigorous battle against senseless giveaways to the Soviet Union and its satellites. He was one of four Republican Members flown to China in 1952 for conferences with Chinese Nationalist officers and U.S. administrators of aid in Formosa.

HARRY MCGREGOR was Republican floor leader in the Ohio State Legislature when I served there nearly 20 years ago. When I came to Washington in 1955, his counsel was wise and generous and sparkling with the infectious good humor which made him liked by all—even those who disagreed with his public views. He was a warm and loyal friend, a valued adviser, and a tireless servant of the 17th District of Ohio.

Last fall, at the very height of a campaign for reelection, death overtook HARRY MCGREGOR unexpectedly at his home in Coshocton, Ohio. Just as he had lived all his life, HARRY MCGREGOR died a fighter.

Less than 2 years before, on Christmas Day 1956, he lost his beloved wife, Twila. To their three surviving children I extend my heartfelt sympathy.

I know they will remember the farewell of Mr. Valient-for-truth in Bunyan's "Pilgrim's Progress." The words are particularly appropriate for HARRY MCGREGOR:

> My sword I give to him that shall succeed me in my pilgrimage, and my courage and skill to him that can get it.
>
> My marks and scars I carry with me, to be a witness for me, that I have fought His battle that now shall be my rewarder.

Mr. HIESTAND. Mr. Speaker, in losing our beloved colleague, Congressman HARRY MCGREGOR, of Ohio, we here in Congress and the people of this Nation have lost a real statesman.

Ever attacking every problem from the viewpoint of "What's best for the people of America," HARRY MCGREGOR was one of the most conscientious and thorough Congressmen it has been my pleasure to know.

Ever maintaining an objective viewpoint, his was a truly selfless service.

Ever mindful of the varied viewpoints of many Members from both sides of the aisle, he won much support for measures he espoused.

HARRY MCGREGOR, to my knowledge, had no enemies. His colleagues mourned with him the loss a year before of his beloved wife and partner for many years. We really shared his grief.

Ever mindful, however, of his duty to his district and his country, he bore up bravely and worked hard and effectively despite his great loss.

We of California and I in particular who knew him well join his Ohio colleagues in paying the highest tribute to J. HARRY MCGREGOR, gentleman, scholar, indefatigable worker, delightful character, but above all, statesman.

Mr. AYRES. Mr. Speaker, when I first met Mr. and Mrs. McGregor, Harry and Twila, I had the feeling that I was in the company of a wonderful couple. There was a team spirit that existed between them that was difficult to explain. When they were separated HARRY's loss was great. He carried on but there was not the same will to win.

J. HARRY MCGREGOR's thoughtfulness, understanding, and dedication will never be forgotten by those who were fortunate enough to know him. I miss him.

Mrs. BOLTON. Mr. Speaker, when one has served 18 years here in this great legislative body, the bonds welded are strong and they go deep. Between HARRY MCGREGOR and myself there was an even closer tie than most because we shared a special election on February 27, 1940.

A pleasant companion and a good friend—a hard-working Congressman and a loyal citizen—such was HARRY MCGREGOR. One could disagree with him as, I confess, I often did, but disagreement interfered not at all with our friendship. As Ohio whip he served the Republican Party and the Ohio Republican delegation well.

Tireless in his efforts to serve his constituents he gave himself with enthusiasm to work in their behalf, keeping in close touch with their hopes, their fears, their concrete desires, and their needs. The 17th District will miss his heartful service, Ohio will miss his constant watchful work in her interests and the United States a faithful worker in these Halls.

To his fine children and grandchildren I do extend my warmest sympathy and the hope that they know with deep certainty that—

> They have not died
> They live and breathe with you
> They walk now, here at your side
> They tell you things are true.
>
> They live, they know, they see
> They shout with every breath
> All is Eternal Life.
> There is no death.

Mr. MACK of Washington. Mr. Speaker, it is most fitting that we who knew him best should gather here today to pay tribute to the worth and works of our friend and colleague, the Honorable HARRY MCGREGOR, of Ohio, who died during last year's fall recess of Congress.

I often think that the roadbuilder is among the greatest benefactors of mankind. The roads they build make it possible for people to get together easier and more frequently to exchange ideas and obtain inspiration from one another. Roads also facilitate the flow of commerce and the exchange of goods, thus promote prosperity and improve living standards.

Our friend HARRY MCGREGOR was a roadbuilder, one of the best and most effective of them, and therefore by his life and works one of the great benefactors of mankind. In private life he was a road contractor and during his 20 years in Congress he was a member of the Public Works Committee and its Subcommittee on Roads.

In the 83d Congress Mr. MCGREGOR was chairman of the Roads Committee and was the author of the Highway Act of that year which paved the way for the greatest advance in roadbuilding this Nation had ever made to that time.

In the 84th and 85th Congresses HARRY MCGREGOR was ranking minority member of the Public Works Committee and along with the Honorable GEORGE FALLON of Maryland, they did more than anyone else to write the present expanded highway program into law. This law, in my opinion, is one of the greatest achievements of Congress in the past 25 years.

HARRY MCGREGOR by his tireless work in Congress for better roads has paved the way for a stronger, more prosperous and happier Nation for generations to come. His work has made all the tomorrows of our Nation better than its yesterdays. Such a life is most worth while.

HARRY MCGREGOR departed life carrying with him the affection of all of us who knew him for he had brought joy into our lives with his friendly and sunny disposition. He left us possessed of our admiration and gratitude because of his large contributions as a legislator to the strength and betterment of our Nation and its citizenry.

AMERICAN BAR ASSOCIATION RECOMMENDATIONS

Mr. SELDEN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. SELDEN. Mr. Speaker, last week the house of delegates of the American Bar Association overwhelmingly adopted the report of its special committee on Communist tactics, strategy, and objectives. This report was printed in full in the February 25 issue of the CONGRESSIONAL RECORD.

It is extremely interesting to note that this distinguished body of American lawyers, eminently qualified to examine judicial decisions, agrees with the fears voiced by various Members of this body that certain decisions of the Supreme Court have broadly and unnecessarily limited national and State efforts to protect our people and our Government against Communist activities.

While the bar association's recommendations will require careful study and preparation of legislative proposals in a number of areas, one subject on which this body is in a position to act promptly is that of passport security. The bar association committee's report singles out the Supreme Court's passport decisions of June 1958 as an example of the weakening of our security defenses and strongly recommends remedial legislation. It will be recalled that a divided Court ruled the Secretary of State had no authority in the absence of specific legislation to withhold passports from supporters of the international Communist movement.

Although the administration submitted legislative proposals to the last Congress, those proposals were considered too broad and sweeping by a majority of the committee that examined them. A shorter bill which I introduced at that time was passed by the House in the closing days of the session.

Several weeks ago I introduced a bill, H.R. 55, identical to that which was passed in the last Congress by this body. In the light of the determinations now reached by leading representatives of the American Bar after a detailed, objective study, I would urge that we proceed promptly to consideration and passage of legislation which would authorize the Secretary of State to deny passports to supporters of the international Communist movement and to close this gap in our defenses against those who would undermine this Nation.

JAMES A. GARFIELD NATIONAL MONUMENT

Mr. WHITENER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. WHITENER. Mr. Speaker, I have introduced a bill today directing the Superintendent of the National Capital Parks to remove the James A. Garfield Monument from its present location at First Street and Maryland Avenue SW. to another suitable site on real property of the United States situate in or near the District of Columbia. Under the provisions of my bill the new location for the monument will be selected by the Commission of Fine Arts.

The measure I have introduced would also direct the Superintendent of the National Capital Parks to repave the site now occupied by the James A. Garfield Monument and otherwise redevelop it in cooperation with the Commission of Fine Arts.

My purpose in introducing this bill is to remove what I consider to be one of the greatest hazards to traffic existing today in Washington and at the same time to provide a more fitting site for the location of an outstanding memorial to a great American. As we all know, the monument is located at the foot of Capitol Hill in the center of one of the busiest and most heavy traversed streets in Washington.

In addition to the heavy automotive traffic, First Street SW. contains two lines of track of the D.C. Transit System, Inc. Trolley cars make frequent trips over this line.

First Street runs at the foot of Capitol Hill in a north and south direction. Southbound trolley cars, upon reaching the Garfield Monument, are forced to go around it on the left side in the face of traffic proceeding north. This results in a very hazardous situation for all types of vehicular traffic.

The James A. Garfield Monument was erected by the Society of the Army of the Cumberland with assistance from the Federal Government. It was dedicated on March 12, 1887, to the memory of President Garfield, whose death took place on September 19, 1881, after having been shot by a disappointed officeseeker in July of that year.

President Garfield was a brave soldier in the Union Army during the War Between the States, and his tragic death resulted in the creation of one of our most important Federal agencies, the U.S. Civil Service Commission.

By introducing a bill to remove his national monument to a more suitable location, I in no way intend to reflect upon this great American. President Garfield's place in American history is secure. He gave his life while serving in the highest office his country could offer.

The Garfield National Monument was erected before the day of modern vehicular traffic. When it was dedicated no one could foresee the day when First Street SW. would be the artery for heavy automotive and trolley traffic. Had such a situation been visualized I am sure that those patriotic and devoted Americans who erected the monument would have selected a more suitable site.

I doubt if there is a Member of this House who has not at some time or another had difficulty in getting around the Garfield Monument. Probably there are some in this House who have had near accidents at the monument.

I have utmost confidence in the work being performed by the National Capital Parks and the Commission of Fine Arts. I know that these splendid agencies, if authority is granted to them to do so, will find a suitable place for the location of this monument to a great American. I think it is fitting and proper that this memorial to our second martyred President should be placed in an area more in keeping with its dignity and historic significance.

I hope that my colleagues in the House will support my bill to remove the monument.

HOW THE PEOPLE OF WISCONSIN FEEL ABOUT DICTATORS

Mr. REUSS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. REUSS. Mr. Speaker, last Tuesday, February 24, I addressed the House on "How the People of Wisconsin Feel About Dictators"—CONGRESSIONAL RECORD, February 24, 1959, pages 2901–2905. My point was that the people of Wisconsin dislike dictatorships, and therefore disagree with the views expressed in an address made early in February by the gentleman from Wisconsin [Mr. WITHROW] to a joint session of the Dominican Congress. I inserted in the RECORD a text of that address as printed in the English-language newspaper, Herald of the Dominican Republic, for February 7, 1959.

On Friday, February 20, 4 days before my February 24 speech, in order to check the accuracy of the text contained in the Herald of the Dominican Republic, my office called the office of the gentleman from Wisconsin [Mr. WITHROW] and asked for a copy of his remarks to the Dominican Congress. We were told that, unfortunately, his office had no further copies.

On Monday, February 23, at 4 o'clock in the afternoon, a member of my staff delivered to the office of the gentleman from Wisconsin [Mr. WITHROW] a copy of the text of the Herald of the Dominican Republic, accompanied by the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 23, 1959.

Hon. GARDNER R. WITHROW,
Member of Congress, House of Representatives, Washington, D.C.

DEAR GARDNER: I am securing a special order to address the House tomorrow, Tuesday, February 24, 1959, on the problem of dictators.

In the course of this address, I shall have to refer to your recent remarks to the Dominican Congress as reported in the Herald of the Dominican Republic, dated Saturday, February 7, 1959. I enclose a copy of the text of your speech as it appeared in this newspaper. I intend to offer this text for the CONGRESSIONAL RECORD.

I am writing this letter so that you may have prior notification of my subject.

Sincerely,

HENRY S. REUSS,
Member of Congress.

Some 23 hours later at around 3 o'clock Tuesday afternoon, February 24, during the course of my remarks on the floor, the gentleman from Wisconsin [Mr. WITHROW] indicated that the report of his address as contained in the Herald of the Dominican Republic was inaccurate, in that he had not in fact used the term "nitwit," as attributed to him in the text of the Herald of the Dominican Republic.

Last Thursday afternoon, February 26, the gentleman from Wisconsin [Mr. WITHROW] came to me and handed me a text of his address to the Dominican Congress which he stated to be completely accurate. It should be noted that Mr. WITHROW's text, unlike the text as printed in the Herald of the Dominican Republic, does not contain the word "nitwit," nor does it contain a reference to the House Committee on Foreign Affairs. I include at this point Mr. WITHROW's text in its entirety:

Mr. President, distinguished guests, friends, I am a little surprised in finding myself here with you today. It was by invitation that I came to visit in the Dominican Republic this week. I was happy to accept the invitation, because I have long wanted to visit this home of Columbus, discoverer of America, and because I have been attracted by the unexcelled record of the Dominican Republic in our war against communism. I came as a friend, but you have now raised me to the level of an official visitor. You have bestowed upon me a privilege that is yours alone to give. I shall long remember this privilege.

The weather, the food, the hospitality of those in official position, and those good citizens whom I met on streets and in their offices and in their homes—all have impressed me greatly. I suppose I should confine myself here to political niceties, and spend my time recounting some of the details of my visit and my observations. I think I shall save this for a report on this trip, which I intend to make to the House of Representatives upon my return to Washington. I think more fact-interested people in the United States ought to have these observations.

And, I suppose I ought to speak in platitudes; but I am not going to do this. Let me talk with you on some events and matters which are of supreme importance to you, and to us in the United States, and to all of us in the Western Hemisphere. These are grave times.

What I am about to say might be called independence. It is. It is the same type of independence which you as a nation have displayed, and for which you must be respected and admired. I have developed the feeling that the Dominican Republic, by its nature, is willing to meet another country or another person more than half way. It is a feeling that you like, and you want to be liked. But, at the same time, it is also clear that you do not really need anyone to get along. I congratulate you on a real independence. Never surrender it.

I stand before you as a friend who defends you when I feel you are right and one who is absolutely certain that if the American States had followed the recommendations of the Dominican Republic first made at Caracas—had we followed them, communism would be a diminishing force in this hemisphere today. Instead, I fear communism grows more and more bold. You can no more compromise with communism than you can with crime. You simply erase it by outlawing it. That was your simple solution.

The world today trembles with rumors of war. We in the United States do not want war, we want only peace, and we will go to almost any lengths to maintain peace. I am no less concerned about war in another sense—revolution, rebellion, civil war. The success of communism lies not in armed conflict of nation against nation. Communism is something which divides a country within itself, and to me this is a far worse crime against Christianity than actual armed warfare when the causes are clear and sometimes just.

There are always small groups who covet war and who encourage rebellion. I think we can identify most of them as Communists. The others would be those who just do not realize what they are doing, and some who seek personal gain. The U.S. foreign aid program has in some instances made international politics profitable, and in still other cases the necessities for U.S. loans is ample evidence that these revolutionaries cannot cope with the complexities of modern government. The administration of a government today is a delicate and difficult thing. The currency and economic crisis of many European countries is satisfactory evidence of the touch needed by a successful administrator. You here in the Dominican Republic have been fortunate in your government. It has brought you peace and prosperity. There are so few countries over the world who could even approach your achievements. I know you give full credit to the amazing abilities of Generalissimo Trujillo, and we do, too. If the generalissimo could be persuaded to turn author, and could be persuaded to write a book on government, the record he has established would make this book required reading in the governments throughout the world. I hope some good friend might prevail upon the generalissimo to write such a best seller.

Economists everywhere who have been unable to do anything write books on how to do it. Here, then, is an administrator who has done it, and who could write the first such authentic book.

We speak eloquently of a free world. Let me tell you very frankly that the United States, and the free nation bloc, is not free to make the decisions today that we might make under different circumstances. The foreign aid program, about which the American taxpayer complains so loudly and for which the President is so insistent and which Congress reluctantly approves—this foreign aid program is mute evidence that we are not free to decide a problem or an issue independently and as we might if the cold war was not with us. Success in the cold war requires us to be expedient, distasteful as it may be to those of us who devoutly believe in principles.

The last war fought upon American soil was the War Between the States in 1861. We called that our Civil War. Our President at that time was the brilliant Abraham Lincoln, who I am proud to say, was a Republican. It was his immortal words "this Nation cannot exist half slave and half free" which rang down through our internal war. Let us apply those immortal words of Lincoln to today. Can this world exist when the peoples of the world are half in slavery of communism and half free?

There are just four reasons for war. The first would be a war for land to live upon. War of this type went out in the early centuries, and except for the Peoples Republic of China, I cannot envision another nation starting a war of this kind and type. Secondly, a war for wealth. I think we can dismiss this one, since this would be a private war of kings. Third is a war for power. Therein lies the real danger of Russia starting war, for political power is the Communist tool and objective. Fourth is a war for security. I cannot by any stretch of the imagination conceive either the United States or the Dominican Republic participating in a war except for their security.

On the other hand, there are overtones in some of the reports of aggression upon the Dominican Republic which are reminded of the Communist programs. Always the Hitlers and the Stalins have precipitated wars on the ill-conceived grounds that it was to protect themselves and their country. We are hearing that propaganda now. Let me very bluntly advise you to beware, and to see it for what it is. Keep your peace by keeping your guard up.

I have constantly fought for a new and firm declaration in the foreign policy of the United States. I have pleaded for, I have insisted upon, a simple policy of cooperating with our friends and excluding our enemies. My task has not always been an easy one.

There were those in the United States who were overjoyed when rebellion took place in Cuba. Then, many of these same persons were horrified when blood ran in the streets in Roman circuses called trials, and when we were called gringoes. In Venezuela we cheered a revolution that we knew absolutely nothing about—only to end up with our Vice President being spit upon, and now some are appalled that the new junta has levied another 10 percent upon our oil interests there. If we sometimes seem confusing I am afraid it is because we quickly bridge 180 years in our minds. We go into these things with the spirit of 1775, and then when the smoke has settled we think in terms of the U.S. Constitution and democracy of 1959. This is real easy for us, but difficult or impossible for anyone else. That is why I am again critical of our new drift in foreign policy and why I shall exert every effort to help to change it. If the world is expected to think as we do, we must realize there are other parts of the world and try to think as they do. Where is the common meeting ground for a world where one-third of the people eat with their fingers and another one-third eat with chopsticks. I hope we can meet and agree upon the single course of action which is immediate and compelling—a unity against communism. Anything else can be left aside, because until communism is defeated, and unless it is defeated, no other political philosophy has a chance to overtake the world.

The greatest fallacy anyone could assume is that strong personality governments are bad and that democracies are good. Each nation and each government has to stand on its own. Any snap decisions and assays, or quick slogan foreign policy is not a safe, long-range policy. If the United States foreign policy ever becomes one which would encourage rebellion and concurred with solidification of revolutionary governments in this hemisphere, I predict we would have succeeded in joining together a new political and economic force in this hemisphere whose course of action would clearly be against the best interests of the United States. I hazard the guess that it might become necessary for us to tear down the very house which we had watched being built as a matter of our own safety.

I hate revolutions anywhere, because internal war is nothing more than the pitting of father against brother, dividing son against son, the dividing of families. Of such was our Civil War. The Latin is foremost in dedication to his family, even unto second cousins. I can think of no greater crime against Christianity than to initiate civil war in which families are blown into hatreds of one another. The Spanish civil war is emerging in history as a monument to horror.

It must seem to you that I have spoken at some length upon war and more particularly upon revolutions. I have, because for more than a quarter of a century you in the Dominican Republic have lived in peace and security. I doubt that any other American state has achieved the prosperity you have right now. It is possible, however, that there are other states which might like to have yours, and might resort to armed invasion to try to get it. You can recall with me that in the Ukraine in Russia in World War II the Russians welcomed the Nazis. Disillusionment was quick and disastrous. I cannot imagine any invaders charging ashore with banners on which might be inscribed your secret ambitions or carrying an ironclad, enforceable manifesto for your welfare. You get not what you want, but what they

are and what they want. Recognize them for the politically dissatisfied, the international brigands they probably will be, whose goal is personal power, personal wealth, not government for the people, and who play the stakes of today for international revolution and diplomatic plunder.

The United States has a possession—Puerto Rico—your neighbor. I suspect this possession has harbored political liabilities to the Western Hemisphere. Living there is one known to you who could not satisfy his political ambitions, but is trying to satisfy his hates. I refer, of course, to German Ormes. The Governor of this possession is Muñoz-Marín, who unlike Alaska and Hawaii does not seem to desire statehood. It was a curious thing to me that it was he who vouched for the purposes of the revolutionary leader of Cuba. It is far more strange that he should be on such familiar terms. If the United States foreign policy is to be firmly and clearly one of nonintervention, then it must apply to our possessions as well as to the continental United States. In the new Congress I asked for and got membership on the House Committee on Interior and Insular Affairs. This committee handles much of the legislation and affairs pertaining to Puerto Rico. It shall be my purpose to pursue some of these curiosities about Puerto Rico.

It has been my privilege and pleasure to meet with your President, the Honorable Hector Trujillo. His simplicity is warming; his programs sound and promising.

It was my very keen and personal pleasure to meet with Generalissimo Trujillo. The Dominican Ambassador to the United States the Honorable Manuel de Moya, had spoken so highly of the generalissimo that I was prepared for a monumental meeting. But, I was not prepared for this meeting and discussion at all. I say this candidly—you have to meet the generalissimo and speak with him before you actually meet up with the personality and the concept of the man who has given the Dominican Republic these great 27 years.

The Ambassador is easily one of the outstanding stars of the diplomatic corps in Washington. However, I remarked to the Ambassador earlier today on the telephone that if the Dominican Republic could persuade the generalissimo to come to Washington I would not be surprised but what there wouldn't be a whole new foreign policy concept given to the Western Hemisphere and the world. Manuel agreed with me that the generalissimo would make the better Ambassador, which is no depreciation of De Moya, but more an appreciation of the insight and organizational concepts needed in Washington in our foreign policies and our diplomatic corps.

I lack the time in residence here, the personal knowledge, and the full understanding of conditions of yesteryear to aggrandize the generalissimo honestly. In a brief 27 years—which is nothing in measuring history and government—the Dominican Republic has gone from rags and storm ruin to the position today where you are envied by all your neighbors. In moving that quickly, I think it only natural that the generalissimo might have stepped upon some toes and might have offended some too sensitive people. Teddy Roosevelt, a great President, stepped upon more touchy toes than any other American. The patient and brilliant Abraham Lincoln was charged with plunging us into civil war and was hated, and finally assassinated. The number of your enemies is sometimes a yardstick of your success.

I should suspect Generalissimo Trujillo's love for his country, his dedicated drive to raise its economy and international standing to its highest level before going to a Christian reward, might have caused some loss of friends—particularly those who sought to interfere with the forward march of progress or who placed greed above service to their country. Our general and President, Dwight Eisenhower, is known to get impatient, also, with those whose views he regards as not in the national interests. I sometimes get impatient, and if you search your conscience, you have too, with members of your family or your employees. A chronic critic is a person who always complains because it isn't being done his way.

There is no one in the Congress of the United States who knows the generalissimo personally, or knows the Dominican Republic peoples, who is a critic. What is there to complain about? There is sanitary water, something you don't find elsewhere in the Latin Americas. There are courts of justice; crime is punished and eliminated where possible. There is law. There is Christianity. There is peace. You have prosperity. There is a public works program, the likes of which I never thought I would see, which improves your economy for all time, and your welfare not for years, not for life, but forever. No, I think the critics are made up of dissatisfied politicans, the ignorant, and those with such infertile minds they succumb to the suave chicaneries of exiles and so-called intellectuals.

I doubt that I would be standing here today if the Dominican Republic had any other but Trujillo at the helm. I came here because I wanted to see this man, this personality, and this country for myself. Would I be taking a liberty if I said this might have been just another Latin republic without the absolute genius and the forceful drive of the generalissimo? Nature gave you a great and fertile island, but your own blood gave you finally a man of devotion to duty and love of country who would convert these natural advantages into your good. I think you know this, too. The remarkable thing to me is that you have no external debts, and a ridiculously low internal debt. I said before if he would write a book on government, it would be a best seller among public administrators.

Your congress could achieve no greater help for the Dominican Republic than to begin now determining just how the progress of the era of Trujillo can be carried into perpetuity. You owe it to the Dominican Republic to seal in this financial prosperity, because you contribute not only to yourselves but to the Western Hemisphere. Now while you have the abilities at hand is the time to do it right and lastingly.

Always bear in mind the real struggle is against a Communist ideology which seeks world power. Do not sell this foe short.

Remember there is no government utopia. Your government and the benefits it can afford to bestow on its people depends on their own efforts and the ability of your governing officials.

I shall be everlastingly appreciative for the help given my country during World War II and for the positive position you have always taken opposing communism.

I am proud that I am an American citizen and know that the people of the Dominican Republic feel that same pride.

I have spoken sometimes frankly, and certainly too long. If I have, I apologize most sincerely to you one and all. Just as France has her Foreign Legion, so too does the Dominican Republic have a foreign legion—a legion of foreign friends, and I am happy to be called a soldier in those ranks.

I hope you will support your government, that you will defend your government from within and without, and I shall help you. You have been gracious; you have been most kind. Until we meet again.

The words in Mr. WITHROW's text will speak for themselves. From his praise of Trujillo and his dictatorship, and from much of the rest of it, I continue to dissent. And so, I am sure, do the great majority of the people of Wisconsin.

SALMON FISHING IN THE PACIFIC OCEAN

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, I have the honor to lay before this body House Joint Memorial No. 1 enacted by the 50th Legislative Assembly of the State of Oregon meeting in regular session, respectfully urging the President of the United States to complete a treaty with Japan on maximum salmon fishing in the Pacific Ocean and institution of treaty negotiations with other nations of the north Pacific on the same subject. Under unanimous consent I include the text of the memorial at this point in the RECORD.

STATE OF OREGON,
HALL OF REPRESENTATIVES,
Salem, February 25, 1959.

The Honorable EDITH GREEN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GREEN: I have the honor to transmit House Joint Memorial No. 1 respectfully urging the President of the United States to complete a treaty with Japan on maximum salmon fishing in the Pacific Ocean and institution of treaty negotiations with other nations of the north Pacific on the same subject.

Very truly yours,
ROBERT B. DUNCAN,
Speaker, House of Representatives.

HOUSE JOINT MEMORIAL No. 1

TO HIS EXCELLENCY, THE HONORABLE PRESIDENT OF THE UNITED STATES:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the percentage of the total number of salmon taken from the high seas of the North Pacific Ocean by the fisheries of Japan and other foreign countries has been increasing at an alarming rate in recent years; and

Whereas this trend can operate only to the detriment of the salmon fisheries of the State of Oregon and the United States and the economies of the State of Oregon and the United States as a whole: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That we urge the President of the United States to use every effort to complete a treaty with the Japanese Government prescribing the maximum amount of salmon which may be taken annually by the fisheries of the United States and Japan; and be it further

Resolved, That we urge that negotiations for such a treaty be commenced at the earliest possible date, and that all nations of the north Pacific Ocean area be urged to enter into such negotiations and to cooperate in the establishment of a treaty; and be it further

Resolved, That copies of this memorial be sent to the President of the United States,

all members of the Oregon congressional delegation, and the legislative assemblies of the States of Washington and California.

THE AMERICAN FARMER

Mr. MATTHEWS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. MATTHEWS. Mr. Speaker, one of the biggest problems facing the American farmer during this fiscal year 1959 is how to get a fair press and other publications media which will present the true facts to the American public. All of us received in the mail recently one of the most interesting computations of facts about the American farmer that I have ever read. The articles were prepared under the auspices of the National Grange, and were sent to Members of Congress under the signature of Jack Jackson, director of public relations. I want to give credit to the National Grange for the remarks that follow. Let us ask, in the first place, this question: Who gets Government subsidies?

Over and over again we read in the press of the terrific subsidies to the farmers of America, but we seldom read about the other subsidies that are granted to other segments of the American economy. Did you know, for example, that the following figures indicate the Bureau of the Budget's breakdown of current expenses and special services for a recent year as follows:

	Millions
Post Office Department in favor of business	$670
Navigation aids	137
Air navigation aids	93
Ship operation subsidies	50
Other special aids to business	138
Total to business	1,041
To labor (grants to States for operating employment service and unemployment compensation programs)	200

A report issued by the House Committee on Agriculture on June 25, 1958, states that farm price support losses from 1933 to 1958, a 25-year period, mind you, have cost taxpayers $5,173,746,788. The House Committee on Appropriations, however, reports the following taxpayer subsidies:

	Millions
Mail subsidies (10-year period, 1946–56)	$5,968
Business reconversion payments	43,262
Subsidies to maritime organizations (1938–57)	3,500
Subsidies to airlines (1938–57)	614

The December 12, 1958, issue of the Wall Street Journal reports that subsidies to U.S. ship line operators run $120 million annually, and that, if approved, requests now before the Maritime Board will bring the total to $220 million. The U.S. News & World Report, in an August 8, 1958, issue, reports that the Government is building two new steamships for ship line operators. One, the *America*, is to cost taxpayers $120 million—it will sell for $47 million. The other, the *President Washington*, is to cost Uncle Sam about $80 million and it will sell for $34 million.

Now, there are many other subsidies provided by the Federal Government, but, I shall not mention more of them, except to remind you that most of us who live in homes, and that includes many, many millions of Americans, buy our homes because Uncle Sam has agreed to bail out the lenders in case there is a default in payments. I would like to add this other thought, also; that when we criticize the farm program because of a tremendous payment to one farmer, let us remind ourselves that when we sit down to read a magazine we might well be reading an editorial in a magazine that receives a subsidy through the U.S. Post Office Department, and this subsidy has cut the annual cost of mailing that one publication by as much as $8,604,000.

Now, of course, two wrongs do not make a right and it may be wrong to pay a tremendous subsidy to one farmer, but if that be a wrong I think it only fair to the farmers who, in a few instances, receive a large subsidy, for the American people to know that this subsidy is matched two or three times over by subsidies that go to certain magazines in this country.

Another grave problem that the American farmer has is the unfair press he receives, when over and over again we get the idea that all of the USDA appropriations represent subsidies to farmers. I have read editorials, Mr. Speaker, in some of our outstanding newspapers suggesting that the U.S. Department of Agriculture's proposed expenditures of $6½ or $7 billion this fiscal year represent a subsidy to farmers. I recently heard a popular television commentator very glibly emphasize this erroneous statement.

Now, let us examine in detail the proposed USDA appropriations. For example, the farm commodity export program in 1957 cost $843 million—or about one-sixth of the total USDA appropriation for that year. Is this a subsidy to the farmer, or is it an effort to help win the cold war? Secretary Benson has said of this program, "It is helping keep the free world free. It is an ambassador of good will. Every American can be proud of the constructive use being made of the abundance of American agriculture." I, along with many of my colleagues, have constantly stressed the fact that we would make far greater progress in winning the cold war if we would make better use of our abundant food. Why not consider this program in its proper perspective, and that is, as a defense program. Surely when airplane manufacturers are granted the right to manufacture airplanes on a cost-plus basis—they and the many other large defense contractors who are guaranteed a profit every time they turn out an implement of war, would not deny the farmers of America a small percentage of the defense budget. From 1953 through the first half of fiscal 1959, $1.2 billion worth of surplus foods has been distributed in foreign countries through U.S. voluntary agencies. This money should not be considered as a subsidy to the farmer.

Always, in the total USDA appropriations, we consider the amount that is lent to our REA co-ops for loans. This will amount to about half a billion dollars annually. These loans are repaid with interest and repayments are over $100 million ahead of schedule. Many more millions that are lent and repaid to the Farmers Home Administration are charged as a net cost in the USDA annual appropriation.

The market research program should not be charged totally to the farmers, since as a result of this program handling methods are now saving the grain trade over $1 million annually; techniques which cut industry's cost of storing cotton have been developed and have amounted to a saving of about $2 million per season; and processes reducing food handling have saved $6 million annually in the city of Philadelphia alone.

The Federal meat inspection program, costing about $19 million a year, the brucellosis eradication program, costing around $22 million a year, have as their primary goal public-health protection, and this is an expense that should not be charged to the farmer.

The International Wheat Agreement, costing about $20 million a year, helps provide the farmers a high price for wheat, but it also helps members of the grain trade expand their export business—and profits.

Surely, we would not count the universally popular school-lunch program as a subsidy solely for the farmers. The USDA contributed around $284 million to this program last year. Millions of our schoolchildren shared the benefits of this program. From 1953 through the first half of fiscal 1959, approximately $1.2 billion worth of surplus food has been given to our own people in the United States. Currently, 14 million schoolchildren, 1.4 million needy persons in institutions, and 5.2 million persons in family units are receiving this food. This program should be charged to welfare.

The supervision and operation of 181 million acres of national forests are maintained and managed by the Government for the production of timber, regulation of streamflow, flood control, water power, irrigation, navigation, and municipal water supply—all in the interest of the public. Many of the large business organizations of this country are absolutely dependent upon the national forests for their existence. In addition, 45 million citizens took advantage of the recreational facilities of our national forests last year. Yet the costs of the supervision and operation of our national forests are too often glibly charged as subsidies to the farmer.

Actually, it is my considered judgment that, generally, only about half of the USDA appropriations each year can be legitimately considered as expenses that should be charged to the farmer, and even of that amount, I think, the word "subsidy" should not be properly ascribed to but about 50 percent of the remaining appropriations—or a maximum total of from $2 to $3 billion. Now this is a

lot of money. It may be too much, but it is not as much as the $6 to $7 billion, we are told, are annual subsidies to farmers.

Now, Mr. Speaker, one of the gravest errors perpetrated in the discussion of the farm problem is the error that pictures the price-support program as being responsible for a greater cost to the consumer. Now, of course, any program that costs money is paid for by the taxpayers of America. All of the services of government cost money. But, no less an authority than Secretary Benson himself has stated, in effect, that there is no noticeable correlation between price supports and the cost that the consumer pays in the marketplace. For example, in a peanut candy bar, I suppose the farmer would receive about one-half of 1 cent for the peanuts that would go into a 5-cent candy bar, if you can still find one. If the farmer gave the peanuts away, my guess is that the price of the candy bar would not be decreased to 4½ cents.

Let us take the cotton products and show the farm value and the retail price in a number of these products:

Cotton products	Farm value	Retail price	If farmers donated the cotton, the retail price would be—
Overalls	$0.65	$3.30	$2.65
Pajamas	.35	3.00	2.65
Broadcloth shirt	.28	3.94	3.66
Work shirt	.26	1.61	1.35
Socks	.07	.50	.43
Work trousers	.51	3.58	3.07
Housedress	.33	3.34	3.01
Yard goods (percale) per yard	.09	.51	.42
Bedspread	1.45	6.31	4.86
Sheet	.74	2.35	1.61

Now, Mr. Speaker, these figures assume that the retail prices would remain the same if the farmer obtained his present value of the raw cotton, but experience has proved that this is not the case. When the farmer gets less, the retail prices do not evidence that loss of income to the farmer, but rather, the retail prices go up. My contention is that if the farmer gave his cotton away, that the other factors involved in the cotton economy would cost just that much more money and the consumer would not get the product a cent cheaper and, in fact, would probably pay more. Do you want proof? Well, in 1948, farmers were getting $2.81 per bushel for wheat and consumers were paying 13.8 cents for a 1-pound loaf of bread. By 1955, the farmer's price had dropped to $2.14 per bushel and the consumer's cost had climbed to 17.5 cents per loaf. By 1957, the farmer was getting only $2 per bushel for wheat, and the consumer was paying 18.8 cents per loaf for bread. Thus, between 1948 and 1957 wheat prices dropped 29 percent to the farmer, but bread prices to the consumer increased 38 percent. In 1951, farmers received $20.2 billion for producing food that cost consumers $43 billion. In 1957, farmers received $19.5 billion for producing about 11 percent more food that cost consumers $50.4 billion. Thus, consumers paid $7.4 billion more and farmers received $700 million less for about 11 percent more food. Furthermore, in the food industry during that period, corporate profits increased $0.7 billion, labor costs $3.6 billion, transportation costs $1 billion, and other business expenses $2.8 billion.

In 1952, when producer prices were supported at 90 percent of parity, consumers were paying an average of 22.8 cents per quart for milk. By April 1958 price supports had been dropped to 75 percent of parity and consumer prices had advanced to 25.3 cents per quart. Furthermore, the April 1958 producer price was about the same as it had been a year earlier, but consumer prices had advanced from 24.6 to 25.3 cents per quart.

Between 1947 and 1957, the cost of the family food market basket increased $243, and here is why:

First. The farm value of food involved increased $3.

Second. Labor costs increased $130.

Third. Transportation costs increased $33.

Fourth. Other business expenses advanced $73.

Fifth. Charges to pay Federal income taxes were up $4.

The purpose of my talk is not to criticize other segments of the American economy, Mr. Speaker, but it is to speak for the American farmer as earnestly and as honestly as I can. I say that the price support program has very little relationship with the price that the consumer pays in the marketplace. It is estimated that farmers today receive only about 39 cents from each $1.00 spent for food. I believe if it were not for the price support programs that he would even receive much less than that amount.

Another grave difficulty that the American farmer faces in the lack of proper and accurate presentation of the facts is the idea presented over and over again that the so-called farm subsidy program helps only one segment of the farm economy, and that is the six, so-called, basic crops. Why, I wonder, are we not told about section 32 funds, which are funds derived from 30 percent of the taxes on imports? This money, amounting to many hundreds of millions of dollars, is spent on the so-called perishable agricultural commodities, such as beef, pork, fruit, vegetables, etc. Proper use of these funds has meant much to the farmer who does not plant the basic crops. Why are we not told of all of the vast research programs—the Extension Service programs, the great marketing agreements which give the farmers, for example, engaged in vegetable or fruit production, the right to regulate the sales of a particular agricultural commodity?

What about the great soil conservation programs that help farmers plant their trees, and then in future years will help great business establishments that will be dependent upon these forests?

What about the great watershed programs and reclamation programs some of which are not sponsored by the Department of Agriculture, but represent an area of aid to farmers not engaged in the production of the basic commodities.

One great problem we have in trying to solve the farm problem is the fact that we have what we might call internecine jealousies among farmers themselves. These jealousies and misunderstandings arise not only among sections, but they arise among producers of various agricultural commodities. The American farmers must present a united front as they seek a solution to the many problems that face them.

It should be pointed out that farmers and ranchers are among the biggest customers of American industry. There are 12 million tractors, cars, and trucks on the U.S. farms, and agriculture buys more petroleum than any other industry. Farmers provide a market for 6½ million tons of finished steel annually. Rubber used on the farms of America would put tires on nearly 6 million automobiles annually. Sixteen percent of the gross freight revenue is from agricultural products. Agriculture consumes 50 million tons of chemicals each year. Agriculture uses more electric power than Chicago, Detroit, Houston, Baltimore, and Boston combined.

About 10 million persons actually work on the farms of America. In the total agricultural economy, about 25 million workers are gainfully employed, as follows: 6 million in manufacturing and selling farm production supplies, 10 million actually on the farm, 9 million processing and distributing farm commodities. Thus, approximately 25 million workers or 40 percent approximately of our gainfully employed are involved in the production and distribution of food and fiber from the farms of America. While the actual farm population has steadily declined, this total number engaged in the total agriculture economy has remained fairly stable over a long period of years.

What about the income of the American farmer? The $13 billior net farm income for 1958 was 20 percent above that for 1957. However, this is 24 percent less than for 1947 and is also less than for any year between 1946 and 1954. In 1957, the per capita farm income was $967, while per capita nonfarm income was $2,082—$309 of the farmers' $967 was for work done off the farm. During that year, the hourly income for farm labor and management was 69 cents while workers in manufacturing industries received $2.07 per hour. During 1956, farm families operating the Nation's 2,213,000 commercial farms received an average income of $5,415 while all nonfarm families—including those living on skid row and public relief—received an income of $6,900.

While the farmer's income has been declining, his efficiency has increased. For example: Between 1950 and 1958, output per farmworker increased 26 per cent and during the same period, total per capita farm income dropped from $983 to $967. The number of persons supported by 1 farmworker was 6.9 in 1900, 10.6 in 1940, 15.9 in 1950 and 23.5 in 1958.

Where do we go from here? We are not going anywhere, Mr. Speaker, if first of all the farmers of America do not unite and present a solid front. We

cannot expect our friends who are anxious to help us to be impressed if there are internecine fights between sections of the farming community. In the second place, we must immediately concern ourselves with legislation to help agriculture commodities in greatest difficulty, such as wheat. We must take other commodities and devise legislation to help them. For example, in my Eighth District of Florida, our greatest cash crop which has a price support structure is flue-cure tobacco. One of the great problems facing our little farmer is the fact that his allotment has been decreased to such an extent that he does not have an acreage large enough to make it profitable for him to produce tobacco. I have introduced legislation which will enable him to lease allotments on a year-to-year basis, under the supervision of the county committee, and with appropriate safeguards for overall production. This would enable the little family-size farmer to have enough tobacco acreage allotment to make it profitable for him to farm and, at the same time, would safeguard production restraints.

Another thing that we must do is constantly to work for the family-size farmer. I have always believed, and still do, that the independent family-size farmer is of vital importance to the America that we know and love. I realize that the number of people living on the farm has rapidly diminished from the 84 percent of the total population in the time of Jefferson to, perhaps, not more than 16 percent at the present time; yet, this number is eminently worth saving. Where will the little farmer turn for employment if he is driven off the farm? The answer, of course, is in the crowded sections of the city in many instances, places where jobs are not available, and where present slums are crying for relief. I realize that I have only been on the Committee on Agriculture for 4 years, and certainly am not prepared to give the answers to the agricultural problem, but I do know that we cannot expect the farm economy to go it alone when other segments of the economy are subsidized by the Government. If we should all return to the laissez faire system, well and good. If no one received a subsidy or a Government program, the farmer could stand absolutely by himself. But his lot without the interest of the Government will be that of continuing to pay more and more for what he buys and receiving less and less for what he sells. Another thing, then, that we must constantly keep in mind is that until better programs are proposed for the welfare of the American farmer, we must live with the programs we have and attempt to purify and strengthen them wherever possible. Certainly we should consider more adequate production controls and other remedial techniques during this present session of Congress. However, we should never, in my opinion, barter away the basic right of the American farmer to receive some help from his Government, to assure for him some reasonable income for his toil when the other segments of the economy receive this largess. We should always fight for the proposition that the farmer cannot go it alone, if other segments of the economy are the recipients of special subsidies from the Federal Government.

Mr. Speaker, in conclusion, I want to pay tribute to the chairman of the House Committee on Agriculture, the Honorable HAROLD COOLEY and to my colleagues on the committee, many of whom have far more seniority than I, and who for years have worked diligently on the problems of the American farmer. I do not believe the situation is hopeless, but I do believe that it is incumbent upon every American to try to get the true facts about the farm problem, and when he does, I am sure that the people will vote on the side of the American farmer. I for one, am not pledged to any particular program or solution. I shall, however, resist to the utmost of my ability the taking away from the farmer the hard fought gains he has made, which I think are fair to the farmer and the consumer. All of us realize there are deficits in the present program, many of which could have been eliminated if Congress had passed the omnibus agricultural bill reported by our committee last year. The present need is to fan the issue, with resolution and courage, to give an adequate program to the farmers of America, for their benefit and for the benefit of every American, since we all depend for life itself upon the food and fiber from the American farm.

AIRBORNE ALERT A VITAL ELEMENT IN OUR DEFENSIVE POSTURE

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include a newspaper article.

The SPEAKER. Is there objection to the request of the gentleman from New York.

There was no objection.

Mr. STRATTON. Mr. Speaker, I was amazed recently, as a new member of the Committee on Armed Services, to learn from the Chairman of our Joint Chiefs of Staff, Gen. Nathan M. Twining, that the United States does not now maintain—and General Twining claimed, with some rare exceptions, had never before maintained—any round-the-clock, airborne alert, that is to say, armed bomber aircraft of the United States in the air constantly ready to react against any enemy surprise attack, and, being airborne, immune to any surprise destructive attack directed against our airbases.

General Twining said that such an alert was too expensive to maintain, except possibly in times of serious crisis. Well, Mr. Speaker, I would certainly think that the Berlin crisis is just such a time. Many persons have already called for a mobilization of our forces to show the Soviets plainly we intend to stand firm at Berlin. Senator JACKSON of Washington called yesterday for the mobilization of four or five Reserve or National Guard divisions. I believe that in a time like this we also require an airborne alert, so that under no possible circumstances can we fall prey to another Pearl Harbor. The stakes are just too great.

In that connection I desire to call to the attention of my colleagues and our leaders in the military the fine column that appeared in the Washington Post this morning, written by Mr. Joseph Alsop. Under unanimous consent I insert it in the RECORD at this point:

ONLY 150

(By Joseph Alsop)

OFFUTT AIR FORCE BASE, OMAHA, NEBR.—If the national intelligence estimates are just no more than normally wrong, this country may soon be nakedly exposed to something infinitely worse than Pearl Harbor.

Only one immediate measure can be taken to reduce the risk. The Strategic Air Command can be ordered to mount an immediate maximum airborne alert.

SAC's brilliant commander, Gen. Thomas S. Power, has already begged the authorities in Washington to put SAC on an airborne alert status. But mounting a continuing airborne alert will cost money. Hence General Power has been turned down, for the usual budgetary reasons.

These are the terrible facts that have been all but burned into this reporter's mind, during his days here, in the headquarters of the great deterrent force that carries the main burden of guarding the United States and the free world. The grim mathematics that prove the facts are indeed that, and not mere figments from a nightmare, can be summarized as follows:

First, SAC is already maintaining a 15-minute ground alert of one-third of its aircraft. But the existing warning system does not see missiles. The new missile-seeing radars will not be in position until 1961, on present projections. Thus SAC now has zero warning against a Soviet surprise attack with ballistic missiles. In these circumstances, the whole SAC force can be surprised on the ground if the Soviet has the missiles to do the job.

Second, the Pentagon leaders have admitted in their recent testimony that the Soviets may well have enough medium range ballistic missiles to destroy all of SAC's overseas bases.

Third, only one question then remains: whether SAC's bases in this hemisphere are equally vulnerable. The number of Soviet ICBM's needed to strike at this hemisphere is proportional, of course, to the target system. Most probably the Soviets would wish their first strike to destroy all of SAC's 30-odd bases on this side of the Atlantic, plus the National Command Post in Washington, plus the main nodes of the communications net of the American Air Defense Command (in order to clear the way for a potential second strike with aircraft). This gives a total of approximately 50 targets, all of them completely "soft." Assuming 33⅓ percent reliability for the Soviet ICBM, a stock of 150 missiles would be enough for the purpose.

On the basis of the national intelligence estimates, the President and the Pentagon leaders alike assert that the Soviets do not have this stock of ICBM's at the present time. On the face of the known facts, the arguments for this estimate appear less strong than the arguments against it. For example, the only sensible explanation for the shutdown of output of the Bison bomber is the conversion of the Soviet's heavy bomber factories to ICBM production. In addition, it is well to remember the persistent optimistic errors in previous national estimates.

In any case, the rightness or wrongness of the estimates does not need to be argued.

The whole American future is now being gambled on a guess that the Soviets do not have a few score weapons, which they have the means to produce and have been working desperately hard to produce. Whether the guess is good or bad, this is a criminal gamble. Only the same psychology that begot Pearl Harbor would permit such a gamble, and especially after this country has received the clearest kind of strategic warning at Berlin.

While we have zero tactical warning, and no missiles of our own in hard pads, there is only one way to reduce the gamble. The maximum feasible percentage of SAC's great force must be kept in the air, with targets assigned, bombs aboard, and ready to go. The word "maximum" needs to be emphasized, since the much easier and cheaper sort of air alert confined to SAC's B–52 squadrons will provide no more than minimum deterrence, which is not real deterrence.

The cost, though considerable, will be under $1 billion a year; but intense efforts will also be needed to increase the flow to SAC of replacement parts, spare crews, jet tankers to improve the B–47 capability, and so forth.

It seems a small price to pay, when you remember General Power's remark that "Pearl Harbor, though a highly successful surprise, was really like stamping on a strong man's little finger." The surprise we are now risking would not just mean the beginning of an ultimately victorious war. It would mean the end of these United States.

BARTER COULD COUNTER SOVIET ECONOMIC OFFENSIVE

Mr. COOLEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Speaker, we all know that the Soviet bloc is mounting an economic offensive against the free world. Part of this campaign is to displace U.S. exports to other free world countries. The Congress has handed our own Department of Agriculture an effective weapon to counterbalance and offset this Communist economic strategy. It is the barter program under Public Law 480.

But, Mr. Speaker, I am sorry to report to the House that this valuable use of our agricultural surpluses, in return for which we are able to accomplish a multiple purpose, by stockpiling vital raw materials, is not being employed as Congress directed it to be. Hostile forces within the administration arbitrarily curtailed the barter program in May of 1957, and they have failed to heed a very clear directive by the 85th Congress that the program should be resumed. As a result, our barter business in the last half of 1958 was only one-sixth of that conducted in the last half of 1956. This program has been put on a starvation diet, in the obvious hope that it will dry up and blow away.

Roadblocks of all kinds have been set up to prevent the restoration of an effective barter program. The biggest obstacle of all is the requirement of evidences of so-called additionality. No shipments can be made to the countries which have big commodity markets—called "A" countries in the Department's regulations—without special permission. Permission to do this is rarely granted, and that is why we do not have a significant barter program.

The purpose of all this administrative redtape is supposedly to protect U.S. cash markets; but the facts indicate that it has the opposite effect. The effect of these restrictions on barter, as the statistics show, has been not only to destroy the barter program but also to diminish the cash markets we had built up while barter was being carried on.

While the administration was prohibiting the barter of U.S. farm commodities to the so-called "A" countries in 1957, the Communists were shipping $89,927,000 worth of these identical commodities to these same countries during that year. Our Government held up the shipment of about a hundred million dollars worth of agricultural surpluses under the barter program, while the Communists filled the orders.

As an example of the continuing seriousness of this situation, during the past 2 months five barter proposals which would involve exports of surplus commodities to Belgium have been vetoed, although Belgium has entered agreements with Communist-bloc countries for the purchase during this year of 372,000 metric tons of these same farm commodities.

Whose cash markets are we protecting? While we continue to prevent the shipment of farm surpluses into "A" markets the Soviets are planning to ship 1½ million metric tons of the same farm products to these countries this year under trade agreements already entered into.

The barter program can help to prevent Soviet encroachment on Western markets. We must realize that the Soviets are in competition with us, and unless we get rid of the silly restrictions which surround some of our export programs, our friends in Western Europe and in other areas will be buying more and more agricultural commodities from the Soviet bloc.

The last thing we all want to do is to aid and abet Soviet economic imperialism. The first thing we all want to do is to find additional outlets for our farm surpluses. Let us hope for an awakening within the administration on this matter. Let us hope that they will institute a significant barter program, as the Congress has directed them to do.

The following tables show 1957 exports from the Soviet bloc to "A" countries, planned Soviet exports to Belgium in 1959, and dollar sales since 1953 compared to barter exports:

Value of selected exports from the Soviet bloc to selected A countries (modified barter program), January–December 1957

PUBLIC HOUSING BONDS

Mr. McDONOUGH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McDONOUGH. Mr. Speaker, today I have introduced H.R. 5096, a bill to close a glaring tax loophole in connection with future issues of public housing bonds. It will end Federal tax exemption for future issues of public housing bonds which are secured by pledge of Federal annual contribution contracts entered into after the date the bill becomes law.

My bill will end Federal tax exemption on public housing bonds which are to be secured by pledge of Federal contributions. They represent Federal credit. In an opinion rendered to the President of the United States on May 15, 1953, the U.S. Attorney General stated in part:

> In summary, I am of the view that: * * * A contract to pay annual contributions entered into by the PHA (Public Housing Administration) in conformance with the provisions of the act (U.S. Housing Act of 1937, as amended) is valid and binding upon the United States, and that the faith of the United States has been solemnly pledged to the payment of such contributions in the same terms its faith has been pledged to the payment of its interest-bearing obligations.

Since the Federal Government by law cannot sell its own bonds on a tax-exempt basis it is just plain wrong to permit a public housing agency, in effect, to sell Federal credit on a tax-exempt basis.

Only last Thursday $103 million of public housing bonds were sold to two bond underwriting groups at an average net interest cost of 3.40 percent. All of those bonds are secured by pledge of Federal contributions. Large investors through this financing device are, in effect, buying Federal credit on a tax-exempt basis. Contrast that with the small saver who buys U.S. savings bonds and gets 3¼ percent interest but must pay Federal income tax on the interest he receives. It is a glaring injustice to the small saver to burden him with Federal taxes on his investment and at the same time set up additional tax loopholes for the large investor on his investment. Such discrimination in favor of the big investor over the small saver must end. My bill will do just that.

The Housing Act of 1959, as reported by the House committee, provides for approximately 190,000 additional public housing units. At an average cost of $13,600 per unit that means $2.6 billion total cost. That will be the principal amount of public housing bonds issued to finance that cost. Those bonds will be 100 percent secured by pledge of Federal contributions. Those bonds at an assumed average rate of interest of 3 percent will generate $1.9 billion of interest payments over the 40-year life of those bonds. Those interest payments will be secured by 100 percent pledge of Federal contributions. The large investor will get that amount of interest on a tax-exempt basis. Assuming these wealthy investors are in the 60 percent income tax bracket, they would be getting a tax windfall of over $1 billion. Such a tax-free windfall for the very wealthy cannot be justified.

When the housing bill reaches the floor of the House if any additional public housing authorization is approved, I intend to offer my bill as an amendment to the housing bill and thus plug this tax loophole. We should make the rules of the game that apply to the small saver no more burdensome than the rules that apply to the very wealthy.

FEDERAL COMMUNICATIONS COMMISSION

Mr. CUNNINGHAM. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. CUNNINGHAM. Mr. Speaker, I am greatly distressed about the recent ruling by the Federal Communications Commission that all candidates for public office must be given equal time on regular news broadcasts.

I do not believe anyone in the broadcasting industry or anyone running for office objects to the equal time provision when it concerns interview programs, panels, or advertising. This equal-time provision is a guarantee to all office-seekers that no station may provide an opponent with choice broadcast time in excessive amounts while refusing another candidate the same opportunity to take his message to the voters.

But to say that equal coverage must be given on news broadcasts to all opponents of an incumbent mayor when the mayor opens a fund campaign is carrying the principle too far. Yet that is what the FCC has ruled. The stations which report such activities as opening of charity campaigns are performing a public service. They should not be told to give equal coverage to other candidates unless the candidate whose activities are covered makes a political comment during the course of the coverage.

Carrying out the decision of the FCC will result in a decided reduction in coverage of activities such as charity drives when part of the public service news coverage must of necessity show a person who is incidentally a candidate for election or reelection. The broadcasters in this country do a fine job of public service, and they should be encouraged in their efforts. I do not say that this decision will end such public service news coverage, but it will certainly reduce such coverage or cause it to be stilted in order to leave out a certain person who happens to be a candidate for public office but who also is the principal person involved in the charity campaign opening or in the dedication of a charity program or institution.

Certainly our broadcasters are mature enough to know when a candidate is seeking free publicity. Reporters and editors of our radio and TV stations are not naive. They will watch and catch the candidate who is looking for a chance to turn such coverage into personal gain.

But let us look into the matter further. What about the coverage of a city council or other legislative body which meets during a period when its members are candidates for reelection. Is a station to ignore the meeting of the legislative body? Is it to say that a bill or ordnance passed and no more? Is it to ignore the debate, which is often as important as the vote? I think we would have to answer "No" to these questions. Yet if the FCC ruling is carried out, the radio and TV stations that lead the way—those who do a good job of reporting government news and informing the people—will find it impossible to do a good job.

Such a station might have to report debate thusly: "A bill to increase the State gasoline tax passed the State senate today. The vote was 50 to 11. Somebody said the people do not want the increase. But somebody else said the people are willing to pay for better roads which will result. Another senator said people don't want better roads if it means more taxes."

Now what kind of a newscast would that be?

Or perhaps when a mayor who is a candidate for reelection greets the President of Argentina at the airport—as

happened in the case decided by the FCC—the newscaster in narrating film of the arrival of this foreign head of state—an honored visitor to our country—should say to the viewers: "Please don't pay any attention to the fellow shaking the President's hand and escorting the President to a car. He's a candidate for a political office and we aren't allowed to mention him unless we give 42 other candidates equal time to shake somebody's hand."

These are poor examples. At least I think they are poor examples. I imagine our talented reporters of our radio and TV stations can handle the situations better than this.

But there can be no doubt that strict enforcement of the equal time rule as it pertains to news coverage will cause less effective coverage of both public service activities and government news. And neither of these areas should suffer from reduced reporting coverage.

I am having a bill prepared which will amend the Federal Communications Act so that the FCC is instructed that it should not enforce the equal time rule in every news situation. The FCC would have rules of guidance which would allow a station to report the news as it happens. When one party has a rally, and the other party does nothing, the news reports should reflect this. But when one candidate buys time, the other candidates will continue to have the right to purchase equal time.

It does not take a Solomon to decide whether a station is giving slanted news coverage to one party or one candidate. Any radio or TV news editor has the good judgment to decide what is news and what is not.

The bill I am preparing will relax the equal time provision as it pertains to news coverage only. And it will spell out that the relaxation does not apply to coverage of individual candidates giving political talks, even when such political talks are part of the news coverage.

I invite my colleagues in the House to join me in sponsoring this bill or similar legislation.

BILL REGULATING NATIONAL HOLIDAYS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. ASHLEY] may extend his remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. ASHLEY. Mr. Speaker, during recent months some dramatic and far-reaching events have commanded our complete attention. The Russians have now launched a manmade planet and there has been a fresh spate of legislation directed at catching up technologically with the Soviets. In addition, thousands of bills have been tossed in the hopper dealing with a host of domestic and international issues which demonstrate conclusively our anxiety over meeting the challenge of our times and staking our claim in outer space. I submit, however, that we cannot permit our overriding concern for maintaining either a military balance of power or a balanced fiscal budget to blind us to the need for achieving progress in other directions.

Today I am introducing a bill to designate the third Monday in February as a legal public holiday called Presidents Day and to provide for the observance of Memorial Day, Independence Day, and Thanksgiving on Friday, thus creating four additional 3-day holiday weekends.

The purpose of this measure is to give Americans at least five 3-day holiday weekends throughout the year, inclusive of Labor Day, and to minimize the number of midweek holiday observances with all their attendant inconvenience and inefficiency.

The advantages of this calendar adjustment both from the standpoint of workers and, indeed, employers, are, I believe, self-evident.

There is no need for me to cite here the infinitely greater pleasure and satisfaction of anticipating and planning a 3-day holiday weekend when by sheer happenstance these holidays occur on Friday or Monday. Quite on the other hand, the interruption of the normal work week for a 1-day holiday not only impairs the smoothness of operations of many industrial, professional, and business concerns, but the abnormal amount of absenteeism that invariably follows is acknowledged to be the bane of bosses and a pain to plant managers.

To those who are shocked by this proposed break with tradition, may I point out that the current fixed date observance of these holidays is not so worthy of veneration as may appear at a glance. Washington was, according to the Julian Calendar used in his day, actually born on February 11. Memorial Day did not become a legal holiday until 1910, and even today veterans are memorialized on four different dates in the United States. As for Thanksgiving, it is within the recollection of all of us that this observance has been shuffled on the calendar and, as a matter of fact, the first Thanksgiving of the Pilgrims was celebrated in October.

Therefore, I earnestly commend the attention of my colleagues to this meritorious resolution to make life more efficient, convenient, and more pleasurable for all Americans and I trust it will receive your thoughtful consideration.

BILL TO ALLOW TAX CREDIT FOR CHILD MAINTENANCE DURING INCAPACITY OF THE MOTHER

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, I have today introduced a bill to amend the Internal Revenue Code of 1954 so as to allow a deduction for certain expenses incurred by a taxpayer for the care of his children while his wife is physically or mentally incapable of caring for such children. The bill would provide that there shall be allowed as a deduction expenses paid during the taxable year by a taxpayer, who is a widower, for the care of one or more children or dependents as defined in subsection (c) and, second, by a taxpayer who is a married man for the care of one or more children as defined in subsection (c); while the wife of the taxpayer is physically or mentally incapable of caring for such children, but only if such care is for the purpose of enabling the taxpayer to be gainfully employed.

The bill further asks that subsection (b) of such section be amended by adding at the end thereof a new paragraph which shall define the term "married man"; a deduction under subsection (a) shall not be allowed unless he files a joint return with his wife for the taxable year; and further that this paragraph shall not apply if for the taxable year the taxpayer is entitled to an exemption for his wife under section 151(b).

The bill which I am proposing further defines child, dependent, and widower. The bill further provides that the determination of whether an individual is married shall be made as of the close of his taxable year, except that if his spouse dies during his taxable year, such determination shall be made as of the time of such death. An individual legally separated from his spouse under a decree of divorce or of separate maintenance shall not be considered as married.

I believe that the bill itself explains the intent behind its passage. The bill is designed to give relief to those men whose wife, by reason of illness, cannot care for their children and who must, in order to support his wife and family, be gainfully employed but in order to be gainfully employed must also make arrangement for child care.

Under the present law a deduction for child care expenses may be allowed only to a taxpayer who is a woman or a widower as defined in the law. A man therefore may be entitled to such a deduction only if his wife has died or he is legally separated from his wife under a decree of separate maintenance or divorce, and he has not remarried at the time the expenses are incurred by him. There is presently no provision in the code under which such a deduction may be allowed to a married man even though his wife is in a mental institution during the period in which child care expenses are incurred.

I believe this constitutes an inequity to the individual citizen and a deterrent to economic growth in our tax laws which should be corrected as soon as possible.

PHILIPPINE WAR DAMAGE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California [Mr. GEORGE P. MILLER] is recognized for 30 minutes.

Mr. GEORGE P. MILLER. Mr. Speaker, I have again introduced a bill, H.R. 4287, to provide for the payment of the balance of war damage claims awarded by the Philippine War Damage Commission prior to 1951. A measure to the

same purpose, H.R. 4311, has been introduced by Congressman CLEMENT J. ZABLOCKI, of Wisconsin, who made a thorough and forthright statement in its support.

I should not take the time of this body to add one word to the volumes which have been spoken, read, and written on the subject of our lasting friendship and cooperation with the Philippines in peace and war, their present and urgent need of assistance, and the moral justice of discharging the balance of an obligation which we entered into a decade ago, if it were not for the widespread pubication of indiscriminate, misleading and often dishonest reports of the deterioration of our relationship with the Philippine Republic.

I am sure that no one in this House who is aware of even a small part of what I know for certain to be the situation in the Philippines and the long history of our connection will permit himself to be prejudiced against any action favorable to the Filipino people by reason of controversial pronouncements of officious spokesmen and by journalistic outbursts which regard drama more highly than fact.

There is no denying the economic plight of the Philippines resulting doubtlessly, in part at least, from errors in planning and administration. It is an accomplished fact in history that the Philippines with our blessings attained a position of independent statehood in 1946, a mere 12½ years ago. From the first situation stem the urgent petitions for help from the Philippines which upon rejection change to cries of disappointment and often resentment. From the second, the recently acquired independence of the Republic of the Philippines, follow the understandable gestures and official acts which accompany national consciousness even where a close friend and benefactor might be involved.

Moreover, in the matter of claims resulting from monetary measures of the United States in the thirties and from war losses later, there have been persistent demands by the Philippines which perhaps include a staggering number and amount of accounts which have little or no merit but represent either the misguided exaggeration of people who have lost something of indeterminate value or perhaps outright dishonesty which is a calculated risk in all claims procedures.

What we in the exercise of our experienced wisdom and cool judgment must do is discriminate between what is sound and permanent and what is momentary and tenuous. We must recognize that there are elements in suggested aid programs for the Philippines which are not only beyond the capacity of the United States to meet but which are not in a real sense salutary to the Philippines. As to claims we must not reject the entire portfolio because of the inadequacy of some, even the greater part, of its elements.

I strongly urge, Mr. Speaker, that we look through the reported antiforeign agitation against Americans in the Philippines and the political demagogy which singles out the Yankee in Manila as a convenient target, to the 25 million kindly Filipinos who are traditionally proud of their historical relationship with the United States which, to quote from a recent analysis appearing in the Washington Sunday Star, "has given them Anglo-Saxon political forms, the English language and a love for individuality and freedom matched by few nations anywhere." The article goes on to say "Things are askew in the Philippines today but the warm geniality of the Filipinos themselves and their emotional closeness to Americans are beyond cavil."

The Honorable Manuel P. Manahan, a stalwart lieutenant of the late and well-loved President Magsaysay who himself was a candidate for the presidency of the Philippines in the last election has denied that the Philippine people are unfriendly to the United States. He lays the blame for most of the anti-American agitation in the Philippines on a small, powerful, cohesive, and vocal group, stating:

> It is just this group who for reasons of its own has created headlines here and has made the outside world feel that this Nation has turned against its oldest friend. This powerful group, which is headed by anti-Americans of long standing * * * is backed by millions of dollars and has raised a loud cry. * * * The Philippine people in general have nothing against the United States and still consider Americans their friends.

On our side, I respectfully submit that a fair investigation would disclose that articulate American voices which dwell on the widening breach between the Philippines and the United States are not only in the minority but are not remotely representative of the sentiments of 175 million Americans whose feelings for the Philippines based on more than half a century of close ties and nurtured by the simple and heart-warming stories of returning soldiers are filled with affection and a normal desire to be of help in time of need.

Specifically, there has been an unfortunate distortion of the various demands of the Philippines upon our Government for the payment of claims in a vast number and variety of categories. It appears to me to have been a mistake to put the single label on all of the claims or to have heaped them all into a totalizing hopper which would produce to a staggering figure close to a billion dollars. Through error or design this procedure resulted in prejudice which is not fair to many meritorious claims which form parts of the aggregate. Again the announcements of rejection of the total Philippine claims program reportedly emanating from our Government in the first instance seemed to have been colored by bureaucratic disfavor traditional in matters of this kind, and later appeared to have been officially repudiated since there has been no decision either for or against the claims.

In conclusion, may I point out that the war damage awards of the Philippine War Damage Commission forming the subject matter of the legislation now before this House resulted from studied legislative action directly after the end of the war; that, as has been frequently reported, the legislative history behind this action indicates that our Congress had every intention of supplementing the emergency wartime measure with further legislation called for by circumstances which might develop; that even after the most conservative appraisal of properties lost and damaged during the war the amount paid upon the awards made by an agency of our Government, the Philippine War Damage Commission, aggregated only 52½ percent of the face amount of the awards.

The New York Times in an editorial prompted by the current agitation concerning Philippine relations touched on the work of the War Damage Commission in the following language:

> The United States was able to do a good job on the settlement of claims. The administrative cost of making these settlements was remarkably low, the operation was sound from the outset, and it met an immediate need.

It is true that in a strict legal sense there is no enforcible claim against the United States resulting from Philippine war-damage awards. Nevertheless, I do not believe there is a man among us or among our constituents who will resort to legal technicalities to refute a moral obligation of such pronounced clarity as the war-damage awards which we have left unpaid.

In this particular, Mr. Speaker, there is an open Philippine claims adjustment with the United States which must be segregated from any generalities and must be dealt with by us in the light of the history of our legal and moral obligations and the requirements of this moment based upon the condition and economic needs of our friend and ally, the Republic of the Philippines.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. GEORGE P. MILLER. I yield.

Mr. JUDD. Mr. Speaker, I wish to commend the gentleman from California for the statement he has just made, and for the bill he has again introduced. Let me add a point or two to underline and support what the gentleman has said. When the Philippines War Damage Act was being studied by the Congress at the end of the war, I was a member of the old Committee on Insular Affairs which handled that legislation under the chairmanship of our former colleague, Judge Bell of Missouri. The act established the War Damage Commission and provided that all claims that the Commission verified as legitimate and reasonable should be paid up to the first $500, and that payment of the balance above $500 should be prorated according to the amount of money available. We had no figures at that time on which to base a firm estimate of what the total of all valid claims would amount to. The figure of $500 million was the first estimate agreed upon, but obviously was in some degree picked out of the air. We could be reasonably sure the total would be at least that. At one time I offered an amendment to authorize $600 million. If the Commission found the justified claims came to less than that, no harm would be done. The money would not be spent. On the

other hand, it would be advantageous to move in quickly and help restore the damage that had been suffered in the Philippines during their valiant defense against Japan. We should remember that most of the damage was inflicted during their liberation—inflicted not by the Japanese forces, but by our American planes and artillery. Yet not a Filipino wavered even when his home or his family or his buffalo was being destroyed by our bombs or our war operations. They were as loyal as any people in history have ever been in their cooperation. I felt then that we should have adequate funds to do the job of restoration as quickly as possible. To get them on their feet rapidly would prove sound economy. A stitch in time would save nine later on.

In the negotiations before the bill finally passed the House and Senate and became law, the amount authorized was $400 million. But, I recall distinctly that in the report and during the debates others besides myself stated that this figure was only a rough estimate and that we recognized our obligation to provide more later if the amount of valid claims required more. So I feel that while it is more than 10 years later, the moral obligation still stands.

At the time the War Damage Commission had disbursed the $400 million we provided, a difference of opinion developed as to the better way to help the Philippine economy and people thereafter. Was it better to pay the balance of those larger approved claims which had been paid up to only about 52 percent of the balance above $500? Or was it better to give aid by making loans or grants for the development of industries in the Philippines? Would the same amount of money do more good if put into building up the whole economy rather, or if given as compensation to individuals or firms or institutions that had suffered damage? This was an honest difference of opinion. I feel that we have a moral commitment to carry through what we said in 1946 we would do and which we have not done fully.

Mr. Speaker, if the gentleman will yield for a moment further, I would like to say a word about this recent talk that the Filipinos are becoming anti-American. Some of that comes from people who see the efforts of the Philippines to develop economic independence as, somehow meaning that they are pulling away from, even turning against, the United States. I cannot agree. The Filipinos would be remiss and would be doing less than they ought to for their own future if they did not make strong and persistent efforts to develop their own economy so that they can stand on their own feet and not be subject to or dependent upon the economy of the United States.

In 1946 we gave them political independence. In the Independence Act we stipulated that they were to move step by step toward full economic independence in 1974. Thereafter they would no longer have tariff preference in the United States. Now, how can they develop economic independence by 1974 if they do not now build up their own industries? When they establish their own industries they naturally are run by themselves, not by Americans. Some Americans who have had a privileged status in the past seem to regard that as anti-American. No, it is healthy self-reliance. Of course, there are irritations on both sides; but I have been there a good many times, as the gentleman has, and we have not seen any anti-American feeling among the rank and file of the Filipino people. In fact, there is overall a stronger pro-American feeling than I know of in any other country in the world.

They are short of foreign exchange now, but that is not wholly the result of bad developments. They have started seven or eight hundred new industries in the past few years. That required large investments to get machinery and sometimes supplies from abroad. They had to invest most of the precious foreign exchange they earned and of the loans and grants they were able to get from abroad. So they are short on dollars now, and the peso is weak. But these investments should pay off in the years ahead and give them a sounder and healthier, self-supporting economy. We ought to understand that this shortage of capital in the Philippines which we are hearing about and which this bill will help correct, is in some respects the result of the sound efforts they have been making to become economically independent by 1974. It is a problem to be solved, not something to be condemned.

The Philippines and the United States have a very close relationship, founded first on 50 years of relationship as trustee and ward. Then we had 4 years of the closest comradeship in fighting against a common enemy. We have now had more than a decade of partnership as equals—two sovereign States voluntarily choosing to walk together for common purposes, each helping the other. And, believe me, the Filipinos have been very helpful to us in interpreting us to their fellow Asians. I think it is mischievous for any Americans to misrepresent as anti-American the wholesome desire of the Filipinos to be independent, just as it is mischievous for some Filipinos to charge that the United States is trying to impose or reimpose outside controls on them.

Mr. Speaker, the relationship between these countries has been extraordinarily close. It is loyal friendship and farsighted statesmanship for the United States to do what it properly can at this difficult period in the life of the Philippine Nation to help it through the problems with which its ablest leaders are struggling. We want to go ahead together in the years to come.

Mr. GEORGE P. MILLER. I thank the gentleman.

I now yield to the gentleman from Massachusetts [Mr. McCORMACK].

UNITED STATES-PHILIPPINE ISLANDS RELATIONS

Mr. McCORMACK. Mr. Speaker, what happens in the Philippines is of great concern to the people of America. The people of the Philippines are not only our friends but our allies.

We helped them to achieve their freedom. We led them, so to speak, by the hand to reach their goal of sovereign nationhood.

Recently we read reports in the press that were somewhat disquieting. The newspapers made much of certain unresolved issues between our two countries. They were magnified beyond their just proportions. It is natural for two nations as closely linked by political and economic ties such as the United States and the Philippines to have some disagreements every now and then. In any family there are bound to be some differences, but, with very rare exceptions, they are adjusted.

The United States Ambassador to Manila and the Philippine Ambassador to Washington were recalled by their respective governments for consultations. This was a wise move for a briefing from each envoy was needed to help clear the atmosphere in both countries. It is evident each Ambassador did his share to pour oil on troubled waters. Each one gave his government and people the perspective necessary to view the situation without bias or passion or emotionalism.

We want to assure our friends in the Philippines that the true American sentiment is not only to be fair with them at all times, it is more than that: it is to be of help to them as much as we Americans can. The mills of the gods may grind slowly and in a democracy the wheels of government may not turn as fast as we would want them to. But this does not mean that if an injustice that should be righted has been allowed to go uncorrected that it is a deliberate one. The record of Philippine-American relations shows that whenever an injustice or an inequality has been called to our attention, we have always voluntarily made the correction. The most recent case was the Philippine Trade Act that we first extended and then modified in a manner satisfactory to the wishes of the people of the Philippines.

We are happy to note that Gen. Carlos P. Romulo, our esteemed former colleague in this House, whose unequaled service to his country has earned our admiration, has returned to his post as Philippine Ambassador to Washington. In an interview that he gave to the Manila Times on February 16, 1959, he emphasized that he found no anti-American sentiment in the Philippines, and there is no anti-Philippine sentiment in the United States. In order that in this country our people may know the present temper and attitude of the Filipino people, under unanimous consent I include the interview in my remarks:

CARLOS P. ROMULO SEES NEW PHILIPPINE ISLANDS ATTITUDE—SAYS FORGING OF TIES WITH SEA NATIONS NOT ANTI-AMERICANISM

(By Vicente J. Guzman)

"It is not anti-Americanism that I found in the Philippines."

This is not an off-hand diagnosis by Ambassador Carlos P. Romulo. It is the well-considered view of a man whose perceptions have been sharpened by years of involvement with the problems of the world.

What he found, our Ambassador to Washington said, is a people growing into maturity, seeking new values, in quest of new

goals, reassessing their standards and engaged in searching national introspection.

"Certainly, such a people, blazing a trail for themselves," Ambassador Romulo said, "cannot be accused of being anti this or anti that.

"It is the birth of a new soul, the product of a developing maturity and it is heartwarming and soul-stirring."

The Ambassador had just come home from a luncheon, one of the numerous parties his friends have lined up for him since his return home last January 26. He was in a cool "barong Tagalog" and was every inch the perfect host.

Dick, his third son, the only member of the family around and who acts as his secretary even while poring over his law review books (a Harvard law graduate, Dick is home to take the bar examinations) had gone to classes.

We started with the weather which the Ambassador finds very agreeable. Fifteen years in America have not reconciled him, he said, with the cold Washington climate this time of year.

Since 1935, the general said, Asians had begun to dream of getting together in close ties. This was not possible then because we were divided among ourselves.

India, Malaya, Ceylon, and Burma were under British rule. Indonesia was feeling the effect of ruthless Dutch colonial power, Vietnam, Laos, and Cambodio had not yet freed themselves from the French.

The predominating policy of the colonizers was to divide and rule. The dream of Asians could not be realized in the face of these obstacles.

A quarter of a century has rolled by. Now, the atmosphere has changed, and the feeling of integration is nurtured in the natural development of our maturing nationhood.

"This does not mean," Ambassador Romulo said, "that we are veering away from the United States. This means that we want to update our relations in such a way that we form a close friendship with our neighbors without prejudice to our old ties with America."

He reminded me that the Filipino is a child of the East and the West.

"From 1946," he said, "we devoted ourselves to rehabilitation and reconstruction. We had to pay attention to the material side of our lives. We had to get rid of the scars of war.

"So now we have time," he went on to say, "to devote to the national soul. We are starting to get our bearings spiritually, hungry for reorientation.

"Add to this, the new existing problems that have suddenly cropped up as we enter the atomic age."

Now that our stand on communism has been taken, Ambassador Romulo sees that the Filipinos are realizing the existence of new conditions and new circumstances that they have to meet as a nation.

"We begin to ask questions because of these new conditions," he said.

"For example," he added, "we ask ourselves in our agonizing reappraisal, if and when the intercontinental ballistic missile (ICBM) has become operational and America will no longer need us as a base, what kind of relationship would we evolve with the United States?

"When our usefulness with America expires, when American naval and air bases have become obsolete because of the ICBM, on what basis will Philippine-American relations be laid?"

Our inner tensions are not helped any, in his opinion, when we look around us and see the tremendous postwar industrial advance of Japan.

And there are the teeming millions in the Chinese mainland now under the lash of Red dictators.

"Should we not be thinking of ourselves, caught in competition as we are now in the industrial race between China and Japan?"

And there is India and her new 5-year plan. Romulo feels concerned about the possible effects of this upon the Philippines.

"All these revolutionary changing conditions," the Ambassador said, "impose new appraisals. They open up new horizons. And so we begin to plumb these heretofore unfathomed depths. This is because we as a nation must adapt ourselves to the transmutations imposed by the atomic age.

"Certainly, that is not anti-Americanism. As we delve further and further, we know that nationalism is an essential in internationalism. We can only have an international personality if we have something national to contribute to the world."

With respect to the new concept hereabouts in our foreign relations, Ambassador Romulo is wholly attuned to the idea of the Philippines integrating with the rest of the world and not merely with one nation.

"If the goal of humanity is integration and not fragmentation, should we not," he asked, "begin now preparing for this process even if it may be in the long tomorrow?

"We cannot escape the evolution of mankind. America no doubt is our best friend but it is not because we love our old friends less when we have to prepare for an inevitable future because certainly we love our people more."

Romulo is of the belief that the closer we are to our Asian neighbors, the more the United States will realize the value that we are as allies in the cause of freedom and democracy.

The pariah, Romulo emphasized, is despised everywhere. "We do not want to be a pariah in Asia and no self-respecting nation wants a pariah for an ally," he said.

Speaking of Philippine-American relations, particularly, Ambassador Romulo affirmed there are irritations that have marred the cordial relations between the two countries. These irritations, he said, were the result of the accumulation of unattended claims of the Philippines dating back to 24 years ago.

In this connection, Romulo paid tribute to Filipino patience.

Philippine claims, he said, total $942 million, broken up as follows:

1. $24 million in gold devaluation funds.
2. $130 million in additional war damage payments.
3. $173 million in coconut oil processing tax.
4. $75 million in sugar excise tax.
5. $1 million in claims of Philippine customs duties of imports of the U.S. Army and Navy.
6. $600 million in various military claims, known as the bulk claims.

Of these items, only the first has been attended to. Only last week President Eisenhower sought funds to meet this obligation, which dates back to 1935, in a recommendation to the U.S. Congress.

President Garcia in a summit conference in Baguio last Friday at which the Ambassador was present defined Philippine policy in respect to carrying out these negotiations. That is one of the reasons Ambassador Romulo was summoned to Manila—to help in the formulation of that policy.

I have talked to several officials and others who are keen observers of our foreign policy and I know that Ambassador Romulo, who because of the record of his achievements is considered our premier diplomat, will return to Washington with his hand considerably strengthened by solid support at home.

I also include an editorial that appeared in the Philippines Herald of February 20 about the work that General Romulo did while he was in Manila and an editorial of the Manila Times of February 21 on the same subject:

[From the Philippines Herald, Feb. 20, 1959]

AMBASSADOR ROMULO

Gen. Carlos P. Romulo returned to the United States the other day with the implied full support and confidence of the President, our Congress leaders, and the nation as a whole in his role as Philippine Ambassador to that country. There is no doubt that his brief stay here has been most fruitful, both in the sense of providing him an opportunity to brief the Filipino people and their leaders on vital aspects of the Philippine-American relationship and of getting briefed, in turn, on current trends in this country. But more than this, perhaps, he returns to Washington with his hand strengthened by his nation's confidence in his leadership and ability.

General Romulo is, no doubt, among the best men who can represent us in the United States. The record of his achievements shows this. That he is highly regarded by the American people is also unquestioned, and this, one must admit, is a distinct asset to one charged with the task of representing us in that country. In no better way did he show this competence than when he appeared before the house and senate foreign affairs committees, during which he answered questions put to him forthrightly, revealing a comprehensive grasp of the various aspects of the Philippine-American relationship.

He also made it a point to address various organizations, such as the veterans, the sugar men, the women's groups, the Boy Scouts, student associations, in each case presenting his views lucidly and effectively. That he made good use of every single day that he was here cannot be gainsaid. In his speeches he invariably managed to drive home a fresh perspective or a new point of view.

We are confident he will continue to represent us with the same loyalty and devotion and we wish him success in the difficult task that awaits him in Washington.

[From the Manila Times, Feb. 21, 1959]

THAW IN PROSPECT

Negotiations on outstanding Philippine-American issues enter a new stage as the two ambassadors—Gen. Carlos P. Romulo and Charles Bohlen—return to their respective posts. General Romulo is on his way back to Washington with specific instructions and assurances of full support from both the President and Congress, while Bohlen is returning with possibly a new set of instructions.

General Romulo's brief visit here has enabled both the foreign affairs department and Congress to have an idea of the progress of negotiations at the Washington end and the feeling in the U.S. capital on the various unresolved issues. In turn, it enabled General Romulo to gage the intensity of the local temper and the seriousness with which national officials are trying to press for the early settlement of P.I.-U.S. issues.

The trips of the two ambassadors have provided the necessary opportunity for fresh consultations. A thaw is, we believe, in prospect.

I also wish to include in my remarks the following news item from the Philippines Herald of February 19 which shows that General Romulo returns to his post in Washington not only with the full confidence and support of President Garcia and of the leaders of the Congress

of the Philippines but also of the Filipino people:

ROMULO DEPARTS FOR WASHINGTON

(By Vic Villafranca)

Ambassador Carlos P. Romulo left unexpectedly last night for Washington armed with instructions from President Garcia on ways of pursuing Philippine omnibus money claims against the United States.

Early yesterday, Romulo was assured of congressional confidence and support during a call on legislative leaders.

Senate President Eulogio Rodriguez said that the Ambassador has "our confidence and we are behind him."

Regarding Romulo's work in Washington, Rodriguez said the Envoy was an able and worthy spokesman and has served the Philippines faithfully in the United States.

He also praised the Ambassador's presentation of the state of Philippine-American relations.

The Senate President said:

"Ambassador Romulo has done a remarkable job in the short time that he was in the Philippines by giving not only the members of both houses of our congress but also our people as a whole a clear picture of Philippine Islands-United States relations."

In his appearance before the house and senate foreign affairs committees, Romulo, according to the legislative leaders, acquitted himself not only creditably but in a superb manner.

The Ambassador called on Rodriguez, speaker Daniel Z. Romualdez, speaker pro tempore Constancio E. Castañeda, and other congress leaders yesterday morning.

During his call on the congress leaders, Romulo took time out to sit with the newspapermen in the senate press gallery, some of whom were his colleagues when he was a newsman.

Mr. Speaker, the day General Romulo returned to the United States after his successful visit to his homeland, he was conferred one of America's highest honors. Freedoms Foundation at Valley Forge, on the occasion of the 227th birthday of George Washington, singled out the Filipino Envoy for its highest award, the Freedom Leadership Award, so far given only to three heads of state, Winston Churchill, Konrad Adenauer, and the late Ramon Magsaysay. The selection is by unanimous vote for three successive years by a jury composed of 34 leading Americans who meet at Valley Forge for 2 weeks to deliberate and choose from among various nominees.

The citation engraved on a handsome plaque and presented to General Romulo in a ceremony in Valley Forge last February 22, which was nationally televised, follows:

FREEDOMS FOUNDATION AT VALLEY FORGE HONORS AMBASSADOR CARLOS P. ROMULO

For his spirited, practical leadership of man, for his unfailing devotion to his country, for his wise counsel and exemplary character, Freedoms Foundation at Valley Forge bestows upon Carlos P. Romulo, a soldier of arms and ideas, its highest freedom leadership award.

His wisdom and courage in the quest to sustain and expand man's individual liberties have lifted the spirits of all who seek freedom.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include therein the articles referred to.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. GEORGE P. MILLER. Mr. Speaker, I join the majority leader in welcoming back to Washington and hailing the return of General Romulo, who has done so much to cement relations between our two countries. I can think of no greater bond between two peoples than the blood of their common heroes.

A REAL AMERICAN—THOSE WHO ARE WILLING TO SACRIFICE AND SUFFER FOR AN IDEAL SEEM TO BE FEW IN NUMBER

The SPEAKER pro tempore. Under previous order of the House the gentleman from Michigan [Mr. HOFFMAN] is recognized for 15 minutes.

Mr. HOFFMAN of Michigan. Mr. Speaker, one such outstanding individual is Stanley Yankus on a farm near Dowagiac, Cass County, Mich.

Seeking freedom and opportunity, Stanley's parents left their homeland—Lithuania—to become citizens here. Stanley, born in this country, grew to young manhood, married, purchased a farm, has three children.

With the grain grown on his farm and some purchased poultry feed, he raised chickens, established a business where he sold 53,000 dozen eggs a year. His business was successful. He not only was able to provide for his family, but to accumulate a small bank account.

Then those who have comparatively little faith in the ability of the present day American to, shall we say, paddle his own canoe, began to enact and enforce what might be termed social legislation.

Through the expenditure of the tax payers' dollars, a vote-buying program was instituted. As Harry Hopkins said, "We will spend and spend, and tax and tax, and elect and elect." "Spend your dollars to elect me."

One of the provisions of the legislation—and regulations—is that no one, even though he owned his own land, could plant or harvest wheat from more than a fixed number of acres, determined by a governmental agency.

Firmly believing that a man had both the natural and constitutional right to use his own property in his own way when no one was injured. Stanley planted and harvested the wheat from a larger number of acres than that specified by the Government. He used the wheat to feed his chickens. No other purpose. He did not sell, trade or borrow a kernel. The result was that the Government came down on him, convicted him, fined him, has now forced him to sell his farm.

Under the Government regulations, he could not grow wheat, grind it in his own mill, let his wife bake the flour in his own oven, he and his family eat bread made from his own grain. If he did, he violated a Federal law, a Federal regulation.

Learning by experience that our constitutional guarantee of the right to own and use one's property was not true, Stanley has regretfully decided that he will give up his citizenship and, with his family, move to Australia where he hopes his right to freedom will be respected.

An editorial from the News-Palladium of February 24, 1959, published at Benton Harbor, Mich., gives expression to the thought of many—which is that, notwithstanding all of the restrictions imposed upon the citizen and the denial of the freedom which we have all heretofore enjoyed, this is still the country where the individual enjoys greater opportunity, more freedom than in any other country. That editorial reads:

AUSTRALIA BECKONS

Stanley Yankus, rebel Cass County chicken farmer who has been battling the Federal Government for 4 years on the issue of crop controls, announces that his 100-acre farm is for sale, and that when and if he can pay what the Government claims he owes for refusing to comply with acreage quotas of wheat, he and his family will turn their backs on the United States, and emigrate to Australia where he intends to make a fresh start.

Yankus has contended all along that he grew wheat to feed his chickens, rather than for sale on the grain market. The Government, however, has kept after Yankus, impounded his bank account and levied penalties until he is ready to give up, a bitter and disillusioned man.

Yankus intends to get a job in Australia and work for hire until he can acquire land and resume farming "down under." He feels that opportunities for pioneering and freedom are greater there for himself and his children.

The choice Yankus is making is his own, and if it is really his wish to leave America, we hope him fortune and happiness. He is an individualist who, like probably millions of other Americans, chafes under growing bureaucracy and statism. Yet there are few, however great the provocation, who would voluntarily surrender their heritage. For with all its faults, its shortcomings and mistakes, nowhere in the world, not excluding Australia, do people enjoy as much freedom, security and opportunity.

In war and peace, the Western World, at least, looks to America for aid, leadship and inspiration. Our responsibilities, whether we enjoy them or not, are to create a better world, and the effort imposed heavy burdens, among them regulations and burdens we can't shirk.

We doubt that Mr. Yankus, whose antecedents came here from Eastern Europe to escape oppression and to carve out new lives, will find any utopia, or that life in Australia will be without problems and difficulties. He obviously feels, however, that he has reached the end of the line insofar as patience and struggling against interference are concerned. We hope he finds Australia his "promised land," but are not forgetful of the fact that tens of millions throughout the world would make any sacrifice to reach America and achieve U.S. citizenship.

A false rumor circulated in Poland last week, to the effect that the United States had removed restrictions on immigrants to America, caused Poles by the thousands to stampede the U.S. Embassy, seeking entry permits to these shores.

Regardless of whether or not we approve of Mr. Yankus' decision, he may have made an historic contribution to this Nation, by focusing so much attention on menacing growth of dictatorship here and alerting the people to the dangers to their freedom. Mr. Yankus' decision must have been an excruciating one, born of desperation he could no

longer endure. His sacrifice, we hope, will help awaken all America.

But one thing is true—that, for the good of all of us, Stanley is sacrificing his opportunity here and, by so doing, is bringing home to each of us a situation which, if not speedily cured, will destroy us as a free nation.

We recall the statement of Nathan Hale who, about to be hanged by the British, said:

I only regret that I have but one life to lose for my country.

Stanley Yankus is bringing home to every thinking American the necessity of stopping in this country the trend toward tyranny.

He has but one farm to give to those who receive subsidies.

STATEMENT OF STANLEY YANKUS, BEFORE THE ALBERT SUBCOMMITTEE OF THE COMMITTEE ON AGRICULTURE, FEBRUARY 27, 1959

Mr. Chairman and members of the subcommittee, permit me to express my deep appreciation for the opportunity given me to very briefly call attention to one of the inevitable results which follow the enforcement of the Agricultural Adjustment Act of 1938, as amended.

The following is a very brief statement of what I would like to say and I hope that after it is read, I may be permitted to enlarge upon the present situation.

What will happen if the present trend in government continues, in my opinion, based upon my experience, is that the people of the United States of America will no longer be free and independent, nor will this be a free nation.

My name is Stanley Yankus. I have lived on my 100-acre farm since April 1943. I raise wheat and barley and feed it all to my chickens. I have never signed an agreement with the ASC. I have never accepted any subsidies. In the fall of 1953, an ASC agent said I could not raise wheat and feed it to my chickens. I thought this was contrary to everything American. I asked the ASC man how I would be able to make a living if I couldn't use my land? In 1954, my wheat fines equaled my entire net income. That particular year 1,100 chickens died in 10 days from a bad disease. Eggs were cheap and feed was high due to support prices. My wife and I made only $1,000 that year.

In the year 1955 I was fined about $1,034. The March issue of Readers Digest magazine has an article entitled "The Strange Crime of Stanley Yankus." What is my crime? A man does have to commit an offense to get fined or punished. I did not sell any wheat so my offense is not selling wheat. Then my offense had to be using land for producing crops.

Now, Congressmen, I would like to put the shoe on the other foot. You have passed laws permitting the Bureau of Reclamation to put new land into production. In the year 1955 alone, the Bureau of Reclamation added a 136,000 acres of land into production. So who is more guilty of the strange crime of producing crops? The Bureau of Census also states that 6 million bushels of wheat were imported in 1955. I did not add to the surplus of wheat, but you did since you have the power to regulate imports.

During the years 1954 to 1958, inclusive, I was fined $4,562 plus interest and costs. Because many of the farmers in my situation had been through courts and received adverse decisions, I decided to appeal through the press to the American people. The Detroit Times was the first large newspaper in the Nation to champion my cause.

The division of power—legislative, executive, and judicial—has been a fundamental concept of English and American law.

The ASC has nullified this concept because a bureaucrat in the Department of Agriculture can write a regulation through the Federal Register which has the effect of law. The ASC can and does execute and administer these laws, and the ASC acts as judge and jury in determining a farmer's guilt. I am not fighting for the right to grow wheat. I am fighting for the right to own property. If I am forbidden the use of my land, then I do not own it. My rights do not extend much beyond the right to pay taxes. This is tyranny.

The fifth amendment of the Constitution says "no person shall be deprived of life, liberty, or property without due process of law." The right to trial by jury is one of the due processes of law which has been denied to me.

My right to liberty should certainly be my right to earn my own living on my own farm.

Federal law should apply equally to all citizens. Yet in 36 States there are wheat restrictions, and in 12 States there are none. Thus, I am a second-class citizen because I live in a State where restrictions are imposed.

For 5 years my wheat allotment has been about 10 acres per year. Since I began to seek publicity, the ASC gave me an allotment of 28 acres for 1959. This is ample proof that allotments are established arbitrarily.

Not only have I fed all the grain I have raised but I have purchased $12,000 worth of commercial chicken feed each year. This feed contains wheat and so I have been reducing the surplus of wheat.

I have not harmed any other farmers. I have earned my own living. I have paid my taxes. How can you Congressmen justify the laws which have destroyed my means of making a living?

Many people have told me that I would lose everything by opposing these wheat laws. What is everything? Money is of no value to a slave. I think freedom is everything.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PATMAN, for 30 minutes, on Wednesday and Thursday next, March 4 and 5, and to revise and extend his remarks and include extraneous matter.

Mr. O'HARA of Illinois, for 1 hour, on March 12 and March 16.

Mr. CRAMER, for 30 minutes, on Tuesday, March 3.

Mr. HOFFMAN of Michigan, for 15 minutes, today.

Mr. POWELL (at the request of Mr. MCCORMACK), for 30 minutes, on Tuesday, March 3; for 30 minutes, on Wednesday, March 4; and for 2 hours, on Friday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. PORTER in three instances and to include extraneous matter.

Mr. SAYLOR and to include extraneous matter.

Mr. REES of Kansas.

Mrs. BOLTON and to include extraneous matter.

Mr. MACK of Washington and to include extraneous matter.

Mr. MCCORMACK and to include extraneous matter.

At the request of Mr. MCCORMACK, the following Members:

Mr. RODINO and to include extraneous matter.

Mr. LIBONATI.

Mr. ALGER.

(At the request of Mr. MCCORMACK and to include extraneous matter, the following:)

Mr. DENT in three instances.

ADJOURNMENT

Mr. JOHNSON of California. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 30 minutes p.m.) the House adjourned until tomorrow, Tuesday, March 3, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

637. A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1959 in the amount of $427,516,262 for the legislative branch, the judiciary, the District of Columbia, and various departments and agencies of the executive branch of the Government (H. Doc. 90); to the Committee on Appropriations and ordered to be printed.

638. A letter from the Secretary of Commerce, transmitting the report entitled "Third Progress Report of the Highway Cost Allocation Study", pursuant to section 210 of the Highway Revenue Act of 1956, approved June 29, 1956 (70 Stat. 387, 401), as amended by section 1 of the act approved August 28, 1958 (72 Stat. 983) (H. Doc. 91); to the Committee on Ways and Means and ordered to be printed with illustrations.

639. A letter from the Acting Secretary of the Treasury, transmitting the third annual report on the financial condition and fiscal operations of the highway trust fund for the fiscal year 1958, pursuant to section 209(e)(1) of the Highway Revenue Act of 1956 (H. Doc. 92); to the Committee on Ways and Means and ordered to be printed.

640. A letter from the Attorney General, transmitting a draft of proposed legislation entitled "A bill to provide for the relocation of the National Training School for Boys, and for other purposes"; to the Committee on Government Operations.

641. A letter from the Acting Secretary of Health, Education, and Welfare, transmitting a report covering personal property made available for distribution to public health and educational institutions and civil defense organizations under section 203(j); and all real property disposed of to public health and educational institutions under section 203(k), pursuant to the Federal Property and Administrative Services Act of 1949, as amended; to the Committee on Government Operations.

642. A letter from the Secretary of the Interior, transmitting a report pertaining to the construction and operation of saline water demonstration plants, pursuant to Public Law 85-883; to the Committee on Interior and Insular Affairs.

643. A letter from the Acting Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier

National Park in the general vicinity of Ashford, Wash., and for other purposes"; to the Committee on Interior and Insular Affairs.

644. A letter from the Acting Chairman, U.S. Atomic Energy Commission, transmitting a draft of proposed legislation entitled "A bill to amend Public Law 85-590 to increase the authorization for appropriations to the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes"; to the Joint Committee on Atomic Energy.

645. A letter from the Attorney General, transmitting a draft of proposed legislation entitled "A bill to amend section 1915 of title 28, United States Code, relating to proceedings in forma pauperis"; to the Committee on the Judiciary.

646. A letter from the national director, Boys' Clubs of America, transmitting the Third Annual Report of the Boys' Clubs of America, covering the period of 1958, pursuant to Public Law 988, 84th Congress; to the Committee on the Judiciary.

647. A letter from the corporation agent, Army and Navy Legion of Valor, of the United States Army, Inc.; transmitting the audit report of the Army and Navy Legion of Valor of the United States of America, Inc., for the period July 24, 1957 through July 17, 1958, pursuant to Public Law 224, 84th Congress; to the Committee on the Judiciary.

648. A letter from the secretary and treasurer, Congressional Medal of Honor Society, transmitting the annual auditor's report for the calendar year 1958, pursuant to Public Law 642, 85th Congress; to the Committee on the Judiciary.

649. A letter from the Chairman, U.S. Civil Service Commission, relative to a report concerning the establishment of positions in grades GS 16, 17, and 18 under the Classification Act of 1949, as amended, including the annual report from the Commission on Civil Rights, and the St. Lawrence Seaway Development Corporation; to the Committee on Post Office and Civil Service.

650. A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to define the term 'gross income from the property' for the purpose of computing percentage depletion in the case of oil and gas wells"; to the Committee on Ways and Means.

651. A letter from the Secretary of Commerce, transmitting the report on the investigation and study made to determine what action can be taken by the Federal Government to promote the public welfare by increasing highway safety in the United States, pursuant to section 117 of the Federal-aid Highway Act of 1956, and under the general authority of section 307 of title 23 of the United States Code, entitled "Highways" (H. Doc. 93); to the Committee on Public Works and ordered to be printed with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of February 26, 1959, the following bill was reported on February 27, 1959:

Mr. SPENCE: Committee on Banking and Currency. S. 57. An act to extend and amend laws relating to the provision and improvement of housing and the renewal of urban communities, and for other purposes; with amendment (Rept. No. 86). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted March 2, 1959*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ASPINALL: Committee on Interior and Insular Affairs. H.R. 1776. A bill to amend the act of June 28, 1958, entitled "An act to provide for a National Outdoor Recreation Resources Review Commission, and for other purposes"; with amendment (Rept. No. 87). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROBERTS: Committee on Interstate and Foreign Commerce. S. 79. An act to amend the Federal Food, Drug, and Cosmetic Act to permit the temporary listing and certification of Citrus Red No. 2 for coloring mature oranges under tolerances found safe by the Secretary of Health, Education, and Welfare, so as to permit continuance of established coloring practice in the orange industry pending congressional consideration of general legislation for the listing and certification of food color additives under safe tolerances; without amendment (Rept. No. 88). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H.R. 3320. A bill to amend the act of June 21, 1950, relating to the appointment of boards of medical officers; without amendment (Rept. No. 89). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H.R. 3322. A bill to amend title 10, United States Code, and certain other laws to authorize the payment of transportation and travel allowances to escorts of dependents of members of the uniformed services under certain conditions, and for other purposes; with amendment (Rept. No. 90). Referred to the Committee of the Whole House on the State of the Union.

Mr. RIVERS of South Carolina: Committee on Armed Services. H.R. 3366. A bill to authorize the extension of loans of naval vessels to the Governments of Italy and Turkey; with amendment (Rept. No. 91). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H.R. 4068. A bill to amend title 10, United States Code, by repealing section 7475, which restricts the increasing of forces at naval activities prior to national elections; without amendment (Rept. No. 92). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARRIS: Committee on Interstate and Foreign Commerce. H.R. 1011. A bill to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes; with amendment (Rept. No. 93). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. McDONOUGH:

H.R. 5096. A bill to amend section 103 of the Internal Revenue Code of 1954, relating to interest on certain governmental obligations, and section 10 of the U.S. Housing Act of 1937, relating to annual contributions in assistance of low-rent housing; to the Committee on Ways and Means.

By Mr. ASPINALL:

H.R. 5097. A bill to amend part IV of subtitle C of title 10, United States Code, to authorize the Secretary of the Navy to take possession of the naval oil shale reserves, and for other purposes; to the Committee on Armed Services.

H.R. 5098. A bill to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado; to the Committee on Interior and Insular Affairs.

By Mr. BROYHILL:

H.R. 5099. A bill to improve the administration of oversea activities of the Government of the United States, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CELLER:

H.R. 5100. A bill to provide for the establishment of a U.S. Foreign Service Academy; to the Committee on Foreign Affairs.

By Mr. CONTE:

H.R. 5101. A bill to provide for the approval of the 1956 payment in lieu of taxes made to the city of Holyoke, Mass., under the U.S. Housing Act of 1937; to the Committee on Banking and Currency.

By Mr. CURTIS of Missouri:

H.R. 5102. A bill to amend the Internal Revenue Code of 1954 so as to allow a deduction for certain expenses incurred by a taxpayer for the care of his children while his wife is physically or mentally incapable of caring for such children; to the Committee on Ways and Means.

By Mr. DAVIS of Tennessee:

H.R. 5103. A bill to repeal the act requiring the filing of certain information with respect to trade between the United States and its noncontiguous territory; to the Committee on Ways and Means.

By Mr. DURHAM:

H.R. 5104. A bill to amend the Atomic Energy Act of 1954, as amended; to the Joint Committee on Atomic Energy.

H.R. 5105. A bill to amend Public Law 85-590 to increase the authorization for appropriations to the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. DURHAM (by request):

H.R. 5106. A bill to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. ELLIOTT:

H.R. 5107. A bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas; to the Committee on Banking and Currency.

H.R. 5108. A bill to amend the Internal Revenue Code of 1954 to exempt a corporation from the corporate income tax where its operations are carried on in an economically depressed area and provide employment for a specified minimum number of persons in that area; to the Committee on Ways and Means.

By Mr. EVERETT:

H.R. 5109. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. FALLON:

H.R. 5110. A bill to amend section 4242 of the Internal Revenue Code of 1954 to exempt from the club dues tax certain charges made by nonprofit clubs for the use of facilities; to the Committee on Ways and Means.

By Mr. FINO:

H.R. 5111. A bill granting to persons in the classified (competitive) civil service the right to a hearing before removal or suspension, and the right to a judicial review of a removal or suspension; to the Committee on Post Office and Civil Service.

By Mr. FLYNT:

H.R. 5112. A bill to amend section 90, title 38, United States Code, so that burial allowances might be paid in cases where discharges were changed by competent authority after death of the veteran from dishonorable to conditions other than dishonorable; to the Committee on Veterans' Affairs.

H.R. 5113. A bill to amend Public Law 85-422 so as to place all retired military personnel in one category as to retirement pay; to the Committee on Armed Services.

H.R. 5114. A bill to provide for the construction of a new Federal building in Newnan, Ga.; to the Committee on Public Works.

H.R. 5115. A bill to guarantee the right of trial by jury in certain contempt cases in U.S. courts and to restrict citations for contempt to proceedings involving persons having actual notice of terms of writ, order, rule, decree, or command of the court, and for other purposes; to the Committee on the Judiciary.

H.R. 5116. A bill to amend sections 4081 and 4082 of the Internal Revenue Code of 1954 to include wholesale distributors within the definition of "producers" of gasoline, and for other purposes; to the Committee on Ways and Means.

H.R. 5117. A bill to amend title II of the Social Security Act to provide a wage credit of $160 per month for active military or naval service during World War I; to the Committee on Ways and Means.

By Mr. FRAZIER:

H.R. 5118. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. GIAIMO:

H.R. 5119. A bill to provide that the Secretary of the Interior shall develop and carry out an emergency program for the eradication of starfish in Long Island Sound and adjacent waters; to the Committee on Merchant Marine and Fisheries.

By Mr. GRANT:

H.R. 5120. A bill to amend the Internal Revenue Code of 1954 to provide a credit against income tax for contributions to educational institutions and taxes paid for school purposes; to the Committee on Ways and Means.

By Mr. HUDDLESTON:

H.R. 5121. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. IKARD:

H.R. 5122. A bill to amend the Internal Revenue Code of 1954 to provide that certain insurance agents shall be treated as outside salesmen for purposes of computing adjusted gross income; to the Committee on Ways and Means.

By Mr. KING of California:

H.R. 5123. A bill to extend the Renegotiation Act of 1951 for 2 years, to provide additional factors to be considered in determining excessive profits, to permit appeals from decisions of the Tax Court in renegotiation cases, to provide for reports to Congress, and for other purposes; to the Committee on Ways and Means.

By Mr. LOSER:

H.R. 5124. A bill to amend section 21 of the Second Liberty Bond Act to provide for the retirement of the public debt; to the Committee on Ways and Means.

H.R. 5125. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. MATTHEWS:

H.R. 5126. A bill to provide for the construction of a new Federal building in Gainesville, Fla.; to the Committee on Public Works.

H.R. 5127. A bill to provide for the construction of a new Federal post office building in Palatka, Fla.; to the Committee on Public Works.

By Mr. O'BRIEN of New York:

H.R. 5128. A bill to amend section 27 of the Revised Organic Act of the Virgin Islands; to the Committee on Interior and Insular Affairs.

H.R. 5129. A bill to equalize the pay of retired members of the uniformed services; to the Committee on Armed Services.

By Mr. OLIVER:

H.R. 5130. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. PORTER:

H.R. 5131. A bill to provide for the establishment by the Secretary of the Interior of a Pacific Northwest account, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. RIVERS of South Carolina:

H.R. 5132. A bill to amend title 10, United States Code, with respect to active duty agreements for Reserve officers, and for other purposes; to the Committee on Armed Services.

By Mr. SANTANGELO:

H.R. 5133. A bill to amend the Internal Revenue Code of 1954 to grant an additional income tax exemption for a taxpayer supporting a dependent who is 65 years of age or over; to the Committee on Ways and Means.

By Mr. TOLLEFSON (by request):

H.R. 5134. A bill to authorize a per capita payment to enroll members of the confederated tribes and bands of the Yakima Indian Nation; to the Committee on Interior and Insular Affairs.

By Mr. ULLMAN:

H.R. 5135. A bill to amend the Employment Act of 1946 to establish policies with respect to productive capital investments of the Government; to the Committee on Government Operations.

By Mr. WALTER:

H.R. 5136. A bill to provide for the supervision of deportable aliens; to the Committee on the Judiciary.

By Mr. BATES:

H.R. 5137. A bill to amend title 10 of the United States Code with respect to procurement procedures of the armed services, and for other purposes; to the Committee on Armed Services.

By Mr. BROYHILL:

H.R. 5138. A bill to extend the grounds of the Custis-Lee Mansion in Arlington National Cemetery; to the Committee on Interior and Insular Affairs.

By Mr. COOLEY:

H.R. 5139. A bill to express and effectuate the policy of Congress with respect to the disposal of surplus agricultural commodities, and for other purposes; to the Committee on Agriculture.

By Mr. DAWSON (by request):

H.R. 5140. A bill to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time in conformity with the provisions of the act; to the Committee on Government Operations.

By Mr. FLOOD:

H.R. 5141. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer who resides in an economically depressed area to deduct as a trade or business expense his traveling expenses incurred in seeking and performing employment or self-employment outside such area; to the Committee on Ways and Means.

By Mr. LANGEN:

H.R. 5142. A bill to amend the Public Health Service Act to protect the public from unsanitary milk and milk products shipped in interstate commerce, without unduly burdening such commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. McGOVERN:

H.R. 5143. A bill to amend section 22 of the Agricultural Adjustment Act, as amended; to the Committee on Ways and Means.

By Mr. METCALF:

H.R. 5144. A bill to provide for the construction of the Knowles Dam project on the Flathead River in the State of Montana for the protection and development of the Flathead and Columbia River Basins; to promote the agricultural and industrial development primarily of the State of Montana, but also of downstream areas; to improve navigability and to assist flood control on the Flathead and Columbia Rivers; to provide for the national defense and welfare by advancing the integrated comprehensive development of the water resources of the Pacific Northwest, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 5145. A bill to provide that certain lands shall be held in trust for Indian tribes on the Fort Belknap Reservation, and to provide that such lands shall become part of such reservation; to the Committee on Interior and Insular Affairs.

By Mr. MURRAY:

H.R. 5146. A bill to amend title 23 of the United States Code in order to increase the amount authorized for bridges over Federal dams; to the Committee on Public Works.

By Mr. PIRNIE:

H.R. 5147. A bill to provide for the recognition of the Polish Legion of American Veterans by the Secretary of Defense and the Administrator of Veterans' Affairs; to the Committee on Veterans' Affairs.

By Mr. WHITENER:

H.R. 5148. A bill to provide for the removal of the James A. Garfield Monument from its present location, and for other purposes; to the Committee on House Administration.

By Mr. YOUNGER:

H.R. 5149. A bill to limit the size of payments to farmers; to the Committee on Agriculture.

By Mr. ALFORD:

H.J. Res. 274. Joint resolution proposing an amendment to the Constitution of the United States providing for reconfirmation by the Senate of certain appointments made by the President, by and with the advice and consent of the Senate; to the Committee on the Judiciary.

By Mr. ASHLEY:

H.J. Res. 275. Joint resolution designating the third Monday in February of each year as a legal public holiday to be known as Presidents' Day, providing for the observance of certain other legal holidays on days other than those now fixed by law, and for other purposes; to the Committee on the Judiciary.

By Mr. ELLIOTT:

H.J. Res. 276. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. MEYER:

H.J. Res. 277. Joint resolution requesting the President to issue a proclamation designating 1959 for the observance of the 350th anniversary of the historic voyages of Hudson and Champlain; to the Committee on the Judiciary.

By Mr. COLMER:

H.J. Res. 278. Joint resolution authorizing the President to take such steps as he deems necessary to carry out U.S. responsibilities for Berlin; to the Committee on Foreign Affairs.

By Mr. ANDERSON of Montana:

H. Con. Res. 92. Concurrent resolution that it is the sense of Congress that House Concurrent Resolution 108, dated August 1, 1953 (83d Cong.) shall be interpreted as stating an objective, not an immediate goal, as it pertains to Indian "termination" of relations with the Government; to the Committee on Interior and Insular Affairs.

By Mr. METCALF:

H. Con. Res. 93. Concurrent resolution to restate Federal responsibility toward Indians and the Federal Government's relations with Indian tribes and groups; to the Committee on Interior and Insular Affairs.

By Mr. WALTER:

H. Res. 187. Resolution authorizing the printing of additional copies of House Report No. 41, current session; to the Committee on House Administration.

By Mr. CLARK:

H. Res. 188. Resolution to postpone the consummation of a TVA contract to an English firm; to the Committee on Public Works.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By Mr. MARTIN: Resolutions of the General Court of Massachusetts memorializing Congress to enact legislation providing for a minimum wage of $1.25 per hour; to the Committee on Education and Labor.

Also, resolutions of the General Court of Massachusetts memorializing the Congress of the United States to establish a national cemetery in New England; to the Committee on Interior and Insular Affairs.

Also, resolutions of the General Court of Massachusetts memorializing the Congress of the United States against granting concessions on textile imports from foreign countries; to the Committee on Ways and Means.

By Mrs. PFOST: Memorial of the Senate of the State of Idaho with respect to the Director of the Office of Civil and Defense Mobilization exercising the powers conferred upon him to enter into contracts with the producers of domestic cobalt at a rate per pound to compare with the rate paid foreign producers; to the Committee on Armed Services.

Also, memorial of the House of Representatives of the State of Idaho, relative to repealing House Concurrent Resolution 108, 83d Congress, and that a statement of policy be enacted regarding the Indian people, and for other purposes; to the Committee on Interior and Insular Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States with respect to the Director of the Office of Civil and Defense Mobilization exercising the powers conferred upon him to enter into contracts with the producers of domestic cobalt at a rate per pound to compare with the rate paid foreign producers; to the Committee on Armed Services.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States relative to requesting amendment to title IV, section 401, subsection (a) of Public Law 815, as amended, 81st Congress, concerning construction of adequate school facilities; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States to prepare legislation that reports be made by the Office of the Comptroller General disclosing to the various States the amount of unclaimed money and other property held by the Federal Government and the persons to whom the same belong, and for other purposes; to the Committee on Government Operations.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States, opposing the enactment of H.R. 1929 because of its effect on the natural resources industries of the State; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States, relative to repealing House Concurrent Resolution 108, 83d Congress and that a statement of policy be enacted regarding the Indian people and for other purposes; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to investigate and determine the causes of inflation and to enact remedial legislation; to the Committee on Banking and Currency.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact and enforce legislation to implement the decisions of the Supreme Court of the United States outlawing segregation in the public school system; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact legislation providing for a minimum wage of $1.25 per hour; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to establish a national cemetery in New England; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Massachusetts memorializing the President and the Congress of the United States against granting concessions on textile imports from foreign countries; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Utah, memorializing the President and the Congress of the United States relative to requesting such remedial action as deemed necessary to preclude the closing of low power television booster stations; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the Legislature of the State of Wyoming, memorializing the President and the Congress of the United States relative to the passing of legislation relating to the amendment of section 2(c) of the Mineral Leasing Act of February 25, 1920, as amended (41 Stat. 448, 30 U.S.C. 184), removing restriction on railroad companies in regard to the leasing of public lands for coal purposes; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Wyoming, memorializing the President and the Congress of the United States relative to proposing an amendment to the Constitution of the United States concerning the abolishing of personal income, estate, and gift taxes and prohibiting the U.S. Government from engaging in business in competition with its citizens; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BOGGS:

H.R. 5150. A bill for the relief of Our Lady of the Lake Church; to the Committee on the Judiciary.

By Mr. BURNS of Hawaii:

H.R. 5151. A bill for the relief of Felicidad Caletena; to the Committee on the Judiciary.

By Mr. CURTIS of Massachusetts:

H.R. 5152. A bill to provide for a posthumous cash award in recognition of the contribution made by the late Dr. Saul Hertz in the medical use of radioactive iodine; to the Committee on the Judiciary.

By Mr. CURTIS of Missouri:

H.R. 5153. A bill to confer jurisdiction upon the Court of Claims to hear, determine, and render judgment upon certain claims of Roger W. Evans and Jamerson C. McCormack; to the Committee on the Judiciary.

By Mr. DERWINSKI:

H.R. 5154. A bill for the relief of Miss Anka Grahovac; to the Committee on the Judiciary.

By Mr. FLOOD:

H.R. 5155. A bill for the relief of Ralph H. Traher; to the Committee on the Judiciary.

By Mr. FLYNT:

H.R. 5156. A bill for the relief of the Collier Manufacturing Co., of Barnesville, Ga.; to the Committee on the Judiciary.

By Mr. FRAZIER:

H.R. 5157. A bill for the relief of Alexandra Nicholas Karageorgeou; to the Committee on the Judiciary.

By Mr. HIESTAND:

H.R. 5158. A bill for the relief of Shigeko Mizuta; to the Committee on the Judiciary.

By Mr. O'BRIEN of New York:

H.R. 5159. A bill for the relief of Epifania Gitto; to the Committee on the Judiciary.

H.R. 5160. A bill for the relief of William Joseph Vincent; to the Committee on the Judiciary.

By Mr. RAY:

H.R. 5161. A bill for the relief of Michael Fodale; to the Committee on the Judiciary.

By Mr. ROGERS of Colorado:

H.R. 5162. A bill for the relief of Ioannis Doumouliakas; to the Committee on the Judiciary.

By Mrs. WEIS:

H.R. 5163. A bill for the relief of the Rochester Iron & Metal Co.; to the Committee on the Judiciary.

By Mr. O'BRIEN of Illinois:

H. Res. 189. Resolution providing for sending the bill H.R. 5093 for the relief of North Counties Hydro-Electric Co. and accompanying papers to the Court of Claims; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

TVA Contract

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. DENT. Mr. Speaker, last week I introduced a resolution calling upon the TVA, the OMCD, and other departments and agencies of Government to reconsider the contract awarded to Parsons of England, for electrical equipment never before purchased outside the continental United States.

This order would have given much-needed labor to the many unemployed in my district, and other districts in western and eastern Pennsylvania.

In introducing this resolution I had the full support and cosponsorship of the following Members of Congress: Congressman ELMER HOLLAND, Congressman FRANK CLARK, Congressman MORGAN, Congressman MOORHEAD, and Congressman MILLIKEN, of Pennsylvania.

You will note, sir, that this effort is bipartisan. I have since been informed by the following Members of Congress of their full support in this endeavor: Congressman SAYLOR, Congressman VAN ZANDT, Congressman GAVIN, Congressman KEARNS, Congressman RICHARD

SIMPSON, and Congressman STANLEY PROKOP, of Pennsylvania.

I am sure that other Pennsylvania Members would join me if the opportunity presents itself to present a joint plea to bring this work to the workmen and industry of Pennsylvania.

Water Resources Development

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very worthwhile speech by the senior Senator from Louisiana [Mr. ELLENDER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH DELIVERED BY SENATOR ALLEN J. ELLENDER BEFORE THE ANNUAL MEETING OF THE NEW YORK STATE WATERWAYS ASSOCIATION IN NEW YORK CITY, ON FEBRUARY 27, 1959

Ladies and gentlemen, I am indebted to President Wright for inviting me to speak before your annual meeting of the New York State Waterways Association.

I prize this invitation, since it comes from an organization which, although far removed in miles from my home State of Louisiana, is shoulder to shoulder with us in purpose—the protection and development of one of our most precious resources, water.

My interest in water resources development goes back a long way. I was born at Montegut, La., a small village located about 30 miles from the Gulf of Mexico, and some 16 miles south of my present home at Houma.

Houma, a city of about 25,000 inhabitants, is located about 50 miles southwest of the great port at New Orleans, at the junction of Bayou Terrebonne, a navigable stream which carries a great deal of freight, and the Gulf Intracoastal Waterway, with which all of you are doubtless familiar. The great Mississippi is less than 20 miles away, as the crow flies.

Having been born and reared in this area, I know at first hand the hazards of uncontrolled water, and, conversely, the benefits of wise development of this resource. With such a background the importance of a well-regulated and maintained system of waterways was impressed upon me at an early age. Through the 22 years I have served in the U.S. Senate, that interest has not only been maintained, but it has grown.

In those years I have devoted much time and energy in helping formulate and develop a long-range, well-planned program of our water and land resources. In all humility, but with some pride, I feel that I have achieved some slight degree of success in these long-range plans.

With your indulgence, I would like to expand my remarks to include a birdseye view of the great Mississippi, with the city of New Orleans as the gateway between the Mississippi Valley and the fabulous riches to the south of us.

Some 41 percent of the area of the United States is drained through the Mississippi River. In the last major flood on the Mississippi—that of 1927—an area of 23,000 square miles was inundated. This is about the combined area of the States of Vermont, New Hampshire, and Connecticut.

Cities, towns, and farms were flooded, destroying crops and paralyzing industry. Scores of lives were lost. Property damage ran into hundreds of millions of dollars; rail transportation suffered heavily, with only one rail line operating for a time east and west below Cairo, Ill.; highways and bridges were unstable for weeks; and thousands of people were left homeless and destitute.

The havoc that would result from a repetition of such a flood today, with the increase in population and the growth of industry in this area, is impossible to conceive. Fortunately, a comprehensive plan for the development of the Mississippi River and its tributaries was authorized in 1928, the year following this great flood. Since that time work has progressed steadily, although after 31 years this project is only 72 percent complete. Yet, the benefits from this project already exceed the costs by a benefit-to-cost ratio of 5 to 1.

One of the prime inland waterways of this area, the Gulf Intracoastal Waterway which passes Houma, was authorized on the basis of developing 400,000 tons of commerce a year, but the tonnage on that waterway now exceeds 13 million tons. More important, however, is the fact that the development of this waterway was a major factor in creating the vast industrial complex of the Texas-Louisiana Gulf Coastal area.

Thus my interest in the beneficial development of water resources of the Nation stems from a personal conviction that such developments were an important factor in achieving our present high standards of living, not only in the area of my home State but all across this great Nation of ours.

I believe that unless a well-planned and aggressive program of water resource development is carried forward, our children and grandchildren will not have an opportunity to enjoy the many advantages that today we take for granted.

My convictions in this have been strengthened by my recent travels through Europe and Asia. I believe that unless we protect our greatest resource, water, unless we keep it inland and do not let it flow to the sea unused, some day many parts of our great country may become as barren as the Gobi Desert, or as the lands which I have seen on my travels in old Persia. Our history books tell us that about 500 years before Christ, the entire area of Persia was capable of sustaining the livelihood of 115 million people. Now it adequately can care for less than 14 million.

Consider the great Valley of Mesopotamia between the Tigris and Euphrates Rivers. At one time that area could produce food and fiber for 15 million people. Today that great valley can hardly supply the needs of 2 million people. And why? Because of the neglect of a great natural resource—water. If it had been possible to retain the waters upstream on those great rivers, and not permit them to steal the rich topsoil and float it into the interior of the country and into the sea, the chances are that that great valley would still be very productive.

The fact is, that those rivers carried millions of tons of earth down the streams and clogged the small tributaries and rivers in Mesopotamia. Today that land is not suitable for much cultivation. It is sour. It cannot be farmed. Certainly we cannot afford to let that happen in our great country.

Two years ago I visited various portions of the Soviet Union for well over a month. This was my third trip to this country in as many years. I had the opportunity of visiting cities never before seen by an American Government official; cities in the far reaches of Siberia, an area which had been pictured to me before my visit as wastelands of snow and ice—as a vast prison camp. But that was not what I found. To my great surprise, I saw a virgin land being awakened, a land that promises to make Siberia the granary of Russia. Industry was flourishing to a surprising degree. One of the principal tools the Russians were employing in this development was a well planned utilization of its waterways system, both for navigation and the development of power from falling water. I saw several hydroelectric power stations that were larger than our biggest and one that was almost twice as large as any we have in this country. I saw foundations poured for turbines and generators which will have a rated capacity of 300,000 kw. each—almost three times larger than anything we have. And these projects, gentlemen, were designed, constructed, and had all component parts built within the Soviet Union. In fact, much of the work on the large turbines was being done at Novosibirisk, a place which was a small trading post in 1905, but is now a city of almost 1 million.

As a result of my inspection of installations in Russia, I am convinced that in water transportation and hydroelectric power development the Russians are inching ahead of us.

In any comparison of time, money and effort expended on resource development in Soviet Russia and the United States, there is, of course, absolutely nothing that we can do about the rate of such developments in Russia. They are proceeding with their own resources to meet the needs of their own economy. We must direct our attention to what we can do to satisfy our own needs.

There have been many studies of resource developments by presidential committees. One of the most recent was the Presidential Advisory Committee on Water Resources Policy, dated December 22, 1955. In that report it was stated that the estimated use of water in the United States in 1950 was 185 billion gallons per day and that, based on an estimated population of 200 million by 1975, the requirements would be 350 billion gallons per day.

However, the November 28, 1958, issue of the U.S. News & World Report contained a very penetrating article by Dr. Philip M. Hauser on the so-called explosion of population in the United States, which sheds more light on this problem of expanding population.

Dr. Hauser is head of the Department of Sociology at the University of Chicago, and has been Deputy Director of U.S. Census. He points out that the newest projections of the Census Bureau place the population of the United States in 1975 at between 216 and 244 million.

That is an increase in the predictions of from 8 to 20 percent in the past 3 years.

Putting it another way, taking a mean of the projections, a population of 230 million by 1975 would mean a 30-percent increase in our population in the next 16 years. Think of the tremendous increase in demand on all elements of our resources, including water. In terms of water demand, we will require about 400 billion gallons per day. In other words, during the quarter century period from 1950 to 1975 we will more than double our water requirement.

Thus it should be apparent that plans must be made now to meet these increased needs.

When you consider the time required to develop a major project—3 years or more for planning, then 8 to 10 years for construction—it is evident that it is none too early to start projects needed and justified now.

They will become critically urgent long before they can be completed on an economical program. Crash programs should be avoided if at all possible, since they are always more expensive than necessary, and frequently do not provide for the optimum use of the site.

And yet, in the face of all this data, how is the present administration meeting the known demand for resource development? It has not only failed to recommend funds to start surveys, plans, or new projects that are needed now, but last year built into the budget a planned slowdown which would delay the benefits of the projects underway as well as increase their ultimate cost.

As you all know, last year when the Congress added some new starts for planning and construction, there was a terrific blast from the White House.

On September 2, 1958, the President reluctantly signed the public works appropriation bill. At that time he issued the following statement:

"In the Public Works Appropriation Act, 1959, the Congress has included approximately $39 million in funds to initiate construction on 65 unbudgeted new project starts that will ultimately cost almost $700 million. Adding nearly $700 million to the already heavy future commitments for Federal water resource projects is but another instance of irresponsibility in the expenditure of public funds. I am compelled to approve the act, however, because it appropriates essential funds for continuing work on river and harbor, flood control, and reclamation projects that were started in previous years."

When you consider that the appropriation for construction in the 1959 act was approximately $870 million, was it really an act of irresponsibility in the expenditure of public funds to start new projects which will ultimately cost nearly $700 million? That is adding less than 1 year's future commitment at the present rate of construction.

Unless it is the desire of the administration that the water resource program wither and die on the vine—and that may be the underlying reason—a fair number of new starts should be added each year.

Perhaps those shortsighted planners in the Budget Bureau believe that the Federal Government is spending too large a portion of its budget in developing the water resources of this Nation. Let us examine the facts.

Between 1950 and 1956 our national population increased 11.2 percent. Between 1950 and 1956 the national income increased 42 percent. During the same period the expenditures for rivers and harbors and flood control decreased 14.9 percent.

I believe those figures are very significant.

As all of you know, construction costs have increased on an average of 5 percent a year. If that average is applied to the 1950 expenditure of $627 million, we should be spending about $908 million in 1959 on the civil functions of the Corps of Engineers in order to maintain the same level of operations as in 1950. In contrast, the appropriation was just under $814 million. This comparison disregards the increased need for these public works resulting from our expanding population.

What is the situation in your own backyard—the Middle Atlantic Division of the Corps of Engineers?

The 1960 budget requests $37,448,000 for the continuation of construction on 13 projects. Of these 13 projects, 7 would be completed with the funds requested in 1960. If the budget were to follow its usual course, the 1961 request would be for approximately $24,294,000 for the continuation of six projects, of which three would be completed with the funds requested. By 1962 the budget request would be $21,511,000 for three projects, of which two would be completed with the funds requested. Thereafter you could expect about $13.75 million for the next 2 years to complete the Delaware River Channel.

Had it not been for the new starts added by the Congress, or had the President been granted the item veto he requests, the picture would be even more bleak.

I believe that one of the most vital interests of your association is the improvement and betterment of the 525 miles of the New York State Barge Canal System. This is probably the largest State-owned canal system in the United States. The foresight of the people of the great State of New York in the early 1800's in building this canal has always had my admiration. The part it played in the development of your Empire State and the rest of the United States, particularly the Middle West, cannot be overestimated.

I am aware that efforts are being made to amend the constitution of New York State to permit the legislature to lease or transfer the barge canal to the Federal Government. As I understand the situation, legislation authorizing such transfer passed the legislature in 1958 and similar legislation, now pending, must be adopted this year in order that the proposal may be submitted to the voters in a referendum. Certainly there is a real need for a modern barge canal system, and I am pleased to note that the State legislators are studying the problem of the future of this waterway. It certainly demonstrates a healthy interest by the State of New York in waterway improvements.

The thought expressed in certain quarters as to the reduced future need or role of this system in the overall transportation requirements of the Middle West and Northeastern United States, in view of the early opening of the St. Lawrence Seaway, may be giving some of you apprehension as to the continued interest of the United States in its improvement. While initially there may be some minor traffic for overseas destinations that will be diverted to the new seaway, the system will continue to be a vital artery of commerce to serve the large number of industrial centers which the existence of the barge canal itself helped to create and expand. The seaway will doubtless generate new enterprises and activities which may make your canal system even more vital to the continued growth of the State of New York and the Nation at large.

I can assure you that many Members of the Congress are aware of the continued importance of this system to the welfare of the Nation. This is evidenced by the Federal participation in its modernization as authorized in the River and Harbor Acts of 1935 and again in 1945. It is regretted that the national crisis of the Second World War and the Korean situation made necessary a slowdown of this improvement. I was pleased that last year, through the efforts of the Senate Committee on Appropriations, we were able to give this project a boost by providing an additional unbudgeted $800,000 to the budget estimate of $110,000 in order that a start could be made on replacing a pair of guard gates at Waterford.

In 1935 deepening between locks and the raising of bridges were authorized. Of the 65 bridges to be raised, 42 have been or are being raised and the deepening was completed in 1941 with only some widening at structures remaining to be done. The 1945 act approved deepening through the locks. The sills of 18 locks have been or are in the process of being lowered with 9 locks or structures still remaining to be done.

The Corps of Enginers has been directed to restudy the project with a view of eliminating the restriction in the 1935 act on overall expenditure by the Federal Government and to determine what further improvement might be justified.

Under the present Federal project, the responsibility for preparing specifications and designs rests with the Department of Public Works of the State of New York. Such plans must then be approved by the Corps of Engineers. Contracts are then let by the Department of Public Works of New York and finally, disbursement of Federal funds is authorized by the Corps of Engineers when the work is completed to reimburse the State for expenditures under the contract. Due to the fact that the organization responsible for planning and construction of the project is not the agency that supports the budget request, I fear that the importance of early obligation and expenditure of funds is not fully appreciated.

I recall several occasions when it was impossible to obtain even the budget estimate for this project because funds for the previous year had not been obligated at the time of the hearings.

Your State officials have demonstrated their faith and confidence in the future of their canal system in proceeding with the improvement with State funds pending future appropriation by the Congress.

For years, New York Harbor has had two unique river and harbor activities: the supervision of New York Harbor function and the collection of drift, with which I have become familiar during appropriation hearings. The vast quantity of waste materials generated here surely needs adequate surveillance to insure its proper and legal disposal. The hazard of drift and its damaging effect on boat operation is known to me. I trust our appropriations for these activities have been adequate. If not—show us why.

You have many other interesting and important projects in this area, which are sometimes difficult to follow, since New York Harbor is not included as a whole in one Federal project, but is made up of about 35 projects. Your Kills, or New York and New Jersey Channels project, now nearing completion and again being studied for further improvement; the Newark Bay, Hackensack and Passaic Rivers area, largely completed except for the Hackensack, but needing further study due to your Port of New York Authority's development at Newark and Elizabeth; the Buttermilk Channel that needs completion; the Pierhead Channel in upper bay; and the many smaller channels and harbors. You are truly a series of ports within ports, any one of which in itself warrants the concern, interest and attention of the Federal Government. However, all of these features suffer by reason of the no-new-start policy of the administration.

Unless some of the review studies for modernization of these waterways are permitted to be started, you may have to wait 4 or 5 years before you can start some of the improvements that are needed today.

Another important project in this area is the deepening of the Hudson River, from 27 to 32 feet up to Albany, N.Y. Last year the Senate, following the recommendations of the Appropriations Committee, approved funds to initiate this important modernization of the Hudson River. Unfortunately, this appropriation did not survive the House-Senate conference. I am hopeful that this project can be started in fiscal year 1960.

There are many other projects I could discuss, but those mentioned are vastly important—important not only to the people of New York, but to those of the entire Nation as well.

To plagiarize a phrase often used, I believe that what is good for New York is good for the country, just as I also believe that what is good for Louisiana is also good for the country.

That is why my temper rises and my blood boils when I hear the all too familiar label

of "pork barrel" placed on public works projects. These shortsighted mudslingers have no conception of the good that flows to our entire Nation as a result of such programs.

A channel in New York is deepened, and as a result, increased trade pours into Pennsylvania. A harbor in Louisiana is completed and there is an increased demand for Iowa corn, Pittsburgh steel, and so on.

These are the true end results of public work programs—increased trade and activity which will continue to keep our country great and at the forefront of nations.

That is why I cannot understand the position of the present administration. It is not possible for me to accept the thesis that the American economy cannot afford the expenditure of funds for projects which will eventually produce more wealth for all of us.

Efforts to cut down our public works programs are merely shortsighted attempts to curtail spending that in the long run will just cost the American people more money. If the administration is so eager to cut down Federal spending I invite its attention to the trimming of our foreign aid program.

As you are aware, the Congress has been ask to cut back public works expenditures for next year, while in the next breath, the administration has requested a 26 percent increase in our foreign aid programs.

Perhaps one way to obtain adequate public works programs—and I might add, without the benefit of justification and the close watch of the Corps of Engineers over projects—is to secede from the Union and ask for foreign aid.

If this situation were not so serious it would be farcical. We have an administration that on the one hand is attempting to slowly stifle the progress made in recent years in the development of our waterways, and on th other hand, willingly pours money with both hands into foreign countries.

I repeat, our public works programs are investments in the future of America, and I for one, know of no better place to invest our money, our faith, and our efforts.

I believe the time has come for the Members of Congress—and the entire Nation as well—to stand up and demand that the administration take a new look at its public works policy—or else prepare for the entrance of a new administration that will.

Statement of Secretary of Agriculture on Farm Surpluses

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, on February 15 there was published as an editorial in the Washington Evening Star Secretary Benson's own condensation of his statement made before the Senate Committee on Agriculture and Forestry.

Mr. President, there are some who dislike the Secretary, some who dislike his actions and doubt his sincerity. I am not one of those. I have the utmost respect for Mr. Benson. I consider him to be one of the finest men ever to occupy a position in public life at such a high level.

Mr. President, I ask unanimous consent that the statement, which was published as an editorial, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BENSON ON FARM SURPLUSES

"The question of what to do about our farm surpluses is before Congress once more. This year the question pretty much gets down to what we do about wheat-support prices. The major part of our surplus is now concentrated in wheat. Certainly, if you add cotton and corn to wheat, you have represented 85 percent of the crops in Government hands or under loan, and they presently total above $7.5 billion, and rising. Surpluses will soon cost us about $1 billion annually in storage and interest charges alone.

"We had a great year for wheat in 1958, by far the biggest crop in history. It amounted to 1.2 billion bushels, yet we can consume at home and sell abroad only about 900 million bushels. The rest goes into expensive storage. This does not have a wide benefit for our farmers. As a matter of fact, the bulk of the payments go to less than 10 percent of those who grow wheat.

"Actually, farmers generally are doing fairly well. Farmownership is at the highest level in history, and so are net equities. The condition of life on the farm has improved immensely and there is no longer that old sharp economic, cultural and educational dividing line between life on the farm and life in the city. Transportation, television, electricity have worked wonders. True, there are hardship areas and the cost-price squeeze is especially harmful to farmers, but unrealistic wheat support prices offer no way to alleviate them. There are other means and we are now pursuing them.

"What we need now in the Department of Agriculture is congressional authority to set wheat supports at levels that will lead to sales, not storage bins. In this way, we can retain and build our foreign markets and still produce all that our domestic consumers care to buy. This would save us billions yearly, help to revitalize our agriculture at home and abroad."

The above is Secretary of Agriculture Benson's own condensation of his statement to the Senate Agriculture Committee. We thought it worthy of reproduction in this form. It makes a good editorial.

Dr. Godfrey Lowell Cabot

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, I would like publicly to congratulate Dr. Godfrey L. Cabot of 242 Beacon Street, Boston, Mass., on the occasion of his 98th birthday on February 26, 1959.

Dr. Cabot is a businessman, a philanthropist, and a citizen who all his life has devoted himself to public service and better government.

Graduating with high honors from Harvard in 1882, Dr. Cabot undertook graduate study in geology and then established the highly successful Godfrey L. Cabot, Inc., in Boston with branches in many parts of the country.

One of his lifetime special interests has been aviation. Dr. Cabot learned to fly at the age of 55, an age when many men are thinking of retiring, by winning his Navy wings at Pensacola in 1918. He then completed a successful experiment of picking up cargo from the water in a moving plane, much to the astonishment of authorities in the Navy Department who were less than enthusiastic, at that time, about aviation. Subsequently, Dr. Cabot has been president of the National Aeronautical Association; one of the original directors of the Aviation Research Foundation, and remains honorary president of the Federation Aeronautique Internationale (FAI) which keeps the official worldwide records for aviation achievements by all countries.

Dr. Cabot in his 90's retains a modern view of the great future possibilities for aviation and in a recent letter to Prof. Langdon P. Marvin, Jr., he made this prophecy:

> I predict that the time will come when the freight traffic through the air will greatly exceed passenger traffic through the air, and the receipts for carrying their goods through the air will be greater than for carrying passengers through the air. I predict that the time will come when the passenger and freight traffic through the air will be to a great extent separated, and most of the freight carried by planes that are built specially for that purpose.

It is a source of inspiration to all of us to contemplate the active intelligence of Dr. Cabot, and his many friends join with me in wishing congratulations on his 98th birthday and best wishes for many more birthdays to come.

Mr. Speaker, I ask unanimous consent to insert a letter from the President to Dr. Cabot and join in the President's congratulations:

THE WHITE HOUSE, *February 24, 1958.*
DR. GODFREY L. CABOT,
Boston, Mass.

DEAR DR. CABOT: I am reminded that February 26 brings around your 97th birthday anniversary. I am sure that as you look back upon America's tremendous progress during your lifetime you have the same feeling of pride as do I, and I hope that you will share in the immense possibilities that seem to be just around the corner for us—and for all peoples.

From my friends I know that you are as keen an observer of the passing scene as ever, and I do hope that I shall have the privilege of sending you my warmest felicitations, as I do now, for many future years.

With best wishes and warm regard,

Sincerely,

DWIGHT D. EISENHOWER.

Second Anniversary of Ghana Independence

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message which I recorded for the Voice of America extending congratulations to the peo-

ple of Ghana on the second anniversary of their independence:

My warmest congratulations to the people of Ghana on this, the second anniversary of your independence.

What a day it was in 1957. Indescribable heat that everyone ignored. Amazingly well-managed crowds—deeply interesting ceremonies culminating in that final midnight moment when the Prime Minister spoke from the little stand in the Polo Field and said: At long last we are free.

All this is in my mind today.

To Dr. Kwame Nkrumah, I extend my good wishes and friendly congratulations.

How proud all of you must be of the advances that have been made in your educational services in all fields of education. Such evidences of your recognition of the fundamental part education plays in all areas of freedom give confidence to all.

Last summer we here in the U.S. Congress of which I am a long-time Member welcomed your Prime Minister with sincere pleasure. He spoke to us of your country's need for American investment. He told us of your efforts to eradicate poverty, disease, and illiteracy, and to achieve the sustained economic development which will permit a reasonable standard of living.

We have been happy that a survey team has gone to you in preparation for a useful mission of technical cooperation. We are ready to serve with you in the program you are developing.

This is but a word, on this, the second anniversary of your freedom, to congratulate you and to wish for you all good things.

Heaven bless you, Mr. Prime Minister, and every man, woman, and child in Ghana.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of February 28, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

George Washington's Farewell Address, of September 17, 1796, is read yearly in the House and Senate on his birthday. Though his principles are timeless and enduring, it is ironic to recognize how we moderns seem determined to shut our eyes to the great abiding truths. His admonitions include:

1. The importance of the Federal union of States, and strict observance of the Constitution and its proper amendment process (no amendment by reinterpretation);

2. Government by separated divisions is good, each checking the other (no usurpation of power by one branch or of State powers by the Federal Government);

3. There can be no national morality if the sense of religious obligation and principle fails in us. (How do we measure up here?)

4. Preserve public credit, be selective in tax, avoid debt, do not burden posterity (and now even our Government bonds are considered less desirable as investments because Congress has depreciated the value of our money by profligate spending);

5. No entangling alliances or favored treatment of any nation, but rather commerce and enlightened self-interest (check our foreign aid, trade programs, and alliances against this).

The payroll of a Representative is public information, and should be (although this is not so in practice in the Senate). Who is hired and what is paid, within limits, is left largely to the discretion of the individual Congressman. Some hire kinfolks, and some pay higher than others. The judgment of the Congressman is the deciding factor and is, of course, subject to approval or disapproval by the voters every 2 years. For my part, I believe in running my office like a business, with incentive pay the factor—pay well as it's earned but only for equivalent performance, value received. On this basis, my staff measures up. No secrets either; the pay records will always stand public scrutiny.

The criticism of the Senate leadership leveled by Wisconsin Democrat WILLIAM PROXMIRE points up a problem of concern to all Congressmen in both parties. Under our setup, Congressmen are elected to represent specific areas, not parties. But just as power has gravitated from the States and localities to Washington, power in the Congress has tended to concentrate in the hands of the majority party's leadership. When as at present a party's majority is somewhat lopsided, and there's even a modicum of party discipline, the power of the leadership can be rather considerable. Particularly is this so at present when Democrats in both Houses are led by men from the same area who have long worked in close cahoots. Representative government may not be very representative. A legislative program may depend on a party line and how that line is determined can be vitally important. If it's arrived at by political masterminding at the top rather than from the bottom up, defections are inevitable among Congressmen really trying to be representative of their States or districts, rather than just acquiescent cogs in a party machine over which they have no control.

Debt retirement by the Federal Government received some attention this week, with several Texans proposing that a yearly payment on our debt be included in the budget. Many, including myself, applaud the idea, and I want to help in such a worthy effort. But here's the rub: How can we retire the debt by any amount when the Congress continues to spend more than is taken in? We must cut waste and welfare programs so that there is a balance of cash on hand in the Treasury to pay down the debt. Isn't this so? The irony of this debt retirement proposal is that some of those sponsoring it are among those regularly voting for bigger Federal spending. For example, one gentleman now voicing support for debt reduction voted only 14 percent for economy and 86 percent for big spending last year; another voted 70 percent of the time for big spending last year. Perhaps this inconsistency was the reason for the exhortation of the public to request less of the Federal Government, and this certainly makes sense. However, I hold that a constitutional democracy in a republic demands that our representatives exercise judgment and self-discipline, be leaders, not followers. Therefore, it is up to Congress to vote "No" to big spending proposals and seek to eliminate waste, and to prevent raids on the Treasury by organized pressure groups.

The battle of the budget (and debt retirement) has become a battle of survival for our type of society and human freedom, as I see it. Surely, it is important for each Member to be more concerned with preserving the fiscal health of this great Nation (through the self-discipline of reduced spending) than with his seat in Congress. It's a simple matter of which comes first. Believing this, I intend to press this viewpoint, questioning no one's motives or integrity. If I must, disagree—but without being disagreeable, disliking only the ideas, not the people involved.

Democratic Victory Dinner Address

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address I made at the Democratic victory dinner in Washington, D.C., on February 28.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MIKE MANSFIELD, DEMOCRAT, OF MONTANA, AT DEMOCRATIC VICTORY DINNER, WASHINGTON, D.C., FEBRUARY 28, 1959

The automobile industry is often described as the pace setter of American industry. In other words, it occupies a position in the American economy like the Democratic Party in American politics. There's one difference. Last year the American people didn't go too well for the new cars. Last November they went, with real enthusiasm, for the Democrats.

So, tonight, we are having a victory dinner. You know, there are some people who think you can have too much of a good thing. They say, for example, "There's too many Democrats in the Senate. What's LYNDON going to do with them all?" Well, so far as I know, we don't have any Democratic unemployment in the Senate. The distinguished majority leader has put all the Democratic Members to work, and they are beginning to produce. There's no such thing as an "acceptable" level of unemployment in the Democratic Senate, just as there oughtn't to be in the Nation.

Personally, I don't think you can ever have too many Democrats at work—in the Senate or anywhere else. As a matter of fact, there's a shortage of Democrats. The country could use a lot more of them over in the other branch of the Government. I don't know about the market for automobiles. But, as far as Democrats are concerned, it won't be until 1960 that the supply will begin to catch up with the demand.

In the last few weeks we've been seeing the new automobiles on the streets of this city. They have clean, fresh lines. Some of the cars are conservative looking. Others show liberal style changes. A few even have that futuristic look.

Not to be outdone by the automobile industry, we have our own display of 1959 Democratic models tonight. We've got four lines with us—not Fords, General Motors, Chryslers, and Ramblers. What we do have are Democratic Governors, Senators, Representatives, and Democratic presidential possibilities. We've even done something which Detroit hasn't been able to do for years. We've brought in a successful new producer—Alaska—with three new Democratic designs—all fully equipped with snowshoes.

Some of us have had an opportunity to preview the new 1959 Democratic models in the Senate. We've already looked under the hoods and tried the steering gear and the brakes. Take it from us, the new automobiles have nothing on them. These new Democratic models may not handle as easily—take, for example, the one produced in Wisconsin—but they all do have plenty of power. As a matter of fact, some of us older rattletraps, the model A's are beginning to wonder what the influx of these bright and shining new additions to the Senate is going to do to the used car market.

Nevertheless, we strongly commend them—all of them—to you. We urge you to take them to your hearts as we have done. They add luster drive, safety and countless new extras to the Democratic Party and to the Nation.

That is why I am delighted to participate in this victory dinner. It is true we are celebrating, in a general sense, the triumph of the Democratic Party in the 1958 elections. But in a special sense we are celebrating the victory of these new Senators, new Representatives and new Governors. It is they who add up to the difference between an ordinary election and the great Democratic victory at the polls last November. Through them, the Nation has made clear what it expects of all of us.

I am very glad that the great leader of the Senate, LYNDON JOHNSON of Texas, is here tonight to help us interpret the meaning of this victory. I can tell you that his reputation as a skilled craftsman and mechanic in this trade is fully warranted. He knows his political automobiles. And out of his warm and responsive heart and his clear-thinking head, he knows something much more important. He knows that the function of the Democratic Party is to go; not to seem to go. It is to go, not in starts and stops, not in bursts of power and sputtering stalls, but to go firmly and steadily in the direction which the American people, by giving us this great victory, have commanded us to go.

The late Senator Robert Taft said that the function of the opposition is to oppose. With all due respect to that great Republican leader, I want to say that for Democrats, opposition alone is not enough. We Democrats will oppose when it is necessary to oppose. But we shall oppose responsibly and we shall try to contribute constructively to the security and progress of the Nation whenever and wherever we can.

To do that, we have got to have clearly in mind what we cannot do, as well as what we can do, under our constitutional system. The administration, alone, can lead in this country. True, it is a fact that is going to change in 1960. It is going to change, however, only if we do what the American people have commanded us to do; it is going to change only if we do what we can do, not what each of us thinks he would like to do. What Democrats can do, what they must do, is to point out a constructive path for the Republican administration to follow. We have got to keep it working when it would prefer to relax. For the sake of the American people we must hold the hand of this Republican administration when it is perplexed. We must try to guide it when it loses the way. We owe that to the people who have entrusted us with a large share of the responsibility for running this Government.

In specifics, we have got to try, as we have been trying, to get it started on the road to policies which may lead to a more durable peace. We have got to improve the administration of foreign aid and restore the decent image of the United States in so many parts of the world. We have got to see to it that this Republican administration keeps its nose to the grindstone of the social and economic problems which plague large parts of the Nation. You know those problems—inadequate education and other unequal opportunities for millions, a disgracefully wasteful agricultural policy which sees mountains of decaying surpluses side by side with millions of people without enough to eat, high prices, millions of unemployed, the decay of urban centers, a lagging science, an antiquated and inequitable tax system and a neglect of our older citizens. These and similar matters are the problems which confront us. To boot, we have to try to deal with them within the framework of a sleight-of-hand budget from an administration which last year gave us another such budget along with policies that helped to produce a $12 billion deficit in it.

We Democrats have a duty to try to make this administration work, not for the benefit of one, but for all sections of the Nation and for peace. We have a duty to try to make this administration work, not for the benefit of the few but for the welfare of the many.

That is the meaning of November 1958. That is what the American people have asked the Democratic Party to try to do. I do not know whether we shall succeed. It is a monumental task to try to do anything with a Republican administration. Speaking for those of us who are in the Senate, however, I can assure you that we shall try our best.

The Massive Irresponsibility of the Spenders

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 2, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent that remarks I made before the Ohio Association of Retail Lumber Dealers on February 26, entitled "The Massive Irresponsibility of the Spenders," be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE MASSIVE IRRESPONSIBILITY OF THE SPENDERS

(Address by U.S. Senator BARRY GOLDWATER, Republican, of Arizona, before the Ohio Association of Retail Lumber Dealers, Columbus, Ohio, February 26, 1959)

Just a few days ago we Americans observed the birthday of the Father of our Country, George Washington. I am frequently amazed at how the words of really great men ring true generations after their time. Abraham Lincoln, Theodore Roosevelt, Thomas Jefferson—even today their philosophies serve us as a guiding light.

So it is with George Washington. I sometimes think that his Farewell Address should be framed and hung in the office of every Senator and Congressman in Washington, for it offers some very sound advice.

Among his words in that address were these: "As a very important source of strength and security, cherish public credit."

He admonished the Nation to use credit as sparingly as possible and to avoid the accumulation of debt not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear.

Now, that's a fairly simple formula. The following of it is what takes courage. Political courage.

I am sadly reminded of those words as I observe the spending orgy now under way in Congress. The budget busters are going at it hammer and tongs, determined to spend more and more of your tax dollars on the theory that a little bit of inflation is good for the country.

Some observers have expressed the opinion that Congress has reflected the views of the people by approving increased domestic expenditures. They believe the people generally have taken the attitude that if the United States can afford to spend billions for military and economic aid to foreign countries, then they, as taxpayers, want to get as many benefits as possible under domestic programs.

Whether this was a correct estimate of the opinion held by a majority of the people or not, one is entitled to suspect that it was the basis on which the 2d session of the Democratic-controlled 85th Congress permitted:

1. A deficit of $12.9 billion;

2. The public debt limit to be raised from $275 billion to $288 billion temporarily and to $283 billion permanently; and

3. Nondefense spending for fiscal 1959 to be increased by $5.3 billion against an increase of $2 billion for defense purposes.

The fact is that total national defense spending planned for fiscal 1959 will be $4.3 billion under fiscal 1953's defense budget of $52.6 billion. On the other hand, nondefense expenditures in 1959 are estimated at $9.2 billion above the 1953 level of $21.7 billion.

In the face of the growing public debt, such extravagance has no place in the budget of a prudent government any more than it would fit into the budget of a prudent family.

Let's consider the Federal budget in everyday terms.

A family budget, operated in the same manner as the Federal budget, would mean that the family started out fiscal 1959 with a debt of more than four times its annual income. Following the Federal trend that family would face its financial situation by obligating itself to spend more than $1.08 for every $1 income received during the year. No sound financial institution would accept a note signed by a member of a family in such a condition.

As a matter of fact no family and no business or industry could ever get into such a dire financial situation with private financing. They would be considered broke long before ever reaching such a status.

In the light of such a situation we currently have before us the even sorrier spectacle of certain leaders in Congress practically hand tooling an economic disaster.

If the budget is unbalanced the result will be higher taxes for everyone. And if the revenues to balance the spending are not collected by the Government then the people of this country are in for a period of inflation that could push the cost of living upward and make your dollar worth less and less.

There are several bills coming up for consideration in Congress that involve spending more billions than the budget provides. Those behind this legislation seem to feel that the country doesn't care and the sky's the limit on public spending as long as you hang a "welfare" tag on it.

I can't think of many things that would please the Kremlin gang more than to see the economy of this country weakened from within by irresponsible fiscal policies. Deficit spending and lending, if continued, will lead us straight into the Russian trap envisaged by Lenin, who said: "We shall force the United States to spend itself to destruction."

A nation can hang itself on the gallows of excessive public debt—and we are no exception.

Some people would have us believe that the Federal Treasury is a bottomless grab-bag which never needs to be conserved or replenished. Because of this attitude we have seen the national debt soar to dizzying heights. The Federal debt in December 1958, was $283 billion—about $7,000 per family in the United States.

In about 25 years our expanding Federal Government has boosted the average family's tax bill from $120 to $1,600 a year.

We don't often hear these facts.

As I mentioned earlier, this current fiscal year the Federal deficit is estimated at nearly $13 billion—the Government is spending nearly $13 billion more than its receipts. For the coming fiscal year the President has

presented a budget of $77 billion. It is a balanced budget, even though it is the biggest peacetime budget in our history.

Yet some critics have called it a skinflint budget. Actually, as the President himself said, it will "help prevent further increases in the cost of living and the hidden and unfair tax that inflation imposes on personal savings and incomes."

Senator HARRY F. BYRD, an outstanding authority on fiscal policy, has said: "Our free-enterprise democracy is the greatest economic system the world has ever evolved. But there is one controlling requirement, and it must never be overlooked. The system is based on solvent government and sound money. It is in this requirement that we have allowed ourselves to become weak." To those words I say "Amen."

We cannot spend our way into prosperity. Nor can we preserve our prosperity and our free-enterprise system by following a reckless policy of spending beyond our income in peacetime.

The vital necessity of sound fiscal policy is illustrated by the constantly increasing prices of military equipment. Even allowing for the obvious fact that the new weapons and equipment are much more sensitive, powerful, effective, and, therefore, more expensive than the items they are replacing, the truth is that a good deal of inflation is already built into their extremely high costs.

Let me give you a few examples of the rising prices of what is known as military hardware. The B–29 heavy bomber at the end of World War II cost about $600,000. The all-jet B–52 intercontinental bomber of today costs about $8 million.

During World War II, a submarine cost about $4.7 million. The Polaris submarine will cost about $90 million.

Rockets and missiles are expensive, too. It is estimated that the cost of developing ballistic missiles to an operational state will be a good deal more than twice the cost of developing the first atom bomb.

Does this mean that unlimited Federal spending is inevitable? Should we just give up in our attempts to keep the budget within reasonable bounds? If that were so, then we would already have lost the battle to stay free.

But it is not so. Most of our problem thus far has been that the great majority of our people have not been aware of the dangers they face from even bigger Government and irresponsible fiscal planning.

We must wake up. We must alert the various forces in our citizenry to make sure of two things:

First, whatever funds are needed for defense, for space exploration, and for other essential military and civilian purposes must be provided, and provided soundly.

Second, waste, duplication, continuation of governmental services no longer needed must be eliminated and eliminated promptly.

We must live within our income. We must keep our economy sound. It cannot be done by going further into debt. We must maintain fiscal integrity.

This is the road to commonsense, the road to a sound defense—a sound defense against the enemies of freedom, both at home and abroad.

The Federal debt is only a part of the whole U.S. fiscal picture. When we add up our total debt—the net debt owed by Federal, State, and local governments, by business and by individuals—the sum is staggering—$758 billion. It has almost doubled since the end of World War II.

Personal income after taxes is the highest it has ever been. Yet, both mortgage debt and consumer debt have been increasing. In 1958 alone, mortgage debt outstanding went up nearly $15 billion.

At the end of 1958, consumer, or personal, debt totaled nearly $45 billion—seven times what it was 20 years ago. A few years ago only one family out of three had any consumer debt. Now more than half have such obligations.

Worse still, the majority of persons with such personal debt have no liquid assets to fall back on.

We can readily see what a terrible thing inflation is by what it has done to the people of France. In that country the cost of living today is 37 times what it was about 30 years ago.

A pound of butter that cost 10 francs in 1927 is 410 francs today.

Men who put aside savings for substantial annuities find that their pensions are worth only 15 percent of what they were in 1940.

The pensions of French veterans of World War I—pensions once considered adequate—have depreciated to a value of 70 cents a month.

Don't say it can't happen here. The people of France never thought it would happen there.

I do not mean to say that all debt is bad. Of course not. Sound business debt is one of the elements of growth. Sound mortgage credit is a real help to a family that must borrow for a farm or a home.

But is it not apparent that in the areas of both public and personal debt these limitations of soundness are being disregarded by all too many of our citizens?

This matter is of vital concern to all of us, but especially to our younger citizens. They will live under the hysteria of inflation throughout the rest of their lives—if it is not checked now.

They will carry the load of our rising debt, and its growing interest payments—if we go on spending beyond our income.

They and their children will pay the bill that will inevitably be rendered by a continuing fiscal irresponsibility—and it will, I fear, be a bill compounded in hardship and heartache.

Inflation has already robbed our dollar, savings, pensions, annuities, insurance policies, social security, etc., of more than one-half of their purchasing power and real value. It has increased the cost of Government more than 100 percent, thereby raising taxes more than 100 percent. As the dollar buys less and less each year, the cost of national defense rises more and more, thereby seriously crippling this country and the free world in their life-and-death struggle for survival against the disciplined forces of communism.

Since our Government has gone in debt more than all the other governments in the world and since Congress continues to spend more money than it takes in, the money obligations of our Government have been falling in value year by year for a long time.

If this keeps up for a few more years our money will be worthless and the savings of our people for old age, sickness and for their children will be wiped out. It is a certainty—if Congress continues its spending spree. If there is any doubt about this, I suggest reading the history of nations in ancient and modern times. The handwriting is on the wall for all to see but the blind.

This is a period in the early stages of inflation when the owners of equities such as stocks, land, and commodities appear to either hold their own or profit from inflation. This doesn't last long. As history shows, the owners of such equities are finally wiped out.

Under inflation, stocks earn less and less dividends and ultimately their value is based on dividends. Taxes on real property mount ever higher because of inflation until it makes ownership of real property unprofitable. In France and Germany, where inflation was unchecked, the people vainly sought refuge through every type of investment. They all came to the same end—bankruptcy.

Our country is at peace. The economists predict one of the best business years ever. We're all going to make more money, there will be longer fishtails on our automobiles, bigger screens on our television sets, and more chrome-plated gadgets in the kitchen for the little woman.

It sounds just dandy, but I think it would be wise in these times to take a hard look at just where we're headed and see if we are not living in some sort of fool's paradise. Perhaps, as the Chinese say, it is only temporary.

I do know one thing for sure—the massive irresponsibility now being displayed in Congress is definitely not the answer. I think it's about time those elected to high office thought less about winning popularity contests back home and faced up to the responsibility of doing—and voting for—what is best for the country as a whole.

This country faces a challenge greater than any it has ever known. For a nation with so marvelous a heritage to destroy itself by robbing Peter to pay Paul is unthinkable.

We must keep America free and strong—economically, socially, and spiritually—so that our way of life may endure. There is no other way. This is your challenge and mine—a challenge to every American no matter who or what he may be.

Curtailing Foreign Imports

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. DENT. Mr. Speaker, as usual, opposition to the present administration on reciprocal trades and the Buy American Act, draws editorial comment, as well as a batch of misinformation, which serves to further confuse the minds of the public as to the realities of the situation. I am submitting for the RECORD today two editorials appearing in local papers which would appear to cover the subject to the uninformed, but to those of us who have made a thorough study of the situation the answer is not so simple. I submit, therefore, Mr. Speaker, my reply to these editors and their editorials:

OPEN LETTER TO THE PITTSBURGH POST-GAZETTE

FEBRUARY 27, 1959.

To the EDITOR.

DEAR SIR: I don't write Letters to the Editor very often. When I do, it's because either the information is in error, or I am badly informed.

On Wednesday, February 25, your editorial appears to put my fight for the awarding of large contracts to foreign governments in a bad light.

Personally, I've been an advocate for liberal trade policies. However, I always felt that the promises of every President, every Secretary of State, and every Secretary of Commerce—since the passage of the original reciprocal trade bills and the foreign aid legislation—were being kept.

Every assurance was and is still being given that no arguments on trade would be made that would prove to be injurious to any American industry.

The facts do not bear out these assurances:

Most of our troubles are of recent vintage, the Buy American Act has been openly and flagrantly abused since the Presidential order of December 1954, decreasing the American

differential allowance from 25 percent to 6 percent.

The escape clause has been invoked 60 times by industry and minor relief has been granted only 19 times and no relief in the other 41 cases.

This record was compiled in spite of the fact that in 31 cases the Tariff Commission ruled unanimously in favor of tariff relief for the injured industries.

Two classic examples are the binocular and watch industries. After many protests against the competition from abroad, they closed shop and are no longer producing in the United States. The prediction is that all the watch industry will fold unless something is done.

These are not isolated cases, they are the rule, and not the exception.

Insofar as your figures for export and import of electrical equipment, the testimony given us is that of all the export business done by American producers all but $200,000 worth was paid for by our own money under mutual aid, ICA, and other Government spending and lending agencies.

Even this market is now threatened by new regulations being put into effect.

I believe a trade agreement has to be mutually beneficial and mutually respected.

In the case of British selling our Government generators and other power-producing equipment, the testimony shows that the British do not permit any foreign country to sell any item of this nature to their entire power industry.

In the case of the Jeannette Elliott plant, the differential was approximately 12 percent and this, according to the President's order, should have given the business to our local company.

However, they invoked a new item into the calculations by giving credit to the Swiss company for the 13 percent ad valorem duty charged on the import.

Needless to say, the Jeannette company, nor their workers, were given credit for the taxes, Federal, State and local, paid.

I don't want to appear to be an isolationist or a high tariff advocate. I do, however, recognize our higher standards of pay, fringe benefits, personal and corporate taxes.

I also recognize that we need friends everywhere. Somehow, I can't believe we make friends by taking over their production facilities with our investments and our markets.

I may be a little short on the economics of the situation, but I can't figure how it will help the American workman and the American businessman by making it more attractive profitwise, and taxwise for an American manufacturer to close his plants here to make investments abroad and to be allowed to take his foreign profits tax free, if he reinvests in other foreign enterprises. The promotion also calls for limiting American investors in foreign enterprise taxes to the limit of the taxes paid through foreign corporation earnings and investments to the taxes assessed by the foreign country.

One example given shows where a steel producer pays a limit of 30 percent on net income compared to 52 percent here. This may be all right if we can afford it, however, I doubt if we can with the debt and budget greater than all the rest of the world combined.

In closing, and to make a point, I refer back to my statement that agreements have to be mutually beneficial and respected.

Let's take the auto industry. We give concessions to foreign cars that permit the following comparative prices in New York City and other places:

New York, United States of America: American Ford $350 more than British Consul, $900 more than German Volkswagen.

London, England: Ford $3,850 more than Consul, $3,800 more than Volkswagen.

Cologne, Germany: Ford $1,900 more than Consul, $3,800 more than Volkswagen.

Copenhagen, Denmark: Ford $2,800 more than Consul, $3,700 more than Volkswagen.

Caracas, Venezuela: Ford, $2,800; Consul, $2,050; Volkswagen, $1,750.

South Africa: Ford, $3,350; Consul, $2,250; Volkswagen, $1,800.

Mexico: Puts a 100 percent tariff on all American cars.

The formula shifts in its application in Brazil, Japan, the Philippines, and other markets, but in every case the heaviest duties apply to American cars.

This is known as market rigging and this is the reason we have lost our foreign market and about 13 percent of our home market.

When we can't keep our production lines at full capacity, it adds to the cost of the item produced and with the loss of foreign markets we are necessarily put into a position where we can't compete successfully with imports.

This doesn't alibi our big cars and luxury items but how do we explain the fact that Nash has all of its "Metropolitan," their cheap, small, unadorned car, made exclusively in England and it's the same car formerly produced here.

I know that both sides of an argument has logic and sincerity on their side. I can't, however, as a public servant, be choosy in the matter of whose job I shall try to save.

To me a worker in the glass plants, rubber works, bicycle shops, coal mines, electrical or any other endeavor is equally distressed if he is unemployed.

I shall never knowingly vote to create conditions that will cause any American worker to lose his job or any American business, including your journalistic enterprise to lose its earnings on its investments and services.

I know this is a long "letter" but believe me, I haven't scratched the surface of the problem.

I hope we can find a solution that will help us keep both our friends, our jobs, and our standard of living.

Sincerely,

JOHN H. DENT,
Member of Congress.

[From the Pittsburgh Post-Gazette, Feb. 25, 1959]

HOW TO PROTECT JOBS

Before Congressmen—and Jeannette's Representative JOHN DENT notably among them—take action to curtail the American importation of such goods as electrical generators, they should be reminded that foreign trade is a two-way street on which this country enjoys a preponderance of the traffic.

The current debate has arisen because Swiss and British firms have underbid American firms on electric generators contracted for by agencies of the Federal Government. Mr. DENT and others have complained that this would deprive American workmen of jobs. While Mr. DENT certainly can't be blamed for protecting what he believes to be the best interests of his constituents, he should take a look at the other side of the street.

Pittsburgh Congressman WILLIAM S. MOORHEAD has pointed out that this country exports far more electrical equipment than it imports. State Department figures for 1957 show that the United States exported $1 billion worth of electric machinery and apparatus while importing the same sort of material valued at only $145 million. In the field of electrical generators alone, American exports totaled $175 million as compared with imports of only $13 million.

When renewal of the reciprocal trade program was up for congressional consideration last year, it was estimated by Government officials that world trade makes jobs for at least 4½ million American workers. Closer to home, exports bring $793.2 million yearly to Pennsylvania, $164.7 million annually to Allegheny County alone. This trade represents full-time jobs for more than 9,400 workers in the Pittsburgh area's five principal industries.

The jobs of these and other workers would be jeopardized, and this Nation's unemployment problem would be aggravated, if Congress supported a program aimed at protecting American workers through higher tariffs or subterfuges in the name of national security. That would invite reprisal by foreign countries which could cost more American jobs than would be protected. If we are to continue to sell our products abroad, we must encourage conditions under which foreign countries can do business with us.

Mr. HARRY PORE, Jr.,
Editor, the Monessen Daily Independent, Monessen, Pa.

MY DEAR HARRY: Your story and editorial again demonstrate your technique of telling half-truths.

Where did you get the story that Congressman MOORHEAD "hits" DENT on Buy American?

Mr. MOORHEAD has never once argued with me on my position of fighting for the Government orders for Westinghouse and Elliott Co., of Jeannette.

In fact, he was one of the cosponsors of my resolution asking that the orders be given to the American concerns.

The only difference between my thinking and some of the others is that I can't see any difference between my unemployed glass workers, steelworkers, and others because of our trade policy than an electrical worker.

There is no change in the position of my congressional district, since my predecessor, Congressman Kelley, fought and voted against reciprocal trade agreements.

Our district happens to be one of the areas that has been sacrificed to the sacred cow of cotton and other low man-hour production exports.

I am not now, nor have ever been, a Smoot-Hawley high-tariff advocate.

I am now, and have always been, a believer in fair trade and believed what every President and every Secretary of State and every Secretary of Commerce of the United States have said time and time again for the record, "That no reciprocal trade agreement will be made that will cause undue hardship or injury to any American industry."

I believe in that, and I believe also that if we made concessions we should receive same.

I know you would like to be fair, so I'll give you some facts that are compelling, at least to a Representative of the 21st Congressional District of Pennsylvania, with its heavy unemployment. I've just received the latest figures on our trade balance with Japan, and I believe it tells the story that I'm trying to emphasize. We trade payrolls and raw materials for consumer goods and unemployment.

We sell Japan: Cotton, wheat, soya beans, metalworking machinery, heavy oil, crude petroleum, bituminous coal for steel producing, iron and steel scrap, barley, cotton mill waste and pulp, hides and skins, beef tallow, corn, miscellaneous.

We buy from Japan: Processed and canned fish products, iron and steel, pottery, silk fabrics, sewing machines, optical instruments, cotton fabrics, wool and worsted fabrics, pearls, cotton clothing, railway sleepers, glassware, cooking utensils, miscellaneous.

Although there is a slight trade balance in dollars in our favor, the indisputable fact remains that the things we sell are used to make products to sell back to us.

We have 38 million tons of steel capacity idle, yet the U.S. Navy buys 5,700 tons of steel plate from Japan. Last week we ordered $9 million worth of radar equipment from Canada and Westinghouse and

General Electric are on short workweeks with thousands unemployed.

It isn't an easy matter to know the answer but one thing is sure, we can't operate without employment and when the State Department decides which jobs to sacrifice and which jobs are to be protected, let us hope that our district factory workers get as much consideration in the future as oil, wheat and corn planters.

I am not against trades—all I want is reciprocal trades that are reciprocal.

I am attaching a letter with more details of interest which I have sent to the Post Gazette.

Hoping we can work together, at least for our district, I remain,

Sincerely yours,

JOHN H. DENT, *Member of Congress.*

FULL CIRCLE

Representative JOHN H. DENT, of Westmoreland County, is engaged in a strange campaign for a Democratic Congressman of the New Deal persuasion. He is promoting so-called buy American legislation to protect U.S. manufacturers against foreign competition.

It has been a good quarter-century since a Congressman from this area adopted such a position. The last one from Westmoreland County was classified by the Democrats, if memory serves us, as a reactionary.

So apparently we have come full circle on the question of free trade versus protective tariffs. Representative DENT's position is indistinguishable from that of the blackest Republican of the Smoot-Hawley era.

It is hard to avoid the impression that Mr. DENT is more interested in votes than in finding the right answers to problems of foreign competition and world trade. Some industries in his district are feeling the effects of foreign imports; so he proposes the simplest possible remedy—shut out the imports, buy American.

What it pleases him to overlook is that the United States by and large is an exporting country. Take Europe, from where come the products that are bothering Mr. DENT. In 1957 the United States shipped to Europe nearly $6 billion worth of products; we imported from Europe about $3 billion worth.

Does anyone seriously believe that if the United States reverts to a high tariff policy, it will continue to find the world's markets open to it?

Columbus Day

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. RODINO. Mr. Speaker, for many years there has arisen, from time to time, a movement to make October 12, Columbus Day, a national holiday. It is true that nearly all the States today observe it in one form or another, either as a legal or a public holiday. My purpose, however, in introducing this bill is to make October 12 a truly national holiday, sponsored by the Federal Government. There has, properly speaking, been but one occasion when Congress has purported to declare a national holiday throughout the United States, and that was by the act of March 2, 1889, which used the expression with reference to the following April 30, the "Centennial Anniversary of the Inauguration of the First President of the United States."

I submit that it is time to break the precedent again and the purpose of this bill—H.R. 418—is to declare October 12 a permanent national holiday. No anniversary, surely, could be more basic nor fundamental than that which marks that day in the year 1492 when the eyes of Christopher Columbus first beheld an outpost of the New World. Although he did not know it was a new world, believing it to be merely the western Indies, and died in that belief, it was nonetheless the faith and persistence of this one man, in the face of almost inconceivable obstacles and heartbreaking humiliation and delay, which threw open a new hemisphere for the settlement of mankind and the eventual emergence of a great republic founded on democracy and dedicated to the proposition that all men are created equal.

Surely this epochal day merits a yearly observance, both in tribute to the man himself and to an event which forever changed the face of the earth and altered the destiny of the human race.

Oregon, the Beaver State, Host to the World in 1959

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article about the Valentine State of Oregon written by one of Oregon's outstanding native sons—Senator RICHARD L. NEUBERGER. The story appeared in the February 1959 issue of Retirement Life.

THE STORY OF A "FRONTIER OF THE FUTURE"—THE BEAVER STATE—HOST TO THE WORLD IN 1959

The first Americans to journey westward to Oregon were on the payroll of the Federal Government. They were a pair of Army captains named Meriwether Lewis and William Clark—the most famous exploring team in all history.

The pay of this redoubtable pair was skimp. Each collected only $1,228 for a pilgrimage which lasted 2½ years. Nor was there any National Association of Retired Civil Employees in 1805 to assure them of a steady Government annuity when the epochal trek was over, although a grateful Congress did vote the exploring leaders 1,600 acres of choice homestead land apiece.

Oregon, which lay at the sunset end of the trail of Lewis and Clark, this year celebrates its first century of statehood. Oregon was admitted to the Union on Valentine's Day of 1859, just about half a century after Lewis and Clark had brought our flag down to tidewater on the Pacific coast.

SUPERLATIVES STUD STATE

Meriwether Lewis had been private secretary to President Thomas Jefferson. He sent to his illustrious superior fabulous reports about the realm called Oregon—its swift rivers, towering mountains, deep harbors, and riches in timber, pelts and fisheries. Oregon still makes this enduring and vivid impression on residents and visitors alike. Superlatives stud the State like raisins in a pudding.

On its eastern boundary, Oregon is bordered by Hells Canyon of the Snake River, deepest chasm on the continent. In some places, it measures over 7,000 feet from rim to river. The western boundary of Oregon is the Pacific Ocean, which caresses beaches of white sand or sends jets of spray against rocky capes and headlands. I once heard a photographer for Life magazine say he had taken pictures of virtually all of the great seacoasts of the world, but the Oregon seacoast was by far the most picturesque and beautiful of any of them.

OREGON CLIMATE MILD

Oregon's northern border is the Columbia River. In its surging reaches lurks nearly one-third of the entire hydroelectric power potential of North America. The Columbia, second in size only to the Mississippi among the rivers of the Nation, drops 2,700 feet from its distant source in the Canadian Rockies to its union with the sea near Astoria, where Lewis and Clark put in the first winter ever spent by Americans along the Pacific seaboard. In addition, the prodigious Chinook and Blueback salmon runs of the Columbia are among the most valuable fisheries on earth—worth almost $20 million annually.

Because of the mild climate which dominates its western slope, Oregon is particularly popular with retired people. Many members of NARCE in Oregon are men and women who came to the State after retirement, liked what they saw—and stayed. My wife and I understand this feeling. We are natives of Oregon, born and bred. The instant Congress adjourns each session, we rush to Oregon, and we never return to the National Capital until just when Congress is ready to resume. We extract every last possible minute in our beloved Oregon.

Besides its awesome topography, which culminates in the 11,225-foot glacial summit of Mount Hood, Oregon has made striking contributions to Government during its 100 years of statehood.

INITIATED GOVERNMENT REFORMS

Oregon was the first State to enact laws setting maximum hours and minimum pay to protect women and children in industry. This set the pace for similar social legislation all over the Nation, Oregon also pioneered in adopting the initiative and referendum. Indeed, these reforms have become commonly known as the "Oregon system." Under them, citizens may circulate petitions on street corners or along country roads collecting signatures to place any proposal on the ballot. Such petitions have been used to enact statutes safeguarding natural resources or providing higher standards of old-age assistance.

Furthermore, Oregon led all other States in bringing about the direct election of U.S. Senators. Until Oregon elected a Senator by popular vote, Members of the Senate were appointed by State legislatures. This often encouraged corruption, deals and the supremacy of special interests. After Oregon had made the breakthrough, the 17th amendment to the Federal Constitution soon followed, making mandatory the election of all Senators at the ballot box. The famed Senator William E. Borah, of Idaho, said Oregon's people were entitled to principal credit for this major reform.

Oregon is noted for its educational attainments. During the mass aptitude tests given our GI's during the Korean hostilities, soldiers from Oregon ranked second in the United States, exceeded only by those from Minnesota. Oregon spends more per pupil on its students than any State where school districts operate the public schools. The University of Oregon Medical School, the

forestry department of Oregon State College and other specialized categories are outstanding in the Nation.

PEAKS COMPARED WITH ALPS

Yet, despite Oregon's leadership in the realm of government, it is the vast outdoor amphitheater of the State which characterizes Oregon most predominantly.

Awesome scenery abounds in Oregon. The Wallowa Mountain Range, with its granite spires and upland meadows, has been compared to the Swiss Alps. Justice William O. Douglas, of the U.S. Supreme Court, actually insists that the Wallowas are the more magnificent. Crater Lake National Park throws a protective stockade around the bluest lake in all the world—a lake formed when a prehistoric volcano blew off its summit in a mighty cataclysm. The lake fills the ancient crater, where icy water has replaced molten lava.

The quiet tree-shaded trails which thread the coast and Cascade Mountain ranges offer an unparalleled opportunity to view the magnificent stands of virgin timber which constitute one of Oregon's major resources. Many of the giant Douglas-fir seen today were standing when Lewis and Clark traveled through this country 150 years ago.

Oregon Caves National Monument, the John Day fossil beds, and the lava formations of the Deschutes and Crooked River gorges provide both entertainment and education for those interested in the history of the earth's crust.

RECREATION AVAILABLE TO ALL

Portland, the metropolis of Oregon, has long, cool spring seasons which are ideal for the growing of majestic roses. This culminates every June in the Portland Rose Festival, where some of earth's loveliest flowers are on display. Portland also has more evergreen trees growing within its city limits than any other community, even including Vienna with its vernal groves which Johann Strauss immortalized in "Tales From the Vienna Woods." Forest Park is a primeval solitude almost within mashie shot of downtown skyscrapers.

Oregon has made a determined effort to insure that all its citizens, and their guests, may enjoy the recreational benefits inherent in the State's scenic grandeur.

Oregon was the first State to levy a gasoline tax to pay for its roads, also the first State to paint a center stripe down the highway to promote safety in fog and night conditions. The efficient highway system reflects this leadership. U.S. 30, the Columbia River Highway, is one of the world's most scenic drives. It has been compared with journeys along the Rhine, the Hudson, and the St. Lawrence, but with the Columbia offering by far the grandest dimensions. U.S. 101 clings to the headlands above the Pacific Ocean like a lariat. This road alternately presents vistas of mountain and sea. Its restaurants and hotels feature meals which highlight a wide variety of seafoods and fresh fish, because the waters off Oregon teem with aquatic life.

HAS MOST STATE PARKS

All the beaches of Oregon belong to the State, thanks to a progressive program instituted by Gov. Oswald West in 1912. No beach can be fenced off. The gleaming sands are a public playground for over 300 miles.

Oregon has more State parks than any other State in the Union. Some combine timbered uplands with ocean bathing. Others are located in the evergreen-shrouded interior mountain ranges, near clear snow-fed lakes or rushing rivers with picturesque names such as Rogue, Siuslaw, and Metolius. For the vacationer, free camping sites are available. For the weekend visitor, roadside picnic facilities are provided. Boating, swimming, fishing, and hiking are accessible to all. These recreation areas are in addition to the myriad of forest camps to be found in Oregon's 12 national forests.

DEER, ELK ATTRACT NIMRODS

Each year over half a million hunters and fishermen find the Beaver State's woodlands, fields, and streams a sportsman's mecca. Deer and elk seasons lure thousands of hunters to the woods in Oregon. Lewis and Clark actually located their historic Fort Clatsop within the present boundaries of Oregon because they glimpsed so many elk, as a source both of food and of replenishing their tattered garments. Oregon ranks second (to California) in the number of mule deer among the States, and second (to Idaho) in its elk population. Mule deer are the biggest of all the deer species.

Pheasant, quail, grouse, and partridge offer fine bird shooting, and for the benefit of waterfowl hunters there exist several public shooting grounds on wildlife management areas.

The State is justly famous for its fine trout and salmon. Deep-sea fishing, a living for many Oregon residents, is an avocation to thousands more who find invigorating sport in landing sea bass, halibut, perch, and other game fish indigenous to Oregon waters.

In all fish and wildlife matters, conservation is the keynote of State policy, thus insuring that future generations will enjoy the same privileges available to sportsmen today.

MUSIC, ART SUPPORTED

Portland maintains one of the finest symphony orchestras in the Nation, and also supports a symphonic choir. The Civic Theater stages numerous contemporary and classic productions with both local and Broadway casts. Regional and internationally known art is displayed in the Portland Art Museum. An extensive free public library system serves the city.

While Oregon's bountiful heritage of natural beauty and outdoor recreational opportunity has drawn thousands of Americans to this Northwest State, there are strong cultural and economic reasons for its popularity with our retired citizens.

ADULT EDUCATION CENTERS

Towns and cities which contain Oregon's 19 colleges and universities provide special advantages associated with the academic community, such as lectures, concerts, and sports events. Extension and adult education courses are accessible in all areas. In smaller communities, organizational events and local festivities provide a ready road to social contacts and congenial companionship.

In a time of generally rising prices, economics becomes more than an academic discipline for those dependent upon fixed incomes. Retirees living on unchanging annuities have no defense against this unfair tax. For this reason I was pleased to join with others in the last Congress to secure a 10-percent increase in the annuities of retired Federal employees. I regard few causes as more merited than that of providing fair upward adjustment of benefits for retired Federal employees and, as chairman of the Senate Subcommittee on Retirement, I intend to continue my efforts in the 86th Congress to insure that retirement funds available to former Government workers bear a reasonable relationship to living costs.

FEDERAL ACTION NEEDED

It is my hope that during the next 2 years Congress will delve deeply into the economic problems facing America's senior citizens. There are serious questions involving not only inflation but job discrimination, compulsory retirement, housing and medical care which demand immediate attention. The need for effective solutions grows more imperative each year as the proportion of our populace over 65 years of age continues to expand. In this connection, I plan to reintroduce in the Senate a proposal for a White House Conference on Aging—an approach suggested by a leader in matters of social welfare and humanitarian concerns, Representative JOHN E. FOGARTY, of Rhode Island.

Major responsibility for the correction of injustices toward older persons belongs to the Federal Government, since only at this level can any substantial degree of uniformity be assured. However, I am proud that Oregon has taken countenance of some of the pressing needs of its senior citizens through effective State action. One example: During the 1957 session of the State legislature a bill was passed and signed by Governor Robert Holmes exempting annuities up to $2,400 from State income taxes.

Oregon has repeatedly resisted adoption of a sales tax, which so discriminates against those forced to subsist on small monthly pension payments. Oregon offers certain inbred economic advantages for retirees who desire to stretch a monthly annuity check.

Housing is readily available in both urban and rural communities. In urban areas apartment selection is broad, and numerous projects devoted entirely to elderly people are under way.

MONEYSAVING POSSIBILITIES

Individual vegetable gardens—a feature of thousands of Oregon suburban and rural homes—permit a moneysaving method of supplementing food supplies. Oregon's climate permits the growing of nearly all fruits and vegetables.

Food processing, a major statewide industry, provides many older persons with an excellent source of supplementary income and a pleasant summer diversion.

Mild weather of western Oregon means low heat bills in winter. The Northwest's vast network of hydroelectric power sources keeps the cost of electricity low.

Perhaps the most persuasive argument attesting to Oregon's desirability as a retirement home is the simple fact that the percentage of people over 65 years in our State is increasing twice as rapidly as the total Oregon population—and an unexpectedly high percentage of the increase is due to migration. Recent statistics indicate that 9.2 percent of Oregon's population is in this age group; the figure is well above the national average.

CENTENNIAL TO ATTRACT 8 MILLION

This year an estimated 8 million persons will visit Oregon's 1959 Centennial Exposition and International Trade Fair. It will be the largest such event held in the West since the San Francisco World's Fair in 1939. Special programs to celebrate Oregon's 100th birthday will be held in cities and towns throughout the State.

Oregon will be on display in 1959. I believe that many who come as interested viewers will eventually remain as enthusiastic residents. Oregon is like that.

Hon. Latham Castle

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. LIBONATI. Mr. Speaker, President Eisenhower is to be congratulated for nominating the present attorney general of the State of Illinois, Latham

Castle, to become a judge of the U.S. Court of Appeals for the Seventh Circuit—Illinois—to succeed the late Judge Philip J. Finnegan.

Latham Castle is of old Illinois pioneer stock. His grandfather, Miles Beach Castle, an early settler in De Kalb County, founded the Sandwich State Bank in 1856. Latham, after service in World War I, was graduated from Northwestern University Law School in 1924. He became city attorney of Sandwich, Ill., in 1926; and in 1928 was elected States attorney of De Kalb County, reelected in 1932 and 1936. His future in the law continued in 1942 until 1952 as county judge. In 1952 he was elected attorney general of the State of Illinois and reelected in 1956.

Latham Castle is a legal scholar as well as a brilliant lawyer. He represents the highest ideals in his profession. He has never forgotten his loyalties to friendship. His career as a public servant has been marked with a real sense of high integrity. He has a fine mind, and life's experience has mellowed his judgment and understanding. His judicial training, together with a high quality of the understanding of law enforcement, both as States attorney and attorney general, have prepared him for the responsibility of this high office.

I congratulate him, his lovely mate, Georgiana, and his son, John, for this merited honor. The court of appeals will welcome such an illustrious son of the law.

Taxpayers' Revolt

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. MACK of Washington. Mr. Speaker, a long predicted and long overdue taxpayers' revolt against excessive Government spending and high taxes has started in the State of Washington.

Tens of thousands of Washington State citizens are signing petitions and writing letters to State legislators and Members of Congress urging less spending on new programs and demanding that these legislators "hold the line against increasing Government expenditures" and refrain from levying any new and additional State or Federal taxes.

Washington State's two U.S. Senators are quoted in the press as saying that each of them already has received petitions or letters from Washington State bearing more than 1,000 signatures.

The Aberdeen World of Aberdeen, Wash., in my home county—population 55,000—reports leaders of the taxpayers' revolt claim they will obtain petitions or letters to Congressmen and State legislators bearing at least 5,000 signatures.

I received 344 taxpayers' revolt letters from my own county Monday morning and the drive there for a curb on extravagant governmental spending appears to be only at its beginning.

This taxpayers' revolt, newspapers report, is nonpartisan and has the endorsement of leaders in both political parties.

The petitions bear the following heading:

A renewed declaration of independence to the Governor, State of Washington:

We, the undersigned citizens, knowing that the power to tax is the power to destroy, and believing that man is best governed who is least governed, and that government should be held to the same financial responsibility as that to which we are held—namely, to live within its means—do hereby pledge that we shall not require more services of our Government than such as are already being rendered.

We therefore demand that no increased taxes be enacted and that Government, both State and Federal, confine their expenditures to existing sources and limits of revenue.

We further declare that any elected representative of the people who does not subscribe to these views is not worthy of our support at the polls.

Other petitions are addressed to Members of Congress and to State legislators.

Signers of the petitions are following up their petition signing by writing letters to Members of Congress and to State legislators. A typical letter of this kind follows:

I have signed a petition addressed to the Governor, our representatives in the National Congress and our State representatives, in which I have pledged that I will not request any increased governmental services and demanding that no increased taxes of any kind be levied.

You will shortly receive this petition, which it is expected will have the signatures of at least 5,000 citizens of Grays Harbor County, Wash., most of whom will write you a similar letter.

This position is endorsed by leaders and members of both political parties.

I urge that you exert every effort to prevent any additional taxation whatsoever.

Here is a taxpayers' revolt that may become nationwide. If it does become nationwide, it may contribute greatly to Congress and State legislatures obtaining balanced budgets this year.

If the revolting taxpayers accomplish that goal, they will put a brake on the continued rising prices of inflation which are reducing the living standards of millions of American citizens, especially pensioners, retired persons, and others who are on fixed incomes.

The Fight With Inflation

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the address made by the senior Senator from Utah [Mr. BENNETT] before the Pennsylvania Manufacturers Association at Philadelphia, on Tuesday, February 24, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FIGHT WITH INFLATION: ADDRESS BY SENATOR WALLACE F. BENNETT, OF UTAH, BEFORE THE PENNSYLVANIA MANUFACTURERS ASSOCIATION, AT PHILADELPHIA, TUESDAY, FEBRUARY 24, 1959

It is always a great inspiration to have the privilege of speaking to an audience of manufacturers, because to me it is like coming home. For 30 years, before I went to the Senate, I was part of the management of a small manufacturing plant in Utah and, like you, I am proud of it. American manufacturers can be proud of their accomplishment, the great heritage of capital they have produced for our country, the millions of jobs they have provided, and the value and variety of the products they supply for our ever-expanding pattern of living. To do this has required the use of all the keys to success—initiative, imagination, great drive and vigor, high integrity and sound judgment.

The very fact that we have done all this makes it hard for me to understand why we are so blind to the forces that, unless we wake up, will destroy both our freedom and our wealth. For 20 years now, a thief has been preying on us and, rather than catching and exposing him, we have helped him rob everybody, including ourselves. Maybe this is true because he is the world's most accomplished confidence man whose hand is much quicker than the eye. He blinds us with promises of something for nothing. He drains our capital away, falsifies our records, dries up our markets, and finally squeezes us dry in our old age. And we applaud him and call for more.

Inflation is a thief that can steal the substance of our wealth without altering its outward appearance. Christ said, "The letter killeth, but the spirit giveth life." Inflation preserves the letter of economic values, but kills the spirit.

So real is inflation's illusion that many hardheaded businessmen—who can spot a phony business deal a mile away—not only think that a little inflation is either natural, inevitable, or desirable, but that it offers a real opportunity for growth and profit to a shrewd and daring operator.

Perhaps all this is possible because without realizing it, most of us have become addicted to a powerful narcotic. We reach eagerly for increasing doses of economic "happy dust" because it brings illusions of greater success and well-being, easier and faster progress, and greater profit.

Or perhaps even though we are wracked with the pain of economic cancer, we mistake fever for the glow of health and puffy swelling for expanding muscle. If this is so, then we are using the narcotic to disguise the pain.

No matter in what terms you describe it, there is a force abroad in our economy that has already taken a fearful toll from every American company, family or individual—an evil that must be exposed, faced, and conquered.

What is its awesome name? Inflation.

LET US WAKE UP TO THE DANGER

Fortunately, many Americans are beginning to wake up to the danger, to recognize inflation for what it is—thief, cancer, and narcotic. President Eisenhower is one of these and in his recent messages to Congress and the people has called for, "Action to meet these challenges by all groups in our society, and by all units of Government."

Specifically, he has challenged consumers, government, labor leaders, and businessmen to meet the particular challenge that inflation presents to them.

Being human, as well as being businessmen, we could generate a great glow of self-righteousness by pointing out to government

and labor both the extent of their particular responsibility for the present inflation and the things they should do to correct their faults. But there has already been too much finger pointing and blaming of one group by another. Tonight, I propose that we businessmen look our own weaknesses squarely in the eye and see what we can do to cure them.

WHY SHOULD WE BE CONCERNED?

There are two basic reasons why we should be concerned with inflation—one humanitarian, and the other based on enlightened self-interest.

If we have any active sense of social responsibility, we will fight inflation for the sake of those who are most vulnerable to its damages and least able to protect themselves. These include all who live on fixed incomes and pensions, the aged, the widowed, and the disabled. Not much better off are the schoolteachers and the civil servants at all levels of government. If any man profits by inflation—even temporarily—it is eventually from these people on pensions and fixed income that his profit comes—a cruel story of Robin Hood in reverse.

But if a few of us are indifferent to the fate of these victims of inflation, none of us should ignore its damage to ourselves—in the context of the well-being of business and industry, both in general, and in our own particular company. In this respect, let me point out four specific ways in which we can be hurt.

1. Inflation discourages the accumulation of capital

By eating away purchasing power year after year, it penalizes thrift and discourages investment. Oh, I know that the smart boys think that investment in common stocks or real estate is a safe hedge, but as more and more people crowd into that escape hatch, they create and accelerate the very force from which they fled until the whole structure of inflated values collapses, as it did in 1929.

2. Inflation destroys capital already accumulated

That this is already going on is demonstrated to every businessman who finds that his allowable accumulation of depreciation reserves will not replace his depreciated assets. As prices rise more rapidly, this erosion shows up in inventory too—while accounts receivable are settled at a discount. The end is bankruptcy, as the Germans found in the twenties.

3. Inflation distorts figures, destroys accurate comparison and forces uneconomic decisions

Speculation replaces sound merchandising, and investments intended to replace money as a device for the dead storage of value are substituted for investments in productive industry to produce more value. Thus we reverse the lesson of the parable, and emulate the man who buried his one talent, rather than the one who put his talents to use and doubled them.

4. Inflation narrows our markets—both at home and abroad

As true purchasing power shrinks, more and more people must use more and more of their remaining purchasing power for basic necessities, and more and more products are in danger of being priced out of the market. This is true for services too, as the great do-it-yourself movement in America demonstrates.

But even more dramatically, inflation dries up our foreign trade. In 1957 we sold $19.5 billion worth of American products abroad. In 1958 it dropped to $16 billion. While our commodity balance of trade is still on the plus side, our balance of payments shifted from plus to minus. In that year we had to pay out $2.3 billion in gold plus $1 billion in dollar balances held by foreigners in U.S. banks to fill the gap. In the past, the effects of our inflation have been balanced by greater inflation abroad, but lately, and by heroic efforts, our chief customers in Europe—finally including even France—have moved to greater stability. The new European Common Market will protect that stability and unless we solve our problem too, our own price policies will be even more responsible than their tariff barriers for shutting us out. And when we can't export goods, we will export capital and know-how behind the European wall, and there will be fewer American industrial jobs. Then our inflated wage scales will be a statistical mockery—victims of inflation. This mockery has already begun.

Inflation effects on the purchasing power of the dollar

These, then, are among the ways in which inflation is hurting both people and business But when we come to measure the actual reduction in the purchasing power of the dollar since 1939, we become truly alarmed.

The most frequent measurement is in terms of a weighted average of consumer prices—the so-called cost of living index. On this scale the 1939 dollar has shrunk in 20 years to 48 cents.

But there have been other serious shrinkages in purchasing power. When we measure it as income, we have to consider also the increased tax bite before we can translate it into a consumer's dollar. A gross income of $3,000 in 1939 would need to have risen to $6,457 today for a man to pay his taxes and buy the same goods he bought in the year 1939. If a man made $10,000 in 1939 he would have to be making nearly $24,000 today to hold his own. In other words, his spendable dollar is worth only 43 cents. And if a man was in the $25,000 bracket in 1939 he would have to be making $70,000 in 1959 dollars to have the same available purchasing power. His spendable dollar then has shrunk to 36 cents.

And this is not all. Some dollars have shrunk faster than others. Looking at price indexes again, while the average 1939 consumer dollar is now worth 48 cents, the dollar you spend on some other products today is worth even less than 48 cents. Take these examples·

The dollar you spend for prime industrial products is worth 45 cents.

Your commercial and factory construction dollar is worth 37 cents.

If you build a new house, your construction dollar is worth 36 cents.

If you buy a house today which was constructed in 1939, you are spending a 33-cent dollar.

If you have your car repaired, you use 30-cent dollars.

These are samples of the damage inflation has done in 20 years. Unfortunately, history—even recent history—shows that once inflation is accepted as inevitable or desirable its rate always accelerates. When we begin to build a factor for inflation into our personal and business decisions, we give it an extra push. Unless we make a stand soon, it can pass the point of no return, beyond which there will be no question as to whether we will have an economic collapse—only when it will come. To argue that we can live with inflation and control its rate is to forget that it is an economic cancer, and that if we can really control it, we can, in fact, eliminate it.

HOW SHALL WE CONTROL IT?

Up to this point I have been pointing out why inflation must be stopped. Now it's time to try to answer the more difficult question—How? As businessmen and managers of industry, what can and must we do to meet President Eisenhower's special challenge to us, and win the fight against inflation in our special and particular area?

I have four concrete suggestions.

First, we must face the problem and prepare to solve it. This requires the same process that we use to solve any other business problem—plus a little extra spiritual strength. We must wipe out from our own thinking the illusions that inflation has created and replace them with the hard facts. Among these illusions are several false ideas.

1. That we have always had inflation

The fact is that until the thirties, the price levels went up and down, but the long term level remained fairly stable. Wholesale prices in 1930 were about the same as in 1790.

2. That inflation is necessary to growth; that without its artificial stimulation men will not work harder or invest more

The same thing can be said about a narcotic, but here we recognize that the effect is temporary and the price for it is too high. Actually, in most periods of great growth like the twenties, prices were slowly falling. Inflation distorts figures to counterfeit growth, as you will easily see when you measure the rate of increase in your business in tons or gallons and then compare this with the rate in dollars.

3. That inflation can be profitable, because it produces something out of nothing

This is the oldest confidence come-on in human experience and always conceals a clever larceny.

4. That even if inflation is inevitable, a shrewd man can outsmart it by clever investment

This is both stupid and cowardly, the action of a soldier who runs from the fight—or a strong man who pushes the helpless out of the lifeboat. In the end, when the inevitable crash comes, even the smart boys get it.

5. That even if it is bad, it's someone else's fault—and that there is nothing we can do about it

This dims and rejects the very spirit of American free enterprise and makes hollow mockeries of all our great technical and productive achievements. If we approach inflation as another business problem, which it is, and develop an understanding of its effects, we can master it. The first job then is to straighten out our own thinking and accept our share of the responsibility.

TEACH THE TRUTH ABOUT INFLATION

The second suggestion in our fight against inflation is to help others—and specifically our own employees—to get the same understanding of the truth. This will not be easy, because while the official union line on inflation is essentially wrong, it is very appealing. Because their basic approach of more pay for less work is obviously inflationary, they support it with the idea that if wages can be raised faster, new markets will be created, and enough new production will come in to control inflation. What they must ignore is that wages are always the predominant element of cost, and that wages that rise faster than productivity are engines of inflation. When price rises inevitably follow such wages increases, they blame it onto exorbitant profits. The true effect can easily be shown by such figures as these from manufacturing. While physical productivity increased only 31 percent between 1947 and 1957, average hourly wages in manufacturing increased 67 percent. Some have referred to this spread between wages and productivity as the "inflationary gap." It is interesting to compare this spread of 36 percentage points with the 32 percent increase in industrial prices over the same period.

Because employees are being fed misinformation regarding the relationship of wages, profits and prices, they too have illusions about inflation. Through patient planned programs of education, these false ideas must be replaced with truth. For obvious reasons the unions will not undertake this, and if work is to be done, we must do it.

In making this suggestion I know it is another case of calling for education in solving specific problems. This need is always with us and always will be. This job will never be finished. But with respect to inflation, it has a special urgency because there is a definite educational process going on through unions intended to produce the wrong results, and this must be offset, and soon.

ADOPT SOUND OPERATING POLICIES

There is a third area in which we can move against inflation, that of our own operating policies. From now on we must think in terms of stable values and force ourselves to face our operating records and our balance sheet after we have wrung out the water of inflation. We should adopt some stable benchmarks for comparison and tie our planning and evaluating to them. From time to time we should make a report to our stockholders and the public in which we spotlight the effects of inflation on our typical dollar figures.

We should always face the problem of inflation in our dealings with our employees and, specifically, fight to keep wage increases well within the total rate of increase in productivity. If we do this, we will leave some share of the benefits of increased productivity for the stockholders whose investment in new equipment really makes most of it possible. But most important of all, we will thus preserve some part of this for the consumer.

In many ways the consumer is the real key to the control of inflation. He is the one who is robbed when prices rise and only when prices fall—ever so slightly—does he, or more properly, she, have a sure share in our progress. When we provide a share of the added benefits of increased productivity to those on the productive side of our two-part economic cycle, it comes in the form of increases, and it means increased wages to the worker and greater profits to the investor. But if the consumer is to have a share, it must be expressed in decreases in price. This has largely been forgotten in the current era of inflation. Forgotten, too, is the once commonly accepted business axiom that mass production produces lower prices. When we in industry begin to plan to give the consumer his share of the progress we make, prices will stabilize or drop, and inflation in consumer prices will disappear. It's just that simple.

REMOVE GOVERNMENT INFLATIONARY PRESSURES

Fourth, and finally, we must work to remove the inflationary pressures that originate in government. These take many forms.

1. Pressures to increase the supply of money to provide easy bank credit at low interest. This is inflationary by definition.

2. Pressures for nonproductive, non-self-liquidating Government programs that either increase taxes or pile up more public debt. As a Senator, I am appalled to find that many Americans, including businessmen, are economic schizophrenics where Government finances are concerned. They keep their concepts of Government expenditures and Government income in two thought-tight compartments. They want more local programs, more loans and grants, but lower taxes. They fight increases in the debt ceiling and are piously for economy but only if it does not affect them. If we are to control or eliminate inflation, we must move into a sustained period of balanced budgets, and this inevitably involves the control of expenditures for procurement and services at the local level—in your town or State and in mine. So long as we insist on more for any reason we will face the threat of inflation.

ELECT NONINFLATIONISTS TO CONGRESS

Since ours is a representative form of government run by men and women chosen through popular elections following campaigns conducted by political parties, we who want to cure inflation and other weaknesses in government must devote enough time and effort in political activity to first select, and then elect, representatives who understand the dangers of inflation—and will resist its temptations. The union leaders, who are essentially inflationists by philosophy, have moved into this field with great success and the representatives they have sponsored and elected are too often inflationists. In my opinion, this has made inflation, direct or disguised, our greatest nationwide economic issue.

Well, this is my story. Inflation is a great and vicious evil, a form of larceny, a cancer, a destructive narcotic. There are many reasons, social and selfish, why we must conquer it. This is true for all of us, and particularly for the managers of business and industrial enterprise. But there is one final and particular reason why this is especially true for you, the members of the Pennsylvania Manufacturers Association. One of the chief functions of your association is to supply casualty insurance. In this field, inflation has been especially destructive. Costs of settling claims have skyrocketed. General figures that demonstrate this are hard to get, but your association officials know that in the field of casualty insurance inflation is a real burden.

INFLATION MUST BE STOPPED

Inflation must be stopped, and we must do it as citizens and businessmen. If we leave this fight entirely to the power of Government, it can only be done by increasing Government interference with our own right to manage our own business, even to the possible imposition in peacetime of price and wage controls. There are men in Congress now who favor that step if inflation continues. Our own experiences with controls occurred so recently that they should still be convincing enough to make us realize that this step should mean the disappearance of freedom and free enterprise—and the end of our way of life.

Shall we continue to drift blindly into economic destruction—or wake up and live? Regardless of what others may do, I think the real challenge is to the leaders of business and industry. Have we the courage and faith with which to meet it? I believe we have, but we must act now to be effective.

Address by Hon. Estes Kefauver, of Tennessee, Before Vanderbilt University Law School

---

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the speech I made on the problems of inflation and antitrust before the Vanderbilt University Law School on February 25, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR ESTES KEFAUVER BEFORE VANDERBILT UNIVERSITY LAW SCHOOL, NASHVILLE, TENN., FEBRUARY 25, 1959

Vanderbilt University is one of the great educational institutions of the South. It has traditionally sought for and taught truth. This is one of the reasons why Vanderbilt men and women have always been able to contribute so much to the building of America. I am indeed honored to be here today and for this opportunity to address the law school. The theme of my talk today presents the choice that must be made if we are to preserve our free, competitive system.

I firmly believe that the high cost of living is our No. 1 domestic problem. This has been increasingly emphasized in recent weeks as we have heard more and more from all sides expressions of alarm over high prices and inflation. The President, in his Economic Report to the Congress of January 20, 1959, also recognized this problem.

For several years I have served as chairman of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary of the Senate. As chairman, in the spring of 1957, I announced that the subcommittee would conduct an investigation and hold public hearings on administered price industries. As I explained at that time, "The high cost of living is due in no small part to the upward manipulation of prices by big companies in administered price industries." The subcommittee began by hearing from some of the country's leading economists who have specialized in administered prices. From the testimony of these experts, an administered price may be defined as one having two characteristics: (a) it is set by administrative actions and (b) it is maintained for a period of time. With respect to the first characteristic, it is the seller as a matter of individual choice who establishes the price at which he will make sales, whereas in competitive industries, it is the impersonal market which establishes the price. With respect to the second characteristic, there is no generally accepted period of time during which a price must remain unchanged before it can be regarded as an administered price. What is significant here is not so much the frequency of change, but the responsiveness of a price to changes in the market. Prices which are administratively set and maintained are insensitive to changes in the market; that is, they are increased and maintained at the same time that demand is falling off by decreasing output. Dr. Edwin Nourse, a former economic adviser to the President, in his definition of an administered price industry, emphasized that the essential point is that they can maintain a predetermined price by restricting production. These are the administered prices having the potential for economic distress with which the subcommittee is concerned in its inquiry.

Following the testimony of the economic experts, the subcommittee conducted extensive hearings in the steel and automobile industries, two of the most basic in our economy. It was found in these industries that there existed a kind of upside-down competition. This describes the situation where prices continue to go up even when demand decreases. These high prices are put into effect by the largest company in the industry, with their so-called competitors following almost identically. Apparently this is accomplished without any express agreement.

In the steel industry since World War II, the hearings revealed that prices have moved on a number of occasions in the opposite direction to that which was indicated by the changes in demand. The steel price index

continued its virtually unbroken rise even when demand and production declined, as they did in 1949, 1954, and 1957. It also continued its climb when unit labor costs declined, as they did in 1950 and 1955. No matter what the change in cost or in demand, steel prices since 1947 have moved steadily and regularly in only one direction, upward. The subcommittee found that in 1957 steel price increases substantially exceeded cost increases. It was also clear at the time the 1957 price increases were made there was nothing in the information available to the industry to suggest a forthcoming increase in demand that would have supported higher prices. The fact that these price increases were made and maintained despite such underlying adverse economic conditions illustrates how, through price administration by the leader in the steel industry, upside-down competition can result.

In some industries such price behavior possibly would not have caused substantial injury to the public interest, but this is not true of the steel industry which is the very underpinning of our entire economy. Every time the price of steel goes up, it is inevitable that steel consuming industries raise their prices. This has a tendency to cause price increases in many other lines.

When the subcommittee began its hearings in 1957, I think it fair to state that it was the preponderate opinion that the inflation which our country was experiencing was the product of excess demand. It will be remembered that this opinion was so strongly held that the Federal Reserve Board tightened its money policy in an effort to contract demand. In the opinion of many this policy was based on a false analysis and contributed substantially to the recession from which we have not yet fully recovered. Even during this recession period prices continued to rise in most of the administered price industries, such as steel. Dr. Gardiner C. Means, an eminent economist who is the pioneer in the field of administered prices, appearing before the subcommittee on January 24, 1959, said: "Today, after experiencing inflation and depression at the same time, there are few who still think that this inflation has been the product of too much demand. Clearly, the inflation has not been of the old-fashioned, classical kind with all prices going up more or less together. Also, it is now generally understood that the new type of inflation is associated with administered prices and wage rates. For bringing about this understanding, I believe your committee is in large measure responsible. Indeed, we are fortunate that your chairman and your committee had the imagination to see the relation between these two things and the courage to focus attention on them."

In this recent appearance before the subcommittee, Dr. Means also presented wholesale price changes by product groups for the periods 1942–53, 1942–47, 1953–57, and 1953–October 1958.

In the 1942–53 period the wholesale price changes for all commodity groups generally rose in price and by not too different amounts. During some of this period prices were controlled by OPA and OPS.

In the period 1942–47, demand was far in excess of supply and prices in all commodity groups rose. However, prices in the competitive groups far outrose prices in the administered price groups.

In the period 1953–57, there was an entirely different picture. Price increases were practically entirely in the administered price groups. In some market price groups, prices rose very slightly; in others, they actually went down.

The fourth period 1953–October 1958 extending the third period to October 1958, showed generally the same picture as the period from 1953 through 1957, namely, higher prices in administered price groups with little increases or declines in the competitive groups.

Dr. Means made one point clear: administered steel prices had the dominant role in the 1953–58 inflation. Not only did steel prices rise the most in that period, but prices in the steel and steel using groups also rose more than those of any other groups and accounted for two-thirds of the gross increase in prices. It is significant that, as Dr. Means pointed out, the administered price groups accounted for 85 percent of the gross increase in the wholesale price index. Moreover, he stated that if prices in these administered price groups had not gone up, the wholesale price index would have risen less than 1 percent and that so far as the wholesale price index is concerned, there would have been no inflation.

The result of inflation is strikingly shown in the recent Economic Report of the President. The table on page 142 of that report reveals that in current prices, the total gross national product increased from $397.5 billion in 1955 to $436.7 in 1958. However, when expressed in 1958 prices, the total gross national product only increased from $435.4 billion in 1955 to $436.7 in 1958. Thus it is shown that during this period gross national product has increased only $1.3 billion in terms of 1958 prices. Hence when inflation is milked out of the large increase in dollar values, we have only enjoyed a slight increase in gross national product.

The seriousness of the cost of inflation to the American people is further revealed in the Economic Report of the President. In a chart which appears on page 155 of that report, it is shown that the per capita disposable personal income, using current prices, increased from $1,661 in 1955 to $1,784 in 1958. In contrast, however, when 1958 prices are used, per capita disposable personal income actually declined from $1,790 in 1955 to $1,784 in 1958. Thus we reach the remarkable conclusion that every person in the United States was $6 worse off in 1958 than they were in 1955.

Because the automobile industry is so pivotal in the overall economy, the Antitrust and Monopoly Subcommittee also inquired into the pricing practice of that industry. It is claimed that one out of every seven workers in this country is dependent, directly or indirectly, on the automobile industry for his livelihood. This study reveals that General Motors today commands approximately 50 percent of the automobile market in the United States. During the past 10 years this company's average profit, after taxes, has been an impressive 25 percent of net worth. This compares with a national average of 11 percent for all manufacturing corporations. In 1947 General Motors' profit was only 17 percent, but in 1950 its profits reached 37.5 percent, which was higher than its profits of 36.2 percent in the boom year of 1929. These figures are all the more impressive when the income tax rise is taken into consideration. In 1929 General Motors' profit margin before taxes was 38.5 percent, while in 1950 its before taxes earnings reached 77.4 percent.

Mr. Harlow Curtice, president of General Motors, in his appearance before the subcommittee, stated that he and three other executives determined the prices for all divisions of the corporation and that such prices were fixed so as to return 15 to 20 percent profit after taxes on total investment. It would appear that General Motors sets prices by a formula method, the first ingredient of which is the fixed 15 to 20 percent profit after taxes. To this is added the cost of materials, labor, overhead, taxes, and fixed costs based on a standard volume of 80 percent of production capacity. It is easy to see that if volume exceeds 80 percent of capacity, which it has in many years, profits are bound to rise above the 20 percent goal. The hearings showed that after these prices have been so fixed by General Motors, they become the prices of the industry. A comparison of comparable models of the major producers reveals little or no price differences.

Except for public utilities, our economy is not regulated. Ours has traditionally been a free, competitive enterprise system. But competition is fast disappearing among our basic industries because price competition is disappearing. In almost every industry we now find a big one, two, three, or four where the leader establishes prices and the others immediately follow suit. The problem of high prices and inflation also grows increasingly worse with the decline of price competition.

Almost 70 years ago the first of the antitrust laws, the Sherman Act, was passed by the Congress. This act has been supplemented by a number of others. We refer to these laws as the charter of our economic freedom. We early elected not to force companies to compete. Our antitrust laws seek to remove illegal restraints and monopolistic abuses so that they could compete. Hard core evidence is necessary to prove illegality.

In the past such evidence was forthcoming and many successful cases were brought against giant combinations of economic power. However, evidence of collusion is often lacking today because companies simply do not have to get together to set prices. As I have said, they simply follow the price pattern set by the leader. The Department of Justice and the Federal Trade Commission have told the subcommittee that they are helpless against such pricing practices unless direct evidence of collusion can be produced.

In this unhappy state of affairs the people are caught in a price inflation and the Government, under present laws, appears powerless to do anything about it. The day of decision is here. America must decide, and decide now, whether it wants a free, competitive economic system—not in fancy words, but in reality. It is up to Congress to discover how to exercise its constitutional responsibility of regulating commerce. Today, it appears that more and more of that power is being exercised by a relatively few managers in key industries.

The time has also come for the public interest to be put ahead of the private interests of either management or labor. During this time of high prices, I don't believe labor should demand or receive any wage increases in basic industries which management could justifiably use as the basis for necessary price increases.

Since the end of World War II our economy has been on a wild merry-go-round. As the cost of living increased, labor asked for wage increases as compensation. When wage increases were granted, prices were raised and the cost of living increased again. This, in turn, led to additional wage demands and so on. High prices and inflation obviously affect every group in America. Many U.S. businessmen believe the danger of the United States pricing itself out of foreign markets is an immediate one. In the President's economic message to Congress was the insistence that high prices here at home could lower our capability to compete in world markets. Labor has likewise been harmed. During this same period, we have seen great increases in unemployment. This problem is still with us today.

We now stand at the fork in the road. We must choose either Government regulation of business or the improvement of our antitrust laws. We must restore the climate where competition can be expected. The choice for me is easy. Regulation except in times of extreme emergency is undesirable.

Specifically what legislation might be passed to strengthen the antitrust laws? I would suggest three basic supplements to ex-

isting law. First, the test of section 7 of the Clayton Act, with respect to mergers, should be made to apply to section 2 of the Sherman Act. Under this section of the Clayton Act, the evidence need support only a finding of substantial lessening of competition or tendency toward monopoly in order to make a merger illegal. This change in section 2 of the Sherman Act would afford the Government greater power to destroy monopolies.

Second, I would suggest that unfair methods of competition and unfair acts and practices in commerce which are unlawful under section 5 of the Federal Trade Commission Act should be declared illegal under section 1 of the Sherman Act. This would enable the Department of Justice to attack all trade restraining evils.

Third, I would suggest that there be enacted into law my bill S. 716 authorizing the Attorney General to compel the production of documentary evidence required in civil investigations for the enforcement of the antitrust laws. Not having this power today, the Department is unable to gather evidence on which to base a suit except by use of grand juries in criminal investigations.

Together with the staff of the Antitrust and Monopoly Subcommittee, I am presently working on bills to amend section 1 and section 2 of the Sherman Act in the manner in which I have just suggested. When these bills are drafted, I shall introduce them in the Senate.

Although I believe the principal problem in our economy is the undue concentration of economic power, I also suggest that the antitrust laws be strengthened in respect to other problems. For example, I have tried for several years to secure the enactment of legislation which would partially change the law as interpreted by the Supreme Court in the Standard Oil of Indiana case in 1951. This bill designated for several Congresses as S. 11 would, contrary to the decision in the Standard Oil case, make illegal under section 2(a) of the Clayton Act price discriminations which may substantially lessen competition or tend to create a monopoly, even where they are made in good faith.

In 1950, when the Kefauver-Celler amendment to the antimerger section of the Clayton Act was enacted, I was hopeful that the amendment would arrest the great merger movement which was then in progress. However, the enforcement efforts of the Federal Trade Commission and the Department of Justice of the antimerger law even as so amended has been most disappointing. Under the amended law only one case, the Bethlehem-Youngstown proposed merger, has been finally adjudicated in the courts, and this case was not appealed. I have again joined with Senator O'MAHONEY in sponsoring S. 442 requiring in specific instances that premerger notification be given to the Federal Trade Commission and the Department of Justice, with the hope that such amendment might add stimulus to the enforcement program of the antimerger law.

Standing at the forks in the road, I have indicated that answer to our basic economic problems of today lies in an improvement in our antitrust laws rather than in Government regulation. I have made some suggestions as to what some of these improvements should be. I believe that given an understanding of the problem and the choice of remedies, the public would support congressional action along the lines I have indicated.

History teaches us that when a nation loses its economic freedom, it also loses its political freedom. Germany, under Hitler, and Italy, under Mussolini, went through this experience. We must not have it happen in the United States. Keeping competitive may not be popular. To insist upon price competition may work temporary hardships on present concentrations of power, but in the long run, it is the only way a democracy can survive. The accomplishment of this purpose is the joint responsibility of business, labor, and Government and one in which lawyers must play a major part.

American Bar Association Supports House-Passed Bill To Free the Federal Payroll of Communists and Fellow Travelers

---

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. REES of Kansas. Mr. Speaker, I share the deep concern expressed by the American Bar Association in its resolution recommending prompt enactment of legislation to close loopholes in the law which permit Communists and fellow travelers in many Federal positions.

After full and complete consideration of individual rights as well as national security requirements, the American Bar Association has strongly endorsed legislation to prevent Federal employment of Communists and subversives—S. 1411—as reported by the House Post Office and Civil Service Committee and passed by an overwhelming vote in the House last year.

Unfortunately, this urgently needed legislation was not acted on by the other body when we could not obtain conference agreement on the House-passed bill.

I agree wholeheartedly with the action of the American Bar Association in thus squarely endorsing the action taken last year by the House of Representatives. The resolution once more confirms the determination made by this House, that a security system for Federal employment, to be really effective, should be spelled out clearly in the law rather than left to the whims and caprices of administrative officials.

As far back as 1946 I secured the adoption of a resolution to investigate reports of malfunctioning of the Federal employees' loyalty program. Investigation disclosed extreme laxity in certain parts of the executive branch concerning infiltration of subversive elements. Based on these findings, a Federal employees' loyalty program was established—but soon proved inadequate because not based on law. The House of Representatives in 1948 approved my bill to establish an effective loyalty program, but there again the other body did not act. Finally, the House passed a bill in the 81st Congress which was approved by the other body and became Public Law 733, providing for summary removal of Federal employees whose actions jeopardize national security.

Public Law 733 was seriously weakened, as a measure to protect national security, by the Supreme Court decision in Cole against Young. The Court decision invalidated a portion of the Executive order on securities issued in 1953 and thereby opened the door for many known security risks to force their way back on the Federal payroll. Also, under this and later decisions, the Government has been required to give over $450,000 in back pay to persons who had been removed from Federal positions as security risks. This came about, not because these persons are not security risks but solely because of the technicality that their positions had not been specifically designated as "sensitive."

The real issue is simply this: Should any individual who is a Communist, fellow traveler, or subversive hold any public office or position in the Government of the United States? The American Bar Association now has joined with the House of Representatives in answering "No." After full deliberation, and with proper consideration of the protection of individual rights in the light of the national interest, they strongly urge enactment of Federal employees' security legislation approved by the House last year.

Mr. Speaker, I believe I can assure the Members that one of the first bills to be brought to the floor by the Post Office and Civil Service Committee in this session will be the bill to close existing loopholes and provide a permanent, fair, and effective security program for Federal employment. These are the major provisions of such legislation:

First. The head of any department or agency may suspend any employee when deemed necessary in the interest of national security.

Second. Within 30 days, after such suspension, the employee shall have an opportunity to reply.

Third. After complete review of investigation the department or agency head may separate the employee if he determines it necessary in the interest of national security.

Fourth. The suspended employee is entitled to a written statement of charges, reasonable opportunity to answer, a hearing, review by the department head, and a written decision.

Fifth. The term "national security" means all Government activities of the United States involving national safety and security, and every Government employee is deemed to be engaged in an activity involving national security.

Sixth. Any reinstated employee shall be paid for time improperly off the payroll in an amount not to exceed the amount he would have earned had he not been separated, less any earnings during the separation.

Seventh. Procedures under the Lloyd-La Follette Act of 1912 or the Veterans Preference Act of 1944, as applicable, must be followed in any suspension or separation, to the extent consistent with national security.

Eighth. Any employee separated under the security provisions is entitled to appeal to the Civil Service Commission for complete review and the Commission's decision is final and must be followed by the department or agency.

This legislation, as was the case with S. 1411 last year, reaffirms the intent of Public Law 733 as enacted by the 81st Congress. It gives every proper measure of protection to the loyal employee, and

at the same time will help keep the Federal payroll clear of Communists and fellow travelers. It will place in effect most of the recommendations of the Wright Commission on Federal employees' security. This Commission, appointed by the President several years ago, submitted a report of nearly 1,000 pages and recommended even stronger Federal employees' security legislation. Mr. Wright, Chairman of the Commission, in testimony before our committee, endorsed this legislation and added:

It is a tragedy, indeed, that we need any loyalty or security programs, and I fervently hope that the day will hasten when we can abolish them. Until that day, however, we dare not forget that the threat is not only real but formidable.

The discerning and forthright resolution of the American Bar Association is in the highest public service tradition of this great professional association. Its report and resolution are of great value in bringing to public attention the crucial importance of early legislation providing the means to deal permanently and effectively with the problem of subversive infiltration in our more than 2 million Federal positions. I commend this report and resolution to the attention of all Members of the 86th Congress.

Statement of Secretary of the Interior Seaton

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. SAYLOR. Mr. Speaker, recently the members of the Committee on Interior and Insular Affairs invited Secretary of the Interior Fred A. Seaton to discuss the operation and plans of his Department as they related to the 86th Congress. In his usual precise manner, Secretary Seaton delivered the following statement, the reading of which I commend to our colleagues:

STATEMENT OF SECRETARY OF THE INTERIOR FRED A. SEATON, BEFORE THE HOUSE INTERIOR AND INSULAR AFFAIRS COMMITTEE, FEBRUARY 18, 1959

Mr. Chairman, it is a pleasure to appear again before this committee. My understanding is that you are interested today in discussing the operations and plans of the Department of the Interior as they relate to consideration by, and possible action of, your committee.

Before commencing this discussion, permit me to present to you the members of my staff who are here.

First is Under Secretary Elmer F. Bennett. Many of you, I know, are acquainted with his background. For the information of your new members and the record, however, let me say that Mr. Bennett came to the Department of the Interior from the office of Senator Eugene Millikin, of Colorado. He is an attorney with 17 years' experience in the Federal Government. He has successively served in the Department as legislative counsel, as my personal assistant, as solicitor, and since September 20, 1958, as Under Secretary.

Another gentleman whom most of the members of this committee know is Assistant Secretary Fred G. Aandahl. A former Governor of North Dakota, he also served as a member of this committee when he was Member of the 82d Congress. Secretary Aandahl's responsibility in the Department is in the joint field of water and power. The Bureau of Reclamation, Bonneville Power Administration, Southeastern Power Administration, Southwestern Power Administration, Office of Saline Water, report to him.

Our Assistant Secretary for Fish and Wildlife is Ross L. Leffler. Secretary Leffler came to Interior with a lifetime record of devotion to conservation. He served 29 years with the Pennsylvania Fish and Game Department. While jurisdiction over a great part of the activities of the Bureau of Sport Fisheries and Wildlife, the Bureau of Commercial Fisheries and the Office of the Commissioner of Fish and Wildlife, all of which report to Secretary Leffler, rests with another committee of the Congress; there is a definite relationship between public lands legislation and action and fish and wildlife conservation.

Roger C. Ernst, our Assistant Secretary for Public Land Management, supervises the Bureau of Land Management, the Bureau of Indian Affairs, the National Park Service, and the Office of Territories. Formerly the Land and Water Commissioner of the State of Arizona, Secretary Ernst also has a full background of experience in the fields of reclamation and conservation.

Another area of our Department, that of Mineral Resources, is supervised by Assistant Secretary Royce A. Hardy. It includes the Geological Survey, Bureau of Mines, Office of Oil and Gas, Office of Geography, Office of Minerals Mobilization and the Office of Minerals Exploration. Secretary Hardy, a graduate of the University of Nevada in mining engineering, is a registered professional mining and metallurgical engineer. Before joining the Department, he was vice president and general manager of Manganese, Inc., of Henderson, Nev.

The next member of our staff needs little introduction here. George W. Abbott, our Solicitor, was counsel for this committee from 1953 to 1957. He is now our chief legal officer. Earlier he served as my assistant.

The Department's administrative management activities are the responsibility of D. Otis Beasley, our Administrative Assistant Secretary. Secretary Beasley, who began his career in Government in 1928, now has the top career position in our Department. He is responsible for Administrative Services, Budget and Finance, Inspection, Management Research, Personnel Management, Property Management, and Security.

The last member of my staff with me today is Ted Stevens, one of my assistants who also serves as legislative counsel. He came to the Department of the Interior from Fairbanks, Alaska, where he had served as U.S. attorney.

Mr. Chairman, as you requested, I am here today to discuss the program of our Department—particularly the budget and legislative aspects of it.

We have completed our hearings before the Interior Appropriations Subcommittee, in which we supported a request for $344,564,400, exclusive of the Reclamation and power agencies. In all, our total budget request for fiscal 1960 is $633,775,400. This amount reflects our recognition of two facts.

First, our programs—in conservation, in science and technology, and in the advancement of human welfare—are of such importance to the Nation as a whole that we must continue to carry them on at a high level of efficiency and intensity.

Second, if we overexpand these programs and thus require excessive cash outlays, we shall necessarily contribute to inflationary pressures, decreasing the value of the dollar, and ultimately hobble the very programs we were trying to aid.

It is of great interest to this committee, I believe, that we are not requesting funds for new reclamation construction starts for fiscal year 1960.

One reason, largely, is that there are 11 new starts in the current fiscal year. During the next few years, these 11 projects, added to the large list we already had underway, will pyramid the fund requirements for the Bureau of Reclamation. The following tabulation lists the totals of fund requirements for construction and rehabilitation from regular funds and from the Upper Colorado River Basin fund, for fiscal years 1959 to 1965 inclusive, with and without the new starts for which funds were appropriated for the fiscal year 1959.

Fund requirements for Bureau of Reclamation construction and rehabilitation, regular funds and Upper Colorado River Basin fund, fiscal years 1959–65

FUNDS REQUIRED

Fiscal year	With 11 new starts provided for in the 1959 Appropriation Act	Without 11 new starts	Increase required by new starts
1959	$214,048,335	$207,828,335	$6,220,000
1960	212,445,000	195,060,000	17,385,000
1961	267,172,000	227,671,000	39,501,000
1962	263,276,000	211,181,000	52,095,000
1963	203,182,000	157,763,000	45,419,000
1964	127,950,000	100,735,000	27,215,000
1965	84,053,000	70,631,000	13,422,000

While the new starts included in the 1959 Appropriation Act raised the fund requirements of the Bureau only about $6 million in 1959, they increased these requirements $17 million for 1960, $39 million for 1961, and $52 million for 1962. More new starts in 1960 would mean more pyramiding in the 2 or 3 years ahead.

The no-new-starts policy for water resources projects is governmentwide; the administration is seeking no funds for starting new projects for flood control, navigation, and related activities of the Bureau of Reclamation or the Corps of Engineers. Nevertheless, the total activities of these two agencies in 1960 are expected to reach an all-time high of $1.1 billion.

If the 11 new starts had not been added last year but rather commenced this year, our schedule through 1965, exclusive of additional new starts, would have looked like this:

Fiscal year:	*With 11 new starts in 1960 appropriation act*
1960	$201,280,000
1961	245,056,000
1932	250,682,000
1963	209,858,000
1964	146,154,000
1965	97,846,000

The peak demand would have occurred in 1962 rather than 1961 and would have been almost $17 million less. When we recall that Congress over the past 12 years has appropriated an average of $188,940,480 for reclamation construction, the point becomes clear. It does seem to me that a further pyramiding of reclamation fund requirements might result in disaster. The surest way to destroy the reclamation program, in my opinion, is to extend the fund requirements beyond hope of realization.

In preliminary legislative studies before the convening of this Congress, the Department reviewed approximately 300 pieces of legislation, a large majority which are within the area of interest to this committee. Some of them have already been sent to you, or similar bills have been introduced by Members of Congress, and referred to your committee.

Foremost of all the items under consideration is, of course, Hawaii statehood. We are grateful to this committee for the privilege extended to me to present my views on the Hawaii bill and for the fact that you have already favorably reported it. To me, few bills to be considered by this Congress will have the national—yes, even the international—attention that will follow action upon the Hawaii statehood bill. And I know, Mr. Chairman, that you will call upon me or any member of my staff, if there is anything more we can do to further its prompt passage.

Next in importance, to me, is our proposal to establish an effective helium conservation program. As you, of course, all know, helium is a unique resource. Its use is essential to our most vital defense and nuclear programs and of growing importance to medicine and industry. Our annual consumption of helium has increased fivefold since 1950, yet no major new source of this gas has been discovered in the natural gases being produced from a relatively small area in Texas, Oklahoma, and Kansas. This helium constitutes a minor percentage of these natural gases. Helium, which will not burn, is wasted into the atmosphere through millions of gas stoves and furnaces.

Our conservation program envisions the construction of up to 12 new recovery plants, to be located on certain pipelines, transporting helium-bearing natural gases to commercial markets. This helium would be stored underground until needed.

Since we submitted our legislative proposal to the Congress in the final weeks of the last session, we have reviewed this proposal in its entirety and made some changes in it. As soon as these have been cleared through the executive branch, we shall resubmit our proposal to the Congress.

Mr. Chairman, we have many other items which we consider important. We will again urge favorable consideration of the Fryingpan-Arkansas project in Colorado, the San Luis project in California, the Burns Creek Dam in Idaho, and several other projects for possible initiation of construction after 1960 when our fiscal situation permits. Of course, my recommendations for joint development of the Trinity River Division of the Central Valley project are still before you.

One of the important problems in the mineral resources field is that of coal research. We have previously reported our views to your committee on bills which call for the creation of a Coal Research Commission. We have noted a bill introduced in this Congress which would give contract authority to the Bureau of Mines for research. Our experts have predicted a phenomenal growth in national demand for energy in the next two decades. Increased emphasis on the development and more efficient use of our vast coal reserves should result from research programs conducted by both industry and Government. We hope to have our report on this legislation completed and cleared soon.

Meanwhile the Bureau of Mines is continuing its research program on the production, use, and conservation of coal. Recognizing the need for greater emphasis on shorter range problems, the Bureau has programed research work for the next fiscal year on hydraulic mining and transportation of coal, on degasifying coal beds to eliminate hazards that exist in gassy mines, and on the performance characteristics of commercial coal-cleaning equipment.

Generally, the resurgence in the economy has materially improved employment and the outlook for the major metals and minerals industries. For example, already, copper, aluminum and steel have enjoyed a significant recovery. And there are signs of strength in other mineral markets that were giving us concern in the recent past. For example, the import quotas established by the President, 5 months ago, have had the effect of tending to firm the U.S. price for lead and zinc. Despite the recent drop in lead, U.S. prices still exceed the prices when quotas were imposed. We believe that the general economic recovery will stimulate additional consumption of these commodities.

The work of the Bureau of Mines and the Geologic Survey of our Department is also essential to the continued health and vigor of our minerals industries. Through geologic and mineral resource surveys, investigations and research, both agencies provide the public and industry with basic data, which stimulates exploration for and development of new sources of mineral raw materials.

Through research in geology, geochemistry, and geophysics, the Geological Survey is developing new and more definite knowledge concerning the occurrence and origin of mineral deposits. It is vigorously pursuing the development of new prospecting techniques to provide the key to the discovery of new mineral deposits, particularly those not obvious to surface exploration. Through research in mining methods and metallurgical techniques, the Bureau of Mines is making major contributions to fuller and more efficient utilization of the Nation's mineral resources.

Our Office of Minerals Mobilization is constantly reviewing the mineral mobilization situation of various segments of the American mineral and solid fuels industries, and revising programs to conform with changing defense requirements. In carrying out this function, OMM provides the staff work for the Department under the Strategic and Critical Materials Stockpiling Act, the Defense Production Act, the Trade Agreements Act, and Public Law 480—known as the agricultural barter program.

We are also just initiating the program of the Office of Minerals Exploration designed to stimulate exploration for new domestic mineral reserves. We have already had more than 600 requests for information on this new program.

The Bureau of Land Management is responsible for approximately 475 million acres of the Nation's public lands, including 298 million in the new State of Alaska. Most of the remaining 177 million are in the other 11 westernmost States. The Bureau also has responsibilities in connection with more than 300 million additional acres and for mineral leasing on the submerged lands of the Outer Continental Shelf.

As principal custodian of the public lands, BLM's primary purpose is the wise administration, selective disposal, conservation, and management of the Nation's public lands and resources. These resources include the land itself, minerals (including oil and gas), forests, and range vegetation. Some idea of the scope of the Bureau's responsibilities may be seen in the fact that about 174 million acres are administered under the Taylor Grazing Act and almost 100 million acres are under oil and gas leases. During the fiscal year ending on June 30, 1958, the BLM took in gross receipts for $127,385,000, to increase the total of receipts since the BLM was formed in 1946 from union of the General Land Office and the Grazing Service to nearly $1,077 million.

Among the significant items of legislation we propose to submit to the Congress in this field will be bills to regulate and control the activities and effect of land locators and promoters on the public domain.

We are faced today with a serious situation, resulting from the entrance into the land locating business of a number of promoters, some of whom are not qualified and may be unethical in their practices. They prey upon the desire of people to own land and upon the ignorance of the general public concerning the requirements of the public land laws. Advertising widely, executing contracts which actually promise nothing more than to file an application with the land office, and holding out great expectations of gain, they have induced people by the thousands to file applications—sometimes for substantial fees—under various public land laws.

By and large, these applications have been filed upon lands without respect to the acceptability of the application under the regulations or the availability of the lands under the law. This practice costs the public many thousands of dollars in wasted money and tends to paralyze the land offices by the very numbers of applications and by the conflicts with other applications that result.

We hope to have legislative proposals in this area.

We also believe that the present public land laws do not provide a convenient means by which public lands can be made available for needed developments. We are considering a proposal to permit the sale of public lands chiefly valuable for business and urban purposes. The chief features of this proposal would authorize the sale of such lands to States and local governments at their appraised fair market value and also, where appropriate, sales at public auction to private individuals, associations, and corporations. This proposal, we believe, might facilitate needed commercial, industrial, and suburban developments in the public land areas.

Section 17 of the Mineral Leasing Act establishes a minimum rental for non-competitive oil and gas leases of 25 cents per acre per annum, with a waiver of all rentals for the second and third years. By regulation we have raised the rental for the first year and for the 6th through 10th years to 50 cents. We cannot, however, alter the waiver provision by administrative action. We have found that the low rental and the waiver of 2 years' rental may have encouraged speculation and have in reality been detrimental to oil and gas development. By the payment of a very small sum a party may hold a lease for a number of years with no intention of developing the leasehold but with the hope of selling the lease for a profit. If annual rentals are increased, and there is no longer a waiver of any year's rental, the mere holding of a lease for possible resale will be less attractive, and the speculating leaseholders will, we believe, be replaced by leaseholders interested in the active development of the oil and gas potentialities of the leasehold. The proposed legislation which we have prepared, H.R. 3263, would increase the minimum annual rental per acre to 50 cents and would eliminate the waiver provision. This amendment would have the added advantages of bringing Federal rentals more into line with the prices charged on State and privately owned lands and of recognizing the changes which have occurred in the value of money since this rental provision was first enacted in 1935.

One of the significant legislative proposals affecting the National Park Service is contained in legislation pending before you to authorize the Chesapeake and Ohio Canal National Historical Park and Parkway. Originally it was thought that a parkway road should be constructed along the canal between Washington and Cumberland. Further studies have demonstrated that the canal and adjoining lands should be set aside as a park with emphasis on the preservation of its historic, scenic, and recreational values. We, of course, subscribe to the general objectives of this legislation. Specific details will be discussed in our report, which has not yet been cleared with other interested executive agencies.

We are considering whether we need additional authority to enable the National Park Service to utilize land acquisition funds to pay for options in the acquisition of lands, and to utilize Federal lands adjoining

park areas for park facilities—with the concurrence of affected Federal agencies—without including these lands within boundaries of the park. Moreover, the Park Service should be given authority to avail itself of nongovernmental architectural and engineering services. This is particularly necessary if we are to avoid the necessity of large, temporary increases in our professional and technical staff while Mission 66 is under way. This new authority will make possible a more efficient execution of our Mission 66 program.

In the field of Indian affairs, several controversial subjects will require the consideration of Congress. Unfortunately, there are no easy answers. This is a field in which opinions frequently differ and in which emotional reactions are sometimes strong.

One of the problems that need congressional consideration is the disposition to be made of the submarginal lands that were acquired by the United States during the depression in the middle 1930's and that were transferred by Executive order to the Department of the Interior for administration for the benefit of various Indian tribes. Approximately 326,000 acres are involved. Title has been in the United States now for more than 20 years, and a decision needs to be made regarding the conditions under which the lands may be acquired by the Indians. The problem has been faced on a piecemeal basis in two instances (with the Seminoles in Florida and the Pueblos in New Mexico).

Another problem involving Indian lands that need attention is the heirship problem. After tribal lands were broken up and allotted (i.e., conveyed) in separate parcels to individual Indians, the original owners have died, and the inheritance process has resulted in the creation of almost unbelievable numbers of undivided fractional interests in the lands. In many instances this process has virtually frozen the title in a manner that makes it difficult for the individual owners to use the land themselves or to dispose of it. The problem is to determine the conditions under which the land may be sold by the individual Indian owners when some of them do not agree or cannot be located, and the conditions under which the tribes may, if they wish, acquire the lands that are offered for sale. In the latter case the big problem is how tribal acquisitions should be financed.

The Department's study of these subjects is also proceeding—and we shall work closely with your Indian Affairs Subcommittee in regard to specific recommendations in these areas.

The policy of terminating Federal supervision over the affairs of the various tribes as they become ready for that action has received much attention in the past. The Department expects to submit to this Congress a few termination bills, but as I have previously announced and emphasized, the Department will submit a proposal in this field only if it is fully understood and concurred in by a majority of the Indian group affected. The groups under consideration are small ones and will not present the complex issues that were involved in the Klamath and Menominee legislation.

The major item of legislation we shall submit to your committee in the fish and wildlife field will be our proposal to establish the Arctic Wildlife Range in Alaska. This area of approximately 9 million acres is located in the extreme northwest corner of our new State. Over 5 million acres of the area was formerly withdrawn as part of Public Land Order 82. As a refuge for caribou, grizzly and polar bears, Dall sheep, and wolverine, plus countless flocks of migratory birds of over 100 species, this wildlife range will provide a working laboratory for the study of Arctic life.

Our proposal for this area will seek authorization to permit metalliferous mining under a permit system and to open the area to mineral leasing. We will, however, seek to limit access to the area in order to prohibit appropriation of the surface title under the public land laws. We are currently working with the Department of Defense to eliminate their objections to our original draft bill. We are in substantial agreement now, and as soon as the technical drafting is completed and clearance has been given by the Bureau of the Budget, we shall submit this proposal to Congress.

Of primary interest to this committee is our saline water program. As you know, we recently had an independent board of consultants make a study of the needs of the Office of Saline Water in light of our expanded responsibilities under the demonstration plant authority enacted by Congress last year. This survey resulted in a series of recommendations, mostly administrative in character, which will be put into effect as the program progresses.

Interest in the contemplated demonstration plant activity has been intense. We are approaching the date for the selection of the first process to be demonstrated under this program. Selection of the process will precede and influence selection of the site.

Our budget request for fiscal year 1960 for this portion of our saline water program is $300,000. This amount includes funds for the selection of processes and for the engineering plans for the first conversion plants.

Of course, our basic activity in research and development is continuing.

The development activity is in the areas of three major processes—distillation, membrane, and freezing. In distillation small pilot plant work is under way on rotary vapor-compression stills, long-tube vertical multiple-effect systems, and solar stills of several types. The LTV distillation and the multistage flash distillation cycles continue to look very promising.

Two membrane processes are in commercial use, and a number of small plants are in operation on brackish water treatment. Improvement in equipment and membranes is continuing.

A small pilot plant using freezing as a separation process is now being built. It is based upon successful laboratory research and development recently completed.

Research is being carried out on these major processes, including the reverse osmosis and osmionic processes, and on others, such as solvent extraction. Some of these will be going into small pilot plant development.

In closing, let me repeat, Mr. Chairman, the comments I made to some of the members of this committee recently. It has been a matter of continuing pride to those of us now serving in the Department of the Interior that our relationships over the years with your committee and its members have been most satisfactory and pleasant. We have disagreed—at times—but our disagreement has normally been as to the means we should adopt to accomplish a mutually agreed upon objective. Partisanship has not impeded the important work of the committee (and I like to believe has not impeded the important work of the Department), and the people we all serve have benefited thereby.

I make these comments again to give me the opportunity to assure you, Mr. Chairman, on the record, that it is our intention to do our part in continuing, in every way possible, this outstanding record of cooperation.

We stand ready to assist this committee in any way. And it is my feeling that any disagreements arising during this Congress between any of us will be eventually resolved as they always can be by reasonable and sincere men. If our relationships continue in the future as they have in the past, and I feel confident they will, we will continue to build sound and wise programs for the development, wise use, and conservation of our precious natural resources.

A Definite Challenge

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. McCORMACK. Mr. Speaker, there is an article in the Wall Street Journal of March 2, 1959, entitled, "Challenge in Science." A summary of the article is in the first paragraph as follows:

> Considering Russia's accelerating pace in research and the Russians' intense motivation to overtake Americans on all fronts, the United States is in danger of losing its overall science leadership within 10 years.

This is, indeed, a sobering statement and so is a statement dated February 26, 1959, of the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming. His statement may be summarized as follows:

> I have learned, with considerable disappointment, that many schools across the country, for one reason or another, are failing to take advantage of a virtually cost-free opportunity to strengthen the teaching of science and mathematics.
>
> Government surplus equipment suitable for use in teaching science and mathematics is currently declared surplus at the rate of about $100 million in initial value each year.
>
> Although the equipment is available to colleges and universities and to public, parochial and nonprofit private schools throughout the country, only about 20 percent of the scientific items actually find their way into educational institutions.

Mr. Speaker, the implication of the Secretary's statement seems to be that the schools in the United States are at fault in failing to get valuable scientific equipment virtually free. As chairman of the Special Subcommittee on Donable Property of the House Government Operations Committee and as sponsor of Public Law 61 which made surplus property available to educational activities it is my considered judgment that the failure of the educational institutions to make 100 percent use of the surplus equipment is due to lack of leadership and coordination in the executive branch of the Government. I regret that it is necessary to make this statement but since the passage of Public Law 61 in the spring of 1955 there have been numerous examples of lack of cooperation and coordination between the several executive agencies which are responsible for the execution of the program which was unanimously passed by the Congress.

It is a serious matter, Mr. Speaker, to state on the one hand that the Russians are challenging our leadership in the overall scientific fields and at the same time admitting that useful and necessary scientific items which are surplus to the requirements of the Federal Government are utilized only to the extent of 20 per-

cent for purposes which involve our survival. I urge that Secretary Flemming utilize his authority either directly or through higher echelons and do what is now possible under existing legislation to insure that surplus property when useful and necessary for purposes of education, health and civil defense are so employed and at the earliest possible moment.

Last calendar year surplus property at initial cost of $334,109,167 was transferred to the States for purposes of education, health, and civil defense. However, the 1960 budget statement indicates that there will be a total of $8 billion in surplus property declared in fiscal 1959 and a total of $10 billion in fiscal 1960.

Why there is so much surplus property is a serious matter upon which I have often spoken and, of course, involves the necessary organization of the Department of Defense which generates more than 90 percent of all surplus property.

The full statement of Secretary Flemming follows:

STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

I have learned, with considerable disappointment, that many schools across the country, for one reason or another, are failing to take advantage of a virtually cost-free opportunity to strengthen the teaching of science and mathematics.

Government surplus equipment suitable for use in teaching science and mathematics is currently declared surplus at the rate of about $100 million in initial value each year.

Although the equipment is available to colleges and universities and to public, parochial, and nonprofit private schools throughout the country, only about 20 percent of the scientific items actually find their way into educational institutions.

Schools that have picked up scientific surplus property have put it to good use in science and mathematics teaching; but there are many more schools that apparently are unaware of the kinds of equipment that they can obtain simply by paying warehousing and transportation costs.

This equipment ranges all the way from push buttons for second graders to jet airplanes for engineering students. It includes nautical and navigation instruments; radio and radar equipment; electric motors and generators; photographic equipment; spectrometers; laboratory items and supplies, including chemicals; lenses, and electronic items and components.

A large part of this equipment comes from the Department of Defense, where it has been used in research laboratories, in training personnel, or in actual operations throughout the country. Other items come from the Atomic Energy Commission, from the laboratories of the Department of Agriculture, from the Veterans' Administration, and from other Federal agencies. Many of the items are in the original packing cases.

The spotty demand for scientific surplus equipment is in sharp contrast to the speed with which other surplus items, such as building supplies for school maintenance and machine tools and materials for vocational education programs, are picked up.

That scientific equipment could be equally valuable to schools and colleges generally—if they know of its existence—is shown by the fact that it is constantly being bought up by dealers, after it has gone begging for a sufficient length of time, and then is resold to schools.

Once property has been determined surplus—that is, its usefulness to the Government has ceased—the Surplus Property Division of this Department assumes responsibility for getting as much of it as possible where it can do the most good. State surplus property agencies—and every State and the District of Columbia has one—let the Department know how much they think will be requested, and the property is transferred to State warehouses. Representatives of schools may visit these State warehouses and select the items they require. Some States also circulate lists of available materials and accept orders by mail.

Real and personal property which is not disposed of in this way is advertised for sale to the public. About a year ago, for example, 100 instruments which record direction and velocity of the wind were declared surplus property, but educational institutions did not ask for them. They were sold to surplus dealers who in turn sold them to schools. Electrical measuring instruments have been sold by the thousands for as little as a few cents each and later resold to schools.

Where real efforts have been made to inform the schools, the results have been extremely gratifying. The North Carolina State agency, for example, has circularized every school in the State with a list of scientific items available, and established a Saturday warehouse open house for science teachers. The State agency now accepts all the scientific equipment it can get, knowing that the schools will put it to good use. In Nebraska the State agency worked with the University of Nebraska in preparing guide sheets for science teachers, to show how available equipment can be modified or adapted. The Texas agency has on its staff a specialist whose chief concern is to see that available scientific equipment is put to maximum use in Texas schools.

I am convinced that all that is needed is more information about what is available in the surplus property warehouses and greater initiative on the part of the schools themselves.

A school can obtain much useful equipment for its science and mathematics courses simply by:

1. Getting in touch with the State surplus property agency and establishing the school's eligibility.

2. Sending the appropriate personnel to the warehouse to see what is actually available or likely to be coming in.

3. Informing each science or mathematics teacher what is available and at the same time obtaining a list of items that each teacher would like to have for his classes.

4. Providing the State agency with a list of desired items so that the State agency can be on the lookout for them as they become surplus.

In many instances it is simply a matter of backing the school bus or station wagon up to the loading platform of the warehouse, picking up previously selected items and driving off with them.

Valuable scientific equipment constantly comes on this market. Within a few weeks 19 unused dynamometers for checking engine efficiency are likely to be available in the New Orleans area, left over from the Michaud ordnance plant, which formerly built tanks. Each has an acquisition cost of more than $11,000. These dynamometers will—I hope—find their way into engineering schools which need them.

A large number of secondary schools, colleges, and universities have taken advantage of the opportunity to obtain valuable equipment at little or no cost. Just last week $4 million worth of radar units were allocated to universities and colleges. Last fall a $1,300,000 aerial navigation trainer was given to the University of Pennsylvania, which will use its components in building a nuclear reactor. Electronic computors have been given to the University of New Mexico, the Louisiana Polytechnic Institution, the University of Kansas, and George Washington University in Washington, D.C. Students in a Kentucky high school operate a "ham" radio station put together with surplus property—and students in a Virginia technical school operate their own TV station—also assembled from surplus property. The Aeronautical Engineering Department of the University of Maryland has constructed a supersonic wind tunnel from parts of a former Japanese wind tunnel and two large steel tanks formerly used by the Navy in conducting a diving school.

The surplus property utilization program as a whole has made major contributions to our schools, and our public health and civil defense agencies since its establishment in 1946.

During the past 13 years 84,522 acres of land and 6,871 buildings have been conveyed to colleges, universities, and junior colleges. These represent an acquisition and improvement cost of over $296 million.

Over 20,000 buildings have been transferred to elementary and high schools, mostly for use as shops and classrooms. The facilities given to public schools through surplus property are worth more than $500 million.

Early in 1958 vocational and trade schools—and colleges and universities—reported an urgent need for machine tools to expand training facilities and replace obsolete equipment. For this reason, increased emphasis was given this phase of the surplus property program. During 1958, 7,476 machine tools were allocated, with an acquisition cost of nearly $13½ million. This represents an increase over 1957 of 339 percent in the number of machine tools donated, and a 312-percent increase in their acquisition cost. Additional thousands of components, accessories and supplies for these machines, as well as related testing and measuring equipment, were also given to schools. As patterns of defense production continue to change, even more machines are expected to be available in the tools-for-schools program. These machine tools should be in especial demand by area vocational educational programs now being established or expanded under title VIII of the National Defense Education Act.

During the past year, about 80 percent of all surplus personal property was distributed to schools, about 10 percent to hospital and health facilities, and 10 percent for civil defense purposes.

Since the inception of the surplus property utilization program in 1946, personal property with a Government acquisition cost of $1,590,835,673 had been made available to State agencies for donation for health, education, and civil defense purposes. Real property with an acquisition cost of $742,373,674 has been transferred to health and educational institutions.

The Argument for Hawaii

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. DENT. Mr. Speaker, for the benefit of those who are not fully prepared with certain facts and figures on the newest proposed State in the Union, I want to present some information that may help our people to have a better understanding of Hawaii, its peoples, its aims, its habits, and more important, its united effort and yearning to become one

of the great States of the United States of America.

After 46 years as an organized Territory of the United States, Alaska in 1958 became the 49th State and left her older sister, Hawaii, the only remaining incorporated Territory.

Hawaii has proved its qualifications for statehood time and time again since becoming a Territory in 1900. The islands' people revere the American flag and the principles it symbolizes. Their mode of life, the type of local government they support, and the service they give to the Nation are a credit to the colors.

They are much like the people of Main Street, U.S.A. For more than half a century they have lived as Americans, worked as Americans, and fought in wars for America. They have always conducted themselves as first-class citizens.

Modern Hawaii, destined to become Uncle Sam's 50th star, is already the Nation's star performer in the Pacific.

Before going into the details, here are some of the salient points that show Hawaii as one of the country's most modern, progressive, and prosperous areas in 1958:

First. A fast-growing population reached 575,000, plus another 41,000 military personnel.

Second. Business in the Territory approached a volume of $2 billion annually, with sugar, pineapple, and tourism leading the industrial moneymakers.

Third. Fifty-nine banks had a total of $481 million assets, clearings of $3.3 billion.

Fourth. With the expansion of tourist facilities and industry, including a forthcoming Standard Oil refinery and a steel mill, construction was a $200 million island industry.

Fifth. Two hundred thousand employed persons in the Islands were paid $850 million annually in wages and salaries.

Sixth. Per capita personal income rose to $1,821 in 1957, ranking Hawaii 25th with the States.

Seventh. Taxes paid the Federal Government reached a record $166 million, putting Hawaii ahead of 10 States as a taxpayer.

Eighth. A total of 136,000 students attended the Islands' 208 public schools in 1958, and 7,000 were enrolled at the University of Hawaii, highest per population in the Nation.

Ninth. The United States was spending more than $300 million to maintain the strength of this Pacific bastion of defense and America's show window on Asia.

Such are some of the highlights of modern Hawaii, an integral part of the United States since 1898, a proud and loyal community of half a million American citizens asking their full measure of equality under the American flag. Hawaii has repeatedly shown her true red-white-and-blue colors. She was never more fit and ready for the crowning honor or statehood. Hawaii is headed for stardom.

By embracing Hawaii as a State, America would advance three bold steps closer to victory in the cold war against communism in the Pacific and Asia.

First. It would demonstrate dramatically that the United States both cherishes and practices the democratic ideal that her citizens stand equal before the law regardless of color and creed. The example of a State of Hawaii would shine in the Pacific for half the world's people to see and to compare with the empty promise of equality held out by communism.

Second. Admission to the Union would bolster Hawaii's role as our defense outpost in the Pacific.

Third. It would make Hawaii a center where the people of the Pacific basin could study and learn our best American traditions.

When the United States granted independence to the Republic of the Philippines, the peoples of Asia understood. Statehood for the strong, loyal body of American citizens of many Pacific races in Hawaii would be an even more striking example for Asia.

It would be a sign to a billion men, women, and children that the Pacific Ocean is no longer a barrier between them and a free way of life. Statehood would confirm their hope that America believes in the full development of local self-government.

In these times, statehood for Hawaii is an ethical rather than a political question.

Old World colonialism has run its course in Asia, leaving its people with a choice—a free way of life, or communism.

Our national policies will be judged in no small measure by the decisions we make in respect to the people of Hawaii.

It is imperative that we continue to demonstrate our belief that all people should have a government of their own choosing.

Hawaii already is a Pacific outpost of the American way of life, a window on our freedoms. The people of Hawaii already have reached a goal still sought by the rest of the world. Nowhere else is there a mosaic of races, national origins, tongues, cultures to compare with this community of Americans.

The Territory is no longer an experiment in democracy. It is proof, tested in war and peace, that people of the East and West can work together for the good of all under the flag of freedom.

Hawaii occupies a key position in the commerce and defense of the Pacific. Her many racial backgrounds give her people a keen and knowing interest in Pacific affairs. A State of Hawaii, fully represented in Washington, would be a voice alert to the problems of national security in the Pacific, with a background of knowledge to furnish ways of meeting the problems.

The people of the islands have long paid tribute to the American way of life by their persistent demand for statehood. They do not seek independence. They do not ask dominion status. They seek American union.

They ask, with overwhelming voice, to share the privileges and responsibilities of full citizenship with their fellow Americans.

Again, more than 50,000 young men of Hawaii served in the Armed Forces during World War II and the Korean conflict. Hundreds more are volunteering or being drafted today on quotas enforced in the same proportion as in the States. Yet Hawaii's citizens had no voice in the passing of the draft law.

Only the change from territorial status to statehood will properly correct this situation by giving Hawaii full equality in the American system of government, including:

First. The right to full voting representation in both the U.S. Senate and the House of Representatives, with the people of Hawaii selecting these representatives.

Second. The right to vote for the President and Vice President of the United States.

Third. The right to choose its own governor, and to carry on functions of government by its own elected officials instead of Federal Adminstrators.

Fourth. The right to the wider latitude of a State in lawmaking by its own legislature.

Fifth. The right to judicial functioning in its courts by local authority rather than by Federal appointees.

Sixth. The right to freedom from overlapping of Federal and local authority.

Seventh. The right to an equal share on a per capita basis in Federal grants for education, health, highways and other public improvements.

Eighth. The right to voice in any proposed amendment of the constitution.

And all of these rights would be irrevocable.

Citizens of all the States enjoy these rights; Hawaii's Americans have earned them too.

Hawaii is an industrious, prosperous, and progressive community—a showcase for democracy.

It is a land of sunshine, scenic beauty, natural grandeur—as Mark Twain said: "The loveliest fleet of islands that lies anchored in any ocean."

It is America's strongest military outpost in the Pacific, a symbol of our Nation's firm intentions.

Hawaii is also a modern American community. It has a streamlined government, a high standard of living, progressive industries, first-rate schools, familiar churches, and up-to-date transportation and communication facilities.

Its citizens live in modern houses, drive new automobiles—some with help of the finance company—belong to Republican and Democratic clubs, and send their children to the University of Hawaii or a favorite mainland college.

Hawaii residents yell themselves hoarse at football games, eat hot dogs, attend church services, watch television. They enjoy Broadway hit plays at Honolulu Community Theater and they take in "thriller" movies at drive-ins; they go to afternoon jazz sessions and attend evening Honolulu Symphony Orchestra concerts; they enjoy exhibits at the Honolulu Academy of Arts and read the funny papers.

They are Americans, through and through.

They are particularly proud that whatever their racial origin, they have learned to live together, work together, play together and study together—that is Americanism too, and the kind that makes the deepest impression on the half of the world's population that faces toward Hawaii. To these peoples, Hawaii is a fascinating laboratory; a place where democracy has been planted and thrives in fertile soil, whose appealing crops are worthy of attention.

This land of economic prosperity and social opportunity deserves a close look from its Pacific neighbors—and from its American neighbors on the mainland.

Hawaii has an area of approximately 6,400 square miles, larger than any of three States—Connecticut, Delaware, or Rhode Island.

The Territorial Department of Health estimates October 30, 1958, put Hawaii's population at 575,711, or a total of 616,711 including military personnel. Hawaii's population was thus larger than the population of any of five States: Vermont, Delaware, Wyoming, Nevada, and Alaska. Hawaii has a larger population than existed in any State at the time of admission with the exception of Oklahoma. As a State, Hawaii will fit the pattern of 14 States, with 1 or 2 Representatives in Congress and the usual 2 Senators.

Eighty-five percent of Hawaii's people are citizens of the United States. More important, between 98 and 99 percent of grade and high school students are citizens.

Hawaii's finances are sound. The Territory has substantial resources in lands and industries and has taken care to build a strong economy with them. For the fiscal year ending June 30, 1958, the Territory paid a record high of $166,306,000 in Federal taxes, more than any of 10 States, including Alaska.

Hawaii has paid more than $2.3 billion in Federal taxes since becoming a Territory.

At the end of June 1957, total assets of the 59 banks in Hawaii were $481 million. Clearings amounted to $3.3 billion.

Hawaii's 1957 mainland dollar earnings were $856 million. Hawaii spent $833 million.

Per capita personal income rose to $1,821 in 1957, putting Hawaii in 25th place nationally or ahead of 24 States—U.S. Department of Commerce, Bureau of the Census, State Tax Collection in 1958, August 1958.

A notable expansion and diversification of industry is taking place. Among the most dramatic of recent developments was the choice of a site on Barber's Point several miles from Honolulu for a $40-million refinery by Standard Oil Co. of California. Construction was begun in October 1958, for this first oil refinery in Hawaii.

The island's first steel mill, for production of reinforcing bars for the construction industry, was to be completed and in operation early in 1959.

Agriculture has branched out into other fields besides sugar and pineapple, such as macadamia nut production.

Hawaii's homegrown textile industry is setting tropical garment fashions for all the Nation.

Agriculture is the foundation of Hawaii's economy. The Territory leads the world in the technique of sugar production and far outstrips the rest of the world combined in the canning of pineapple products.

Nowhere in the world have scientific methods been applied to agriculture on the scale that prevails in the sugar and pineapple production of Hawaii.

The Senate Interior and Insular Affairs Committee reported in 1951. In 1957, Hawaii's 28 independent sugar plantations produced 1,085,000 tons of raw sugar on their 220,000 acres with a crop value of $148 million.

Hawaii's 9 pineapple canneries processed 30,787,000 cases of fruit and juice grown on 77,000 acres of 13 plantations. Total value of the crop was $117 million.

The young coffee industry in 1957 grew 4,404 tons worth nearly $6 million. Beef and dairy products continued their rapid expansion in order to match the demands of a vital, growing population. Fruits, nuts, vegetables, and flower crops contributed nearly $5 million to Hawaii's economy.

Islanders consumed 7½ million dozen eggs and a goodly quantity of chicken to account for $6.5 million in the poultry industry.

Hawaii's superb climate, scenic beauty, and recreational facilities are a major economic asset to the islands.

Tourism ranks as Hawaii's third basic industry, and is determinedly challenging sugar and pineapple in dollar value.

Every year sees new highs in the number of visitors, which reached a record figure of 168,000 in 1957. In dollar volume this has meant a jump from $6 million in 1946 to $77 million in 1957, or an increase of 1,183 percent. The elements that caused this increase point to further expansion. These include the continuing national population migration to the west coast, and the expansion in volume and speed of air transportation. By early 1959, Hawaii will be served regularly by jet liners taking a scant 4½ hours to fly the 2,000 miles from California.

To accommodate the increase in visitors, multimillion-dollar developments like Henry J. Kaiser's Hawaiian Village Hotel and the rapid rise of luxurious apartment-hotels have become common sights.

Several first-class hotels have been built on the neighbor islands of Hawaii, Maui, and Kauai. One notable area is the Kona coast of the island of Hawaii, which, in a smaller way than Waikiki, has grown phenomenally.

A projection by the Hawaii Visitors Bureau indicates the Territory will be hosting 280,000 tourists annually by 1965.

In 1950, 63 delegates were elected throughout the islands to write a constitution for the proposed State of Hawaii. Foes of statehood said that the ILWU's Communist leadership would control a majority of the delegates. But candidates identified as representing the ILWU leadership were defeated.

As the convention met, the subcommittee of the House Committee on Un-American Activities opened hearings in Honolulu. One convention delegate resigned and another was expelled as a result of testimony, or of refusing to testify, at the hearings.

The State constitution finally drawn contains a provision that "no person who advocates, or who aids or belongs to any party, organization or association which advocates the overthrow by force of violence of the Government of this State or of the United States shall be qualified to hold any public office or employment."

It is the first State constitution to contain such a provision.

Despite bitter ILWU opposition to this conservative constitution, it was ratified by the people by better than 3 to 1 in a plebiscite. The National Municipal League of New York City said Hawaii "had set a new standard in the writing of a modern State constitution by convention."

Among strong anti-Communist measures, Hawaii's Legislature has enacted:

First. Legislation setting up a subversive activities commission to ferret out security risks.

Second. A series of loyalty acts as stringent as in any State.

To summarize, the Nation needs Hawaii because:

Statehood would be an example before the world of American democracy in action. It would bolster Hawaii's defense role in the Pacific. It would make Hawaii a center where Pacific peoples could study American traditions.

Hawaii is a community of Americans who have proved that East and West can live and work together, in peace and war, under the flag of freedom.

Hawaii has passed every test. Congressional committees, Government departments, military leaders and others have marked her "A" for American. Five major Pacific commands in Hawaii show the Islands' military importance. Statehood will serve notice to the world that the United States intends to stay in the Pacific.

The Nation wants Hawaii because:

National surveys since 1941 show public opinion overwhelmingly in favor of admitting Hawaii into the Union.

The American press is nearly unanimous in its support of Hawaiian statehood.

Nearly two score national organizations are on record in favor of it.

The platforms of both political parties call for immediate statehood.

Twenty separate Congressional hearings have exhaustively investigated Hawaii's fitness for statehood.

The U.S. House of Representatives has passed Hawaiian statehood bills three times, in 1947, 1950, and 1953.

Although reported out favorably by the Senate and House Interior Committees in succeeding sessions of Congress, Hawaii's bills never came to a vote in either chamber. The Hawaii and Alaska measures were combined, then

reintroduced separately, and Alaska's bill was finally enacted in the 85th Congress.

Why Hawaii wants statehood:

Hawaii's 575,000 people have fulfilled the obligations of citizenship for more than half a century without enjoying all the privileges.

They pay taxes as residents of the States do and serve on battlefronts equally, but have no voice in either tax or draft legislation. Taxation without representation violates a basic American precept.

Statehood is the expressed will of Hawaii's people. They have elected or reelected 10 ardently pro-statehood Delegates to Washington since 1900. In a plebiscite in 1940, 67 percent of those voting said they favored statehood.

In 1949, the people elected 63 delegates to a convention to draft a proposed State constitution. At the next year's elections they ratified the constitution drawn by better than 3 to 1.

In February 1954, 116,000 persons on all the major islands signed a huge petition for statehood addressed to the U.S. Senate.

The case for Hawaii rests. The people of Hawaii have spoken eloquently and without reservation. They want to belong. Now the American people, through their representatives, must make the all-important decision.

Will Hawaii be admitted as a State in the firmament of the United States of America?

I say "Yes."

Castro's Cuban Justice on Trial Before the Cleveland City Club

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered last Saturday, February 28, 1959, before a luncheon meeting of the Cleveland City Club in Cleveland, Ohio:

Before I speak about a nation whose new Government is barely 2 months old today, please let me say a word about a State whose 100th birthday was February 14, 1959, Oregon, my State, that is. In the Pacific Northwest we are having a big centennial celebration out there this spring and summer. You are all invited. I personally invited Fidel Castro earlier this week, pointing out to him that he would feel at home because many of the men are sporting outrageous beards and our mountains would please any rebel band. We have many other attractions. Do plan to visit this newer Northwest territory. I guarantee that you will enjoy yourselves.

Here is a proposition I trust you will concede without argument: A Member of Congress becomes an authority in any area, physical or abstract, by any contact—be it ever so slight. I hope to demonstrate this to you today.

According to the title of my remarks today I am an "eyewitness" and as such I am supposed to report to you on Castro's Cuban justice. In a moment I shall lay a foundation for my testimony. First, let us consider the issues on which I shall testify:

1. Does the quality of Castro's justice indicate that Cuba is now a police state or soon will be?

2. Does it show Communist influence and anti-U.S. sentiments, existing and potential?

3. Does it mean that Castro intends to bring revolution to other lands?

4. What can we do, officially and personally, to improve the qualities of Castro's justice and our relationships with Castro's Cuba?

JUSTICE IN THE BROADER SENSE

I make no apology for using justice in the broader sense. I do not confine it to the cases of the accused war criminals. Justice as I use it in these remarks represents the purpose of government. In other words, what does Castro's treatment of accused war criminals tell us about the nature of Castro's government?

Now, as to my qualifications as a witness, a few words so you who have questions for me won't be too hard on me when your turn comes. I don't speak Spanish. I have never had a formal course relating to Latin America. Within the last 2 years I have made two short visits to Puerto Rico, two to Venezuela, one each to Costa Rica, Colombia, Honduras, and Panama. I have visited Cuba three times, the first on my way back from Honduras in December of 1957 for about 3 hours between planes. My wife and I took a taxi into Havana and discovered that we couldn't get within four blocks of the presidential palace because of police barricades. The second time was last month for 2 days and the third time was a week ago for 3 days. Exactly a week ago at this time I was making a speech in Santiago de Cuba at a meeting sponsored by the Santiago Committee for Industrialization and Progress. The Lions Club, the Rotary Club, the Twenty-Thirty Club, and the chamber of commerce were all there. Last Monday I again talked with Fidel Castro, this time for 45 minutes.

Now, if you'll bear with me, just one more flashback:

Shortly after I arrived in Washington, in December of 1956, I learned that a constituent of mine, Gerald Lester Murphy, had disappeared in the Dominican (so-called) Republic. In the course of trying to find out what happened to him I discovered that our official policy was to be kind to dictators. I didn't like this. I said so. Not only did I believe our treating Trujillo as though he were respectable had made him think he could get away with murdering Gerry Murphy, but it was plain to me that our policy conflicted with our Nation's deepest traditions and played into the hands of Communists.

HOW THE BATTLE WAS JOINED

In the course of my expressing my protests about our official policies I naturally included other dictators, Perez Jimenez, of Venezuela; Stroesner, of Paraguay; Somoza, of Nicaragua; and Batista, of Cuba. In my office and in my travels I met many of the antidictator nationals of these countries. I received many letters from them. I learned a great deal from persons who had been in this fight much longer than I, such people as Herbert Matthews, of the New York Times editorial board; Gov. Muñoz Marín, of Puerto Rico; Jose Figueres, former President of Costa Rica; Alberto Lleras Camargo, now President of Colombia; Romulo Betancourt, now President of Venezeula; and many others. I found that my strongest allies were the Inter-American Press Association and newspapermen who knew the area, and also organized labor, particularly the AFL–CIO vice president, Serafino Romualdi.

I am still ignorant in many respects, but not quite so much so, thanks to my friends. My distinguished colleague, Mr. BRAZILLA CARROLL REECE of Tennessee, former chairman of the Republican National Committee, disagrees with me about Castro's justice. On February 9, in an insertion in the CONGRESSIONAL RECORD, he calls me his irrepressible colleague (which in this connection will doubtless continue to be true), and he also calls me one of the principal apologists for Castro. He thinks Castro is encouraging communism. He doesn't want us "to condemn in word or action any government with whom we are in free alliance," but he thinks we "owe it to mankind" to protest the "obvious and proven disregard of the basic elements of justice and fair play" by the Castro government.

THE QUESTION OF A POLICE STATE

This brings us to the first issue on which I shall testify as an eyewitness. Is Cuba now a police state?

It is true that Castro is the strong man in Cuba today. It is true that military tribunals are trying accused war criminals and that some 300 have been executed upon being found guilty. It is true that the procedures do not involve the use of a jury nor of many of the procedural safeguards we deem essential in Anglo-Saxon jurisprudence. It is true there are no freely elected officials in the executive or legislative branches.

It is also true that Fidel Castro, President Manuel Urrutia, Ambassador Dihigo, his Cabinet Ministers, and the barbudos, or "bearded ones" in the 26th of July movement are not the kind of people who countenance "blood baths," much less arrange them. The Cuban people love the barbudos. They greet them and wave to them. What a difference from the way they felt about Batista's soldiers and police.

I think the beards mislead many people in our country. For example, a week ago in Santiago de Cuba, the capital of Oriente Province where the revolution began, I met Manuel Pinero, the commandant of Castro's forces there. He has the most magnificient red beard and locks I've ever seen. Until you talk with him and unless you had known other Castro men, you might think, "What a screwball this guy must be." In fact, though, Commander Pinero is a capable, sensitive and decent man. He studied economics at Columbia University. His wife, Lorna, who has an M.A. in psychology, comes from New London, Conn. At midnight last Saturday he escorted me on a tour of the Moncada, the military barracks in Santiago, where Castro made his famous attack on the 26th of July and where Masferrer, Batista's terrorist-in-chief, had his headquarters and where many boys and men were horribly tortured.

"We don't like this place," Pinero told me. They plan to destroy the buildings where the atrocities were committed and to make a school out of the rest. The weather was excellent that night. Many people were on the streets at 1 a.m. Under Batista, my hosts told me, the streets were deserted after 9 o'clock.

A LESSON IN HUMILITY

On the following day, Sunday, Pinero told me they were going to have a degradation ceremony. His wife thought at first he meant to say "decoration" but he didn't. Some noncom had made a mistake and he was being stripped of his rank in a public ceremony. The Castro men never looted, they never raped, they never tortured or killed prisoners. They don't drink whisky. I have met many of them. Never have I seen one who swaggered or was loud spoken. They are not a rabble in arms. They are

disciplined and restrained, dedicated but not fanatical—because of a humility they all possess. Major is their highest rank. One captain told me they had just been paid for January. His salary after deductions was $208.

I asked Commander Pinero how they were able to indoctrinate the new recruits who joined them in great numbers when they left the mountains last December to march toward Havana. He told me that, in addition to giving them examples of conduct and specific instructions, they shot one new man who stole a can of milk. They are very serious about maintaining the high morality of their revolution, but not to the point of setting up their own terror.

A REBEL IN SUNDAY SCHOOL

As I left Santiago the man across the aisle in the airplane was a Baptist minister from Park Forest, Ill., by the name of Joseph L. Hughes. He and several other Baptist ministers had just spent 2 days in Santiago. "We hadn't been here 10 minutes," he told me, "until we had a different picture than the press had given us." He said they had just left one of Castro's top men teaching a Sunday school class. He shared my admiration for these men and said he and his colleagues would be speaking up on their side when they returned to the United States.

Yes, an army is in control of Cuba, the rebel army. But there are civil liberities, including freedom of the press, and there is a promise of free and honest elections in less than 2 years. The men who are in command are decent men worthy of our support and sympathy in their struggle to establish democracy in Cuba.

After my talk in Santiago last Saturday the Castro men flew me about 50 miles north to the Sagua de Tanamo, a town of about 6,000 inhabitants, which had been cruelly damaged by Batista's air force. Nearly 300 civilians were killed there. This was the first time I had seen a bombed city in this hemisphere. Whether or not it was a war crime is not clear. The evidence is conflicting. The 21-year-old captain who escorted me, owner of a sugarcane farm and student of chemistry who intends to enter politics someday, a softspoken athletic lad by the name of Caleb de Quesada, told me he had been informed that there was no resistance, but barbudos in the village told me they did fight back. Both could be correct. The assault extended over 10 days. The resistance probably developed after repeated attacks. The invariable Castro tactic was to come into a town at night, take all the guns and retire to the hills before dawn. All air attacks were in the daytime. This young captain, by the way was Castro's heavy weapons expert.

WHAT IS A WAR CRIME?

The point here of course is which, if any, of the 40 or more Batista pilots now on trial in Santiago are war criminals. I talked this over with Pinero and with Castro. They agreed that the burden of proof was on the prosecution to show that the accused man knew he was shooting or bombing only to terrorize civilians and not as part of an attack on enemy forces.

This testimony of mine adds up to the finding that Castro and his men are as decent as Batista and his men were indecent.

But, you might ask, because in many instances their procedures were summary and they have executed many men, how do we know that they haven't killed innocent men? I attended no trials. I relied on a free press to tell me about them. The press has been free and wide-ranging since Batista left, yet I have to date seen not even one allegation that an innocent person has been executed or that any one of those condemned had no opportunity to defend himself. This does not mean I endorse the procedures. I do not. From the first I have urged their improvement.

The persons being executed are not shot because they are Batista supporters as one news story stated, but because they were murderers of defenseless men, women, and children. Castro can predict that about 400 will be executed because he knows very well the files on the notorious murderers in the police and in Masferrer's "tiger" army. These files were carefully prepared by thousands of spies. Batista's men helped by not trying to hide many of their atrocities, thinking to intimidate the Cubans. Pinero made available to me pictures taken by Masferrer and his sadistic underlings. They are beyond description. What man can do to man is incredible. The Nazis did no worse.

THE HIGH COST OF WORDS

I knew about these atrocities and I blamed Batista for them while he was in office. Many Cubans and others sent me stories and photographs. Why didn't the Nation know? One reason is that Batista corrupted the press, even some of our own. He bought good words or, at least, silence. The Associated Press, a fine organization with high ideals, fired one of its employees in Havana, Arroyo Maldonado, a Cuban citizen, about a year ago when it found he was receiving money from Batista.

An Associated Press staff writer, Robert Berrellez, one member of the entirely new AP American contingent in Havana, finished his recent series on the Batista atrocities with this paragraph, referring to the 400 (out of 2,000 detained) who Castro said would probably die:

"It could have been more, some quarters say, were it not for the strength of criticism outside Cuba—much of it probably growing out of a lack of information on what had happened here."

The Cuban revolution was not a change of the palace guard. It may not achieve all its noble ends. It may even degenerate into a police state of the left or the right. I don't think it will. The determination in the Cuban heart to establish an honest and democratic government is too intense and too universal.

THE PROS AND CONS

This brings us to the next question, what about procommunism and anti-U.S. feeling in the Castro government? Every enemy of a Latin American dictator is called a Communist and worse. Many Catholics supported Castro and most of his men are of that faith. One cannot be a Catholic and a Communist. Furthermore, Castro and his leaders are middle class people with a social and economic reform program which is not communistic. Of course the Communists are on the scene, with money and know-how, to take advantage if they can of disorganization and to fire up, as best they can, anti-U.S. sentiments.

A Cuban can be anti-United States without being pro-Communist. Historically there has been very little anti-U.S. feeling in Cuba compared to other Latin American countries. I have found no such feelings. I asked Castro last Monday why, in a telecast a few nights previously, he had put out an anti-U.S. version of Cuban-U.S. history. He replied that he had to be honest, but that he was not anti-United States. I believe him. The best proof is the kind of men he has put in high places and the kind of government Cuba now has.

THE NERVOUS NEIGHBOR POLICY

Both Commander Pinero and Premier Castro assured me that they did not intend to sponsor aggression against their nervous neighbor, Rafael Trujillo, the senile dictator of the Dominican Republic. They know that such action would inevitably invoke the organized action of the Organization of American States against them. This brings us to the third issue: Is Castro's government planning to take the lead in igniting the overthrow of other tyrants in Latin America? "Exiles from any land can come here," Castro told me Monday, "and I will not allow the police to bother them." He makes no secret of his dislike for Trujillo.

Trujillo tried to help Batista. He tried to help Dictator Pérez Jiménez, of Venezuela. Now he has, in his capital city, two deposed dictators, Perón and Batista, as living reminders to his long-suffering people that a day of reckoning for such men eventually comes. No wonder Trujillo wishes they would go away.

The shoe is now on the other foot in Latin America. Not long ago the lovers of freedom were running and hiding from torture and death. Now the forces of decency and democracy are strong and becoming stronger. They control Cuba and Venezuela, both potentially wealthy countries. Their leaders speak out against Trujillo. They are only justified in doing so. I think this is in keeping with the most sacred traditions of the United States, a country which was born out of revolution against a tyrant, a country whose citizens know that democracy once attained must be maintained.

THE PROMISE—NOT THE THREAT

Vice President NIXON, with whom I sometimes do not agree, said in Oregon week before last in my presence that "we should concern ourselves more with our faith in freedom, more with the promise of the American Revolution and less with the threat of the Russian revolution." I say amen to that.

My observations in Cuba lead me to conclude that the Cuban leaders do not intend any rash Bolivarlike expeditions against the declining dictators, but that they will join with Venezuela and other countries in condemning all governments based on terror and tribute and that they will carry this policy into the Organization of American States and other international organizations. Such expressions, in my opinion, particularly if joined in by the United States, will be quite sufficient to insure the early downfall of Trujillo by internal forces which heretofore have been frustrated by the respectability misguidedly accorded to this despotic regime. An invasion of attitude in these circumstances can be more readily effective than an invasion of barbudos.

THERE'S A DIFFERENCE

What about Castro's Cuba in its relationships with the United States? I think we will be more friendly than ever, now that our administration has endorsed a policy of differentiating between democracies and dictatorships, now that Cuba is an emerging democracy, and now that we have an outstanding Ambassador in Havana, a career man, Philip Wilson Bonsal, whose opposition to dictators needs no further demonstration. The two political appointees who preceded Bonsal made a sorry mess of our official standing in Cuba by identifying themselves with the dictator and his minions. Our refusal to withdraw our military missions from the Batista government was an error of immense proportions, yet we are now sending Marines to Haiti to repeat that mistake.

A free, uncorrupted press will do much to help reestablish our good relations with Cuba. Cuba's own struggle as it becomes better known here will enlist support and sympathy. I predict brighter days and closer ties between this fair country and our own, ties based on our common devotion to human freedom. Its government is taking hold. Castro appeared more severe and assured when we spoke Monday. Sunday he and the Cabinet spent on a yacht out at sea where they could confer without telephones. I found this out because I was to have had dinner with the brilliant young secretary of

the treasury, Lopez Fresquet. His U.S.-born wife explained where he was and why.

I conclude by listing a few of the features I feel we must include in our Latin American policy:

A GOLDEN RULE OF DIPLOMACY

First, and foremost, we must speak up for freedom and against tyranny. This goes beyond our American Revolution and back to a manger in Bethlehem. Our ambassadors and military men must be instructed not to identify themselves with tyrants but to be particularly friendly in countries striving for the establishment of human freedom.

Second, we should cut off all foreign aid, both military and technical assistance, to Latin American nations whose governments are based on fraud and force. We should increase such aid to democracies.

Third, we should encourage the exchange of information and citizens. When I was in Santiago I found the local businessmen were eager that the American sailors be allowed to come there again on leave, this not having happened for almost 2 years. State Department officials in Cuba favored it. So did Fidel Castro and the U.S. Navy when I asked them. It is now up to the Department of State, and I hope they decide affirmatively without delay.

Fourth, we must work toward commodity controls, particularly with respect to coffee, along the lines of the sugar agreements which have worked so well.

Fifth, we must make more capital loan funds available through the Development Loan Fund and the Inter-American Bank.

Sixth, and this applies to me, there should be more study of the Spanish language in the United States. We should insist that our Foreign Service personnel in Latin America and elsewhere maintain a continuing and intense interest in the language of the country in which they serve.

No doubt there are many other policies we need to adopt or to improve, some perhaps more vital than several I have listed. The most hopeful sign, however, in my opinion as a peripatetic eyewitness of part of this hemisphere, is the greatly increased interest shown by the American people in Latin America in the last year. There is no question where the American people stand with respect to democracy and tyranny, but I know Fidel Castro in his lonely mountain hideout often had cause to wonder why the United States Government didn't reflect more accurately the sentiments of its citizens.

In sum, this eyewitness, on the basis of what he has seen in Cuba and elsewhere, reports to you that Fidel Castro, his barbudos and the people of Cuba are doing their utmost to establish an honest and Democratic government in Cuba. The nightmare of the Batista terror is at last ended. The notorious criminals are being punished. Castro told me Monday that all the trials would probably be finished in a month and that many of those convicted would receive only jail sentences. It was my impression that he too will be glad when this phase of the revolution is finished.

I close with an observation made recently by my friend Jose Figueres, former President of Costa Rica and an outstanding leader of democracy. For many years in this hemisphere, Figueres pointed out, no partisan of Democratic government was safe in Latin America. The dictators, through their thugs, penetrated everywhere, even into the United States. The Cuban war crimes trials, Figueres believes, offer a fitting occasion to show that the hemisphere is a little less safe for the men who do a dictator's dirty work.

Thank you very much.

HOUSE OF REPRESENTATIVES

TUESDAY, MARCH 3, 1959

The House met at 12 o'clock noon.

Dr. Edward G. Latch, minister, Metropolitan Memorial Methodist Church, Washington, D.C., offered the following prayer:

O God, our Father, Thou everlasting sustainer of our spirits, we thank Thee for the coming of a new day, for every awakening of mind that comes to us, and for the noble ideas that seek lodgment in our minds endeavoring to be heard. Unto Thee would we dedicate the work of this day.

Forgive us, when in our pride and conceit, we think that but for us Thy purposes would fail. Forgive our rebellion against all that is unpleasant in life—against discipline and disappointment and defeat. By Thy spirit living within our hearts help us to learn the lessons whereby we can grow into a greater maturity of mind and of heart.

Lay Thou Thy hand in blessing upon us—the leaders of our people—and grant us wisdom, grant us courage for the living of these days. In Jesus' name we pray. Amen.

The Journal of the proceedings of yesterday was read and approved.

JOINT COMMITTEE ON INTERNAL REVENUE TAXATION

The SPEAKER laid before the House the following communication:

MARCH 3, 1959.

The Honorable SAM RAYBURN,
Speaker of the House of Representatives.

MY DEAR MR. SPEAKER: Pursuant to section 8002 of the Internal Revenue Code of 1954, the Honorable NOAH M. MASON, of the Committee on Ways and Means, has been designated as a member of the Joint Committee on Internal Revenue Taxation to fill the vacancy created by the death of the late Honorable Daniel A. Reed.

Sincerely yours,

WILBUR D. MILLS,
Chairman.

OUR FIRST DUTY IS TO RAISE DUTIES ON IMPORTS THAT PUT AMERICANS OUT OF WORK

Mr. LANE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, people often ask why the language used in drawing up a bill is so vague and confusing.

Legislators cannot possibly anticipate all the possible ramifications of a given piece of legislation, or the defects in it that will be revealed only through actual experience.

Some programs of the Federal Government start off in a constructive manner, then boomerang back to bite the hand that feeds them.

Then we must tighten up the original law by specific amendments to correct those contradictions that we could not foresee.

Take the Rural Electrification Administration, for example, and the legislation governing its organization, its purpose, and its operation.

Being rural, one would never expect that it would become involved with foreign manufacturers or tariffs. As a consequence, no specific provision was written into the law requiring that corporations or cooperatives securing loans from the REA must place their orders for turbine generators with American manufacturers doing business in this country.

This oversight is now harming American industry and American workers.

Money loaned by the REA is being used by the borrower to buy generators from a Swiss manufacturer, when that business should have gone to General Electric of Lynn, or some other manufacturer in this country.

The Congress must act swiftly to close this loophole before American business and American workers lose their shirts to foreign competitors who will have a field day in our domestic market. For your information on this issue, under unanimous consent I insert in the RECORD the following editorial of February 17, 1959, from the Daily Evening Item, of Lynn, Mass.:

THIS IS RIDICULOUS

With all its other headaches, it is regrettable that American business is now going to be called upon to compete with foreign firms for orders financed by U.S. Government loans and lack of adequate duty protection will deprive American workmen of employment which should rightfully be theirs.

In simple, unvarnished language, that is exactly what has happened to the General Electric Co.'s River Works here in Lynn.

A Swiss manufacturer has been given an order for three 22,000-kilowatt turbine-generators which could have been manufactured by the company's Lynn medium steam turbine, generator, and gear department.

The contract would have given 150 people a full year's work.

The Swiss firm, paying only one-third the wages which GE pays, was able to underbid GE 25 percent even after adding a 15-percent import duty on top of Swiss shipping and production costs.

But the real bit of irony in the whole deal is that funds for the order were provided by the U.S. Rural Electrification Administration, a Federal agency which lends money to groups which promote electrical development.

GE says it is not unusual for its turbines and generators to be higher priced than those of competitors, either American or foreign, but discerning buyers are willing to pay the difference for GE's shorter delivery dates, reliable performance, efficient operation and fast, effective service.

A week ago a similar instance was brought to light when the Tennessee Valley Authority placed a 500,000 kilowatt turbine-generator with a British company, despite a GE bid for the order.

We don't know what the answer is, but it would seem to us that Congress ought to give the tariff and duty regulations which permit such things to happen another long, hard look. It seems ridiculous that the funds of American taxpayers should be used to help knock American workmen out of jobs.

A GREAT LITERARY LIGHT GOES OUT

Mr. IRWIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. IRWIN. Mr. Speaker, in the death of Maxwell Anderson—dramatist and poet—the world has lost one of its most distinguished men of letters.

Mr. Anderson, who passed away on Saturday in the Stamford, Conn., Hospital, was the dean of American playwrights.

And he was but one of many similarly distinguished men of letters who live and work in my home district of Fairfield County, Conn.

This is a section of America renowned for the high caliber of its citizenry, a status that makes Fairfield County one of the most intelligent, most learned, most talented in this great country.

In Maxwell Anderson's death, the world of literature and the world of the theater have lost one of their greatest exponents.

For here was a man whose eyes and pen missed nothing of interest and translated the vital aspects of life as he saw them into a great force for spreading light into the dark corners of human experience.

Maxwell Anderson was in turn a realist, a romanticist, and an individualist.

In tribute, Mr. Speaker, to this remarkable and talented man who has passed into the masterless night of which he once wrote, I would like to introduce into the RECORD the following editorial from the New York Times for Monday, March 2:

DRAMATIST AND POET

The final quiet that came to Maxwell Anderson, dramatist and poet, in a Stamford hospital last Saturday evening, removed a personality that was still active, glowing and impassioned. Nevertheless, Maxwell Anderson's memory and achievements are part of the undying record of the American theater.

Anderson was a shy man, rarely seen in the theatrical circles around Broadway. He was more at home in the quiet country back of Haverstraw, where he spent many working years, or on the Connecticut shore of Long Island Sound, where he passed his productive latter days.

The measure of Maxwell Anderson, as a dramatist and as a man of letters, was equally in the thin volume of poems he published and in the whole field of theatrical expression, from musicals to tragedies. As a poet, he was rightly credited with providing the major impetus to bringing the splendor of verse back to the legitimate stage. To him the drama was no mere entertainment. It was "a religious institution devoted to the exaltation of the spirit of man." He had faith in democracy against "all political patent medicines."

A fearless individualist, he battled against the New York Drama Critics' Circle as the "Jukes family of journalism," and these same critics bestowed upon him two of their highly coveted annual awards for accomplishment in the theater.

Now he goes into that "masterless night" of which he once wrote, and faces his last "defeat, implacable and defiant." His work and his influence will live in the beauty of lines that were written to be read as well as spoken and, as his friends and the theater's friends must hope, in revivals of some of his timeless dramas.

FEDERAL GOVERNMENT SUBSIDY OF ROCK AND ROLL MUSICIANS ATTACKED

Mr. MACDONALD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MACDONALD. Mr. Speaker, it has come to my attention that under the Postal Policy Act of 1958—Public Law 85–426—the Federal Government has undertaken a program which subsidizes rock and roll, jazz, and hillbilly musicians. I view with regret our present Federal tendency to subsidize large segments of our economy. But I view with absolute horror, the prospect of Federal subsidies for performers such as Elvis Presley, Little Richard, Dicky Doo, Conway Twitty, the Royal Teens, and all the other hundreds of musical illiterates, whose noises presently clutter up our juke boxes and our airways.

When the Congress revised the postal rates last year, it added to the low cost category of fourth-class postal rates, books, manuscripts and such educational recordings as Audio-books, read by such artists as Raymond Massey and Ronald Coleman, bearing such titles as "The Trial of Socrates," "Complete Sonnets of Shakespeare," "The Writings and Speeches of Abraham Lincoln," as well as the works of Bacon, Schopenhauer, Milton, Emerson, Thoreau, Whitman, and others. This addition to that category of educational materials seems to me to be a worthwhile one, for it benefits the education of our children, and as such, is justified.

However, the Post Office Department on August 1, 1958, designated all phonograph records as "educational material" and all records now receive the benefit of being classed as fourth-class mail for postal purposes. Translated into financial terms, the so-called record clubs were thereby enabled to mail recordings for 9 cents for the first 16 ounces and 5 cents for each additional 16 ounces or fraction thereof. Prior to this exemption, phonograph recordings, if under 8 ounces, were required to be sent by third-class mail at a cost of 2 cents for the first 2 ounces or fraction thereof, and 1 cent for each additional ounce or fraction thereof. Thus, the present rate charges are exactly one-half what they were prior to this change in our postal laws.

I certainly object to this situation. By this ruling, the U.S. Government has for all intents and purposes officially stamped rock and roll, hillbilly, be-bop, boogie-woogie, and jazz records as educational material.

A look at some of the titles of the records mailed to our high school and secondary school students tops any objection that I might make as to their educational nature. For example, we have listed such current favorites as "Jailhouse Rock," "You Ain't Nothin but a Hound Dog," "Got a Lot of Livin' To Do," "Dinner With Dracula," "You Bug Me Baby," "Bony Moronie," "Whole Lot of Shakin' Going On," "Picking On the Wrong Chicken," and hundreds of others, ad nauseam.

We all know that our postal service is financed primarily from postal revenue. It is obvious that if the rock and roll musical mills are permitted to continue to mail records at these above special rates, the Post Office Department will be denied hundreds of thousands of dollars in postal revenue which are needed to maintain present operations. I for one feel that this practice is an injustice to the ordinary users of our mails. There is no possible excuse for this situation except to make it even easier for the frenetic rock and rollers to become rich even more quickly than they are presently doing.

In a day when we should be concerned with teaching our children science, mathematics and foreign languages, we should not promote by subsidy the abuses of grammar and the musical illiteracy that we hear blaring from our radios, juke boxes, and TV.

If any changes should be made, it seems to me we should make it more difficult for the phonographs of our teenagers to blare from coast to coast daily and nightly with this trash. Certainly we should not give the purveyors of this musical nonsense, a subsidy in mailing these records to our children.

While I have heard Elvis Presley, Conrad Twitty, and Jerry Lee Lewis, the latter who, you may remember, married his 13-year-old cousin while on a rock and roll musical tour of England, mentioned as having an effect on educational benefits, I have always heard them mentioned as having an adverse effect on educational progress. It seems clear beyond any further discussion that putting such immortal rock and roll classics as "Itchy Twitchy Feeling," "Honey Comb," "Stagger Lee," and "Splish Splash" in the same category as the recordings of Bach, Brahms, and Beethoven, et al., is a horrible perversion of the intent of Congress, who tried to further the purchasing of educational records by placing them in an especially inexpensive mailing category.

I certainly hope that the 86th Congress will see fit to rectify this inequity by taking away this subsidy and the Post Office Department will exercise the good sense to put into effect the intent of Congress, as contained in Public Law 85–426.

POPULATION CHANGES IN THE DISTRICT OF COLUMBIA

Mr. DAVIS of Georgia. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. DAVIS of Georgia. Mr. Speaker, according to an announcement yesterday by the District of Columbia Board

of Commissioners the Negroes in Washington now constitute 53 percent of the total population. It had been announced previously that in the public schools, as of October 31, 74.1 percent were Negro and 25.9 percent white. The percentage of colored in the schools is probably larger now.

This calls for some kind of congratulations to be extended to somebody.

When the investigation of the Washington integrated school system was made in 1956, I pointed out that Washington was turning into a second Harlem. Yesterday's announcement is confirmation of the statement.

The announcement shows that in 1953 when our left-wing sociological Supreme Court turned the Negroes into the restaurants and hotels in Washington the white population was 510,000. Twenty thousand moved out by the next year, 1954, the year the Supreme Court turned Negro children into the white schools. This left 490,000 whites. By the next year, 1955, the mass exodus increased to 33,000, leaving 457,000 whites in the District. In 1956, the migration out had swelled to 42,000, leaving 415,000. Only 6,000 fled in 1957, but by July 1, 1958, another 22,000, a total loss of 123,000 in the 5-year period, leaving the white population 387,000.

What is the situation as concerns the Negro population? In 1953, it was 340,000. It increased by 14,000 to 354,000 in 1954, by 18,000 to 372,000 in 1955, by 21,000 to 393,000 in 1956, by another 18,000 to 411,000 in 1957, and by 27,000 the largest increase of all in 1958, to the figure of 438,000. In the 5-year period the Negro population increased 98,000 while the white population decreased 123,000.

The announcement of this change in population from white to Negro does not seem in all respects to be made with the unbounded enthusiasm which might be expected from those who have done so much to bring it about. In fact, it is possible to detect just a slight effort to play it down in this sentence:

> Thus, it is clear that there has been no substantial migration of nonwhites into the city.

But, whether it is better for Washington to turn into a second Harlem through the exodus of white people or through an influx of Negroes is a matter of opinion, and it may be just an academic question, anyway.

It is of considerable consequence, however, that, of this race which is now in the majority in Washington, more than 1 out of 4 births is illegitimate—actually the figure is 1 out of 3.47—they commit 82 percent of the major crimes; they constitute 87.1 percent of the names on the relief rolls; and of reports of venereal diseases the figures show, of total cases reported, 220 white and 9,126 colored.

With the exodus of white people, the sources of revenue are disappearing, business conditions are worsening, real estate values are diminishing.

I shall not try to say whether the Commissioners should congratulate the Supreme Court, or vice versa, or whether both those groups should congratulate the President and the Justice Department. Someone probably should felicitate the home rule brigade upon the possibility of a Negro city government if they should ever be successful in putting their program into effect.

There is one group to whom I can, and do, extend hearty congratulations, and that is the 123,000 who were successful in getting themselves and families out of the mess that now prevails in the Capital City.

AQUINAS DOMINICAN HIGH SCHOOL, CHICAGO

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, I have asked for time to inform the House of the pride we in the Second Congressional District of Illinois have in the Aquinas Dominican High School, which is in the great seventh ward of the city of Chicago, a ward of which I have been a resident for many years. Over 28,000 high school students, representing every State in the Union, participated in the 18th annual science talent search for the Westinghouse science scholarships and awards. Of the 427 who in this stiff competition made the honors group, 2 are members of the senior class of Aquinas Dominican High School, Mary Terese Anglim and Dolores Mary Leahy. I know that my colleagues will join with me in extending the congratulations of the Congress to the faculty of this school, and especially to its teachers in science. Of the 427 who won honor awards, 40 were selected for the top group that was brought to Washington by the Westinghouse Co. and the science clubs of America. Mary Terese Anglim is one of the 40, and one of the great evenings of my service in Washington was when I squired her to the science search dinner. That is one affair that a Member of Congress cannot crash on his own steam. I was invited because of what charming, brilliant 17-year-old Mary Terese Anglim had done in her research of topology which she graciously explained to me is an abstruse kind of geometry. On further inquiry I learned that topology is defined as the study of those properties of the geometrical figure unaffected by any deformation not involving tearing or joining. It requires comprehension of theory rather than a series of mathematical processes. Mary Terese modestly gives the credit for her outstanding achievement to her parents, Mr. and Mrs. D. W. Anglim, and to her teachers in Aquinas Dominican High School. Her father is the superintendent of water distribution and maintenance in the central district of Chicago. He is one of my most distinguished constituents.

The Second District is mighty proud of Mary Terese Anglim. On her graduation from high school she hopes to attend St. Louis University to major in mathematics or possibly chemistry. She will do research in the nuclear field.

PUBLIC HOUSING BONDS

Mr. ALGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, I have today introduced a bill to end Federal income tax exemption on future issues of public housing bonds secured by pledge of Federal annual contributions contracts entered into after the effective date of the act. This will close a tax loophole and correct a tax inequity.

These public housing agency bonds assisted under the U.S. Housing Act represent local credit in name only. It is true the local public housing agency issues the bonds, but it has no taxing power. The credit which is back of the bonds is the credit of the United States pledged to the payment of principal and interest on the bonds through the annual contributions contract which the Federal Government executes with the local agency. Since the Federal Government by law cannot sell its own bonds on a tax exempt basis there is no reason under the sun why the Federal Government through the financing device used in the public housing program, should permit a local shell agency to, in effect, sell Federal credit on a tax exempt basis.

In yesterday's Wall Street Journal there appears an ad by the Dealer Underwriting Group offering $34.8 million of new public housing bonds issued by 15 different housing authorities. I want to read you the sales pitch on these bonds, this is the way they are sold to the public. Here is what the ad says:

> The bonds of each issue will be secured by a first pledge of annual contributions unconditionally payable pursuant to an annual contributions contract between the Public Housing Administration and the local public agency issuing said bonds in the opinions of bond counsel. Said annual contributions will be payable directly to the fiscal agent of said local public agency in an amount which, together with other funds of the local public agency which are actually available for such purpose, will be sufficient to pay the principal of and interest on the bonds when due.
>
> The U.S. Housing Act of 1937, as amended, solemnly pledges the faith of the United States to the payment of the annual contributions by the Public Housing Administration pursuant to the aforesaid annual contributions contracts.
>
> Quotation from an opinion, dated May 15, 1953, of the Attorney General of the United States, to the President of the United States:
>
> "In summary, I am of the view that: * * * A contract to pay annual contributions entered into by the PHA in conformance with the provisions of the act is valid and binding upon the United States, and that the faith of the United States has been solemnly pledged to the payment of such contributions in the same terms its faith has been pledged to the payment of its interest-bearing obligations."
>
> Interest exempt, in the opinion of counsel to the underwriters, from Federal income taxes by the provisions of the U.S. Housing Act of 1937, as amended.

I call your attention, in particular, to one of the statements in the first para-

graph of the sales pitch, "said annual contributions will be payable directly to the fiscal agent of said local public agency." In other words, the Federal Government does not even pay this money to this local shell agency, instead it makes the payments directly to the bond agent who in turn pays the principal and interest due on the bonds. Now contrast this with the sales pitch on a true municipal bond. Again I refer to an ad which appears in today's Wall Street Journal. This is an ad for the sale of $10.7 million city of San Antonio, Tex., bonds. Here is the sales pitch on this true municipal issue:

These bonds, in the opinion of counsel, will be valid and legally binding general obligations of the city of San Antonio, payable from ad valorem taxes to be levied against all taxable property therein, within the limitations prescribed by law.

That is true local credit. That is local credit supported by the taxing power of the community. That local credit is tax exempt and it should be because it is no way dependent upon a pledge of Federal credit.

What really happens with the financing device used in the public housing program is that the Federal credit sold by the local shell agency on a tax exempt basis is in competition with our municipalities who must come into the market and pledge their own credit and taxing power for the bonds which they sell to private investors. No wonder our municipalities at times experience difficulty in marketing their own credit when they must compete with what in effect is Federal credit sold on a tax exempt basis.

It is long since past the time for exploding the myth that public housing bonds represent local credit. It just is not so and since this in effect is Federal credit it should be treated just the same way as the Federal Government must treat its own bonds; namely, it should not be sold on a tax exempt basis.

THE FLEMMING FORMULA

Mr. METCALF. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. METCALF. Mr. Speaker, Secretary Flemming, of the Department of Health, Education, and Welfare, says that his formula will build 75,000 classrooms if the States will cooperate by changing their constitutions, their basic tax policy, and repeal debt limit statutes.

The school districts must consent to go along by getting themselves in debt beyond their admitted capacity to repay.

Secretary Flemming's talents merit wider use than are being given them now.

Secretary Flemming might devote a little of his time to the Washington Redskins. An application of the Flemming formula would result in a prediction that the Redskins now have a formula for winning all the games. When asked about his plan, Flemming could announce that he was going to have the Redskins' ends hovering over the gridiron in helicopters on offense.

The Redskin quarterbacks could pass to either end and the helicopter would fly over the opposition's defensive team and score touchdown after touchdown. Flemming concedes that such procedure will require a change in the basic rules of football and consent will have to be obtained from the other members of the National Football League for this special concession. These are minor obstacles, however, according to Mr. Flemming. He is chiefly concerned whether or not, with Gene Brito gone, the Redskins will ever be able to stop the other team from scoring an equal number of touchdowns.

BILL TO REPEAL FEDERAL EXCISE TAX ON AUTOMOBILE VEHICLES AND PRODUCTS

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. CHAMBERLAIN. Mr. Speaker, today I received notification that the Michigan State Legislature has again passed a concurrent resolution urging the Congress of the United States to repeal the Federal excise tax on automobile vehicles and products.

My bill, H.R. 2388, which proposes that this tax be repealed, is now before the House Ways and Means Committee. I have written a letter to the committee's chairman urging hearings at the earliest date possible.

In February of last year, when the Michigan State Legislature passed a similar resolution, I pointed out that the measure was in the nature of an S O S from the people of my State who work in the automobile industry. As you well know, unemployment is still a matter of grave concern in Michigan or anywhere else where the automobile industry is the primary source of jobs. And it is a primary source of jobs in a good part of the United States.

I repeat what I said last year—one out of every six businesses and one out of every seven gainfully employed workers in the United States are dependent for a livelihood on the manufacture, distribution, servicing and commercial use of motor vehicles.

The Michigan Legislature has recognized the need for the repeal of this excise tax as an important stimulant to automotive production, and hence cut the unemployment figures in depressed areas all over the country.

It is my considered opinion that the Congress of the United States cannot afford any longer to disregard this plea from the American people to remove an unfair tax measure.

I would also strongly recommend that the whole excise tax structure be given a thorough overhauling at this time. Because of pressures from various directions, some of these taxes have been reduced and some have not. A number, like the automobile tax, are leftovers from wartime measures and hang on to bog down our economy when the emergency which brought them into being no longer exists. The result of all this is discrimination in the Federal excise tax pattern, and it seems to be the only way to clear this thing up is to go over the whole tax structure in light of present conditions.

Because I believe the repeal of the automobile excise tax to be an important step in this direction and of vital urgency for the whole economy, and to every one of my colleagues, I include the Michigan resolution with my remarks at this point in the RECORD.

SENATE CONCURRENT RESOLUTION No. 11

Concurrent resolution urging the Congress of the United States to repeal the Federal excise tax on motor vehicles

Whereas this Nation is emerging from a business recession;

Whereas business analysts have counted upon strong public acceptance of 1959 automobiles as a major force in our economy, not only because of the thousands of persons employed directly in the manufacture of automobiles and parts therefor, but also because the automobile industry is a large user of steel, glass, rubber products, transportation, and other good and services;

Whereas it is important at this time that all measures possible be taken to stimulate and revitalize the American economy;

Whereas it is believed that the immediate repeal of the excise tax on motor vehicles would supply an important impetus to the sale of motor vehicles and to business activity and employment in automobile factories and related industries throughout Michigan and the rest of the United States; and

Whereas the loss of revenue from the repeal of the excise tax on motor vehicles would be largely, if not wholly, offset through an increase in business activity and the resulting increase in income tax collections: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Legislature of the State of Michigan, on behalf of the people of Michigan, respectfully urges the Congress of the United States to repeal the excise tax on motor vehicles; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Secretary of Labor, the President of the Senate, the Speaker of the House of Representatives, and the members of the Michigan delegation in the Congress.

COMMITTEE ON RULES

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain reports.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

POLLUTION IN THE MISSISSIPPI RIVER

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DINGELL. Mr. Speaker, our country is beset with many problems, one of the most important of which, but least noticed, is pollution of our waters. The once clean waters which flowed in this country, deep and fast, leaping with fish and pure enough to be used for drinking at any point, are now fouled with filth and disease germs, unsafe for drinking and unfit for industrial use. Communities which use these waters find themselves in a curious position, victims of those who use the same water upstream and transgressors on those who use the same water downstream. This water is, of course, used, reused and used again dozens if not hundreds of times in its travel from its source to the sea.

What was once one of our most beautiful, and which is still one of our economically most important rivers, is the stately Mississippi.

I took the trouble to search records of the Department of Health, Education, and Welfare and the Public Health Service from a conference called to look into this matter as a basis for later enforcement action to abate the pollution.

Some of the language in that report I found to be astonishing. The once lovely Mississippi is even more filthy and foul than I had had any reason to believe.

The quotes below appeared in the report of the conference required under Public Law 660 of the 84th Congress before enforcement can be begun by the Public Health Service. I took the trouble to compare the present day river with the description which Mark Twain made of the same water a little over a hundred years ago. The sadness and shame of this horrible waste is that it need not occur. Vigorous Federal, State, and local action can clean up the Mississippi and restore it to a reasonably pure and sanitary condition, even in modern day industrial America:

THE MISSISSIPPI RIVER

Not only has the Mississippi River been a most important stream in our Nation's life and economy, it also has formed a backdrop for outstanding literary works of American authors. One of these, "Huckleberry Finn" by Mark Twain, is familiar to us all. Who does not recall with pleasure the account of Huckleberry's trip down the Mississippi on a raft accompanied by the runaway slave, Jim Turner, with its flavor of calm, easy-going life on the water?

"We catched fish and talked, and we took a swim now and then to keep off sleepiness. It was kind of solemn, drifting down the big, still river, laying on our backs looking up at the stars. * * * The fifth night we passed St. Louis, and it was like the whole world lit up."

We can only conjecture how Twain would have written this passage today in view of the following description of the river at St. Louis, as did a resident of the area recently:

"Predominant among the floating materials are patches of grease, citrus fruit peels, and scraps of leafy vegetables, typical of garbage, that constitute a broad continuous trail from the mouth of the Mill Creek sewer at least as far downstream as Jefferson Barracks. Condoms abound in the floating material. An oil slick, typical of sewage or oily waste pollution, covers the river from bank to bank in the lower end of this section."

Very few of the people who live along the Mississippi, however, continue to use Huckleberry's rudimentary means of water transportation. Nevertheless, the incredible filth of the Mississippi in the St. Louis area has created concern in many quarters because of the specific ways in which it damages persons who must use the river. Because of this concern, the Public Health Service called a conference to look into this matter as a basis for possible recommendations on action to abate the pollution. There is no more graphic way to describe the situation than in the words of the persons who appeared at the conference and informed the presiding officials as to the effects of pollution on specified water uses.

PURIFYING THE RIVER WATER FOR PUBLIC WATER SUPPLY

"My name is Clayton Wingerter. I am superintendent of the Chester Water Department. * * * Our trouble started a good many years ago.

"Occasionally the dairy was our chief objector. They would come down to check, * * * we would give them a sample out of our filter effluent, which is safe to drink because we carry a high chlorine content; you could see their hair almost stand on end from that phenol. It would actually burn your mouth, the phenol content was so high.

"Another one of the problems we have is the grease. There's times if you look at our filter surface you wouldn't know whether it was a water filter or whether it was something in a well-run sewer plant, because it had curds of what appeared to be kitchen grease floating on the surface. It's covered."

BOATING AND OTHER WATER SPORTS

"Mr. Chairman, members of the conference, my name is Fred B. Lifton. I'm with the Outboard Boating Club of America.

"* * * Several days ago I had the opportunity of getting on the river myself, * * * and I'm not sure I have completely recovered from it yet. I have been around the country, I have seen a great many boating waters, but I can honestly say I have never seen anything approaching the situation that prevails here.

"* * * I had some other people with me who have been * * * in the boating field for many, many years * * * and to a man, these individuals were literally astounded at what they saw. The only comment was one that you have heard many times, and that is, 'It's perhaps a shame that the river wasn't just a wee bit thicker, then you could plow it.'

"When * * * we were disembarking * * * we were approached by several rather hard-bitten individuals who had been in the business of operating marinas and docks for a number of years * * * and these individuals, when they found that we were involved in looking at pollution, came up and in the most imploring way * * * he just pointed to the river and he said, 'It's terrible. It can't go on much longer like this. Please, can't you do something?' "

FISHING

[Mr. T. J. Barnickol, representing the Missouri Conservation Commission]: "The off-taste and odor in fish has become a major fishery problem since 1944. By 1946 similar reports came from Chester, Ill., fishermen and since then these reports of off-flavor and odor have come from fishermen throughout the Missouri section of the Mississippi River below St. Louis—a distance of approximately 316 miles. A Festus, Mo., fisherman reported having to discard a 3,000-pound catch of fish taken near Herculaneum because of the bad odor and flavor. In 1947 commercial fishermen at Valmeyer, Ill., 28 miles below St. Louis reported that often half their catches of fish were discarded because of an off-flavor resulting from pollution. Another fisherman at Kimmswick in 1953 reported that 90 percent of his catch was not marketable as a result of the taste and odor problems. * * *

"One of the Commission's law enforcement officers reported the occurrence of offal from a poultry processing industry whose sewer effluent enters the river in the St. Louis area on the Illinois side. He explained that the river current carries this material for some distance and that in places it becomes so thick at the surface that to drive a motor boat through it is nearly impossible. Feathers and decomposing viscera, presumably from poultry, comprised the major part of this waste."

We can now hazard a guess at how Mark Twain, under today's conditions, would have written the above quoted passage from "Huckleberry Finn":

"We catched fish and talked about how bad they smelled. Jim didn't dare taste one and neither did I, so we threw them back among the rest of the garbage. We wanted to take a swim now and then to keep off sleepiness, but after looking at the water we decided it would be better for Jim to risk recapture and maybe hanging. It was kind of solemn, drifting down the big, still river, laying on our backs looking up at the stars. Every once in awhile, when we thought the river looked a little clearer, we would take the clothespins off our noses for a whiff of ozone. The fifth night we almost passed St. Louis but our raft got stock in a mess of fat and feathers so we managed to pole it to shore where we said goodby to it."

THE BENSON RECORD AS SECRETARY OF AGRICULTURE

The SPEAKER. Under previous order of the House, the gentleman from Mississippi [Mr. WHITTEN] is recognized for 30 minutes.

Mr. WHITTEN. Mr. Speaker, I take the floor to call attention to hearings just released today by our Subcommittee on Appropriations for Agriculture. I call these hearings to the attention not only of the Congress, but of the Nation. Anyone who will read them cannot escape the fact that the present Secretary of Agriculture and his policies are not only wrecking American agriculture but the U.S. Treasury as well. From the record, he and his associates apparently will resort to almost any means to have his way.

It is with genuine regret that I make this speech. However, I feel I must, for a balance between agriculture, industry, and labor is absolutely essential to the public welfare. The Secretary's actions are rapidly making that impossible. I have served on the Subcommittee on Agricultural Appropriations since 1945, for 9 years as chairman; I have worked hard, holding hearings for many weeks each year, reviewing in detail all the operations of the Department of Agriculture. I served quite a number of years before the present Secretary of Agriculture took office in 1953.

Mr. Speaker, these hearings before our committee, as well as those for the past 5 years, clearly show that the records of the Department prove the views and the policies of the Secretary to be wholly unsound. The situation gets worse by the day.

I do not complain at the Secretary's personal standing with the public and the press as a man of strong religious beliefs and faith in his church. However, that is no basis on which to determine his stewardship of the Department of Agriculture, its costs to the Treasury, and effect upon farm people.

I am an officer in my church. Most Members of Congress are active in the church of their choice. The point I

make is that the Secretary does not have a corner in that field. However, the Secretary's church affiliation has been played up to the point that most people, including most newspapers and magazines, have not looked at his record as Secretary of Agriculture.

THE RECORD

From the start the Secretary insisted the answer to our problem with basic farm commodities was to reduce price supports and, thereby, force the farmers to reduce production. Many of us tried to tell him that farmers, like others, had investments, large investments, high operating costs—and that they, too, had to meet costs of operations; that the farmer's income, like that of others, was dependent upon volume times price less costs.

We insisted that with costs rising, the Secretary's program of reducing price could only result in causing the farmer to increase volume (production) to offset the Secretary's price reduction. The Secretary would not believe that. He ignored the farmer's personal problems, which after all determine the farmer's personal decisions.

He insisted that to reduce price would cause the farmer to reduce volume, and everything would be fine. His theories, if true, and they are not, would leave the farmer with, first, reduced price, by the Secretary's action; second, reduced volume, if they did as the Secretary thought; and third, increased costs. Now what would that mean? The answer is easy—bankruptcy.

In his efforts to get authority to reduce price supports, the Secretary added billions of dollars in costs to the Government by refusing to offer CCC stocks competitively in world trade during 1953 and 1954. He added further millions of dollars in costs by a refusal to offer cotton competitively in 1955 when he finally offered other commodities. He has followed this course again this year. He spent hundreds of millions of dollars in needless storage and handling charges during that period, and contributed greatly to increasing our competition abroad by holding an umbrella over foreign production—largely U.S. financed. International grain and cotton firms waxed fat. Secretary Benson had his way. He received authority to reduce price supports. Since that time he has reduced supports an average of 20 percent—pages 196–204 of hearings.

Six years of Secretary Benson's policies and practices show that his price reductions have caused the farmer to do what we tried to tell him history showed they would do. The farmer, faced with increasing costs and lower prices, has tried to make up the difference by increasing his volume—production.

As fast as the Secretary has reduced prices, farm production went up—not down. Government expenditures went up—not down. The take of the middleman went up in approximately the same amount; Government holdings increased greatly, and the consumer pays more and more.

Reduced supports for corn, from 90 percent of parity in 1954 to 77 percent in 1958, have led to the Commodity Credit Corporation holdings being doubled from 880.8 million bushels in 1954 to 1,705 million bushels in 1958—page 196 of hearings.

For wheat, reduced supports, from 90 percent in 1954 to 75 percent in 1958, have led to increased CCC holdings from 990.7 million bushels in 1954 to 1,239.1 million bushels in 1958—page 198 of hearings.

Reductions in price supports for oats, from 85 percent in 1954 to 70 percent in 1958, have been followed by increased Commodity Credit Corporation holdings of this commodity from 62.8 million bushels in 1954 to 87.9 million bushels in 1958—page 202 of hearings.

Further, the Department makes much of claimed improvement in the dairy situation under reduced support levels. The Secretary's programs for dairy products have cost $753.7 million since 1954. CCC inventories of nonfat dry milk have increased from 29.9 million pounds in 1952 to 176.6 million pounds in 1958.

SIX YEARS UNDER SECRETARY BENSON

From the Department records, I quote:

1. Personnel:

Dec. 31, 1952	67,406
Nov. 30, 1958	89,464
June 30, 1959 (estimate)	98,487
June 30, 1960 (estimate)	98,945

2. Appropriations:

[In millions]

	Fiscal year 1952	1960 budget estimate
Regular activities	$796.0	$1,277.8
Commodity Credit Corporation:		
Capital Impairment	421.5	1,535.4
Reimbursements	141.0	1,268.1
Total	1,358.5	4,081.3

3. CCC inventories:

	Billions
January 1953	$1.1
January 1958	5.4
June 30, 1959 (estimate)	6.8
June 30, 1960 (estimate)	9.1

4. Public Law 480 (title I): Estimated expenditures through June 30, 1960 — 5.2

5. Soil Bank: Estimated expenditures through June 30, 1960:

Conservation reserve	.7
Acreage reserve	1.7
Total	2.4

In the 6 years of Benson's policies and practices, expenditures paid to warehousemen, railroads, and trucklines, to processors and others, but charged up to the farmer by the Secretary and the President, have increased as follows:

Additional cost and personnel data

[Dollar amounts in thousands]

Item	Fiscal year 1952	Fiscal year 1957	Fiscal year 1958
Interest expense (net)	$16,043	$274,884	$322,876
Carrying charges:			
Storage and handling	73,259	364,391	408,610
Transportation	45,392	186,382	177,728
Processing and other	96	19,082	17,044
Total	118,747	569,855	603,382
Administrative expenses	$15,114	$29,631	$33,875
Man-years of employment	2,742	5,044	4,769
County office expenses	$12,814	$45,082	$50,586
Man-years of employment	3,637	7,498	8,067

As stubborn as a Missouri mule is supposed to be, I believe even a Missouri mule would, at least, have some doubts after that 6-year record, but not Secretary Benson.

The Secretary is an affable, likeable man, in great demand for speeches. Because the press and public go for his pious platitudes, the Secretary refuses to accept his own record. Not satisfied with price reductions authorized at his discretion by law, on January 30, 1959, he reduced farm price supports a further $180 million—to $200 million, by the backdoor method of changing the parity index, as shown on page 86 of the hearings. Although he denied knowing the outcome in advance, the record shows he gave the statisticians go ahead orders only after he had been told that the approximate result would be to reduce the parity index, which, in turn, further reduced price supports.

The Secretary said:

The revisions that have been made in price indexes are simply a matter of good statistical practice, and I didn't know what the outcome was going to be (p. 19 of hearings).

And later on page 21, he testified:

Our technicians are operating free from pressure from the outside as far as I am concerned. I have had pressure on me several times not to announce the index, the parity index, at a certain time because it was just before an election or just after some important decision was to be made.

I have religiously followed the policy that they should not be interfered with in their work in any respect and the record will so show.

Mr. Wells, in charge of this parity index change, testified on page 113 of these hearings, however, and I quote:

Mr. WELLS. After the preliminary calculations last March we did have reason to believe it would probably reduce the parity index. Exactly how much we didn't know.

Mr. WHITTEN. And this year, after the Secretary has been making his pitch for reducing price supports, you went to him and urged him to take final action toward putting the index together, knowing the probable effect, and released it, didn't you?

Mr. WELLS. I recommended that he revise the parity index; yes, sir.

Mr. WHITTEN. And at that time you told him the probable effect?

Mr. WELLS. I told him the approximate effect; yes, sir.

Mr. WHITTEN. Even though it was locked up and the figures weren't known, the Secretary had information from you as the expert in this field upon which he relied. If he let you go ahead and do this work which was locked up so nobody would know it, he knew it would come out in line with his beliefs, did he not?

Mr. WELLS. Approximately, yes.

Prior to that, B. R. Stauber's letter of March 14, 1958, to Wells—pages 211 to 226 of hearings—offered various suggestions as to what could be done in order to reduce the parity index on price supports. That certainly is not in keeping with objective statistical work.

Stauber, Chief of the Agricultural Price Statistic Branch, wrote Wells the various steps whch could be taken in weighting the results to reduce parity. After receiving that information, Wells wrote Assistant Secretary Paarlberg, on

July 9, 1958, asking permission to proceed. Significantly, Wells' letter contains the following, which I quote:

You will note that Mr. Stauber estimates the various changes which might be made which would result in reducing the level of the parity index by somewhere between 3 and 6 percent as of June 1957.

Mr. Stauber suggested that if the smaller farms were dropped from the figures obtained in the survey, this would have the effect of reducing the parity index—page 216 of the hearings—because it would shift emphasis from family living costs to production costs, though small farmers number far more than 50 percent of all farmers.

Then if you will read the records from the files of the Department—page 207 to page 250 of the hearings—you will learn of other steps taken to reduce the index.

This information reveals that the latest revisions were based on surveys conducted in only 300 counties on 6,715 farms for production costs, 3,845 farms for cost of family living, and 2,006 farms for prices received. This represents a few farmers in a little over 10 percent of the counties of the United States. It covers only about one-fourth of 1 percent of the farm families in the United States, with separate groups of farms checked for each element.

Secretary Benson was advised that, if the new compilation were permitted, he could expect a reduction in the parity index. He said, go ahead. Then the so-called objective, and to say "objective" is a farce, statistical compilation was made; price supports were further reduced by approximately $180 million to $200 million, without any change by law or any consultation with congressional leaders. Thus, Secretary Benson invites further efforts by the farmer to offset reduced price by increased volume.

Mr. Speaker, termites never did a better inside job of destruction.

SECRETARY HELD UMBRELLA OVER FOREIGN PRODUCTION; HAD AUTHORITY TO SELL COMPETITIVELY

Now we come to the second major reason for our special hearing. This year the Secretary has admittedly been refusing to offer American cotton for sale in world trade on a competitive basis. On February 3, 1959, the Secretary testified before our committee as follows:

Mr. WHITTEN. Mr. Secretary, do you agree now that the charter of the Commodity Credit Corporation authorized you throughout your tenure of office to sell CCC commodities in world trade at competitive prices?

Secretary BENSON. Yes; the charter was very clear on that, as I have indicated before. Not only in the case of cotton, but any commodity.

Mr. WHITTEN. You realize that authority existed during these years when you refused to use that authority to be competitive?

Secretary BENSON. Yes. The charter hasn't been changed.

Mr. WHITTEN. Do you agree that, when we finally persuaded you to use it, you sold a million bales of cotton in less than 2 months?

Secretary BENSON. Yes; that is right.

Mr. WHITTEN. Do you agree that the Congress passed this act making it compulsory that you sell cotton competitively to the point of "reestablishing and maintaining" our fair share of the world market, after you went for months and refused to follow up what you showed you could do with the million bales? Do you agree that that happened?

Secretary BENSON. Yes. Of course, the Congress passed the legislation and we are trying to comply with it, Mr. Chairman, and we intend to. (P. 12 of the hearing.)

Then on February 16, 1959, before the House Committee on Agriculture, he testified:

The legal requirement that the Federal Government support a few crops at unrealistic levels is pricing us out of the world market.

Mr. Speaker, that statement is completely untrue. Such statements have been made by the Secretary for years. What can you do with a man who keeps saying such things, when he knows better and admits he knows better?

The record shows that, notwithstanding authority to sell in world markets at competitive prices, which would thereby make American commodities available to the needy peoples of the world at fair prices, Secretary Benson made use of the officers of the $14.5 billion CCC; all employees of his Department—Mr. Farrington, the General Counsel; Mr. Wells, Administrator of the Agricultural Marketing Service; Mr. Morse, President of the Commodity Credit Corporation and Under Secretary; Mr. C. L. Miller, Assistant Secretary; Mr. E. L. Peterson, Assistant Secretary; Mr. M. L. McLain, Assistant Secretary; and other top officials—flatly refusing to use this authority during the years 1953 and 1954, and most of 1955, not only on cotton but on every other commodity for most of that period; holding dairy products off in 1957 and 1958, all the time paying out huge storage charges on what he would not offer to sell competitively; counted such cotton and other commodities to reduce American acreage, to the benefit of our American-financed competition in foreign lands.

I do not know how even the State Department or the President could claim they help needy foreign people of the world by holding our commodities away from them, while making them pay high prices for commodities of American financial interests in Mexico, South and Central America, and elsewhere.

The record of these hearings will show that in 1956, after investigations by our committee disclosed that the Secretary and his policies were holding an umbrella over big U.S. investors in Mexican, and South and Central American cotton production—names and investments appearing on pages 2 and 3 of the hearings—the Secretary finally offered 1 million bales of cotton competitively, which he sold for export in less than 6 weeks, although he had anticipated a year would be required.

Even after this experience, Mr. Benson refused to sell cotton competitively for months, resulting in the Congress passing the Agriculture Act of 1956, the Eastland Act, which contained the following provision—section 203, title II, Agricultural Act of 1956.

In furtherance of the current policy of the Commodity Credit Corporation of offering surplus agricultural commodities for sale for export at competitive world prices, the Commodity Credit Corporation is directed to use its existing powers and authorities immediately upon the enactment of this act to encourage the export of cotton by offering to make cotton available at prices not in excess of the level of prices at which cottons of comparable qualities are being offered in substantial quantity by other exporting countries. * * * Such quantities of cotton shall be sold as will reestablish and maintain the fair historical share of the world market for U.S. cotton, said volume to be determined by the Secretary of Agriculture.

Up until that point, the records will show, the Secretary was consistently giving out erroneous information, which he repeated again on February 16, 1959, before the Agriculture Committee of the House, stating that it was price supports which prevented sales in foreign markets.

At the same time he was continuously pointing out the high cost of storage, largely of his own making. He was not telling the American people that he was raising the rates while exercising his discretion, refusing to use the law which authorized him to sell competitively, and thereby was responsible for this increase in Government holdings, totaling billions of dollars.

As a matter of law, there is no relationship between the level of price supports and sales in world markets, because whatever the level of the price supports the charter of the CCC always has authorized competitive sales. The Secretary admits that fact on page 12, quoted heretofore.

After the passage of this act of 1956, the Secretary and the Department sold approximately 13 million bales of cotton in world trade during the years 1956–57 and 1957–58. Yet these hearings will show that in this current year of 1958–59 the Secretary agrees he has held U.S. cotton 4½ cents higher than comparative qualities in foreign countries, in spite of the provisions of law.

As a result, our sales this year were only about 1.8 million bales; and all the time the Secretary and the President—relying on the information given him by the Secretary—complain about the high cost of storage and the huge Government investment.

On February 3, 1959—page 25 of the hearings—under strong pressure from our committee and others, the Secretary agreed to offer cotton on a competitive basis and to carry out section 203 of the Agriculture Act of 1956, though it was only for August 1 delivery.

The very next day, February 4, 1959, the Department issued its announcement—USDA—34451—binding itself not to sell from CCC stocks even though it became necessary to do so to carry out the provisions of section 203 of the Agriculture Act of 1956.

When that happened, representatives of the Department were called back, and then agreed to carry out that law. As a result, a clarification of such announcement was issued on February 5, 1959, which stated:

If the payment-in-kind program does not prove effective, with reasonable export payments, the Department will be required to reinstate a competitive sales program (from CCC-owned stocks) to the point of reestab-

lishing and maintaining the fair historical share of the world market.

Now we read in the February 21, 1959, edition of the Washington Star a story with regard to the recent visit of President Eisenhower to Mexico, and the communique issued following the meetings of Mr. Eisenhower with President Lopez Mateos, of Mexico. I quote:

The communique said there was agreement that there should be cooperation and consultation between the two governments on the disposal of cotton. This might mean that Mexico will be protected in the future against sale abroad of U.S. cotton surpluses.

Mr. Speaker, reestablishing and maintaining our historical share of world markets is not "disposing of surpluses." I cannot believe even the President would feel he had the right to ignore the law, keep our cotton or any other commodity away from the needy people of the world, all to help Anderson-Clayton and other American firms in their operations in Mexico.

REBATES TO PRIVATE FIRMS

If you wish to see how the Department of Agriculture is really run, read the reports of our committee investigators. You will find the Department witnesses testified that it could not sell by sample the 8 million to 10 million bales of cotton which had been built up during the period the Secretary refused to sell in world markets. Yet the record shows that, as soon as this cotton was sold to private firms, the Department could and did sample; then they classed downward most of this cotton, which was by that time owned by private firms, and paid out approximately $135 million in rebates to the firms—a list of which, together with rebates received, is on pages 167 and 168 of the hearings. This, too, was charged up to cost of the farm program.

Our investigations—pages 372 to 379 of hearings—show that much of this cotton was sold in world trade by these firms at higher than the new class and much at higher than the original class, which to say the least gives our cotton a bad name abroad.

BENSON'S WAY OUT OF THE FARM MESS

Mr. Speaker, I have just read the article appearing in the February 6, 1959, issue of the U.S. News & World Report, entitled "Benson's Way Out of the Farm Mess." My reaction is that if we do not stop Secretary Benson's policies and practices the mess will get much worse. His way out is "more of the same." It is the result of the Secretary's own actions he uses to attack his own farm program, yet no one seems to catch on.

THE CORN STORY

Recently the Secretary has cited the vote of corn farmers against controls as evidence that farmers are coming to his views. Of course they voted against controls—Secretary Benson used his discretion, assured them $1.12 per bushel without controls. This fall he will literally have corn ears sticking out of his ears. However, I feel sure he will act surprised, point out Charlie Brannan was Secretary until 1953, and use the costs in further speeches against all price supports.

INCREASED CONSUMPTION OFFERS LITTLE

His own record proves him wrong in the view that reduced prices will increase total consumption of agricultural commodities. As prices have been reduced during the past 6 years, retail prices which control total consumption have gone up. On the other side, it is agreed generally that the American people, as a group, certainly do not eat too little; rather, according to the medical fraternity, it is too much.

Actually, under our system of selling for what the traffic will bear, if the farmer were to produce, at his own expense, all agricultural commodities and could give them away at the place of production, if the cost of harvesting had to be paid, and processors, transporters, handlers, wholesalers and retailers added what the traffic would bear, it would probably be only a short time before retail prices would be just as high, even though the farmer produced at his own cost and gave away the production. As evidence of that, I point out that with a 20 percent reduction in support prices for many farm commodities, retail prices at the markets have gone up. The American consumer might change what he ate; but it is doubtful if he would substantially increase the quantity consumed.

Even under Public Law 480, where we virtually give agricultural commodities to foreign governments, no effort is made to require sale by those governments at reasonable prices to their own people. Spain sells cotton we have given her to her own people for almost twice the price of cotton in the United States. So it goes. That practice certainly will not increase world consumption.

The Secretary and the President point out the limited number of commodities under fixed price supports. They make no note that many other commodities have price supports of the Secretary's own making. They ignore the fact that reductions in feed prices will bring down prices of livestock and poultry to disastrous levels. Too, they fail to show the millions the administration is paying out in direct purchases of other commodities, the cash subsidies to export perishables, the odious soil bank, the only real basis for which was to put cash from the Treasury in the farmers' hands, to offset their losses under Secretary Benson.

They ignore, too, the fact that price supports on these major commodities have the same lifting effects on other farm commodities that labor contracts by union labor have on wages of nonunion members. The effect is the same.

RESEARCH

The Secretary says the answer is research. We have more than doubled funds for research during the past 7 years. Research is good in its own right. Except for research, since 1940 farm costs would be up $7.5 billion, and the cost of living would be even higher. However, research results do not come fast enough to answer the farm income price problem. Costs go up and prices received go down faster than research can fill the gap.

INDUSTRIAL USE

The Secretary says a further answer is industrial use. Our committee investigated this possibility last year, after the Secretary's committee endorsed such proposal. We are making great advances in promoting the use of fats and there are a number of places where there seem to be some possibilities. However, in most places, the price for agricultural commodities would have to be too low to be of interest. Corn would have to be sold at 26½ cents per bushel to compete as a base for alcohol. Rice and wheat would make fine insulation board—but so will corn stalks, which cost nothing. So it goes. To me this outlet, while it offers some help, could not be expected to make any real dent in the problem.

ACREAGE CONTROLS—INCENTIVE TO INCREASED PRODUCTION

Mr. Benson has agreed repeatedly before our committee that efforts to control production by acreage will not work. I agree with him. Efforts to control production, as shown by the record of the Department, show that to limit the number of acres which any farmer can use for a crop is a great incentive to increase production. In addition to that fact, it also invites the farmer to make huge cash investments in each year's crop, thereby increasing the risk far beyond what is sound business. Many solutions have been offered. If we will only accept the record, the Secretary's solutions make the situation worse. We can then agree on a farm program.

If you are interested in what I suggest we do to improve the situation, read pages 45 to 49 in the hearings.

THE SECRETARY'S SOIL BANK: COME-ON FOR VOTES, 1956, ADDS $2.4 BILLION COST

Nothwithstanding the Secretary's acknowledgment that efforts to control production by acreage will not work—and you will note such acknowledgment in the record of the hearings—in 1956 he recommended to the President—and both he and the President recommended to the Congress—that for the so-called soil bank we pay out $1,200,000,000 to the American farmers in the fall of 1956, to take out acreage, after the President had vetoed the farm bill and the Secretary's policies had the farmers in bad financial shape. Significantly, this was just before the election. Further significant was the recommendation of the Secretary and President that the hundreds of millions of dollars in cash be paid out before the election, on the farmers' promise to take out acreage the following year. I wonder what would have been the reaction of the press and the Nation if a Democrat had proposed any such thing just before an election?

That program has cost the Federal Government nearly $2½ billion. It had little, if any, effect toward reducing production and the acreage reserve, costing $1.7 billions was junked this year on the recommendation of the Secretary and the President.

The conservation reserve section of the soil bank reached relatively few farmers—only 125,000 in 1957–58—and has committed the Federal Government to some $700 million to date; and we are stuck with some contracts from up to 10 to 15 years longer. Here, too, there has

been no real effect on production; and according to committee investigations all sorts of nefarious schemes were used in some instances to bilk the Treasury in connection with the program. Most of the lands rented had little real production history anyway.

From my work on the Appropriations Committee and my study of this whole matter, I am convinced the only excuse for either of these programs was to place in the hands of some farmers cash which they have lost under the policies of Secretary Benson. In the process, however, these moneys are pointed out as cost of the farm program by the same Secretary and at his instance by the President, in speeches which have served to inflame the American people against any farm program.

In an effort to scale the payments down in line with production actually removed, we wrote the following provision in the appropriation act of last year. I quote:

Provided further, That hereafter no conservation reserve contract shall be entered into which provides for (1) payments for conservation practices in excess of the average rate for comparable practices under the agricultural conservation program, or (2) annual rental payments in excess of 20 percent of the value of the land placed under contract, such value to be determined without regard to physical improvements thereon or geographic location thereof. In determining the value of the land for this purpose, the county committee shall take into consideration the estimate of the landowner or operator as to the value of such land as well as his certificate as to the production history and productivity of such land.

Instead of trying to scale payments down in line with production capacity removed by the rentals, the Secretary increased the rate substantially at greatly increased costs to the Treasury.

While wasting these hundreds of millions of dollars, the Secretary would virtually eliminate the agricultural conservation program, which is participated in by approximately 1,250,000 farmers who put up probably twice that much themselves in cash and labor.

The Secretary seems to be determined to pay out any amount to the few but to cut out that which helps the many, and the Nation. He even wishes to cut school lunch, raise the cost of electricity, and appears to be willing to do anything to eliminate the small farmer.

Despite his record, on February 16, 1959, before the House Committee on Agriculture, he used this expression:

To me, the answer to this problem suggests itself in letters of fire a mile high.

And then proceeded to ignore the failure of his policies. That expression sounds very much like that of a zealot.

Mr. Speaker, I repeat, while few seem to notice, it is the costs of the Secretary's own discretionary actions which he uses in his speeches to attack his own administration of agriculture.

If the Secretary had not willfully withheld U.S. commodities from the world trade at competitive prices, we never would have had this big buildup of commodities and foreign production would be much less. If he had not reduced these prices, thereby inviting increased production, our expenditures would have been greatly reduced.

It is surprising to me how he can make speeches such as he does and get away with it as though someone else had been Secretary of Agriculture for 6 years.

THE SECRETARY DRIVES A WEDGE

I started off by saying he had been successful in one thing: With consumer costs going up in spite of reduced farm prices, he has succeeded in driving away and inflaming the urban Members and urban people against any farm program. A balance between agriculture, industry, and labor is essential to a prosperous nation. If one goes down the others will follow.

The Secretary's course is dangerous, because history will show in these countries that are worn out today, the eroded lands came because those in control of the government insisted on food and fiber below the cost of production. It could happen here if the Secretary has his way and he continues to inflame the American people against the farmers to the point of pushing them back to subsistence levels. We will wear out the soil, the base of our prosperous country, and with time we will become like China and India.

This division he generates is far more serious than any problem I can think of, including the inroads he makes on the Treasury or the bad effect he is having on many farmers.

The damage will continue long after both the Secretary and I have passed from the scene.

CONGRESS SHOULD PREVENT REDUCTION IN PARITY INDEX

Therefore, I can and do recommend that the Congress now pass legislation preventing this back-door-change-in-parity means of reducing farm prices from becoming effective. Then we must make a study of each place in existing law where the Secretary has discretion and repeal the authority for him to exercise discretion. If we do not, our Secretary in exercising his discretion will put many more farmers out of business, and make further progress toward bankrupting the Treasury.

FURTHER INVESTIGATION NEEDED

I am today introducing a resolution which would provide for a special investigating committee to be set up by the House of Representatives to investigate the operations of the Department of Agriculture, including the $14.5 billion Commodity Credit Corporation. There is a real basis for such special investigating committee.

As our committee investigations show, this $14.5 billion Commodity Credit Corporation, dominated and operated by officials of the Department, has no real regulations or protection against outside influences nor the premature release of information.

Much has happened to arouse suspicions, to say the least. What makes it worse is that the more paid out in storage, transportation, interest, waste, rebates, or profits to other than farmers, the more it serves the purpose of the Secretary and the President—on the basis of information given him by the Secretary—in attacks against farm programs. This I believe dangerous to the future of our country.

I hope and trust I shall receive favorable action on my resolution.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. JOHNSON of Colorado. When the Secretary first came to the city of Denver, in the heart of my district, after the election in 1953, I heard him say that he wanted to move food out of storage and into stomachs. If I understood the gentleman correctly, he is stating that exactly the reverse has been the Secretary's policy in fact.

Mr. WHITTEN. Certainly in the first 3 years of his being in office. Even under Public Law 480, as far as I have been able to ascertain, there has been no requirement that the governments of foreign countries which really get the commodities are required or called on to sell such commodities at reasonable rates to their own people. For instance, on the cotton we virtually give to Spain under Public Law 480, they charge their own people twice as much as the cotton sells for in this country. So if we let these foreign nations, that is whom we give these commodities to, the foreign nations, that is, sell them for outlandish prices to their own people, you have not increased total world consumption.

Mr. JOHNSON of Colorado. Will the gentleman agree that the Secretary, perhaps, should be tested by that old phrase my mother taught me, "What you do speaks so loudly I cannot hear what you say."

Mr. WHITTEN. I would agree with the gentleman as to the saying but I say as of now with Secretary Benson it is working the other way—what the Secretary says sounds so loud that the public will not look at what he is doing.

Mr. HOEVEN. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. HOEVEN. I did not have the benefit of hearing all of the gentleman's speech. I hope he did not make a political speech.

Mr. WHITTEN. May I say to the gentleman that is always a matter of conjecture as to whether a man did or did not. In my judgment, I certainly did not. May I say to the gentleman from Iowa that the faults I find with the Secretary's policies, in my judgment, are the same faults that the gentleman from Iowa has found in numerous speeches on this floor. Finally, I would like to say that the tenor and the objective of my speech has been to urge the Congress and the Nation to judge the Secretary by his actions as Secretary of Agriculture. I think that is essential. In my efforts to get them to do this, I tried to point out the highlights as we know them in our Subcommittee on Appropriations for the Department of Agriculture which tend to show the absolute necessity of beginning to make the Secretary stand on his own record instead of pointing way back over his shoulder as though somebody else were doing these things.

Mr. SISK. Mr. Speaker, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from California.

Mr. SISK. I am sorry that I missed all of the gentleman's statement, but I do want to commend him on a very able presentation of the facts that I can agree with. My reason for asking the gentleman to yield was because of some recent, what I consider to be completely unfair, propaganda that has come out of the Department of Agriculture in the way of information purposely intended, in my opinion, to pit the consumer against the producers and against the farmers of this country. And, if the gentleman can spare me as much as 3 or 4 minutes, I would just like to read a few comments here with reference to some of these figures.

Mr. Speaker, the administration and the Department of Agriculture were guilty either of stupidity or deliberate falsehood in misinforming a member of the other body that four central California farm corporations received cotton price supports amounting to $1,857,677.14 in 1957. These funds were not subsidies or support payments. They were loans from the Commodity Credit Corporation, and 96¼ percent of the loan money was repaid—with interest. The Government received high-quality cotton for the remaining 3¾ percent.

Such statements by persons who knew or should have known that they were misrepresentations apparently are intended to divide our citizens and set consumers against farmers. They certainly are not calculated to produce calm consideration of a problem and to assist in working out long-range solutions on a basis which is fair to both farmers and consumers.

Let us take the case of the biggest central California borrower, Westlake Farms, Inc., of Stratford, Calif. True, Westlake Farms received a Commodity Credit Corporation loan of $854,450.67 on 5,611 bales of cotton. But by August 1, 1958, the deadline date for redeeming the loan, Westlake Farms had paid $820,912.08 to redeem 5,386 of the bales it placed in Government loan. In addition, Westlake Farms paid $9,890.02 in interest. If the 225 bales that went into the Government catalog were sold at a net loss of $50 a bale, which the Department of Agriculture claims is the average loss, the loss on this big transaction would have amounted to $11,250—scarcely more than the farmer paid in interest.

Another cottongrower, W. J. Deal, of Mendota, Calif., placed 2,419 in loan for $370,040.84 and redeemed the entire amount, paying $6,510.70 in interest.

As the gentleman from Arkansas [Mr. GATHINGS] pointed out so ably a few days ago, the Commodity Credit Corporation cotton program is a program to promote the orderly marketing of this storable commodity. The program prevents the market from being glutted at harvest time, thus helping to stabilize the price for the large grower and the small grower alike.

Now I hold no special brief for the large farming corporations. But I want to point out that no abuses of the existing agricultural stabilization program are involved in the acceptance by large farming corporations of Government loans. It is very unfair to try to place the blame for the costs of the Federal agricultural stabilization program on large cotton growers on the basis of these loan figures.

Let us consider what might happen if large cotton growers were denied such loans and only small growers could borrow from the Government to finance the orderly sale of their cotton crops. As was suggested a moment ago, the present program aids the small grower by protecting the price. If loans were limited to small growers, large producers would sell their crops at the world market price and the Government would be stuck with cotton it would have to sell at a great loss. The program would be much more expensive than it is now, and the economy would suffer for it.

I submit a table showing in detail the loan operations in 1957 of the four central California cotton growers referred to in the other body. It is interesting to note that if all the cotton these four growers let go into the Government catalog were sold at a loss of $50 a bale, the total loss to the Government would fall $677.36 short of matching the $23,727.36 that the growers paid in interest.

The table is as follows:

Commodity Credit Corporation loans to 4 central California cotton growers in 1957–58

Grower	Bales in loan	Amount loaned	Bales redeemed	Amount redeemed	Interest	Bales to catalog	Cost at loss of $50 per bale
Westlake Farms, Inc., Stratford, Calif.	5,611	$854,450.67	5,386	$820,912.08	$9,890.02	225	$11,250
W. J. Deal, Mendota, Calif.	2,419	370,040.84	2,419	370,040.84	6,510.70	0	----------
Frank and Jim Garona, Bakersfield, Calif.	2,387	350,290.43	2,266	332,233.12	3,980.08	121	6,050
Waldo W. Weeth, Coalinga, Calif.	1,898	282,895.20	1,783	265,982.16	3,346.56	115	5,750
Total	12,315	1,857,677.14	11,854	1,789,168.20	23,727.36	461	23,050

Mr. WHITTEN. I thank the gentleman. I would once again hope that he would check the hearings, which support my statements, because I will give page references and quote the record.

If the Secretary had not willfully withheld U.S. commodities from the world trade at competitive prices, as he admits he did, we never would have had this big buildup of commodities. If he had not reduced these prices, thereby inviting increased production, our supply would have been greatly reduced.

It is surprising to me how he can make speeches such as he does and get away with it as though somebody else had been Secretary of Agriculture for 6 years, but nobody seems to charge him with it at all, yet it is his own poor judgment and poor policy that has largely caused the situation.

THE SECRETARY DRIVES A WEDGE

I started off by saying he had been successful in one thing: With consumer costs going up, he has succeeded in driving away and inflaming the urban Members and urban people against any farm program. A balance between agriculture, industry, and labor is essential to a prosperous nation. If one goes down the others will follow. The Secretary's course is dangerous, because history will show in these countries that are worn out today, the eroded lands came because those in control of the government insisted on food and fiber below the cost of production. It could happen here if the Secretary has his way and he continues to inflame the American people against the farmers to the point you push them back to a subsistence level. You will wear out the soil, the base of our prosperous country, and with time we will become like China and India. This division he generates is far more serious than any problem I can think of, including the inroads he makes on the Treasury or the bad effect he is having on many farmers. The damage will continue along after both the Secretary and I have passed from the scene.

Mr. SISK. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include a table.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

THE FARM PROGRAM

Mr. BREEDING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. BREEDING. Mr. Speaker, I want to congratulate the gentleman from Mississippi [Mr. WHITTEN] for the fine statement he made today. I endorse wholeheartedly his remarks about the mishandling and bungling of our farm program by the Secretary of Agriculture, Mr. Benson.

I am a farmer. I have lived on a farm all my life. My roots, Mr. Speaker, are deep in American agriculture. It is particularly painful for one of my background to realize that we have in this country a Secretary of Agriculture who consistently has opposed programs for the best interests of the farmers.

The Secretary is supposed to speak for the farmer, just as the Secretary of Commerce speaks for business, and the Secretary of Labor speaks for labor. Yet we find the Secretary of Agriculture devoting a great part of his time in misrepresenting the position of agriculture and farmers to the public.

It is tragic that the Secretary has seen fit to try to turn the consumer against the farmer. He paints a picture of agriculture as a greedy, special interest group

which gouges the consumer and the taxpayer. This is grossly unfair to the farmer. And, Mr. Speaker, it is a disservice to the whole country. No one should try to turn group against group.

If Mr. Benson worked half as hard in helping farmers as he does in convincing consumers of the evils of the farm program, perhaps we would not be in the fix we are today.

Under Mr. Benson's administration, surpluses have increased, exports declined, and farm prices pushed down. He has had 6 years in office. He blames his present troubles on policies inherited from the previous administration. Perhaps the trouble is more basic. Surely, the previous administration is not responsible for the ineptness which marks so many of the Department's actions.

Also, Mr. Speaker, Mr. Benson has showed a cynical disregard for the intent of Congress whenever possible. The latest example of this is found in the price support levels fixed for feed grains for 1959.

The law specifically relates feed grain price supports to corn through comparative feed values. For example grain sorghums have 95 to 97 percent of the feed value of corn.

But what did the Secretary do? He fixed the price support of corn at $1.12 a bushel, which is equivalent to $2 per hundredweight. Yet for grain sorghums, which have 95 percent of the feed value of corn, he fixed a support price of $1.52 per hundred.

This is a totally unrealistic figure. Farmers in the Southwest cannot produce grain sorghums for this price.

No one should have been surprised at the Secretary's action. He has consistently lowered prices whenever he had the opportunity. Lower prices are a fetish with him.

Mr. Benson believes that cheaper prices will bring about reduced production. This is completely reverse to what actually happens when prices fall. Farmers desperately try to produce more to make up for the drop in income. This is an economic fact of farm life.

Mr. Benson loses sight of the fact that if farmers are to cut production, their income must be protected. Farmers are willing to make sacrifices of production but they need some assurance they can continue to remain in operation. I am sure the Secretary's policy of reducing prices is not the answer.

Again, Mr. Speaker, I want to commend the gentleman from Mississippi [Mr. WHITTEN]. What he said here today needed saying. His remarks should be carefully read by every Member of this House.

SUBCOMMITTEES OF THE COMMITTEE ON THE JUDICIARY

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that each subcommittee of the Committee on the Judiciary may have permission to sit during general debate during the rest of the week.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

PROPOSED ATOMIC-POWER FACILITY IN MAINE

Mr. OLIVER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Maine?

There was no objection.

Mr. OLIVER. Mr. Speaker, I have introduced House Joint Resolution 259, for the construction of an atomic-power facility in Maine, because Maine is a most logical location for such a developmental plant.

Atomic power is presently expensive, but its cost is expected to come down with further progress in reactor development. Obviously, it will become economically competitive first in this country in those areas where the costs of fossil fuels are high. Maine is one of the highest cost fuel areas in the United States.

The early demonstration of economic atomic power is an important objective because of its significance for the domestic economy and also to show our international leadership in developing the peaceful uses of atomic energy. President Eisenhower, the Joint Committee on Atomic Energy, and the Atomic Energy Commission all have stated that it is essential for the United States to fortify its world leadership in atomic-power development. The attainment of this objective can be speeded by emphasizing atomic-power development in those areas where the high costs of conventional fuels will enable the achievement of economic atomic power at an earlier date than elsewhere in the United States.

The latest Edison Electric Institute figures show that in 1956 New England's fuel costs averaged 5 mills per kilowatt-hour as compared with 2.9 mills for the United States as a whole. But these same figures show that in Maine and Vermont fuel costs per kilowatthour averaged 6 mills, twice the U.S. average.

In that year, the cost per heat unit—million British thermal units—for fuel burned in the steam powerplants of Maine averaged 45.3 cents. This is higher than the corresponding cost in any other State in the Union. It compares with a countrywide average of 25.4 cents and a New England average of 39.3 cents per million British thermal units.

Latest available figures—Electrical World—show that as of November 1, 1957, electric utility generating stations in Maine have a total installed capacity of 653,653 kilowatts, of which 350,633 kilowatts was in hydroelectric stations, 261,150 kilowatts in steam-generating stations, and 41,870 kilowatts in internal combustion stations. This means that my State is today dependent on a combination of hydro and steam generation for its power supply.

To provide the hydroelectric part of the combination for its future power supply Maine has, according to the Federal Power Commission's latest estimate, over 1,100,000 kilowatts of undeveloped power in its rivers. This includes 255,500 kilowatts in the St. John River Basin, 320,425 kilowatts in the Penobscot River Basin, 472,700 kilowatts in the Kennebec River Basin, 38,000 kilowatts in the Androscoggin River Basin,[1] and 69,975 in the Saco River Basin. In an average water-year this undeveloped hydroelectric power could contribute nearly 4½ billion kilowatt-hours of electricity.

In view of the fact that Maine's cost of conventional fuel for the generation of electricity is the highest of any State in the Nation, it would seem obvious that it should be one of the first States in which atomic power could be produced on a commercially self-supporting basis.

Furthermore, the availability of potential hydroelectric power, coupled with streamflow regulation in almost any part of the State would make possible a demonstration of the economy of a combination of atomic power and hydro power, including provision for pumped hydro storage if planning studies indicate that it would be desirable.

Papers delivered at last year's United Nations International Conference on the Peaceful Uses of Atomic Energy, held in Geneva, Switzerland, indicated that atomic power and hydropower will be natural working partners in the efficient power supply systems of the future. They made it clear that the most economical atomic power will be obtained from the use of relatively large generating units operated at a high load factor. This means, of course, that the first atomic powerplants should be planned as base load plants. One of the British papers pointed out that pumped storage hydroelectric plants to carry the peak loads could be associated with such nuclear power stations.

These arrangements also have been suggested in papers presented in this country. About a year ago at an Ebasco Services conference, an expert panel made the following prediction as to use of hydro capacity for carrying peak loads, particularly in connection with nuclear powerplants. The quotation is from "Electrical World" of March 10, 1958:

> The nuclear plant can be fitted nicely into a joint scheme with a pumped storage hydroproject. The first would carry the base load; the latter, the peak. The expected low-fuel cost of nuclear plants should make this even more attractive.

Maine is vitally interested in assuring ample supplies of electricity at the lowest possible cost for its homes and its farms, and to attract further industrial development.

We recognize that, in the long run, fuel-generated power is going to be required to provide a larger and larger part of any area's power supply even though it may seem today well endowed with waterpower. And we feel that, for Maine to participate in the country's future economic growth on a competitive basis, this means development of the technology of atomic power production to the point where it will be not simply competitive but truly low-cost power.

[1] There is about 113,500 kilowatts of undeveloped power in this basin, but only 38,000 of it is in Maine; the balance is in New Hampshire.

This position is fully supported in the address of Elmer L. Lindseth, president of the Cleveland Electric Illuminating Co., and chairman of the EEI Atomic Power Committee, at the Edison Electric Institute's 1958 convention. Speaking on the subject of atomic power, Lindseth described a second major impact of fully competitive nuclear power as the impact on our industry of the ultimate elimination of fuel-cost differentials between areas of this country. He continued:

As the cost of nuclear power is progressively reduced, it will become competitive first in high fuel-cost areas. Eventually, although it may be a number of years later, it will be competitive everywhere.

This single fact is, of course, going to cause a major shift in the economic and industrial geography of the United States.

Today, such industries as basic metals, alloys, and electro-chemicals favor locations where they can most cheaply obtain the large amounts of power they use. But with fully competitive nuclear power, they will be no longer restricted to the low fuel-cost areas of today. Determining factors in their location will be chiefly markets, raw materials, labor force, and available sites.

Obviously, this is going to provide hitherto unknown opportunities to a lot of power companies in their area development programs. Formerly fuel-poor areas will have new advantages for industrial prospects. Conversely, fuel-rich areas that have hitherto had advantages built on lower generating costs are going to have nationwide competition.

Location of developmental atomic power plants in Maine would also be beneficial to the atomic energy program from a dollars-and-cents standpoint. Because of Maine's present high fuel costs, the incremental cost of power from these early developmental atomic plants would be less in Maine, and the burden on the Atomic Energy Commission's budget therefore less, than in almost any other U.S. location.

I would also point out that our fuel costs in Maine are not too far below those of some of the Euratom countries, to which the United States is contributing millions of dollars to assist them to build atomic power plants. If this sort of program is good for Europe, it should be equally good for the high fuel-cost areas of our own country.

I, therefore, ask that the Joint Committee on Atomic Energy give careful consideration to my proposal that a demonstration atomic power facility be constructed by the Atomic Energy Commission in Maine. I would recommend that the project be planned in cooperation with the U.S. Corps of Engineers, so that ultimately it can be operated in coordination with one or more hydroelectric stations at multiple-purpose projects, for flood control and other purposes, in one or more of the Maine rivers, including the possible use of pumped storage to improve the economy and the demonstration value of the combined undertaking.

CONGRESS MUST ACT TO STAMP OUT NATIONAL RACKETEERING BY OUTLAWING TERRORISTIC CONSPIRACIES

The SPEAKER. Under previous order of the House, the gentleman from Florida [Mr. CRAMER] is recognized for 30 minutes.

Mr. TEAGUE of California. Mr. Speaker, will the gentleman yield?

Mr. CRAMER. I yield.

Mr. TEAGUE of California. Mr. Speaker, I have asked for this time for this purpose. I had wanted to get on the record this statement at the conclusion of the previous remarks of the gentleman from Mississippi [Mr. WHITTEN] in which he so vigorously attacked Secretary of Agriculture Benson. I should like to give another point of view. I represent an agricultural district, one which is about 12th to 15th in dollar volume in the United States. I can say without any fear of contradiction that at least 90 percent of my farmers fully support Secretary Benson and his policies.

The SPEAKER. The gentleman from Florida [Mr. CRAMER] is recognized.

Mr. CRAMER. Mr. Speaker, I have introduced today a bill to outlaw national conspiracies perpetrated by gangsters and hoodlums who use interstate commerce or interstate communications in furtherance of their terroristic activities, crimes, and rackets.

The bill creates a new crime known as a "terroristic offense" which is intended to be a catchall for all types of conspiracies of an interstate nature which presently, because of their interstate character, have been largely beyond the effective reach of local law enforcement.

The definition of a terroristic offense is "any offense proscribed by the laws of or the common law as recognized in any State relating to extortion, blackmail, murder, racketeering, narcotics, maiming, or assault with intent to inflict great bodily harm, and punishable by imprisonment in a penitentiary or by death." The penalties range from fines for lesser offenses to death for terroristic offenses involving murder.

All of America was astounded in November 1957 when 60 hoodlums, who were leaders or dons in the notorious Mafia, were discovered in convention assembled at a gangster's home in Apalachin, N.Y. The presence in one small town of so many fancy Cadillacs aroused the curiosity of a policeman who took down the numbers while the owners fled from their picnic at a barbeque pit to the woods where they hoped to escape detection.

A list of the guests present at the Apalachin party reads like a Who's Who in the gangster world.

One of the visitors identified himself as Louis Santos, of Havana, Cuba. Actually, Santos was Santos Trafficante, Jr., born in Florida in 1914, and son of the man by the same name who was reputed to be the Mafia chief of Tampa, Fla., in my congressional district. The elder Trafficante, for years, was active in the narcotics traffic and in gambling. His son, according to the testimony of John T. Cusack, of the Federal Bureau of Narcotics, was attending the Apalachin meeting as heir to his father's interests.

Here is what Mr. Cusack has to say further in regard to this promising young man:

It is interesting to note in passing that the New York County district attorney's office is now interested in bringing about the appearance of Santos Trafficante, Jr., of Tampa and Havana, for questioning before a grand jury in New York regarding the slaying of Albert Anastasia. According to the authorities, there is reason to believe that Anastasia's death was caused by a dispute regarding gambling concessions in a gambling establishment in Havana, which is operated by Trafficante. Trafficante, it should be noted, operates the nightclub and gambling establishment called the Sans Souci in Havana, and prior to this, Gabriel Mannarino, of 540 Charles Avenue, New Kensington, Pa., had an interest in this same club. Both Santos Trafficante, Jr., and Gabriel Mannarino were at the Apalachin meeting.

The city of Tampa in my district has one of the worst crime records in the United States. There are 19 unsolved sawed-off shotgun gang murders credited to gangsterism. Harry J. Anslinger, Commissioner of the Federal Bureau of Narcotics, tells me that Tampa is one of the principal ports of entry for the dope peddling traffic in the United States.

This $2 billion illicit business which ruins our youth and wrecks so many lives is controlled to the point of monopoly by the Mafia.

I have been deeply disturbed for a number of years upon reading about sawed-off shotgun killings in Tampa, 19 of which, as I mentioned before, remain unsolved. The nature of these killings and the fact that the perpetrators remain unpunished lend credence to the presumption that they are a part of an interstate conspiracy where the killer is shipped in for the job, or in the alternative, the code of the Mafia seals the lips of all parties involved. Some of these killings are identified with the multimillion-dollar bolita racket in Florida. So disturbed was I over a recent killing that I personally requested that the Department of Justice and the FBI investigate the matter and consider supplementing the efforts of the local law-enforcement officials. I was advised that even though the killing was of a gangland nature, there was no Federal crime involved and that, therefore, the Federal law-enforcement authority had no jurisdiction in the matter. The services of the FBI were even requested by the local law-enforcement officials but again the answer was that no Federal crime was involved. With the enactment of this legislation, a Federal crime in that instance would exist, presumably at least, and based upon this, a nationwide dragnet could be put into operation, which is the only method by which this national and international kill-for-money syndicate can be stamped out. I cite Tampa as an example of an area where Federal help is sorely needed.

In 1942 the Federal authorities broke up temporarily some of the Tampa-Kansas City gang of the Mafiosi by sending several Tampa residents to jail. In this case the Federal Government charged that heroin was being brought from Marseilles by way of Cuba and Tampa to Kansas City for distribution in the Midwest. Agents were able to get a microphone into the Kansas City hotel room occupied by one of the Tampa gangsters and a St. Louis hoodlum. The

phonograph record taken over the microphone recorded the Tampan as saying:

You know you don't have to worry about me. Whatever I know I am going to keep to myself. It don't do you no good to talk and have to face two or three ——— of ——— on the outside when you come out. They even asked me about the Mafia—

Said Antinori in a strained voice—

as if I'd say anything about that.

It is a fact that as fast as one of the Mafiosi is imprisoned, two others rise as replacements in the organization. How the conspiracies spread and how vast is its extent is given in an editorial published in the current issue of Life magazine. Recently, Life showed in detail how the national crime syndicate, headed by the Mafia, muscles in on numerous essential services, from garbage collecting to towel supplies—and especially jukeboxes, easy to control because easy to damage. And last week, says Life:

Ralph Kelly, an Elgin, Ill., jukebox operator whose income was cut from $14,000 to $7,000 when gangster Rocco Pranno became his partner, sat cowering before the McClellan committee, too terrified to talk. The sinister-looking Pranno was right beside him. "This is a tragic state," said Senator SAM ERVIN, JR., as Kelly refused to testify, "when a man in the shadow of the Nation's Capitol cringes in fear." Pranno, another witness testified, had threatened to put cement weights on Kelly's legs and drop him in the river.

Terror is nothing new in the world. Neither is crime. What is new, in the land of the free, is terror and crime organized on such a staggering scale that its overlords even hold their own secret conventions (as at Apalachin, N.Y., on November 14, 1957) and pass their own laws (one member, whose sentence was death, waited shuddering in the garage until he learned that it had been commuted to a $10,000 fine for trespassing somebody's jukebox shakedown territory).

That convention was flushed out only by the accident of a State policeman's curiosity of the sudden influx of expensive cars. But the accident revealed frightening facts about America's health, strength, and security. It revealed that a conspiracy, as secret as the Communist underground and certainly as dangerous, was operating without any of the surveillance and penetration which has all but destroyed the latter. The delegates came from all parts of the land, even from Cuba and faraway Italy. But nobody was following them. Nobody knew what they were up to. All the vaunted crime detection agencies—city, State, Federal—were equally in the dark and made to look equally impotent and foolish.

The Apalachin meeting was Mafia but my bill establishing the terroristic crime is aimed at all evil conspiracies—the anti-Semitic bombing of synagogues by out-of-State terrorists—the anti-American wrecking of public schools—the Neapolitan fraternity of the Commorra to which Al Capone belonged—and it covers likewise the racketeering practices of crooked union officials and locals, as revealed by the findings of the McClellan committee. It is also aimed at Murder, Inc.

Just this week end, a new book called "Brotherhood of Evil: The Mafia" was published by Farrar, Straus & Cudahy, of New York. Its author is Frederick Sondern, Jr., one of the roving editors of the Reader's Digest.

Thanks to Commissioner Anslinger, of the Federal Bureau of Narcotics, who wrote the foreword, I was given a prepublication copy of this excellent book. I recommend this book highly to every Member of Congress and to every public-spirited citizen who is worried and fearful about these terrible conspiracies that are flourishing so openly in our country. Here is what the new book has to say about Murder, Inc.:

Murder, Inc.—as the newspapers came to call it—was unquestionably the invention of three dons: Anastasia, Joe Adonis, and Frank Costello. Actually, it was not an invention at all. It was simply the transposition to the United States of an ancient Sicilian system. The three New York capi mafiosi had realized that the whole business of corporal punishment and eventual execution was being administered in a sloppy and dangerous manner. They must have, as one had in Sicily, a pool of trained, experienced, and reliable bravos who would maim or kill on order for a reasonable stipend. This seemed to them not only reasonable but imperative. * * * In less than a decade Murder, Inc., at the behest of its masters, disposed of approximately 130 rivals and recalcitrants with gun, icepick, cleaver, and rope.

When the organization was finally broken up—

Eight murderers went to the electric chair and 47 of their assistants to prison for long terms.

The New York district attorney's office was getting ready to arrest Albert Anastasia when he was shot while getting a haircut in the barbershop of a New York hotel. It is presumed that his assassins were Cubans imported from Havana at the behest of some of those who attended the Apalachin meeting.

I should interject at this point that the Department of Justice has established a special anti-racketeering division headed by Milton Wessel, a very capable young lawyer who happens to have been my classmate at Harvard Law School and who roomed next to me and who is now doing an outstanding job in continuing a thorough investigation into mobster activities, tying together the pieces so that, I am sure, he will show the existence of a gigantic national, and also international, criminal conspiracy that preys upon every American.

Now let us go back and examine the Mafia in order to find out how the evil doing was imported to America where it spread and its members increased like starlings.

The Mafia is not a lodge with a constitution and a definite set of officers nor does it have any particular name. It is sometimes called "L'Unione Siciliano" and sometimes it is called the "Society of Friends" which happens to be the official name of our good Quaker Church.

The Federal Bureau of Narcotics gives this description of the Mafia in America:

The Mafia in its present form is generally considered to have been organized in Sicily during the late 18th century as a resistance to the Bourbon-French conquest of the island, but to have rapidly degenerated into a society of criminals. The Mafia society as it is taken today must be considered synonymous with, or the outgrowth of, the old Black Hand and L'Unione Siciliano.

We consider the Mafia a well-organized secret fraternal order originating from the Palermo area of Sicily. Its members with few exeptions are all of Sicilian origin and are located in every prosperous city in the world, principally cities of Europe and North and South America, where profits in crime are the most lucrative.

The business of the Mafia is what we term the commercial crimes that prey on man's human weaknesses, such as the illicit narcotic traffic, organized prostitution, counterfeiting, bootlegging, organized gambling, loan sharking and extortion.

When the opportunity presents itself, the Mafia moves into legitimate business, selecting ventures where their strong-arm tactics and cash resources will quickly bring large profits.

Our extensive narcotic investigations of various members of the Mafia fraternity during the past 18 years have repeatedly shown a pattern of either infiltration or complete dominance of several legitimate fields including organized labor, the distribution of beer, liquor and soft drinks; the importation and distribution of Italian olive oil, cheese and tomato paste; the control of wholesale fruit and vegetable produce markets, the baking and distribution of Italian bread and pastry; the vending machine business of all types; the operation of night clubs, bars and restaurants. Their night club operations are frequently complemented through their interests in model and theatrical booking agencies and in musical recording companies.

Mafia members use front people, who are completely trusted, as the means to own and operate these various legitimate interests, and doing this they overcome licensing and income tax problems. Legally a "front man" could eliminate the actual owner, but this is seldom, if ever, done as these "front men" are usually a Mafia brother of minor rank and ability, or the members of the family of the actual owner.

In order to further their legitimate enterprises and cloak their illicit operations, Mafia members conduct a well-planned program of ingratiating themselves with people of all walks of life. Their modus operandi calls for interest and activity in community and church affairs, including generous contributions to charities, and to lead an ostensibly quiet family life. They are ever ready to entertain and do favors for the right people.

* * * * *

The following duties are required of Mafia members:

1. Reciprocal aid to all members in any case of need whatsoever.

2. An absolute obedience to the officers of the society.

3. An offense received by one of the members must be considered an offense to the entire society and must be avenged at any cost.

4. Never recur to governmental authorities under any circumstance for justice.

5. Never reveal the names of members or any other secret of the society.

It is difficult to say who is eligible to join the Mafia or who joins it today, whether there is a formal joining, or whether members, through family tradition, are just born into the society. It appears to us, however, that one becomes a member only through family sponsorship. The Mafia fraternal ties are strengthened through intermarriage which brings about an increase of loyalty to the society through the ensuing blood and family ties.

Between 1885 and the present day Mafia members have immigrated to the United States and settled in almost every principal city. During the last 38 years the immigration of the Mafia to the United States has been either clandestine or fraudulent. Many of these criminals fled Sicily to escape

arrest and prosecution for crimes or to seek more lucrative fields for crime in the new world.

The first Mafia members who came to the United States lived as parasites on the great wave of the Sicilian and Italian immigrants who sought the new way of life in America.

The Mafia-Black Hand criminals through violence, the threat of violence, kidnaping, murder and a general reign of terror, extorted vast sums of money from thousands of frightened, hard-working Italian immigrants. What they could not extort, these gangsters gradually gained through their swindles and crooked lotteries. With the coming of prohibition no group was better qualified to assume a dominant role in the golden age of crime in the United States than the Mafia. During the prohibition era Mafia members extended themselves through every part of the country to carry out their traffic in illicit narcotics and liquor.

With the end of prohibition, we find members of this fraternity continuing in their distribution of narcotics and increasing their activities in organized gambling, counterfeiting, and prostitution. During World War II we find them engaged in the black marketing of sugar, motor tires, meat, and in the counterfeiting of ration stamps.

Wherever the Mafia fraternity has gone the members have developed working arrangements with other mobs of the particular country, or with mobs in this country of various national origins. Non-Mafia gangsters often prefer doing business with a Mafia man because of his known reliability.

In almost every city in the Western World Mafia members are usually strong enough not to be pushed around or suppressed by rivals. However, our files indicate they prefer alliances and working agreements rather than open competition and the ensuing gang warfare.

* * * * *

The Mafia throughout the United States, Canada, Mexico, Cuba, Italy, and France is a fraternal organization divided into many different mobs, syndicates, or conspiracies. Members of the fraternity belong to one or more such groups which are often temporary in nature, organized usually to carry out one particular enterprise, such as importation and distribution of narcotics or the operation of a gambling den.

Policy, areas of influence and mutual cooperation in carrying out these various activities is arranged through the Mafia grand council. Rather than being one great unified crime syndicate, the Mafia is a union or association of many syndicates, composed of Mafia members and adhering to the tradition and policymaking directives of the order. As an example, at Apalachin the 58 identified conferees were not, in all likelihood, members of one conspiracy, but individuals who at different times over the years have been engaged with each other in various commercial criminal ventures.

Palermo, Sicily, is the ancient city and stronghold of the Mafia. From Palermo Mafia mobsters still operate throughout Sicily, Italy, Africa, and Europe, specializing at the present time in the smuggling of narcotics and cigarettes, bootlegging, and kidnaping. As recently as 1955 they launched a reign of terror in the Palermo area, in an effort to control the produce market and the lucrative citrus fruit trade of that city.

We are informed that the Mafia society is divided into units of 10 men. Each unit is supervised by a group chief and the group chiefs in turn by an area chief. The area chief would in all probability be a member of the grand council. The meeting at Apalachin, N.Y., should be considered a meeting of the grand council, although all persons in attendance at Apalachin may not be members of the grand council.

The recent Kefauver committee's investigation of crime by members of the U.S. Senate had this comment to make in the course of its hearings:

Senator WILEY. You are of Italian descent, and we want to make it clear, because I think all over America some of our best citizens are Italians. You think only relatively few of the Italian people are mixed up in this Mafia business?

SIRAGUSA. Yes, sir.

Senator WILEY. Have you any basis whatever to give us an estimate of the extent of the Mafia in this country?

SIRAGUSA. I would say that in all principal cities there are segments of the Mafia, and I would say that New York probably has the big bosses.

Senator WILEY. You have given us a pretty clear-cut factual statement showing Luciano's connections in Italy with the trade in this country. Have you any information to tell us whether or not Luciano has the power to enforce his connections here through threatening or coercion or through gunmen or any other methods? If he is the kingpin, we want to know how far his domain extends.

SIRAGUSA. From what I have seen, and I have spoken to some members of his gang here in an undercover capacity (the narcotic agent at the time was passing himself off very successfully as a big buyer of heroin from New York), I would say, if he is not the kingpin, he is one of the royal family. The fact that he receives large sums of money from American gangsters indicates to me that he has definite word in policy matters and that he is still deriving an income from American rackets.

Senator WILEY. You state that he is one of the royal family. Does that mean he has the power that he can enforce through gunmen and coercion and threats his mandate here in this country?

SIRAGUSA. Yes, sir. ("Yes, sir," was the way the agent said it.)

Now, in conclusion, I want to quote from the summary of Mr. Sondern's book, "Brotherhood of Evil":

The brotherhood still thumbs its nose at government. But legislators and public are beginning to understand its mentality and purpose. And something is being done.

The responsibility for the extent and menace of organized crime in the United States, the racketeering of which the Mafia is such an important element, rests on many shoulders. Most legislators, both State and Federal, have been either ignorant of the facts or lethargic. Many of our law enforcement agencies, Federal, State, and local, have not cooperated sufficiently because of traditional jealousies and jurisdictional disputes. Many of our courts, particularly the Federal judiciary, have too often put legalistic hair splitting above basic, realistic justice. The brotherhood has thrived as a result.

It is shocking and outrageous fact, for example, that not 1 of the 20 top mafiosi of the country who have brazenly defied various congressional investigating committees, have been cited for contempt and then voted in contempt of Congress, has been punished as of this writing. Accardo, Fischetti, Costello, Licavoli, and the others who have over and over sneeringly pleaded the fifth amendment have continued to stay safely and smugly behind the shield of a decision of the United States Supreme Court in 1951 which established the doctrine that a witness must give only his name and address; he need answer no further questions whatever—birthplace, business, finances; nothing. Lower courts, bound by this decree, have dismissed one case after the other. The code of omerta could not have been more firmly supported than by this action of our highest Court.

A formidable tide, however, has been gradually but steadily rising against the Mafia. At times during the last 8 years it has seemed to recede, but its momentum has actually been gaining through four principal phases—the Kefauver hearings, the Danial investigation, the consequences of the Apalachin meeting and now the McClellan inquiry. And for the brotherhood it is a dangerous tide indeed.

Only by the enactment of this bill or similar legislation can the answer to the question raised by the Life magazine editorial referred to herein, "Just who is running this country, anyway?" be found, as it should be, say the God-fearing, law-abiding people of America.

Generally, murder is not a Federal offense. While it is a State crime, local authorities may be incapable, because of the lack of personnel, scientific crime detecting equipment, et cetera, to properly investigate the crime and bring the perpetrators to justice. Since the perpetrators cross State lines and use interstate communications to carry out their nefarious deeds, their actions are, in truth and in fact, interstate in nature and therefore should properly come within the jurisdiction of the Federal Government.

In addition, there are many State crimes either recognized by State statute or State common law, in which interstate instrumentalities are used, and because of this latter circumstance, local authorities not having extraterritorial powers, cannot adequately go out to look for and ferret out evidences of the crime. The Federal Government could, however, and should do this.

It is the intent of this bill to bring the crime detection and prevention powers of the Federal Government into play by making available the services of the FBI, the Federal Narcotics Bureau, the Secret Service, and Federal scientific laboratories for the detection of the activities of secret criminal organizations, such as the Mafia, and for the apprehension of its offending members.

I trust that my fellow Members of Congress on both sides of the aisle will take the same deep interest in this horrible situation as I do. I told you how it operates in my own congressional district. You will find out that its network extends into many of your districts. I hope my bill will be taken up and considered in committee and that hearings will be held to assure that the bill, as offered, is an effective way to curb this cancerous growth in our country.

Allow me to point out that our police authorities, under this bill, will not have to seek out just the perpetrators of a crime. They now can seek out the conspiracy and the conspirators themselves, even though far from the actual scene of the crime.

I am dismayed that my bill cannot cover international aspects. We cannot tear out the Mafia implant in America and feel secure until the roots are chopped out in Sicily. Perhaps additional legislation should be written to take up the international aspects through the United Nations and with other governments that find themselves victimized by conspirational terrorism.

The purpose of my bill is to curb the activities of criminal syndicates such as Mafia, Black Hand, Murder, Inc., and so forth, engaged in organized crime in instances where Federal jurisdiction is lacking, with respect to offenses against State law which are perpetrated by means of interstate activities, and I trust immediate action on this legislation will be taken. The general public deserves this needed protection.

A BILL TO PUNISH THE USE OF INTERSTATE COMMERCE IN FURTHERANCE OF CONSPIRACIES TO COMMIT TERRORISTIC CRIMES AND ACTIVITIES, AND FOR OTHER PURPOSES

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the analysis of chapter 19 of title 18 of the United States Code is amended by inserting immediately after item 372 the following new item:

"373. Conspiracy to commit terroristic crimes; penalties

SEC. 2. Title 18 of the United States Code is further amended by inserting immediately after § 372 of such title the following new section:

"§ 373. Conspiracy to commit terroristic crimes; penalties

"(a) Whoever travels or causes another to travel in interstate or foreign commerce or uses or causes to be used any interstate communication for the purpose of committing any terroristic offense prohibited by this section shall be fined not more than $10,000 or imprisoned not more than 5 years, or both.

"As used in this section the term 'terroristic offenses' means any offense proscribed by the laws of or the common law as recognized in any State relating to extortion, blackmail, murder, racketeering, narcotics, maiming or assault with intent to inflict great bodily harm, and punishable by imprisonment in a penitentiary or by death.

"(b) If as a result of the violation of subsection (a) of this section any person is murdered, maimed or subjected to great bodily harm, the punishment shall be: (1) death, if any person is murdered and if the verdict of the jury shall so recommend; (2) imprisonment for any term of years or for life if any person is murdered and if the death penalty is not imposed; or (3) imprisonment for not more than ten years if any person is maimed or subjected to great bodily harm."

FEDERAL AID TO EDUCATION

Mr. FRELINGHUYSEN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. FRELINGHUYSEN. Mr. Speaker, on February 24 the gentleman from Montana addressed this body in support of his bill, H.R. 22. Under its terms some $11.5 billions would be expended by the Federal Government over a 5-year period to assist in the construction of schools or to help subsidize teachers' salaries.

During the course of his discussion—and I regret I was not present at the time—the gentleman from Montana criticized as "utterly inadequate" and "feeble and ineffectual" the administration's current proposal—H.R. 4268—in this field. He quotes with approval Senator MURRAY's description of the bill as a "legislative monstrosity." He asserts that it is "neither fiscally sound nor an appreciable help" to needy school districts.

Mr. Speaker, these are strong statements. Perhaps we should excuse the sponsor of a bill for using such language—even though it is unjustified—in his effort to state his own case. Certainly name calling is easy enough, and the gentleman from Montana must have heard uncomplimentary remarks about the value and advisability of his own bill. But the question remains whether inaccurate characterizations of proposed legislation will aid us in our search for moderate and realistic legislation.

Is the administration plan feeble and ineffectual? Let us seek an answer by comparing what H.R. 4268 might accomplish with what has been seriously considered by Congress in this field in previous years.

In July 1956 after prolonged discussion in committee, the so-called Kelley bill—H.R. 7535—was brought to the floor for consideration. Under its terms, some 80,000 classrooms would have been provided for over a 4-year period. This bill was defeated on July 6, 1956.

In 1957, the administration again made recommendations which, if enacted, would have provided 65,000 classrooms over a 4-year period. The bill reported out that year by the committee, H.R. 1, would have provided for 75,000 classrooms over a 5-year period. This bill was defeated on July 25, 1957.

Thus, we can see that the only legislation which has thus far received serious consideration contemplated participation by the Federal Government which would have helped build from 65,000 to 80,000 classrooms.

As the gentleman from Montana must know, if he followed Secretary Flemming's recent testimony before the committee, utilization of the proposed program of Federal advances to help provide annual installments on principal and interest could help support $600 million worth of school construction for five successive years. If a total of $3 billion were so supported, approximately 75,000 classrooms would be built. This, I need not add, compares favorably with all bills seriously considered in previous years.

But how, one may ask, could a Federal program which at its peak requires only $85 million annually build as many classrooms as the proposal of the gentleman from Montana? Perhaps more classrooms might be built under H.R. 22 if too much did not go to the subsidizing of teachers. No one knows first how the $11 billion kitty would be divided. However, one ardent advocate of this multibillion approach indicates that no more than 100,000 might be built in 5 years.

Mr. Edward Hollender, national director of the Americans for Democratic Action, testified vigorously in support of the Metcalf bill. He stressed the overriding importance of subsidizing teachers' salaries. He pointed out that States now apportion their own educational funds so that construction gets roughly one-third and teachers' salaries two-thirds. Mr. Hollender then predicted that a comparable allocation of Federal funds would make it possible to build 95,000 classrooms.

Thus we see, Mr. Speaker, that both bills may have the effect of facilitating the construction of roughly comparable numbers of classrooms. Some advocates of a multibillion dollar program just cannot seem to realize that a greatly reduced Federal expenditure might in fact be equally effective. And they seem to overlook the possibility that hard-pressed taxpayers might prefer the less expensive program.

The gentleman from Montana questions whether H.R. 4268 would help appreciably the needy school districts. It is undeniable that as much help, and as easily available help, would be provided by the administration's present proposal as would have been provided under prior proposals. Any school district which could have qualified under previous proposals could qualify under the terms of the new bill. And so long as such a district continues to be in need, it could continue to receive as much help as would have been made available previously.

Mr. Speaker, the only major differences in the new suggestion involves, first the period of time over which Federal and States funds are paid out, and second, a provision in H.R. 4268 for termination of such assistance if a district ceases to be needy.

The administration program is consistent with the overall fiscal policies established by the President. It is fiscally sound. It directs Federal aid where it is needed most, at the communities which cannot finance additional classroom construction, even with the execution of a reasonable tax effort. Despite contentions to the contrary, every State can participate in the program.

States can participate through, one, the grant of appropriated funds; two, through the loan of appropriated funds or, three, through commitments to advance one-half of annual installments of principal and interest on local bond issues. Previously legislation would have required States to participate through grants or not at all. The administration's present proposal thus affords greater flexibility, and increases its practicability.

SUNFLOWER ORDNANCE PLANT

Mr. GEORGE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and to include a resolution introduced by myself today.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. GEORGE. Mr. Speaker, at Sunflower, Kans., there is an ordnance plant that has many buildings. The equipment is up to date and ready to go on solid propellants. For some reason the military is not taking advantage of this plant. There is much unemployment in the area and the people are anxious to go to work. There is no reason why that plant and plants located at Lake City in Kansas City, Mo., and the facility

at Parsons, Kans., should not be utilized and we should like to find out why.

It is my belief that many millions of dollars are being wasted because of the failure to utilize existing facilities and that our military ordnance people are spending literally billions of dollars for private plants.

Just how economy minded is this national administration and which is the party of spendthrifts and wasters? Thank you, Mr. Speaker.

The resolution is as follows:

HOUSE RESOLUTION 192

Whereas the Sunflower ordnance plant located near Eudora, Kans., has been shut down for a considerable period of time; and

Whereas such plant, consisting of 2,887 structures and equipment, covering 10,474 acres, is not today being utilized, although such plant is now equipped to produce solid propellants; and

Whereas billions of dollars are being spent for the construction of private facilities which duplicate the facilities located at such plant which are already in being and would cost $474,312,147 to replace; and

Whereas unemployment in eastern Kansas is at a high level, and an ample supply of labor is available to resume operations at such plant; and

Whereas the operation of such plant would save large sums for the United States which are now being spent for facilities which duplicate facilities at such plant: Now, therefore, be it

Resolved, That the Committee on Armed Services, acting as a whole or by subcommittee, is authorized and directed to conduct a full and complete investigation and study for the purpose of ascertaining the reasons why the Sunflower ordnance plant, near Eudora, Kans., and other similar facilities in the Midwest area are not now being utilized, with a view to recommending to the House such action as may be appropriate with respect to the operation of such plant.

For the purpose of carrying out this resolution the committee or subcommittee is authorized to sit and act during the present Congress at such times and places within the United States, including any Territory, Commonwealth, or possession thereof, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary; except that neither the committee nor any subcommittee thereof may sit while the House is meeting unless special leave to sit shall have been obtained from the House. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

The committee shall report to the House as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable. Any such report which is made when the House is not in session shall be filed with the Clerk of the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. WALTER (at the request of Mr. FLOOD) for an indefinite period on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. ZABLOCKI, for 45 minutes, tomorrow.

Mr. JOHNSON of Wisconsin, for 1 hour, on Monday, March 9.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ZABLOCKI.

Mr. MACHROWICZ.

Mr. HECHLER and to include extraneous matter.

Mr. LANKFORD and to include extraneous matter.

Mr. O'BRIEN of New York.

At the request of Mr. MCCORMACK, the following Members to extend their remarks in the RECORD:

Mr. MCCORMACK and to include extraneous matter in each.

At the request of Mr. GEORGE, the following Members were granted permission to extend their remarks in the RECORD and include extraneous matter:

Mr. ZELENKO.

Mr. LOSER.

Mr. EVANS.

ADJOURNMENT

Mr. GEORGE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 11 minutes p.m.) the House adjourned until tomorrow, Wednesday, March 4, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of the rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

652. A letter from the Comptroller General of the United States, transmitting a report on the audit of the abaca fiber program, administered by the General Services Administration, for the fiscal year ended June 30, 1958 (H. Doc. No. 94); to the Committee on Government Operations and ordered to be printed.

653. A letter from the Administrator, Small Business Administration, transmitting a report covering the progress made in liquidating the assets formerly held by the Reconstruction Finance Corporation, covering the quarterly period ended September 30, 1958, pursuant to the Reconstruction Finance Corporation Liquidation Act, as amended (67 Stat. 230) and Reorganization Plan No. 1 of 1957 (22 F.R. 4633); to the Committee on Banking and Currency.

654. A letter from the President, Board of Commissioners, District of Columbia, relative to transmitting a copy of this year's report on the state of the Nation's Capital; to the Committee on the District of Columbia.

655. A letter from the assistant to the president, the American Academy of Arts and Letters, transmitting the official report of the American Academy of Arts and Letters for the year 1958, pursuant to section 4 of their charter; to the Committee on House Administration.

656. A letter from the Administrator, Veterans' Administration, transmitting a draft of proposed legislation entitled "A bill to extend the authority of the Administrator of Veterans' Affairs to maintain offices in the Republic of the Philippines"; to the Committee on Veterans' Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HAYS: Committee on Foreign Affairs. House Concurrent Resolution 34. Concurrent resolution favoring the meeting of the North Atlantic Treaty Parliamentary Conference for 1959 in Washington, D.C.; without amendment (Rept. No. 94). Referred to the House Calendar.

Mr. MORGAN: Committee on Foreign Affairs. H.R. 2575. A bill to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American Games to be held in Chicago, Ill.; without amendment (Rept. No. 95). Referred to the Committee of the Whole House on the State of the Union.

Mr. O'NEILL: Committee on Rules. House Resolution 190. Resolution for consideration of H.R. 3365, a bill to authorize the crediting of certain service for purpose of retired pay for nonregular service, and for other purposes; without amendment (Rept. No. 138). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 191. Resolution for consideration of H.R. 4413, a bill to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes; without amendment (Rept. No. 139). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LANE: Committee on the Judiciary. H.R. 1434. A bill for the relief of Mrs. Elba Haverstick Cash; with amendment (Rept. No. 96). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1457. A bill for the relief of Mrs. Sue Pyle; without amendment (Rept. No. 97). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1531. A bill for the relief of Cesar Garcia; without amendment (Rept. No. 98). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 1546. A bill for the relief of Georg Gahn and Margarete Gahn; without amendment (Rept. No. 99). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1600. A bill for the relief of Francis M. Haischer; without amendment (Rept. No. 100). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1601. A bill for the relief of Thomas A. Howe; with amendment (Rept. No. 101). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1605. A bill for the relief of Harry F. Lindall; without amendment (Rept. No. 102). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1611. A bill for the relief of Olin Fred Rundlett; without amendment (Rept. No.

103). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1632. A bill for the relief of Dean E. Fosmoe; without amendment (Rept. No. 104). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1653. A bill for the relief of Evelyn Albi; without amendment (Rept. No. 105). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1718. A bill for the relief of Oather S. Hall; without amendment (Rept. No. 106). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1736. A bill for the relief of John C. Matlon; with an amendment (Rept. No. 107). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1766. A bill for the relief of Mr. and Mrs. Moses Glikowsky; without amendment (Rept. No. 108). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2044. A bill for the relief of the estate of Richard Anthony Nunes, Jr.; without amendment (Rept. No. 109). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2050. A bill for the relief of Nissim S. Tawil, Esther Tawil, (nee Goldman), Solomn Tawil, Isaac Tawil, Kathy Tawil, Jacqueline Tawil, and Sarina Goldman; without amendment (Rept. No. 110). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2065. A bill for the relief of Arthur J. Dettmers, Jr.; without amendment (Rept. No. 111). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2104. A bill for the relief of Alfonso Giangrande; without amendment (Rept. No. 112). Referred to the Committee of the Whole House.

Mr. ASHMORE: Committee on the Judiciary. H.R. 2279. A bill for the relief of Mrs. Tyra Fenner Tynes; without amendment (Rept. No. 113). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2280. A bill for the relief of Adele M. Parker; without amendment (Rept. No. 114). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2586. A bill for the relief of Miss Mame E. Howell; without amendment (Rept. No. 115). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2602. A bill for the relief of William C. Hutto; with amendment (Rept. No. 116). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2668. A bill for the relief of John R. Cook; with amendment (Rept. No. 117). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2717. A bill for the relief of Eber Bros. Wine & Liquor Corp.; without amendment (Rept. No. 118). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2846. A bill for the relief of Dorman William Whittom; without amendment (Rept. No. 119). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2954. A bill for the relief of Joseph E. Miller; without amendment (Rept. No. 120). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3093. A bill for the relief of Mrs. Dorothy (Hyman) Monk; without amendment (Rept. No. 121). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3104. A bill for the relief of Col. John T. Malloy; without amendment (Rept. No. 122). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3111. A bill for the relief of Rachel Nethery; without amendment (Rept. No. 123). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3240. A bill for the relief of Mrs. Clare M. Ash; without amendment (Rept. No. 124). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 3249. A bill for the relief of William S. Scott; without amendment (Rept. No. 125). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3252. A bill for the relief of Mrs. Martha Nicometi; without amendment (Rept. No. 126). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3254. A bill for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes; without amendment (Rept. No. 127). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3406. A bill for the relief of William H. Pearlmutter; without amendment (Rept. No. 128). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3410. A bill for the relief of Mrs. Leonard O. Erickson; without amendment (Rept. No. 129). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3522. A bill for the relief of Aaron Green, Jr.; without amendment (Rept. No. 130). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3797. A bill for the relief of Mrs. Alberta S. Rozanski; without amendment (Rept. No. 131). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3798. A bill for the relief of Paul Nelson; without amendment (Rept. No. 132). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3825. A bill for the relief of Dr. Gordon D. Hoople, Dr. David W. Brewer, and the estate of the late Dr. Irl H. Blaisdell; without amendment (Rept. No. 133). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 4142. A bill for the relief of Wintford Jesse Thompson; with amendment (Rept. No. 134). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 4314. A bill for the relief of Samuel Abraham, John A. Carroll, Forrest E. Robinson, Thomas J. Sawyers, Jack Silmon, and David N. Wilson; with amendment (Rept. No. 135). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 4893. A bill for the relief of William R. and Alice M. Reardon; without amendment (Rept. No. 136). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 4964. A bill for the relief of Mrs. Betty L. Fonk; with amendment (Rept. No. 137). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ALGER:

H.R. 5164. A bill to amend section 103 of the Internal Revenue Code of 1954, relating to interest on certain governmental obligations, and section 10 of the United States Housing Act of 1937, relating to annual contributions in assistance of low-rent housing; to the Committee on Ways and Means.

By Mr. BOGGS:

H.R. 5165. A bill to amend Public Law 455 approved March 29, 1956 (H.R. 6309 authorizing the construction of the Mississippi River-Gulf outlet; to the Committee on Public Works.

By Mr. DIGGS:

H.R. 5166. A bill to prohibit certain acts involving the importation, transportation, possession, or use of explosives; to the Committee on the Judiciary.

H.R. 5167. A bill to prohibit certain acts involving the importation, transportation, possession, or use of explosives; to the Committee on the Judiciary.

H.R. 5168. A bill to amend and revise the laws relating to immigration, naturalization, nationality, and citizenship, and for other purposes; to the Committee on the Judiciary.

H.R. 5169. A bill to amend title 18 of the United States Code so as to prohibit certain acts involving the importation, possession, or use of explosives, and for other purposes; to the Committee on the Judiciary.

H.R. 5170. A bill to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes; to the Committee on the Judiciary.

H.R. 5171. A bill to amend the Fair Labor Standards Act of 1938 so as to increase the minimum hourly wage from $1 to $1.25; to the Committee on Education and Labor.

H.R. 5172. A bill to amend the National Labor Relations Act in order to permit supervisors to be considered as employees under the provisions of such act, and for other purposes; to the Committee on Education and Labor.

H.R. 5173. A bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas; to the Committee on Banking and Currency.

By Mr. HERLONG:

H.R. 5174. A bill to amend section 103 of the Internal Revenue Code of 1954, relating to interest on certain governmental obligations, and section 10 of the United States Housing Act of 1937, relating to annual contributions in assistance of low-rent housing; to the Committee on Ways and Means.

By Mr. HUDDLESTON:

H.R. 5175. A bill to amend the Interstate Commerce Act, as amended; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of Maryland:

H.R. 5176. A bill to amend title 10, United States Code, to permit the retention of chaplains as Reserve officers; to the Committee on Armed Services.

By Mr. LESINSKI:

H.R. 5177. A bill to terminate the retailers and manufacturers excise taxes (other than taxes for the highway trust fund and taxes for fish and wildlife purposes) and the excise taxes on facilities and services; to the Committee on Ways and Means.

By Mr. MORRISON:

H.R. 5178. A bill to provide for health and medical services for civilian employees in Government service overseas and their dependents, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 5179. A bill to amend title 14, United States Code, to provide for the patrol of the coastal waterways of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. ABERNETHY:

H.R. 5180. A bill to enable producers to provide a supply of turkeys adequate to meet the needs of consumers, to maintain orderly marketing conditions, and to promote and expand the consumption of turkeys and turkey products; to the Committee on Agriculture.

By Mr. ANDREWS:

H.R. 5181. A bill to protect the right of the blind to self-expression through organizations of the blind; to the Committee on Education and Labor.

By Mr. BAKER:

H.R. 5182. A bill to amend the Federal Employees' Compensation Act to provide compensation for the anatomical loss, or loss of use, of a procreative organ as a result of a personal injury sustained by a Federal employee while in the performance of his duty; to the Committee on Education and Labor.

H.R. 5183. A bill to protect the right of the blind to self-expression through organizations of the blind; to the Committee on Education and Labor.

By Mr. BENTLEY:

H.R. 5184. A bill to amend the antitrust laws by vesting in the Federal Trade Commission jurisdiction to prevent monopolistic acts or practices and other unlawful restraints in commerce by certain persons engaged in commerce in meat and meat products, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CLARK:

H.R. 5185. A bill to extend by 1 year the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Ways and Means.

By Mr. CRAMER:

H.R. 5186. A bill to punish the use of interstate commerce in furtherance of conspiracies to commit terroristic crimes and activities, and for other purposes; to the Committee on the Judiciary.

By Mr. DIGGS:

H.R. 5187. A bill to prohibit discrimination in employment because of race, religion, color, national origin, or ancestry; to the Committee on Education and Labor.

H.R. 5188. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men, and to advance the conservation, development, and management of national resources of timber, soil, and range, and of recreational areas; to the Committee on Education and Labor.

H.R. 5189. A bill to declare certain rights of all persons within the jurisdiction of the United States, and for the protection of such persons from lynching, and for other purposes; to the Committee on the Judiciary.

H.R. 5190. A bill outlawing the poll tax as a condition for voting in any primary or other election for national officers; to the Committee on House Administration.

By Mr. DINGELL:

H.R. 5191. A bill to provide for the establishment of a food-stamp plan for the distribution of $1 billion worth of surplus food commodities a year to needy persons and families in the United States; to the Committee on Agriculture.

By Mr. DULSKI:

H.R. 5192. A bill to amend section 703(b) of the Classification Act of 1949, as amended, relating to longevity step increases; to the Committee on Post Office and Civil Service.

By Mr. FORAND:

H.R. 5193. A bill to amend section 162 of the Internal Revenue Code of 1954 to provide that certain expenditures incurred in connection with measures submitted to the electorate shall be allowed as business deductions; to the Committee on Ways and Means.

By Mr. FOLEY:

H.R. 5194. A bill to establish the Chesapeake and Ohio Canal National Historical Park and to provide for the administration and maintenance of a parkway, in the State of Maryland, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 5195. A bill to define the status of retired members of the Armed Forces, and for other purposes; to the Committee on Post Office and Civil Service.

By Mrs. GRANAHAN:

H.R. 5196. A bill to increase the maximum rates of per diem allowance for employees of the Government traveling on official business, and for other purposes; to the Committee on Government Operations.

By Mrs. GREEN of Oregon:

H.R. 5197. A bill to amend the Employment Act of 1946 to establish policies with respect to productive capital investments of the Government; to the Committee on Government Operations.

By Mr. GUBSER:

H.R. 5198. A bill to establish a system for the classification and compensation of scientific and professional positions in the Federal Government, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 5199. A bill to amend the Internal Revenue Code of 1954 to provide that food and nonalcoholic beverages served at a roof garden, cabaret, or other similar place shall not be subject to the cabaret tax; to the Committee on Ways and Means.

H.R. 5200. A bill to provide that an individual's service on vessels of the Army Transport Service during World War II, if insufficient for a civil service retirement annuity, shall in certain cases constitute "employment" for social security purposes upon payment of the applicable employment taxes; to the Committee on Ways and Means.

H.R. 5201. A bill to amend section 522 of title 38, United States Code, to raise the income limitations applicable with respect to veterans entitled to pension for non-service-connected disability; to the Committee on Veterans' Affairs.

By Mr. GUBSER (by request):

H.R. 5202. A bill to amend title 38 of the United States Code to provide for the payment to veterans of an amount equal to the cost of repairing or replacing certain prosthetic and other appliances damaged or destroyed as a result of certain accidents; to the Committee on Veterans' Affairs.

By Mr. HALEY:

H.R. 5203. A bill to amend the Budget and Accounting Act, 1921, to provide for the retirement of the public debt by setting aside the first 5 percent of the budget receipts of the United States for each fiscal year for the sole purpose of retirement of obligations counted as part of the public debt; to the Committee on Government Operations.

By Mr. HARRISON:

H.R. 5204. A bill to equalize taxation and provide revenue; to the Committee on Ways and Means.

By Mr. HÉBERT:

H.R. 5205. A bill to amend Public Law 455 approved March 29, 1956 (H.R. 6309), authorizing the construction of the Mississippi River-Gulf outlet; to the Committee on Public Works.

By Mr. HERLONG:

H.R. 5206. A bill to amend the Internal Revenue Code of 1954 so as to reduce to 5 percent the manufacturers excise tax on self-contained air-conditioning units; to the Committee on Ways and Means.

H.R. 5207. A bill to amend the Internal Revenue Code of 1954 with respect to the basis (for determining gain or loss) of property acquired from a decedent; to the Committee on Ways and Means.

By Mr. KING of California:

H.R. 5208. A bill to provide that the tax on admissions shall not apply to admissions to a moving-picture theater; to the Committee on Ways and Means.

By Mr. McDONOUGH:

H.R. 5209. A bill to provide for the establishment of a U.S. Foreign Service Academy; to the Committee on Foreign Affairs.

By Mr. McMILLAN:

H.R. 5210. A bill to amend the District of Columbia Alcoholic Beverage Control Act to permit the Board to use its discretion in the case of the requirement relating to the serving of beer at public tables; to the Committee on the District of Columbia.

By Mr. POLK:

H.R. 5211. A bill to amend the Federal Employees Salary Increase Act of 1958 to grant certain increases in compensation to employees of the agricultural stabilization and conservation county committees, to bring employees of agricultural stabilization and conservation county committees within the purview of the Civil Service Retirement Act and the Federal Employees' Group Life Insurance Act of 1954, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. REES of Kansas:

H.R. 5212. A bill to revise the minimum charge on pieces of mail of odd sizes and shapes; to the Committee on Post Office and Civil Service.

By Mr. SAUND:

H.R. 5213. A bill to provide for the assessment of costs against the United States in the case entitled *"United States* v. *Fallbrook Public Utility District"*; to the Committee on the Judiciary.

By Mr. SCOTT:

H.R. 5214. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. SMITH of Kansas:

H.R. 5215. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. TELLER:

H.R. 5216. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. VANIK:

H.R. 5217. A bill to insure the equal protection of the laws to all persons regardless of race, color, religion, or national origin; to the Committee on the Judiciary.

H.R. 5218. A bill to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes; to the Committee on the Judiciary.

By Mr. WALLHAUSER:

H.R. 5219. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted from $1,200 to $1,800 yearly without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. WILLIAMS:

H.R. 5220. A bill to amend the Internal Revenue Code of 1954 to provide an exemption from the tax on club dues for nonprofit hunting and fishing clubs; to the Committee on Ways and Means.

By Mr. WITHROW:

H.R. 5221. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as

amended, and for other purposes; to the Committee on Ways and Means.

By Mr. ZABLOCKI:

H.R. 5222. A bill to provide for continuity and support of study, research, and development of programs for peaceful uses in science, commerce, and other activities related to Antarctica, which shall include, but shall not be limited to, gathering, evaluating, correlating, and dispersing of information and knowledge obtained from exploration, research, and other mediums relating to weather, communications, travel, and other areas of information; also to coordinate Antarctic activities among those agencies of the U.S. Government and private institutions interested in or concerned directly with the promotion, advancement, increase, and diffusion of knowledge of the Antarctic; and to direct and administer U.S. Antarctic programs in the national interest; to the Committee on Interior and Insular Affairs.

By Mr. DIGGS:

H.J. Res. 279. Joint resolution to establish the Emancipation Proclamation Centennial Celebration Commission, and for other purposes; to the Committee on the Judiciary.

By Mr. HARRIS:

H.J. Res. 280. Joint resolution consenting to an interstate compact to conserve oil and gas; to the Committee on Interstate and Foreign Commerce.

By Mr. MAILLIARD:

H.J. Res. 281. Joint resolution authorizing and requesting the President to issue a proclamation with respect to the 1959 Pacific Festival, and for other purposes; to the Committee on Foreign Affairs.

By Mr. ROBISON:

H.J. Res. 282. Joint resolution proposing an amendment to the Constitution of the United States relative to disapproval of items in general appropriation bills; to the Committee on the Judiciary.

By Mr. SAUND:

H.J. Res. 283. Joint resolution to authorize participation by the United States in parliamentary conferences with Mexico; to the Committee on Foreign Affairs.

By Mr. DIXON:

H. Con. Res. 94. Concurrent resolution favoring the operation of very high frequency television booster or repeater stations under certain conditions; to the Committee on Interstate and Foreign Commerce.

By Mr. GEORGE:

H. Res. 192. Resolution to authorize the Committee on Armed Services to conduct an investigation and study to determine why the Sunflower Ordnance Plant near Eudora, Kans., is not being utilized; to the Committee on Rules.

By Mr. MILLIKEN:

H. Res. 193. Resolution relating to TVA contracts; to the Committee on Public Works.

By Mr. PATMAN:

H. Res. 194. Resolution providing for printing additional copies of House Report No. 2713, 85th Congress; to the Committee on House Administration.

By Mr. SAUND:

H. Res. 195. Resolution authorizing investigation of the effect of imports of fresh fruits and vegetables on Imperial, Coachella, Palo Verde Valleys, and other southern California area growers; to the Committee on Ways and Means.

By Mr. WHITTEN:

H. Res. 196. Resolution to create a select committee to investigate and study the operations of the Department of Agriculture and the Commodity Credit Corporation; to the Committee on Rules.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By Mr. BOYKIN: Memorial of the Legislature of the State of Alabama to the Congress of the United States to call a convention, as provided by article V of the Constitution of the United States of America, to consider submitting to the legislatures of the several States for their ratification an amendment to the Constitution in substantially the following form: "No statute of any of the several States shall be held to be invalid as in conflict with any Federal statute, unless such Federal statute expressly provides that such statutes of the several States in conflict therewith are invalid"; to the Committee on the Judiciary.

By the SPEAKER: Memorial of the Legislature of the State of Alabama, memorializing the President and the Congress of the United States relative to requesting an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BOYLE:

H.R. 5223. A bill for the relief of the Moy King Foo family; to the Committee on the Judiciary.

H.R. 5224. A bill for the relief of Constantina Dina Koudounis; to the Committee on the Judiciary.

By Mr. BRADEMAS:

H.R. 5225. A bill to authorize the advance on the retired list of M. Sgt. Chester E. Games, U.S. Army (retired) to the grade of first lieutenant; to the Committee on Armed Services.

By Mr. CRAMER:

H.R. 5226. A bill for the relief of Vincent Ristorcelli; to the Committee on the Judiciary.

By Mr. DANIELS:

H.R. 5227. A bill for the relief of John Wrocenski; to the Committee on the Judiciary.

By Mr. GREEN of Pennsylvania:

H.R. 5228. A bill for the relief of Liliana Integlia; to the Committee on the Judiciary.

By Mr. HERLONG:

H.R. 5229. A bill for the relief of Patrick W. Gowan, David Dooling, Harlie L. Mize, James H. Blaes, and William L. Perkins; to the Committee on the Judiciary.

H.R. 5230. A bill for the relief of the Simpson Construction Co.; to the Committee on the Judiciary.

By Mr. HOLTZMAN:

H.R. 5231. A bill for the relief of Rita Charles; to the Committee on the Judiciary.

By Mr. MULTER:

H.R. 5232. A bill for the relief of Isidor Sturm and his wife, Olga Sturm; to the Committee on the Judiciary.

By Mr. ROONEY:

H.R. 5233. A bill for the relief of Zsuzsanna Reisz; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

91. By Mr. HORAN: Petition of 612 citizens of Sprague, Wash., urging that no increased taxes be enacted and that the Federal Government confine their expenditures to existing sources and limits of revenue; to the Committee on Ways and Means.

92. By Mr. KNOX: Two petitions of residents of the Upper Peninsula of Michigan in behalf of the sovereign state of Finland and its people; to the Committee on Foreign Affairs.

93. By the SPEAKER: Petition of the city clerk, of the city of Dunkirk, N.Y., petitioning consideration of their resolution with reference to the late Congressman Daniel A. Reed, distinguished citizen of Dunkirk, N.Y., and Member of Congress; to the Committee on House Administration.

94. Also, petition of Ray Willis, and others, Louisville, Ky., relative to requesting the impeachment and indictment of members of the U.S. Supreme Court; to the Committee on the Judiciary.

95. Also, petition of Mrs. Ruth B. Nelson, San Bernardino, Calif., relative to appropriating remuneration for her claim of redress of grievance; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

"Up Came Hill"

EXTENSION OF REMARKS

OF

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. O'BRIEN of New York. Mr. Speaker, too often the stress and strain of current events distort and exaggerate the geographical differences among our people of the North, South, East, and West.

In the broader area of national understanding, however, there are frequent and encouraging signs that ancient prejudices and hatreds are being buried beneath a recognition of the fact that a man's worth should not be measured by the geographical accident of place of birth or by the manner in which he approaches the pronunciation of certain syllables.

Recently, Congress in joint session heard a moving tribute to Abraham Lincoln. Countless people from the North think with affection of the gentle Robert E. Lee.

Any man who contributes to true historical perspective, recognizing ability and merit without respect to the Mason-Dixon line, deserves commendation.

That is why, today, I call attention to a great new book, "Up Came Hill," which brings to life a Confederate general, A. P. Hill, whose deeds too long have been hidden from the true light of history.

This book was written by a distinguished resident of my home city, Judge Martin Schenck. I know something of the monumental labor which went into this lively and readable book.

Most significant to me, however, is the fact that a busy northern gentleman should give so much of himself to provide full measure of historical right to a man who fought in the Confederate Army.

It is one more indication that we are, despite surface signs, a united nation.

Address of Samuel S. Stratton, of New York, at the Democratic National Victory Dinner, Sheraton Park Hotel, Washington, D.C., February 28, 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. McCORMACK. Mr. Speaker, on Saturday evening, February 28, 1959, there was held at the Sheraton Park Hotel a tremendous Democratic national victory dinner, which dinner was a great success. Among those who spoke at the dinner was our distinguished colleague, from New York, Mr. STRATTON, who made an outstanding address, which address was received with great enthusiasm.

Congressman STRATTON well said:

And yet the astounding fact is that last fall, in district after district, for all of our individual differences, people who never voted for a Democrat before in their lives, helped to elect Democratic Congressmen, Senators, and Governors. Why? Well, I think it was because people in all walks of life, people in both major political parties, big people as well as little people, even the farmers and small businessmen and workers of traditionally Republican upstate New York, turned to the Democratic candidates, not just because of a party label, but because all these people were desperately hungry, in such dark and critical days, for dynamic, energetic, creative, courageous and fresh political leadership in America. Disheartened, disillusioned, and disappointed with the past, they turned last fall almost as one to the candidates and the party that seemed to them to speak directly to their personal need.

His broad national outlook is also evidenced by the following nonpartisan remarks:

There can be no room today for narrow partisanship or for doctrinaire dogma. Ours must be a fresh, positive program that believes in the future of our land—one that is not tired, not discouraged, not obsessed with false shadows from the past—one which refuses to let America settle weakly for second place in the race for world survival but which is determined instead to see America grow into an even greater and a stronger land, where all may live together in freedom and in peace.

Mr. Speaker, in my extension of remarks I include the able address made by the gentleman from New York, Mr. STRATTON.

Commissioner Donohue, Bishop Hannan, Rabbi Siegel, Speaker Rayburn, distinguished guests, fellow Democrats, and those discriminating and farsighted Republicans you brought with you: You may recall that when Winston Churchill addressed a joint session of Congress in the early days of World War II he remarked, "If my father had been an American and my mother a Britisher, instead of the other way around, I might have made it into these halls on my own."

I know I speak for all my freshman colleagues in the House when I say that the possibility of making it into Congress on ones own is indeed one of the more magnificent features of the heritage of every American citizen. Those of us who were lucky enough to make it here last fall, not on our own exactly but with all kinds of help from all kinds of wonderful people, are already beginning to wonder just how we did it. Some of us may even be wondering how we are going to be able to do it again.

No one freshman Congressman, of course, can presume to speak for all of us. Each of our races was unique. People have asked me how, as the Democratic mayor of a Republican city that hadn't sent a Democrat to Congress in 42 years, I ever got elected. Well, the answer, I tell them, is very simple: I made myself so objectionable, they had to send me to Congress to get me out of town.

"Don't you miss being a big frog in a small puddle?" some have said, "now that you're such a small frog in such a big puddle?" Well, that's an easy one to answer too. Frankly, a mayor's job is all right, but I think it's wonderful just to be in the majority for a change. And such a big majority too.

You know, as mayor of Schenectady, I couldn't even promote myself a place to park in around city hall. So you can imagine the thrill I had the first day I arrived down here to see those signs around the House Office Building, "Reserved for Members of Congress." I drove right up there and parked, even before we had on our special tags. "Hey, you can't park here," the cop told me, "those are for Members of Congress." "Well," I said, "I'm a Member of Congress." "Oh, yeah," the cop said. You know, for a moment, I felt right at home.

And yet the astounding fact is that last fall, in district after district, for all of our individual differences, people who never voted for a Democrat before in their lives, helped to elect Democratic Congressmen, Senators, and Governors. Why? Well, I think it was because people in all walks of life, people in both major political parties, big people as well as little people, even the farmers and small businessmen and workers of traditionally Republican upstate New York, turned to the Democratic candidates, not just because of a party label, but because all these people were desperately hungry, in such dark and critical days, for dynamic, energetic, creative, courageous, and fresh political leadership in America. Disheartened, disillusioned, and disappointed with the past, they turned last fall almost as one to the candidates and the party that seemed to them to speak directly to their personal need.

And so tonight as we gather, quite properly, to celebrate our amazing victories of 1958, let us Democrats not lose sight of the fact that in our triumph we have also inherited a profound and far-reaching and solemn challenge.

For I am deeply convinced that the American people turned to Democratic leadership last fall because they realized that in Speaker SAM RAYBURN and in Senator LYNDON JOHNSON was embodied the kind of sober, responsible forthright, and forward-looking and energetic national leadership that they were seeking.

So it is for us, the rank and file members of the 86th Congress, working together in the days ahead, to bring the promise of that new leadership to real fulfillment in a constructive legislative program designed for all America.

There can be no room today for narrow partisanship or for doctrinaire dogma. Ours must be a fresh, positive program that believes in the future of our land—one that is not tired, not discouraged, not obsessed with false shadows from the past—one which refuses to let America settle weakly for second place in the race for world survival but which is determined instead to see America grow into an even greater and a stronger land, where all may live together in freedom and in peace.

If, as I believe, we Democrats of the 86th Congress do move forward to build just that kind of courageous and dynamic program, then we as a party need have no doubts that we will elect both a Democratic Congress and a Democratic President in 1960.

And when that happens—you and I will have won victory again, not just for ourselves, not just for our glorious party, but—what is even more important—for the future of the American people and for all who love liberty, wherever they may be.

Outstanding Federal Administrator and Federal Employee for the Year 1958

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. MACHROWICZ. Mr. Speaker, the Federal Business Association of Detroit grants annual awards to the outstanding Federal administrator and the Federal employee of the year.

On February 24, 1959, at the Veterans Memorial Building in Detroit, awards for the year 1958 were made to William T. Hunt, an outstanding Federal administrator and to Herbert S. Hubbs as outstanding Federal employee for the year 1958.

I believe this practice of the Federal Business Association of Detroit to be a very worthy one and conducive to the promotion of higher standards in Federal service. I congratulate the association on its practice and also the recipients on the honor bestowed upon them.

Mr. Hunt, manager, Michigan field office, U.S. Department of Commerce, at Detroit, was born in Arkansas and reared in Indian Territory, now Oklahoma. He enlisted in the Army in June 1917 and served 2 years overseas. Mr. Hunt was American Vice Consul in Barbados, West Indies, from 1920 to 1923. From 1924 to 1945 he had responsible domestic and foreign positions in private industry, including domestic production and sales management, and establishment of distribution and plants throughout Europe.

Joining the Department of Commerce in 1945 as assistant manager of the Detroit office, he was promoted to manager in 1946. His office has been most active in serving all business and the public in development and promotion of domestic and foreign trade.

During the Korean war, the National Production Authority under Commerce controlled the production, distribution, and use of strategic materials and promoted conservation. Mr. Hunt organized and directed this important and complicated operation in Michigan.

Mr. Hunt was sent to Thailand by his Department from 1954 to 1955 on the first

official marketing mission ever sent to a foreign nation in connection with an international trade fair. He is very active in many business and civic organizations, and holds and has held major offices in such groups.

Mr. Hubbs, shop superintendent, post ordnance, Fort Wayne, was born April 16, 1902, at Knoxville, Tenn. He has been a resident of the Detroit area since 1926.

He entered military service in February 1942 and immediately following his discharge in May 1945 he entered civilian Government service as an auto mechanic at Fort Wayne. Mr. Hubb's ability was immediately recognized and within a short time he was promoted to the position of shop superintendent.

Mr. Hubbs established and carried through a safety program which resulted in the Ordnance Division receiving the Fort Wayne merit award for safety performance.

As area fire marshall he earned for the Ordnance Division the award for outstanding performance in fire prevention and protection for both 1957 and 1958. In addition, he has personally received several outstanding performance ratings and several commendations from officers under whose commands he served.

Tax Relief for Retirement Plans for the Self-Employed

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. HECHLER. Mr. Speaker, one of the most cherished principles of constitutional government is equality under the law. As Members of Congress we have a special responsibility to see that the legislation which appears on the statute books affords equal treatment to all classes of people in America. Today I would like to raise my voice in support of legislation which is intended to achieve greater equality of tax treatment for those of the self-employed in this country who have the wisdom and the initiative to plan for their retirement years.

I refer, of course, to H.R. 10, introduced by our distinguished colleague from New York, the Honorable EUGENE KEOGH, which was recently reported out of the Ways and Means Committee. This measure was passed overwhelmingly by this body last session but died in the Senate Finance Committee. I wish to congratulate the Ways and Means Committee for their speedy handling of the bill this session. The Congress over the years has studied the Keogh-Simpson-Reed-Jenkins bills with a thoroughness which can be matched by its consideration of very few legislative proposals.

The purpose of H.R. 10 is to reduce the inequity of tax treatment between employees under qualified pension plans and the self-employed. Under pension arrangements which meet the requirements of the Internal Revenue Code, an employee is not taxed on the amount of the retirement contribution paid on his behalf until his retirement benefit is actually paid. This means, in most instances, that this amount will be taxable to the employee at a time when his income is much lower, because he has retired, than it was when the contribution was paid during his working life. Moreover, the employer can deduct the amount of this contribution to the employee's pension as a part of his cost of doing business. The self-employed individual, on the other hand, can get no deductions for the annuity contracts he purchases or the retirement investments he makes and his income is fully taxed at the time of his highest earnings.

H.R. 10 would modify this discriminatory situation by allowing self-employed individuals to take a tax deduction for a limited amount of investment in certain types of retirement annuities, or retirement trusts. The bill would make this deduction available to all self-employed individuals who fall within the meaning of this term as it is defined under the Social Security Act. It would also include doctors and certain ministers who are not self-employed for social-security coverage purposes. The allowable tax deduction would generally be limited to 10 percent of earnings with a deduction ceiling of $2,500 for a year and $50,000 for a lifetime. So that older persons who would have to build up their retirement plans within a shorter period of time would not be disadvantaged, the bill provides that the annual deduction ceiling could be higher for persons over 50 years of age on January 1, 1959.

The deductions would not be applicable to just any annuity contract or retirement trust fund. The annuity policy would have to provide for the starting of payments not later than the time the individual reaches the age of 70, the policy would have to be nonassignable, and if the policy includes a life insurance provision the premium on this portion could not be used for deduction purposes. Similar restrictions are put on the retirement funds authorized under the act. Amounts received by the individual from restricted retirement funds or policies will generally be treated as ordinary taxable income at the time they are received during his retirement years.

To prevent a person from withdrawing the funds invested under one of these restricted plans before the age of 65, a penalty provision is incorporated which, in most cases, would provide that the withdrawals would be taxed at 110 percent of the liability otherwise resulting from including such sums as taxable income.

The legislation presented has been accepted by a substantial segment of the English-speaking world. Great Britain's law on this subject in 1956 was based on the distinguished white paper of the Committee on the Taxation Treatment of Provisions for Retirement headed by Sir James Millard Tucker. Canada followed with legislation in 1957 and the proposal has been under active consideration in Australia and New Zealand. The bill in this country has undergone many revisions and the product we have here today has been modified to answer many of the objections that have previously been raised.

Most of the revisions that have been incorporated into the legislation since it was first considered by the 82d Congress in 1951 have been aimed at reducing the loss of tax revenue by the Federal Government if the bill is enacted. The present administration, although admitting "that the present law does not give self-employed people tax treatment for their retirement savings comparable to that now accorded to employees covered by employer-financed plans," nevertheless has felt compelled to oppose this bill at this time because of the revenue loss. The Treasury Department in its report has estimated that the revenue loss for fiscal 1960 would be $320 million and for the first full year of operation, $365 million.

Testimony before the Ways and Means Committee, however, has questioned the validity of some aspects of the Treasury Department estimate. For instance, some individuals who have studied the provision, believe that the revenue loss would be less than one half the Treasury estimate for the first full year of operation. These people maintain that the experience of Canada and Great Britain has been that the use of the deduction has started on a small scale and has grown slowly.

The fact that there will be revenue loss is axiomatic, of course, with a bill that affords tax relief. I think one is entitled to ask, however, whether this aspect alone can justify the further postponement of this legislation. The equities, in my view, are controlling in this situation and, therefore, I urge the passage of H.R. 10 at the earliest opportunity.

Four Hundred and Fifty-ninth Troop Carrier Wing Wins Safety Award

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LANKFORD. Mr. Speaker, it is with considerable pride and pleasure that I call the attention of my colleagues to the fact that the 459th Troop Carrier Wing, the Washington area's Air Force Reserve flying unit, has won the Continental Air Command's Flying Safety Plaque, emblematic of the best flight safety record in the command. A great many men of this wing are residents of Maryland's Fifth Congressional District, which I have the honor of representing in Congress.

Commander of the wing is Brig. Gen. Ramsay D. Potts, Jr., a prominent Washington lawyer in civilian life and one of the country's most decorated airmen in World War II.

The wing, composed of some 1,500 Air Force reservists who come to Andrews 1 weekend a month to train, have flown

over 26,000 hours and almost 5 million miles, never having an aircraft accident since their inception in July 1954. For the past several years, the unit has boasted their record as not only the best in the command but in the entire Air Force. The award at least substantiates part of the claim. Air Force records are not refined enough to check their performance against other units.

Giving more luster to the wing's accomplishment is the fact that the Federal aeronautics agency has designated the Washington area as one of the three cities with the highest air traffic density in the Nation, thus posing a hazard to flying training.

The award is made each year to the unit that rates the highest in each of the following four areas: (1) Utilization of assigned aircraft and the amount of flying time performed; (2) the mission of the organization and operational tasks accomplished during the period; (3) all other factors influencing the flying hazards faced by the organization, such as accident proneness of type of aircraft flown, air traffic density, weather conditions and terrain; (4) quality of the unit's accident prevention program.

I know I do not speak for myself alone when I say "congratulations" to General Potts and the men of the 459th wing for attaining this most outstanding flight safety record.

Statement in Support of H.R. 3090

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. ZELENKO. Mr. Speaker, at this time I wish to place in the RECORD the following statement I delivered today before Subcommittee No. 5 of the Committee on the Judiciary in support of H.R. 3090 and other civil rights legislation:

Mr. Chairman and my distinguished colleagues, I wish to thank you for affording me this time to speak in support of H.R. 3090. This legislation is similar to many of the bills now being heard by your committee to implement and to expedite progress toward the removing of the stigma of second-class citizenry from millions of first-class Americans.

Enactment of this type of legislation is immediately necessary for we have been most dilatory after nearly 200 years of our proclaimed credo of equality for all in making this principle a fact. In today's changing and turbulent world, we hear the birth cries of new nations achieving their independence. We hear the wails of those peoples whose equality and independence is being stifled and we see the tears of those whose equality has been taken away. These sounds and sights are apparent now not only to us in Washington but also to the Communist overlords in Moscow.

In the present world conflict, more important than the material assistance we offer these people and countries, is our promise to treat with them on the basis of freedom and equality. How can we hope to convince them of our sincerity when it is so apparent to them that millions of our own citizens are in second-class status?

Opponents of this and similar measures argue that this legislation is merely an attempt to destroy their customary and long secured way of life. I respect their opinions but disagree with them that it is in the best interests of our Nation to maintain their status quo.

The history of short-lived nations and civilizations is undisputed in one important respect—that no nation can long exist which is built on the subjugation, in greater or lesser degree, of a large segment of its people.

We, as the leaders of the free world, offer to other nations the principle of equity. By what logic do we refuse it to our own people?

Let us in the spirit, heritage, and requirement of our democracy pass this legislation which is popularly called civil rights but which is freedom rights.

Some Facts About the Budget

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. EVINS. Mr. Speaker, in my newsletter last week I called the attention of the people of the great Fourth District of Tennessee, which I have the honor to represent, to some facts about the President's budget which have not received as much discussion and consideration as, in my view, they deserve.

Under unanimous consent, I am inserting this newsletter in the CONGRESSIONAL RECORD. The newsletter follows:

SOME FACTS ABOUT THE BUDGET

The Appropriations Committee of the House is continuing its hearings, studies, and consideration of all aspects of the President's budget proposals.

Everybody wants economy in Government and everyone wants a balanced budget for the Nation. These are the objectives to be desired. However, in the widespread discussions and debates about the limit and extent of the budget, there are certain facts that have not received much discussion.

For example, we hear much talk about "the wild spending in the Congress." What many sometimes do not realize is that much of this so-called wild spending comes about by the recommendations of the President, his Director of the Bureau of the Budget, and the members of the executive departments. In this connection, it should be pointed out that since 1952 the Federal budget has increased from $60 billion to $80 billion. This year the President is proposing an overall budget of $77 billion. Every year since 1952, the President has presented to the Congress larger budgets, calling for increased Federal expenditures. Every year—with the exception of last year when we were threatened with an economic depression—the Congress has reduced the budget by several billions of dollars and in 1957 by some $5 billion.

Members of the Appropriations Committee, during the current hearings, have been somewhat startled—and certainly it has been revealing—to note that every head of each executive agency, without exception, is asking for increased personnel, increased appropriations and a larger budget for their own departments. This includes the Budget Bureau itself, which is asking for an increase of 5 percent in new appropriations; and the White House where the budget has been increased by 33 percent in the past 2 years, and even the Secretary of the Treasury.

After making this closer look at the President's budget, it is apparent that the President is not recommending that spending be reduced in certain areas but rather increased. The proposed economies in the budget are almost entirely in the field of investments in new assets for the Nation, such as public works projects, the development of our own resources and loans that are repayable. In other words, the President's budget calls for cuts in capital assets and investments in the Nation and for increased expenditures in other departments. This means more spending and less investment.

Some news reports have indicated and great claims are made that the proposed budget is a balanced budget. There are several contingencies which are not realized and in all probability will not be realized. Therefore, the budget is not in reality balanced. These contingencies include again raising the postal rates to the people of the Nation—to which the Congress is not likely to give its approval—(2) increasing again gasoline taxes—(3) not considering supplemental appropriations requests, of which there are annually several in number, and (4) the sale of national mortgages and securities held by the Treasury, which would bring in some income to the Government if sold at reduced rates and with profit to private investors. In considering these contingencies and on second examination, the proposed budget is not in fact balanced because these contingencies are not likely to materialize.

The Congress will address itself to the merits of the various proposals and no doubt will approve some of the recommendations, alter and amend others and substitute, in several instances, the collective judgment of the elected Representatives of the people in substitution for departmental recommendations. Keeping in mind previous action of the Congress, it is very likely that the final budget, after all these adjustments, will come closer in reality to being balanced than the budget presented to the Congress and now under consideration.

Address by the Honorable Clifford Davis Before the Fire Department Instructors Conference, in Memphis, Tenn.

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an excellent address by our colleague, the Honorable CLIFFORD DAVIS, before the Fire Department Instructors Conference, in Memphis, Tenn., on Tuesday, February 24, 1959.

CLIFFORD DAVIS is a brilliant speaker and I am sure the people attending the conference appreciated him taking the time out of his busy schedule to speak to them. The address should be read by every person interested in fire prevention and fire fighting. It follows:

Mr. Chairman, ladies and gentlemen, I acknowledge with genuine gratitude the honor which you have accorded me today. This is the second time that I have had the pleasure of speaking on an occasion of this

character. Six years ago we met on the 25th anniversary of the establishment of the Fire Department Instructors Conference, and now I am grateful for the opportunity to discuss with you briefly the past 25 years in Memphis.

On this occasion it is natural for me to give you the unusual history of these many annual meetings in our city of Memphis. Soon after I assumed the office of fire and police commissioner I was able to name the late Irby Klinck, chief. He was one of the most beloved and finished firemen I have known anything about. A man of courage, ability and high character, he became my genuine, devoted friend and a loyal worker in the truest description of the term.

I shall never forget the chief coming to me one morning 25 years ago and stating that we had an opportunity to entertain this conference. In those days we were making every effort to make more efficient a fire department which had already shown fine progress.

Chief Klinck was a natural-born firefighter. For the first time in the history of our department he recognized as chief the value of training, fire prevention, and the development of more scientific methods in combating fire.

Recognizing the possibilities of such a meeting, I went to work enthusiastically as fire commissioner to support him.

In that first Memphis meeting only 106 men registered from 18 States, but it did not take me long to see the extreme value of the organization to the Memphis Fire Department and to the Nation. In those days our dear friend, Richard Vernor, who has since gone to his reward, was the dynamic originator and leader in this whole program. He was truly a dedicated man.

On the concluding day of the conference I took the platform and urged him to bring the conference back to Memphis the next year and was even so bold as to suggest that this should be the permanent meeting place of the meeting. He and his associates considered the invitation and returned. Originally we met in the fire headquarters, a rather antiquated building even in those days.

It was our idea that the department serve a daily complimentary luncheon. My warm friend, Mayor Overton, who is now deceased, fairly hit the ceiling when he signed the voucher covering a payment for onions, potatoes, and coffee, for the fire department. I know that you are still eating at noon and that the department is participating in those luncheons. Who pays for the 2,500 odd plates represented by the fantastic increase in attendance last year, I do not know, but if the city of Memphis is taking care of the entire cost, it is still ahead.

To me it is inspiring to know that John Klinck, now the chief officer of this department, is following in the footsteps of his splendid father in his recognition of the dividends which come from this conference, and is giving his best as co-chairman of this meeting.

I had the pleasure to give John Klinck his first employment. He came to the service upon completing his high school work. His father and I thought it would be temporary. Possessed of all the fine attributes of that father, he brought to this place of responsibility a scholastic education not possessed by his father. In addition he had the vision of youth and an amazing ability for organization.

I am delighted to know that my successors in the office of fire and police commissioner have supported the department and this conference, but I am simply delighted and thrilled with the accomplishments made under the direction of Commissioner Claude Armour.

To my mind, he is one of the best informed, most industrious fire commissioners in all of this country. His knowledge of firefighting organization, his vision for the future are outstanding.

On Sunday when I went through the Claude Armour Training and Communications Center, so appropriately named in recognition of his service to Memphis and the Mid-South, I could not help but think that this building and everything that goes within it shall ever stand as a lasting momument to his effectiveness and worth in this field.

I could not help but be just a little envious when I learned that already a million dollars had been expended in this center, and when completed its value should approximate $2½ million. When I left the city as fire and police commissioner, 19 years ago, our fire department budget for all purposes was only a million dollars.

But in these last 19 years this city has just about doubled in size, populationwise. In industry, manufacturing, finance, and in all other segments of the economy, it has grown even more amazingly. With the additional area more men, fire stations, and equipment have been required. It has taken very careful planning on the part of the commissioner to provide all of this, as he has done so well.

So it is quite natural today that I should tell you that the spirit of this department, its development, its growth, its acceptance of scientific and specialized techniques, must relate itself directly to the very spirit of this Fire Department Instructors Conference.

Memphis is proud of the finest firefighting equipment in the country, and the department is composed of intelligent, well-trained, and high-spirited men from top to bottom. Memphis has gone on to win fire awards too numerous to mention. Your conference has brought to Memphis, the South, and to the Nation, a clinic so valuable that no one will know the number of lives saved, the property conserved, and the scientific gains accomplished.

This conference is unique in that there is no promotion, no politics, and no organizational difficulties. The annual attendance has grown fantastically.

Represented by a group of serious-minded people in exchanging ideas and experiences to be mutually helpful, this organization has grown without promotion on its own through a real job of program development by the Western Actuarial Bureau, and superb planning by the Memphis Fire Department and the cooperation of intelligent, experienced, and wise officers and instructors from fire departments throughout the land.

Unselfish appearances of learned professors and scientific minds from the colleges and universities along with the appearance of governmental officials and representatives of industry and business have made this conference outstanding.

It was in this very city that the first demonstration of a civil defense municipal control center was demonstrated. It was here at this meeting that 50 industries sent their people in 1952, as did over 50 bases of the Armed Forces.

During World War II, the chiefs of 105 explosive ordnance plants were in attendance. While many of you return from year to year, there is still a turnover of 40 percent which denotes the permanency of the organization on the one hand and the opportunity to sow the seed of ambitious progress on the other.

Fire is as old as the world itself. We have but to go back to history to see the damage that it has wrought.

In Rome, about the year 46 B.C., Julius Caesar had nearly completed the construction of the Basilica Julia, a magnificent law courts building, when it was almost destroyed by fire. After the assassination of Caesar 2 years later, Augustus completed the structure as Caesar had intended. Even after all these years, the platform still remains a relic of architectural antiquity and of a serious fire of ancient history.

In the year 64 years after Christ, Rome was nearly destroyed by a fire that burned for several days.

Passing on to 1666 history records the great London fire which consumed the ancient Cathedral of St. Paul, 86 churches, the royal exchange, customs-house, hospitals, libraries, and prisons.

Previous to the year 1795, the town of Boston, then such a flourishing city of science, culture, and enterprise, was visited by a score of fires extensive in their destruction and frightful in desolation. The distressing calamities which had come to Boston from destructive fires induced the people to make the prevention of fire and the relief of sufferers one of their firts objects of charity and philanthropy. The National Fire Protection Association, so ably directed by Percy Bugbee, today has its headquarters in that city of Boston, which appreciated the importance of early fire improvements.

I could go on to mention the New York City fire of 1835 and many others. Perhaps the most spectacular fire in all history, which turned the thoughts of the Nation more vividly and intelligently to improving building ordinances and the beginning of firefighting techniques, was the great Chicago fire which began on Sunday evening, October 8, 1871, in the O'Leary stable.

Would that I had time to review again the dramatics and the serious consequences of this conflagration, but suffice to say that in its fury demon fire knows not wealth, nor creed, nor race, nor station in life. When the last glowing ember had been extinguished, in that Chicago fire, 17,000 homes were in ruins, 90,000 were homeless, 300 lives had been lost. Property, valued even in those days of values, reflected a loss of more than $200 million, and five square miles lay a smouldering waste.

But one may say, "Those fires occurred many years ago. Haven't our improved firefighting equipment, our more drastic fire laws, and better-trained firemen made such holocausts impossible?" The answer is "No."

Every year we have some 40 major fire catastrophies in which large areas of cities, towns, and forest lands are burned and hundreds of lives are lost.

We have but to remember the tragic Cocoanut Grove fire in Boston, in 1942, and the Rhythm Club in Natchez, Miss., a year before. Except for the number of fatalities, it was the same ghastly story as its successor in Boston—a crowd beyond capacity, insufficient exits, flimsy drapes and decorations that burned like gunpowder, frantic guests fighting for their lives and falling unconscious.

Then there was the Winecoff Hotel fire in Atlanta. The terrible Bar Harbor, Maine, destruction, and we remember afresh, vividly and with sadness the unfortunate school fire in Chicago last year.

All of these fires which I have mentioned made headlines because they reeked with tragedy, drama, and sensationalism. Yet these great conflagrations are but a fraction of our fire losses. For every great fire that is broadly publicized, thousands of American homes are burned without mention in current news.

The flame of a gas stove, the burning match, the lighted cigarette, the electric iron, the toaster on the breakfast table all become symbols of disaster.

A fire breaks out in the United States every 20 seconds. A human life is sacrificed every 44 minutes.

It is a well-established and accepted fact that the power of ignition inherent in animal and vegetable substances is often the cause of spontaneous combustion. Cotton, shavings and sawdust, hemp, flax, oily and greasy rags or rubbish, charcoal, turpentine,

paint materials, tarred rope, felt and sulphur are susceptible to low degrees of heat and are often the cause of fire.

There is nothing more frightful than the onrush of a blaze. The hurtling speed, the roaring motors of pumpers, of ladders, and hose trucks, the chorus of bellowing sirens, the grim faces of firemen precariously hanging on the hand rails, the opening furrow in traffic ahead as the right-of-way is given to fire fighters, the first glimpse of the lurid blaze and billowing smoke, the throbbing of the pumping engines, the clatter and thud of rising ladders, the orderly tangle of hose lines, hoarse shouts of command, the impassioned calls, "Water! Water!" the hissing streams from nozzles gleaming in the glare of searchlights, the hideous crackling and grumbling of flames, the heroism of unselfish men, the back-breaking drudgery, the discipline and orderly procedure, the skill and the knowledge gained from experience and at fire school, the complexity of the fire equipment, the drama, the tragedy, the heartbreak, the terror of victims, and the horror on the faces of an assembled crowd found at every fire make for a common understanding of the role that the fireman plays in our everyday life.

As we have seen gains in our march to improved pumping machinery, safety devices, water systems, we must not lose sight of the value of education. We must recognize the importance of the school program with its fire drills. The lessons learned by the young ones will be taken home to parents.

Fire Prevention Week, so effective in so many places, must be strengthened and encouraged. We must never overlook an opportunity to encourage civic and luncheon clubs in the consideration of fire problems.

Newspapers have always been effective and willing to dramatize the spectacular. We must ever be alert to give them short, effective and readable stories on how to prevent the smallest fire.

The night watchman, who for centuries has smoked a pipe and pulled his clock, must be taught the simple rudiments and later advanced by degrees to a better understanding of his tremendous task.

The radio and television may be used to inform and enlighten the people. The chief officer of the fire department today may well use a television film of actual fires for post mortem material, study, and improvement.

We know today that effective apparatus must be used and speed attained in conveying it to the scene of action. It has long been axiomatic that you can never make up on the road for the time you lost in the firehouse.

A smart fire officer encourages the utmost assistance from representatives of light, gas, telephone, and water utilities. Often these men go unnoticed and unrecognized, but it is they who cut electric lines, remove the danger of high power systems, and add to the sum total of safety.

It is the endeavor of all firemen to find every arrangement that will insure the application of water or chemical on a fire in its early stage. The wooden shingle has gone but new problems in construction are with us. Old hazards may have passed away. Gas is no longer used for illumination, but electricity has changed the construction of mercantile establishments and air-conditioning systems close many buildings tightly, leaving no easy places for ventilation. Plastics and chemicals have come a long way, as has television, the use of natural gas and now, atomic energy.

The Claude Armour Training and Communications Center, and all of our educational programs must advance to meet the requirements of specialization.

Uppermost in the minds of all the people at this moment is the conservation of our resources, the conservation of health, education, and opportunity. Water is short in many parts of the country. No longer can fire departments waste this valuable asset. Indeed, so-called wet water and chemicals and scientific use of this powerful weapon must be continually improved.

Communities that have put forth extraordinary effort in teaching fire prevention and the enforcement of fire laws have been rewarded by a substantial decrease in the number of fires, the number of lives saved, and the amount of property destroyed or damaged.

In this short period of a luncheon talk, I have tried to cover a lot of ground. But I am the first to admit that much more should have been said. If a description of the beginning of this conference in Memphis, the long historical background of the fire department profession, the need for applied specialization, training, prevention, and the necessity for public cooperation, along with the plea for continued application to high principle, be of any value, my hope is that my presence with you today may have been of some little worth.

The Byrd Antarctic Commission

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. ZABLOCKI. Mr. Speaker, I have today introduced a bill to establish the Richard E. Byrd Antarctic Commission, in order to promote a more effective policy and to better protect our country's interests in the antarctic.

A similar bill has been introduced in the other House by the senior Senator from Wisconsin [Mr. WILEY] for himself and for a number of other Senators.

I am delighted to sponsor this legislation in the House of Representatives. Our Government has been actively interested in the south polar region for over a century. As early as 1838, our Government sent its ships on an expedition led by Lt. Charles Wilkes, of the U.S. Navy, to explore Antarctica. Our interest in the exploration of that vital region has continued and grown in importance to this very day. Today, further exploration and potential utilization of Antarctica is of immediate concern to our Nation.

The proposal embodied in the Wiley-Zablocki bill calls for the establishment of a Commission—appropriately named the "Richard E. Byrd Antarctic Commission" in honor of the great explorer whose name symbolizes man's search into the unknown—which would plan, develop, organize, coordinate, and direct antarctic activities among agencies of the U.S. Government and private institutions so as to promote our national and civil objectives.

The specific duties and major purposes of the Commission would be as follows:

First. To collect, coordinate, and better utilize the available data on the south polar region.

Second. To reevaluate this data in the light of current needs, and, so far as possible, make recommendations for clearer, more effective policies.

Third. To conduct field and laboratory studies to further knowledge of science, commerce, and related activities.

Fourth. To conduct research, investigation, and experimentation in antarctic matters relating to the national defense and other interests of the United States.

Fifth. To assist, and, as necessary, direct plans by other U.S. agencies for operations or expeditions into the antarctic, for military, scientific, or other purposes.

Sixth. To establish a depository of information relating to the antarctic.

It is my sincere hope that this legislation will receive prompt and favorable consideration in this House.

Mr. Speaker, under unanimous consent, I ask to have the text of the Wiley-Zablocki bill printed in the RECORD:

H.R. 5222

A bill to provide for continuity and support of study, research, and development of programs for peaceful uses in science, commerce, and other activities related to Antarctica, which shall include, but shall not be limited to, gathering, evaluating, correlating, and dispersing of information and knowledge obtained from exploration, research, and other mediums relating to weather, communications, travel, and other areas of information; also to coordinate Antarctic activities among those agencies of the United States Government and private institutions interested in or concerned directly with the promotion, advancement, increase, and diffusion of knowledge of the Antarctic; and to direct and administer United States Antarctic programs in the national interest

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Richard E. Byrd Antarctic Commission Act of 1959."

DEFINITIONS

SEC. 2. When used in this Act:

(1) "Commission" means the Richard E. Byrd Antarctic Commission.

(2) "Director" means the Director of the Commission.

(3) "Board" means the Board of Governors.

(4) "Commissioned officer" means a commissioned officer of the Armed Forces of the United States.

THE COMMISSION

SEC. 3. There is established in the executive branch of the Government, the Richard E. Byrd Antarctic Commission. The Commission shall consist of a Director, two Deputy Directors, and a Board of Governors.

FUNCTIONS OF THE COMMISSION

SEC. 4. The Commission shall—

(1) maintain a depository of information relating to the Antarctic including: (A) all records of the Commission, (B) originals or copies of records within the executive branch relating to the Antarctic, (C) books, pamphlets, periodicals, and articles dealing with the Antarctic, and (D) such other information as the Commission considers desirable;

(2) conduct such field and laboratory studies and evaluations as it considers advisable to further the knowledge of the Antarctic in science, commerce, and related activities, which shall include, but shall not be limited to gathering, evaluating, and dispersing of information and knowledge obtained from exploration, research and other mediums, relating to weather, communications, travel, and other areas of information;

(3) publish or arrange for the publication of scientific, technical, historical, and general information so as to further the dissemination of information about the Antarctic,

when the dissemination is consistent with the interests of national security and the public interest (publication may be made without regard to section 87 of the Act of January 12, 1895 (ch. 23, 28 Stat. 622), and section 11 of the Act of March 1, 1919 (ch. 86, 40 Stat. 1270; 44 U.S.C. 111));

(4) with the concurrence and approval of the Board, perform, at the request of the head of any executive agency, specific research, investigation, or experimentation in connection with matters relating to the national defense and/or the interests of the United States;

(5) approve the plans for and supervise Antarctic operations or expeditions conducted by, or supported by, other agencies of the United States except for operations or expeditions or parts thereof which are military in character;

(6) assist private Antarctic expeditions or research programs when such assistance is in the best interests of the United States;

(7) accept and utilize the service of voluntary and uncompensated personnel and provide transportation and subsistence as authorized by section 5 of the Act of August 2, 1946 (ch. 744, 60 Stat. 808), as amended (5. U.S.C. 73b–2), for persons serving without compensation; and

(8) acquire by purchase, lease, loan, or gift, and hold or dispose of by sale, lease, or loan, real or personal property necessary for, or resulting from, the exercise of authority under this Act;

(9) receive and use funds donated to the Commission if such funds are donated without restriction other than that they be used to carry out the general purposes of this Act;

(10) report to the President before September 16 of each year, summarizing the activities of the Commission and making such recommendations as it considers appropriate. The report shall include the recommendation of the Board.

THE DIRECTOR OF THE COMMISSION

SEC. 5. (a) The Director shall be appointed by the President, by and with the advice and consent of the Senate, for a period of six years and shall be paid at the rate prescribed in section 107(a) of the Federal Executive Pay Act, 1956 (70 Stat.). He may be a person appointed from civilian life or a commissioned officer in an active or retired status.

(b) The Director shall—

(1) manage the affairs of the Commission;

(2) issue such regulations as he considers necessary to carry out this Act;

(3) appoint and fix the compensation of such personnel as may be necessary to carry out this Act; and

(4) be a member of the Board of Governors ex officio.

(c) The appointments made and the compensation fixed shall be in accordance with the Classification Act of 1949 and the regulations of the Civil Service Commission. However, the Director may employ such technical and professional personnel, and fix their compensation, as he considers necessary, without regard to the Classification Act of 1949 or the regulations of the Civil Service Commission. The Director may terminate the employment of any officers or employees, except the Deputy Directors, whenever he considers that termination to be in the best interests of the United States, except that no person in the classified service may be removed or suspended without pay unless it is accomplished under the Act of August 24, 1912 (ch. 389, 37 Stat. 555), as amended (5 U.S.C. 652).

DEPUTY DIRECTORS

SEC. 6. (a) The Deputy Directors shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties as he may prescribe.

(b) The Deputy Directors may be appointed from civilian life or may be commissioned officers in an active or retired status. However, if the Director is appointed from civilian life, only one Deputy Director may be a commissioned officer. If the Director is a commissioned officer, both Deputy Directors shall be appointed from civilian life.

(c) The Deputy Directors shall be paid $ a year.

MILITARY STATUS OF DIRECTOR AND DEPUTY DIRECTORS

SEC. 7. (a) When a commissioned officer is appointed as Director or Deputy Director, he is not subject to military authority and may not exercise command over any members of the Armed Forces of the United States except as the President may prescribe.

(b) The appointment of a commissioned officer as Director or Deputy Director does not affect his status or rank or the pay and allowances incident to his status or rank. He is entitled to receive the pay and allowances payable to an officer of his rank and length of service, for which the appropriate department shall be reimbursed from any funds available to defray the expenses of the Commission. He is also entitled to be paid by the Commission the amount by which the compensation provided for the Director or Deputy Director exceeds his annual military pay and allowances.

BOARD OF GOVERNORS

SEC. 8. (a) The Board—consisting of eleven members—shall be appointed by the President, by and with the advice and consent of the Senate. The Board shall consist of the President of the National Academy of Sciences; Director of the National Science Foundation; Secretary of Defense; Secretary of State; Secretary of Interior; Secretary of Commerce, or their designees, plus four selected from civil life who are eminently qualified in their professions so as to provide, in addition to Federal administration, a broad field of knowledge and experience which will properly relate the activities of the Commission to the national welfare.

(b) The members of the Board, in addition to the President of the National Academy of Sciences; Director of the National Science Foundation; Secretary of Defense; Secretary of State; Secretary of Interior; Secretary of Commerce, or their designees, shall be appointed for a period of six years, except that, (1) any member appointed to fill a vacancy occurring before the expiration of the term of his predecessor shall be appointed for the remainder of the term; (2) the term of office of the members first taking office after the date of enactment of this Act shall expire, as designated by the President at the time of appointment, one at the end of two years, one at the end of four years, and two at the end of six years, and (3) a member may be reappointed to the Board for not more than one additional term; and (4) the members of the Board who are Cabinet members shall be members of that Board during the tenure of office as Cabinet members.

(c) Members of the Board shall be paid at the rate of $50 per day—for each day—except members of the President's Cabinet during their services as members of the Board, and shall be allowed travel expenses as authorized by section 5 of the Act of August 2, 1946 (ch. 744, 60 Stat. 808), as amended (5 U.S.C. 73b–2).

(d) The Board shall—

(1) meet annually on the first Monday in November and at such other times as the Chairman determines;

(2) elect a Chairman and Vice Chairman, at the regular annual meeting, to serve for the following year;

(3) review and assess the research and exploration activities relating to the Antarctic; and

(4) make such recommendations to the Commission as they consider appropriate for the advancement and dissemination of knowledge of the Antarctic.

RESEARCH CENTERS

SEC. 9. (a) Under the provisions of this Act there shall be established a minimum of five, and not more than eight, research centers at academic and/or research institutions having special competences or interests in scientific aspects of polar research.

The Commission shall determine that each such center shall meet criteria prescribed by the Commission under the policy guidance provided by the Board of Governors, and the Commission shall be responsible for the overall development and coordination of programs of research which may be approved for development within the research centers in, and related to the Antarctic region. Such programs of research as may be initiated at the research centers with the approval of the Commission shall be supported by Federal or private funds.

(b) Due to the unique requirements of polar research, a designated number of fellowships shall be provided to permit qualified students to conduct studies at the research centers and also in Antarctica. The Commission shall be authorized to grant funds in support of fellowships specifically associated with polar research, recommended by the Director of the Commission and approved by the Board of Governors.

SERVICES AND FUNDS OF OTHER AGENCIES

SEC. 10. (a) The Commission may, with the consent of the agency concerned, accept and utilize on a reimbursable basis the officers, employees, services, facilities, and information of any agency of the United States. However, such services and facilities may be furnished only if it does not interfere with the performance of the primary mission of the agency concerned. An agency having custody of data relating to the matters within the jurisdiction of the Commission shall, upon request of the Director, make that data available to the Commission without reimbursement.

(b) Funds available to any agency of the United States for scientific or technical research, educational, or other public service are available for transfer, with the approval of the head of the agency concerned, to the Commission for such use as is consistent with the purposes for which those funds were provided. Funds so transferred shall be spent by the Commission for the purposes for which the transfer was made or for general administrative expenses until such time as an appropriation is made available to the Commission.

ACTS AMENDED

SEC. 11. Subsection 107(a) of the Federal Executive Pay Act of 1956 is amended by adding the following after clause (22):

"(23) Director of the Antarctic Commission."

SEC. 12. Section 505 of the Classification Act of 1949, as amended (70 Stat. 762; 5 U.S.C. 1105), is amended by adding the following subsection:

"(f) The Director of the Antarctic Commission is authorized, without regard to any other provision of this section, to place a total of seven positions in the Antarctic Commission in grades 16, 17, and 18 of the General Schedule. Such positions shall be in addition to the number of positions authorized to be placed in such grades by subsection (b)."

HOUSE OF REPRESENTATIVES

WEDNESDAY, MARCH 4, 1959

The House met at 12 o'clock noon.

Rev. Walter A. Pegg, D.D., pastor, Metropolitan Baptist Church, Washington, D.C., offered the following prayer:

O Lord our God, we come before Thee, a company of men and women humbly acknowledging Thee as Divine Creator and Lord.

We come in confession of our weaknesses and shortcomings, knowing that the best we can produce, more often than not, falls far short of what Thou dost desire of us.

As those who represent the people of the Nation Thou hast deigned to make great, we come asking for wisdom that is not of ourselves, for clear judgment in a day darkened by confusion and misunderstanding.

We pray for ability to see the way before us if it can only be one step at a time. Our problems are multitudinous, our desires are for the welfare of our fellow men, so help us not to lean upon our own understanding but to avail ourselves of the leading of Thy gracious Spirit, that individually and corporately our service may be beneficial to men and honoring to Thee.

We pray for the President, the members of the Cabinet, especially for him who is ill, for all Members of this assembly and the companion body, the Senate. Grant us a sense of Thy presence both now and through all our days. In the name of Jesus Christ, our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

THE LATE RALPH ABERNETHY GAMBLE

The SPEAKER. The Chair recognizes the gentleman from New York [Mr. DOOLEY].

Mr. DOOLEY. Mr. Speaker, it is my sad duty to report that former Representative Ralph Abernethy Gamble, a cherished and longtime friend of many of my colleagues and myself, has gone to sleep with his fathers.

He was the son of Robert Jackson Gamble and the nephew of John Rankin Gamble, a Representative from New York.

Ralph was born in Yankton, S. Dak., May 6, 1885. He attended the public schools of Yankton and Washington, D.C., and was later graduated from Tome Prep School, Port Deposit, Md. He entered Princeton University where he excelled as a track star and afterward attended George Washington Law School, Washington, D.C., from which he was graduated in 1911. He was admitted to the bar in 1913, and practiced in New York, in his hometown of Mamaroneck from 1918 to 1933.

He was a member of the New York State Assembly from 1931 to 1937.

Ralph was elected as a Representative to the 75th Congress to fill the vacancy caused by the resignation of Charles D. Millard.

Ralph Gamble was a quiet, introspective, gentle person who had a host of friends. Hampered in health by a pulmonary ailment which made it difficult for him to breathe under some weather conditions, he suffered in silence many years.

He will be missed by those who knew him and particularly by his many friends in the town of Mamaroneck. I grieve with you over his passing and express my sympathy to his beloved wife.

Mr. Speaker, I ask unanimous consent that all Members may have permission to extend their remarks at this point in the RECORD on the life and character of the late Honorable Ralph Abernethy Gamble.

The SPEAKER. Is there objection?

There was no objection.

Mr. KILBURN. Mr. Speaker, Ralph Gamble has been a friend of mine for 20 years. He has visited us at our home up in Malone, N.Y., and we worked closely together for years on the Banking and Currency Committee. He was quiet and unassuming but sound and conscientious in his work in the House. He always voted for what he thought was for the best interest of our country.

He had been in ill health for some time and I know must have suffered greatly. In his passing I have lost a good friend, and Mrs. Kilburn joins me in extending our sympathy to Mrs. Gamble.

Mr. TABER. Mr. Speaker, Ralph Gamble came to Congress in 1937, and served on the Banking and Currency Committee until 1957 when he retired. For over 10 years he was the second ranking Republican on that committee and did much to keep our legislation right side up.

He was devoted to his work even to the point of impairing his health.

I am very sorry that he is gone and extend my sincerest sympathy to his family.

PLANNED REDUCTION OF NATIONAL DEBT

Mr. VANIK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the REOCRD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. VANIK. Mr. Speaker, two of my distinguished colleagues from the State of Texas have introduced bills which would require an annual reduction of 1 percent in the Federal debt. This legislation would require a $2.8 billion debt reduction this year—if it were the law.

The purposes of this legislation are indeed commendable. I heartily endorse the desirable aim of a planned reduction of our national indebtedness.

I submit that an excellent way to achieve this result would be by reducing the ridiculous 27½ percent depletion allowance to a more acceptable 15 percent level. This one improvement in our tax structure would go a long way toward meeting the annual debt reduction aims of the debt-reduction legislation. If we can consolidate these two proposals, I would be pleased indeed to join in hearty support.

PERMISSION TO SIT DURING GENERAL DEBATE IN THE HOUSE

Mr. QUIGLEY. Mr. Speaker, I ask unanimous consent that the Committee on Science and Astronautics may have permission to sit during general debate in the House today and for the balance of the week.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

PROMOTION FOR CERTAIN OFFICERS IN THE NAVAL SERVICE

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I call up for immediate consideration House Resolution 191.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4413) to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed three hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. THORNBERRY. Mr. Speaker, House Resolution 191 makes in order the consideration of H.R. 4413, which provides improved opportunity for promotion for certain officers in the naval service, and for other purposes. The resolution provides for an open rule and 3 hours of general debate on the bill.

The purpose of this proposed legislation is to provide equitable opportunity for promotion to officers of the Navy and the Marine Corps who are in or behind the "hump."

The "hump" consists of the large group of officers who were initially commissioned during the 4 years of World War II. This group, disproportionate to all other year groups before and behind it, constitutes about one-fourth of the Regular officer strength of the Navy and the Marine Corps. It has provided the large reservoir of combat-tempered experience which has been the backbone of the Navy and the Marine Corps during the past decade.

Officers in the "hump" are now in the grades of lieutenant commander and commander in the Navy and major and

lieutenant colonel in the Marine Corps. Unless remedial action is taken, about two-thirds of these officers will be retired in the grades in which they are now serving without having had a reasonable opportunity for promotion to a higher grade. Ahead of the officers in the "hump" and blocking their promotion are the officers who were initially commissioned before World War II.

It is obvious that unless corrective action is taken, the attrition rate—that is, the number of people who will fail of selection for promotion—will be fantastically high over the next 10 years.

The Department of the Navy considers that the needed additional vacancies in the higher grades could best be created through the retirement, on a selection basis, of some of the senior officers in those grades a few years earlier than they could be involuntarily retired under present law. The proposed legislation here would, if enacted, provide the necessary statutory authority for the selection of officers for continuation on the active list and for the mandatory early retirement of officers not selected for continuation.

The bill provides that in addition to their retirement pay, the officers who will be retired under the provisions of the bill will be allowed a separation pay or readjustment pay to assist in adjusting to the necessary changes in their personal planning. This separation pay or readjustment pay will amount to 2 months pay for each year of active service that these officers will not be able to complete as a result of the enactment of the proposed legislation. No officer shall receive an amount in excess of $6,000.

In view of the importance of this legislation, and the need for it to be discussed fully on the floor of the House, I urge the adoption of House Resolution 191.

Mr. Speaker, I yield 30 minutes of my time to the gentleman from Tennessee [Mr. REECE].

Mr. REECE of Tennessee. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, as we move forward to the consideration of the pending rule and the bill it makes in order, I should like to make a few appropriate remarks regarding the subcommittee of the Committee on Armed Services which reported this legislation. It was my privilege to serve on this subcommittee during the previous Congress.

The distinguished gentleman from Texas [Mr. KILDAY] is chairman of that subcommittee, and based upon my observation of the gentleman and his work, he is, in my opinion, the most outstanding authority on this type of legislation in the Congress. There are few, if any, in the Department of Defense who surpass the gentleman from Texas in his understanding of these intricate problems.

He has as his able assistant Mr. Blandford, who is counsel for that subcommittee. In all of my experience as a Member of the Congress I have seen no counsel who has a keener understanding of the problems involved in personnel matters of the Department of Defense than has Mr. Blandford, counsel for the Committee on Armed Services.

I just felt like I wanted to make these observations before we move into consideration of this bill. I am in favor of the legislation and I hope its consideration and passage will be expedited.

Mr. THORNBERRY. Mr. Speaker, I yield 15 minutes to our distinguished majority leader, the gentleman from Massachusetts [Mr. MCCORMACK].

Mr. MCCORMACK. Mr. Speaker, today is the 170th anniversary of the Constitution of the United States.

You and I are Members of the greatest legislative body in all the world, the Congress of the United States, and we sit here in a period of world history that is one of the most trying that any known generation has undergone.

We can look back with pride to the generations of Americans of yesterday who not only founded this great country but preserved and built it to the great Nation it is today.

You and I and other Americans have inherited this great country of ours, with the Constitution of the United States as our fundamental law, and we are charged with the direct duty of not only preserving and strengthening our country but passing it on to the next generation of Americans unimpaired and, in fact, strengthened. With that great heritage, I know that each and every one of us as Americans, without regard to party affiliation, will perform our duty. I might make the terse observation that if there are some persons in the world today in other countries, particularly those behind the Iron Curtain, who think that because the occupant of the White House, the President of the United States, is politically a Republican and that the Congress of the United States is Democratic so far as the majority in control of the Congress is concerned, that that calls for disunity and division, they are badly mistaken. They just do not understand the American mind and they just do not understand the political thinkings and the considerations in the United States under constitutional government, because whenever danger threatens our country, we do not think and act as Democrats or Republicans, but we think and act as Americans. And, on this occasion I make this brief, pointed observation, that if they look for division, they are going to be sadly mistaken, because we are always unified when danger confronts our country. During that great history of 170 years, when our Nation has grown from the weakest that existed at that time, with four or five million souls, to 180 million, to become the greatest nation in the world, one of the great Americans who has played an important part in the development of our country and its progress during the past 46 years is our beloved Speaker, the distinguished gentleman from Texas [Mr. RAYBURN], and tomorrow he establishes a new record in American history. On March 5, 1959, Speaker RAYBURN will have eclipsed former Speaker Cannon's record of 46 years' overall service and become the new holder for total service in the House of Representatives. On March 4, 1959, today, our beloved Speaker will have served 46 years continuously in this, the greatest legislative body in the world, thus equaling the record of overall service compiled by former Speaker Cannon. Former Speaker Joseph G. Cannon, of Illinois, currently held the record for overall service in the House of Representatives, 46 years exactly. He served in the House from 1873 to 1891, from 1893 until 1913, and again from 1915 to 1923. Our beloved Speaker's service has been continuous, and tomorrow sets another mark in American history, for our beloved Speaker will have sat in this body longer than any other in the history of our country. SAM RAYBURN has served for approximately a quarter of the constitutional history of our country. He has seen much water go over the dam during that period. But, while he has served 46 years, he is just as young and just as virile in his thoughts, in his farsightedness, and his actions, as he was 46 years ago. Certainly, there is no one more intense in his love of America as exemplified by his utterances and his actions than our beloved Speaker.

Only a few nights ago, while at a political dinner, he nevertheless made a ringing American speech in which he was joined by the distinguished majority leader of the other branch, and they both served notice upon those who would destroy our civilization that America stands united. While made at a political rally, these were ringing American speeches. And it was the proper place to make those speeches, to send the message to those in the Kremlin who might think that division exists in America or that they would be able to bring about division in America, that they were strong.

SAM RAYBURN is a man with a heart of gold. When he takes that rostrum as Speaker, he does so not as the leader of the Democratic Party, but as the Speaker of the National House of Representatives in Congress. When any point of order is made or parliamentary questions raised he decides it, not as the leader of a party but as the Speaker of the House of Representatives in Congress. Other Speakers in the past have done the same, but SAM RAYBURN has lived up to the great traditions of all Speakers of this great body and he has added luster to their great contributions of yesterday.

In congratulating the Speaker on a new record, may I also congratulate the people of his district, who kept him here; because without their loyalty and their support he would not have been here, just as with each and every one of us who have to have the support of the people in our districts in order to be Members of this body. The people of his district may take great pride in what they have given to America during the last 46 years in the person of that man with a heart of gold, that man who represents the highest ideals that our country stands for, that man who will go down in history as one of the great Americans of all time, our beloved Speaker, SAM RAYBURN from the State of Texas.

May I say that I started to say "from Massachusetts," because SAM RAYBURN is

our beloved Speaker from 49 States of the Union, now that Alaska has become a State, and I hope and confidently expect that he will be the Speaker when the 50th State, Hawaii, comes into the Union.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. Mr. Speaker, I am glad to yield to my friend from Indiana, the minority leader of the House.

Mr. HALLECK. Mr. Speaker, I thank the gentleman for yielding. May I say at the outset that I do not blame the gentleman from Massachusetts for trying to claim the Speaker as being from Massachusetts. I think I should like to claim him from Indiana, although probably I would have to say, if he had come from Indiana, he would not have been able to weather all of those 46 years. In any event, we certainly wish the Speaker well on this occasion. He has broken so many records around here that sometimes it becomes a little difficult for all of us to keep up with them. Certainly this is a record of which he may well be proud and of which the people of his State and district may be proud and of which all of the people of this great land of ours may be proud.

I have said before on occasion that in my considered judgment the position of Speaker of the House of Representatives is the second greatest responsibility in the Government of the United States. And certainly SAM RAYBURN has graced that position very, very well; magnificently, in fact.

I agree with the gentleman from Massachusetts that when he takes the Speaker's chair he rules impartially and fairly. But I would not want anyone here, particularly some of the newer Members on our side, to get the impression that on occasion our beloved Speaker cannot be a good Democrat just as well, because he can be, and one of these days they will see him take the floor, down here in the well of the House, and make a great speech.

We all appreciate it, and some might even be persuaded on occasion.

In any event, I should like to add this further word: The gentleman referred to the fact that in times of crisis in world affairs we are not Democrats, we are not Republicans, we are just Americans here presenting a united front in a troubled world.

I might with propriety recall to the gentleman that in 1947 and 1948 I occupied his position, except that I was on this side of the aisle. I was the Republican leader of a Republican Congress, with a Democrat President. Those, too, were troublesome years. Those were years when communism threatened much of Europe. We were called upon by our President to deal with aid to France and Italy, aid to Greece and Turkey, and later on with the Marshall plan. I am sure everyone who was here at that time will agree that on that occasion we were not Democrats, we were not Republicans, we were just Americans who closed ranks in the face of a world threat by a potential foreign enemy.

Today even as then, with a Republican in the White House and Democrats in control of the Congress, great problems confront us, problems of tremendous importance, problems the decisions as to which can affect the lives and the futures not only of the people of our country but the people of the whole world.

So I am reassured, knowing as I do how sincere the gentleman from Massachusetts is and how much and how well he speaks for the people on both sides of the aisle, that in this time of crisis and trial we shall all stand together meeting the problems as they arise.

I recall when the Formosa resolution was adopted, and the Middle East resolution, expressing the united determination of a great American people. I am not indicating by that that any resolution of that sort is to be acted upon at this time. But certainly the words that have been spoken on this occasion by the majority leader are indicative of the fact that in this time of trial the American people and all of us in the Government of the United States will present a united front to the end that the welfare and future and safety and happiness of our Republic shall be assured.

Mr. McCORMACK. Mr. Speaker, I yield to the distinguished majority whip, the gentleman from Oklahoma [Mr. ALBERT].

Mr. ALBERT. Mr. Speaker, I want to join the distinguished majority leader and the distinguished minority leader in claiming the Speaker. Oklahoma has been claiming him as Congressman at Large for many years, and we have always been proud to do so.

Forty-six years ago there began a career of congressional service in this House which was to eclipse the service of all other men who had come here before. Forty-six years ago there began in this House a congressional career which was to become not only the longest in point of time but also the most distinguished in point of service in the history of this legislative body.

Then began the career of a young man who was to serve this country in three wars and through some of the most trying peacetime periods in history Then began the career of a great man who was to become the Speaker of this House and to serve in that capacity longer than anybody before.

I believe sincerely that it is the privilege of us who serve here today to have the honor of serving during our time with the greatest legislator in the history of our country, our beloved Speaker, the Honorable SAM RAYBURN, of Texas.

Mr. McCORMACK. Mr. Speaker, I yield to the gentleman from Louisiana [Mr. BOGGS].

Mr. BOGGS. Mr. Speaker, I am honored to be permitted to join in the tributes which have been paid to our distinguished Speaker.

May I take this occasion to point out that the total legislative service of our great Speaker exceeds by 5 years the 46th anniversary that we are celebrating here today.

Speaker RAYBURN began his lawmaking work in the legislature of the great State of Texas on January 8, 1907. That is a little over 52 years ago. I realize that it is very difficult for most of us to comprehend that because 52 years exceeds by several years the age of quite a few Members of this distinguished body.

Some years ago I had the Library of Congress do a bit of research on the comparative service of Speaker RAYBURN and other members of legislative bodies in the world. As all of you know, the American Congress is the oldest, continuous democratic body on the face of the earth. The only competition that Speaker RAYBURN has is in the British Parliament. He has none in either body of the House of Representatives, having exceeded the records of Senator Hale, of Maine, Senator Glass, of Virginia, as well as Mr. Sabath, of Illinois and former Speaker Cannon of the House. Of course, he has served almost concurrently, I believe, with Senator HAYDEN. But, in the other great legislative body of the free world, the British Parliament, he still has one or two records that he might seek to best, and I am certain in light of the aggressive health and leadership of the Speaker that he will best these.

The great William E. Gladstone sat in the British Parliament for 60 years. Lord Balfour sat for 56 years. Winston Churchill is serving his 54th year now. But there is this great and historic distinction. Most of these men were elected to the House of Commons for a limited period of time. Then a grateful nation rewarded them by giving them seats in perpetuity in the House of Lords. So that from the point of view of elective legislative experience and service, SAM RAYBURN, our great Speaker, excels any man in the history of modern democracies.

Insofar as France is concerned, one of the other great democracies in the world, the longest period of service there was for about 42 years. I have forgotten for the moment the name of that distinguished French parliamentarian.

Finally, in closing, I know there is no additional tribute I can pay to a man who is and has been for these many years a great American except to say as one humble Member of this body, I have been so greatly impressed by his life and example and by most of the things that he has said over the years. For instance, I remember a long time ago he made a speech to some of the new Members to whom he gives so much time. He said, "Service is the grandest word in the English language."

Not long ago he told a friend that he could not imagine any career that he could possibly have chosen as a young man which would have given him half the satisfaction that membership in the Congress has given to him. To put it another way, and as he put it, "The chance to help make the people's path a little smoother and their burdens a little lighter is all that any man ought to ask of life."

I think that his devotion to country, his devotion to the House of Representatives, and his devotion to party will be an inspiration to our great country for many, many generations to come.

Mr. McCORMACK. Mr. Speaker, I yield to the gentleman from Tennessee [Mr. EVINS].

Mr. EVINS. Mr. Speaker, I should like to congratulate our distinguished majority leader, the gentleman from Massachusetts [Mr. McCORMACK] for calling the attention of the House to the distinguished career of our great Speaker. I would like to join with my colleagues in paying a brief but sincere tribute to the gentleman from Texas, Speaker RAYBURN.

I notice, almost in good humor but apparently in error, that our friend, the gentleman from Massachusetts [Mr. McCORMACK], tried to claim the Speaker as from Massachusetts. I want to point out that the distinguished Speaker was born in Tennessee and is a native of Tennessee.

There was a great debate on this floor a number of years ago which I read some time ago with amusing interest. Members of Congress from North Carolina and South Carolina debated on this floor who should claim Andrew Jackson. North Carolina said that General Jackson was born in North Carolina, and South Carolina claimed that President Jackson was born in South Carolina. He was from that border region between the two States, but actually Jackson gained his fame and distinction from Tennessee.

While the gentleman from Texas [Mr. RAYBURN] has gained great fame as from Texas and is, in fact, an all-American, we all must realize the fact that the gentleman from Texas, SAM RAYBURN, was born in Tennessee.

To illustrate as to how the Speaker is beloved in our State, recently there appeared an article in the CONGRESSIONAL RECORD about the gentleman from Texas, Speaker RAYBURN, and somewhere therein it was stated that the gentleman from Texas [Mr. RAYBURN] was born in Texas. One of my friends called this error to my attention, knowing I would want to have the RECORD corrected to show that he really came from Tennessee. My State is proud of the gentleman from Texas, Speaker RAYBURN, and we want the world to know that we proudly claim him.

So I share this occasion with the friends who admire the gentleman from Texas, Speaker RAYBURN, and felicitate him and congratulate our Speaker, as a son of Tennessee.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that all Members who may desire to do so may extend their remarks at this point in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. AUCHINCLOSS. Mr. Speaker, it is becoming more and more difficult to find appropriate words to use in expressing one's admiration and affection for you. You have so many friends and you have done so much for others that their feelings are as deep as the ocean and as broad as all outdoors. I believe your greatest attribute is your unfailing honesty in your approach to all things and this honesty of yours is so sincere that one looks upon it with reverence. It is not found in the ordinary man but such a characteristic is indigenous to men of great stature and to men who by their examples have shown their love and respect for whatever is good and for whatever is right. Much has been said about your love of country but that, as far as I am concerned, is taken for granted in a man of your character. You have inspired us all by your services and you have taught many who have served in our Government over the years, the constructive approach and the noble attitude.

May your years be many more and may rich blessings always attend your steps.

Mr. ZABLOCKI. Mr. Speaker, this is indeed an auspicious occasion and I am delighted to join with my colleagues in congratulating you on beginning your 47th year of service in the U.S. House of Representatives.

I am certain that all of us view this occasion as a very special tribute to the exceptional abilities, devotion to public service, and outstanding leadership of Speaker RAYBURN. His achievements as legislator, as a leader of his party, and as the Speaker of the House of Representatives are inscribed permanently in the pages of our Nation's history. But furthermore, his personal qualities which made these achievements possible, have made a lasting impression on all of us who have had the privilege of serving with him, and under his leadership, in this legislative body.

It is these attributes which have made Speaker RAYBURN's name known, respected, and loved throughout the breadth and width of our land. His life of public service is an inspiration to every American.

I pray that the good Lord may grant our Speaker many more years of health and activity in our Nation's service.

Mr. MASON. Mr. Speaker, I have sat at the feet of four Speakers during the time I have been a Member of the House. I have had the opportunity, therefore, of making comparisons and forming judgments. The following is a tribute I paid to the present Speaker in a letter to my people 2 years ago:

> Speaker SAM RAYBURN is a Texas Democrat. He has been a Member of Congress for 44 years; has been elected Speaker of the House eight times, holding that high office longer than any other man in American history.
>
> Speaker RAYBURN is a born leader. He is a man that would gravitate to the top position in whatever field he might be placed. He is a great parliamentarian, a great statesman, and a great presiding officer. He is kindly, considerate, tolerant. He possesses the proverbial "patience of Job"—a necessary qualification for the position of Speaker. As Speaker he has more influence over legislation than any other man in either branch of the Congress. In the writer's opinion the office of Speaker ranks next in importance to the office of President.
>
> Speaker RAYBURN seldom takes the floor during debate, but when he does he commands the respect and attention of the Members. He has the unusual ability of saying a great deal in few words—a very valuable asset for anyone to possess. Too many Members are redundant—they use many words to say very little. Speaker RAYBURN is a great American.

Mr. Speaker, I have looked up to you from my seat in this House for 16 years, and I mean looked up in more than a physical sense. I have looked up to you as a great statesman, as a great presiding officer, as a man who is better informed on Government problems than any other man in either branch of Congress, a man who tops me in every way but one—I was born 2 years before you.

State Senator Richard Barr, of Joliet, Ill., was a member of the Illinois State Senate for over 50 years. He claimed the world's record for membership in an elective legislative body. It is my wish that you will exceed his record in the Illinois State Senate, in the length of your service in the United States House of Representatives.

Mr. DORN of South Carolina. Mr. Speaker, I am happy to join with my colleagues today in congratulating and honoring you, our distinguished Speaker. Mr. RAYBURN's 46 years in this Congress have been the most momentous in the history of the United States. Presidents, statesmen, generals, kings, and queens come and go, but Mr. SAM, like the Rock of Gibraltar, is still here to reassure the American people that all is well with the Republic. Those of us that have served with him for many years have been uplifted by his great qualities of leadership. We are better Congressmen by having served with him.

Mr. RAYBURN, your qualities of leadership, honor, patriotism, duty and integrity not only inspire us but will inspire generations to come.

Mrs. Dorn, my family, my staff, and I wish for you continuing good health, happiness, and many more years of service and inspiration to us all.

Mr. O'BRIEN of Illinois. Mr. Speaker, I am delighted that the majority leader has taken the floor to point out the magnificent record of service of our beloved Speaker, SAM RAYBURN, and I want to join wholeheartedly in his remarks.

No man deserves a tribute more than the Speaker. It was my good fortune many years ago to serve on the Committee on Interstate and Foreign Commerce when the Speaker was chairman of that committee. No chairman was ever more capable in the performance of his duties, more learned in the subject matter within the jurisdiction of his committee, and more fair in his attitudes toward members of the committee—Republicans and Democrats alike.

I should state parenthetically that when I ascribe to the Speaker a thorough knowledge of the subject matter within the purview of his committee, I do not thereby mean to imply that this was in exclusion of his understanding of the other great issues which were before the Congress during his long tenure. I have known few people who possess the basic commonsense and acute perception with which the Speaker is gifted. He has the knack of cutting through superfluous and extraneous matters and going right to the heart of an issue. Invariably, too, he comes to the right conclusion.

No finer tribute can be paid to a man than to enjoy the confidence and trust of his neighbors. The long length of service of Mr. RAYBURN bears eloquent

testimony to the high esteem with which he is held by his friends and neighbors in Texas.

The Speaker has called me his friend. In all my years in public service, I have received no finer compliment or higher accolade. I shall always cherish his friendship.

That is why, Mr. Speaker, I wish you long life and good health so that our beloved country may continue to have the benefit of your distinguished service.

Mr. EDMONDSON. Mr. Speaker, every American is proud of the Speaker of the House of Representatives and his unparalleled record of public service.

In Oklahoma, where Speaker RAYBURN has long been regarded as "Oklahoma's Congressman at large," there has long existed a standing organization known as the Rayburn for President Club.

Thousands of Oklahomans have believed for many years that the best qualified man in the United States for President is SAM RAYBURN, of Texas.

On more than one occasion, I have attended meetings in the Sooner State where all in the room were agreed that Speaker RAYBURN was the best man the Democratic Party could nominate for the Presidency.

On one such occasion, I heard our beloved Speaker tell a large group of Oklahomans that he deeply appreciated such sentiments, but that he firmly and emphatically declined to become a candidate.

Speaker RAYBURN's refusal to become a presidential candidate has been a loss for our party in the White House, but our loss on the executive side of the ledger has undeniably been our greatest gain on the legislative side of the same ledger.

I doubt if any historian of our time will deny that the greatest single influence of this generation upon our Nation's legislative history has been the great Congressman from Bonham, who has served longer than any other American as Speaker of the House.

It has been a great privilege to serve with him in the House.

It is both a privilege and a pleasure to join with my colleagues in expressing congratulations and best wishes as Speaker RAYBURN begins his 47th year of congressional service.

Mr. THORNBERRY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING THE CREDITING OF CERTAIN SERVICE FOR PURPOSE OF RETIRED PAY FOR NONREGULAR SERVICE

Mr. O'NEILL. Mr. Speaker, I call up the resolution (H. Res. 190) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3365) to authorize the crediting of certain service for purpose of retired pay for nonregular service, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. O'NEILL. Mr. Speaker, House Resolution 190 makes in order the consideration of H.R. 3365, which would authorize the crediting of certain service for the purpose of retired pay for nonregular service, and for other purposes. The resolution provides for an open rule and 2 hours of general debate on the bill.

The primary purpose of this legislation is to correct certain inequities which have developed since the enactment of title III of the Army and Air Force Vitalization and Retirement Equalization Act of 1948—62 Stat. 1081—which title authorized retired pay at age 60 for personnel of the Armed Forces who complete 20 years of satisfactory Federal service. The proposal would also authorize certain service to be counted as commissioned service for the purpose of voluntary retirement; and would validate appointments made in the Army of the United States without component under joint resolution of September 22, 1951, which were continued in effect with legal authority until April 1, 1953.

It would permit Reserve personnel to count for this retired pay, service which they performed as an appointed aviation cadet or as a nurse, or service performed as a dietitian, physical therapist, or occupational therapist with the medical department of the Army. Such service may not now be credited for this purpose because of the present limitation that service to be credited must have been performed in the status of a commissioned officer, warrant officer, flight officer, or enlisted person, in the Armed Forces.

It would also allow credit for this retired pay for service in the National Guard after June 14, 1933, if the person served continuously therein from the date of his enlistment in the National Guard, or his Federal recognition as an officer, to the date of his enlistment or appointment, as the case may be, in the National Guard of the United States, the Army National Guard of the United States, or the Air National Guard of the United States. At present credit may be given for service in the federally recognized National Guard only before June 15, 1933.

The Department of Defense recommends enactment of the bill, and the Bureau of the Budget interposes no objection to the bill.

In view of the fact that this legislation seeks to correct inequities in existing law, I urge the adoption of House Resolution 190.

Mr. O'NEILL. Mr. Speaker, I yield 30 minutes to the gentleman from Tennessee [Mr. REECE].

Mr. REECE of Tennessee. Mr. Speaker, so far as I know there are no requests for time on this side. There is no opposition to the resolution, and I therefore yield back my time.

The SPEAKER. The question is on the resolution.

The resolution was agreed to and a motion to reconsider was laid on the table.

SPECIAL ORDER GRANTED

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that tomorrow at the close of the legislative business of the day and other special orders heretofore granted I may address the House for 30 minutes.

I hope the gentleman from Arkansas [Mr. ALFORD] will be present because my remarks are going to be directed to a review of the report of the Special Committee on Election Expenditures of which I was a member in the 85th Congress, and I intend to address part of my remarks to the Hays-Alford case.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PERKINS. Will the gentleman yield?

Mr. O'NEILL. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Labor Management Reform Legislation be permitted to sit this afternoon during general debate.

The SPEAKER. Is there objection?

There was no objection.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 7]

Barrett	Hechler	Powell
Becker	Holifield	Rains
Bowles	Kasem	Rivers, Alaska
Corbett	Kee	Rivers, S.C.
Denton	Keith	Robison
Derwinski	McGovern	Scott
Diggs	Magnuson	Shipley
Doyle	Martin	Sikes
Fogarty	Meyer	Siler
Green, Oreg.	Miller, N.Y.	Smith, Miss.
Hall	Mitchell	Taylor
Hargis	O'Konski	Widnall
Hébert	Philbin	Wolf

The SPEAKER. On this rollcall 385 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROMOTION FOR CERTAIN OFFICERS IN THE NAVAL SERVICE

Mr. KILDAY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4413) to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 4413, with Mr. EVINS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. KILDAY. Mr. Chairman, I yield myself 15 minutes.

Mr. KILDAY. Mr. Chairman, the purpose of this bill is to relieve the hump of officers which has developed in both the Navy and the Marine Corps. The report which accompanies the bill is full and complete and it adequately explains the bill. The report, however, is quite technical and involved. It is essential that the report be written in technical language and because of the technical language which the report contains, it shall be my purpose to give a nontechnical explanation of the situation as it exists and to explain what is being proposed to remedy that situation. I believe it would be evident to all that a military organization requires a distribution of officers through the various grades in the numbers and percentages required to exercise the command functions of that military organization. That would mean, of course, that you would begin with a rather large number in the entering grade. You would have a rather large number coming in at the entering rank of ensign or second lieutenant and then, of course, the number entering each of the higher ranks would constantly be reduced. In 1947, the Congress passed what is known as the Officer Personnel Act of 1947. In that law we attempted to do a number of things. It came along at the termination of World War II; when we were contemplating a long period of peace and it became necessary to reorganize all of the military services including their personnel structure. The Officer Personnel Act was for that purpose. We were very much concerned at that time because, from our Regular Naval Forces and our Regular officer strength in the Navy, at the end of approximately 20 years of service, we were losing through attrition something in excess of 50 percent of the Naval Academy graduates because on promotion from lieutenant to lieutenant commander there were not a sufficient number of billets as commander to absorb the less than 50 percent of the lieutenant commanders who were eligible for consideration for promotion. We did a number of things in 1947 in an effort to reduce that attrition. We attempted to open up the flow of promotions so that it would be constant through captain and to some extent to admiral. One thing we did was to increase the percentage ratio of flag officers—admirals in the Navy and generals in the other services, from one-half of 1 percent of total officer strength to three-fourths of 1 percent.

We also provided that a man who attained the rank of colonel in the Marine Corps or captain in the Navy, notwithstanding the fact that he was not selected for promotion to the next higher grade, would remain on duty until he had completed a total of 30 years of service. We also provided that a commander in the Navy or a lieutenant colonel of the Marine Corps, notwithstanding his failure of selection for promotion to the next higher grade, would remain on active duty for a total of 26 years.

The reason for this provision is that we retained for the Government, and for the Marine Corps and the Navy, the services of these men who had been trained at great expense, who possessed the experience which was necessary for our active naval forces. On the other hand, it was true that those officers who found themselves in the category of commander or lieutenant colonel, with less than 26 years of service, felt that they had a period of security until they had completed 26 years, and a colonel and captain in the Navy felt that he was secure until he should reach the end of 30 years of total service.

So that gradually since 1947 it has been referred to as "a guaranteed tour of 26 or 30 years of service." Notwithstanding the fact that it was not for that purpose, I agree that those officers were reasonable in the position which they took and which they now take, that they were no longer vulnerable to elimination from active duty until they had completed these stated periods of service.

The Officer Personnel Act provided a normal flow of promotion. It envisioned certain normal tours, in each grade as the men came along. What we did not foresee was the coming of the Korean conflict. Korea came in 1950. The act of 1947 was well under way. As a matter of fact, some of the provisions of the Officer Personnel Act had not even taken effect when Korea came on us. So that during that period of time normal forced attrition was not completed. During that time, of course, these officers came to a point in their career at which they should have been selected for promotion to the next higher grade. Not having been selected for promotion, they were supposed to be separated from the active duty list by retirement, if above the grade of lieutenant commander, or by severance if below the grade of lieutenant commander. Practically everybody who came up for selection for promotion was promoted. There was no elimination in those grades. Why? During the Korean conflict the Navy was recalling to active duty, involuntarily, without their consent, Reserve officers who were in the inactive reserves. So it did not make sense to be releasing or passing over Regular Naval officers while at the same time calling men to active duty who had no desire to go on active duty but who were subject to compulsory recall to active duty. So that we have in the Navy and in the Marine Corps 3,500 officers who are compressed at the wrong spot in the promotion zones. There are 3,500 officers in the Navy and in the Marine Corps who must be eliminated from the service from active duty. Three thousand five hundred officers in the Navy and Marine Corps are going to be relieved of active duty, whether legislation is passed or not.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I would prefer to finish my statement now.

Mr. BAILEY. I just wish you would explain how that might happen without an act of Congress.

Mr. KILDAY. That is exactly what I am going to do, and I assure you I will take time enough to answer any questions. But because of the technical nature of this matter, I would like to put my explanation at one place in the RECORD.

I have made the statement that 3,500 officers of the Navy and the Marine Corps are going to be relieved from active duty whether any legislation is passed or not. If no legislation is passed, that 3,500 must come from the relatively low-ranking, young, vigorous officers who are on their way up because they are behind this hump. On the other hand the men who cannot be forced to retire until they have completed 26 years of service if they are lieutenant colonels in the Marine Corps or commanders in the Navy, or 30 years of service if colonels in the Marine Corps or captains in the Navy, are ahead of that hump.

What this bill proposes to do is to give the Navy Department some selection authority as to who is going to go out. Will the 3,500 come from the young vigorous men who are coming up the line? Or will they come from the men in the grades of captain and colonel and, of course, lieutenant colonel and commander?

This bill provides that the Secretary of the Navy shall have the right to convene continuation boards. These continuation boards will be convened and constituted to proceed exactly as selection-for-promotion boards are now convened and as they now function; but instead of deciding who of those within the zone of consideration shall be promoted they will decide who within this group of vulnerable officers shall be continued on active duty. Those they decide should be continued on active duty will be continued until they complete 30 years of service or 26 years of service, depending upon the rank in which they are serving.

Those having faced a continuation board will not be called upon to face another continuation board; it is a one-shot proposition. If he survives one continuation board, then, he will continue on until he has completed the so-called guaranteed tour of 26 years or 30 years of service.

How will an officer be retired? In the first place no one is going to be relieved of active duty who has not completed 20 years of service. Every man who has completed 20 years of service is entitled to retirement for the balance of his life. It is figured at 2½ percent times the

years which he has served; therefore, no one retired will receive less than 50 percent of his base pay. The maximum, of course, will continue to be 75 percent of his base pay if he has completed a total of 30 years, or at the percentage represented by 2½ times his years of service as the total.

There is no question under the law but that the Congress has the power to change the law and that these officers do not hold a contract with the Government, and have never held a contract with the Government under which they were guaranteed this tour. If you will turn to page 10 of the report you will find quotations from the Supreme Court where this specific question was passed upon involving a naval officer. This naval officer at that time was a midshipman. At the present the grade of midshipman is not an officer grade; it applies to a cadet in the Academy, and he is not an officer. But at that time a midshipman was an officer of the Navy, and the Supreme Court has passed upon this question. Here is the language of the Court:

> The primary question in this case is whether a naval officer appointed for a definite time or during good behavior had any vested interest or contract right in his office of which Congress could not deprive him. The question is not novel. There seems to be but little difficulty in deciding that there was no such interest or right. The question was before us in *Butler* v. *Pennsylvania*.

That has been the consistent position. Many times in the past we have changed the rules as to tenure and as to right of retirement.

Mr. BAILEY. Mr. Chairman, will the gentleman yield. Is there not a matter of good faith on the part of the Congress involved here?

Mr. KILDAY. The very next word I intended to state was good faith on the part of the Congress. I am asking the gentlemen to let me complete my statement, then I will be glad to answer any questions which may be propounded, or, at least, attempt to answer them.

We have the legal right to terminate any tour that these men may have, may claim they have, or contend they have. I am not one of those who takes the position that Congress should always do something simply because it has the right to do it.

Mr. Chairman, this bill has been considered by my subcommittee of the Committee on Armed Services on three separate occasions. The Navy Department brought it to us in the 1st session of the 85th Congress and urged that we take immediate action. We held long hearings about it at that time.

It was brought over to us again in the 2d session of the 85th Congress when we again heard testimony, but took no action. This was something that was distasteful, it was something that my subcommittee did not want to do.

But we have now reached the point where something has to give for the benefit of the country and the stability and vigor of our officer corps of the Navy and Marine Corps. The irresistible force has met the immovable object. Something has to be done. Over a period of more than 2 years I had hoped this problem would go away, but it has not gone away and we must face it.

In the bill that was brought to us originally by the Navy it was recommended that we grant to those to be retired under this provision constructive credit for the purpose of retirement. In other words, they suggested that those retired short of the period that they expected to serve be given credit for active duty of one-half of the period they served. In other words, if a captain who originally was to stay on duty until he had completed 30 years of service had completed 26 years, we would add to the time he actually served, 2 additional years to give him credit for retirement purposes of 2 years he did not actually serve. Of course, that would have been an annual recurring cost, it would have increased our already staggering retired pay costs, and it would continue each year through the life of each of these individuals.

When the proposal came to us from the Department of Defense this year, it was recommended that we give them absolutely nothing for the unserved balance of that tour which they expected to serve. Among the arguments in favor of that position was that since the proposal was originally suggested, the pay bill of 1958, about which I think all of you are hearing from your retired personnel, had granted very materially increased retirement pay to this group and as to all other retired groups after June 1, 1958. It is my own feeling—and this has been sustained by the subcommittee and by the full Committee on Armed Services—that these men should be given something to cushion the shock of early transition from the military service to civilian status. I suggested, and it went to the Navy, that instead of a constructive credit which we are very much opposed to granting because we have never granted constructive credit for purposes of retirement that we provide a lump sum readjustment allowance. We are afraid of a precedent because of what might happen in the future should such a precedent ever be established. The proposal that I made, which was considered by the Navy, was that instead of that we give these men a lump-sum readjustment allowance. That is not novel in the military system, because a Reserve officer released from active duty now gets a certain number of months' pay for each year he has served. The proposal I am about to outline was sent by the Navy to the Department of Defense, and it was rejected. The committee added a provision to the bill that each man now in grade retired under the provisions of this act—and they will all be retired—shall receive 2 months' pay for each year that he does not serve, so that the captain who had served 26 years and would have 4 years yet to go would get 8 months' pay under the provisions of this bill, but not to exceed $6,000. It would not be a recurring cost; it would be paid once, and then it would be over. And he is not being treated badly, because that individual would retire at $7,978 a year, and he would draw as a readjustment allowance $6,000 when he was relieved, or he could spread that out over a period of 3 years if he preferred to do that.

Now, as to what this is going to cost. Attempting to estimate the cost of legislation of this type is most difficult. Whatever conclusion is reached is bound to be very speculative, because there are savings in certain instances and there are costs in other instances. As a saving, for instance; when a captain with less service fills the spot occupied by a captain with more service, he receives less money, so he does not cost you as much as the man with the longer period of service. Then, of course, the actuarial tables come into the question as to how long these people might live and things of that kind. We have given very careful consideration to that, and with the understanding that it is most difficult to arrive at, we give you the figure that for the first year it will cost about $3.5 million and that that will continue at about that cost for a period of 5 years, and that over an extended period of 60 years it will cost approximately $15 million.

Now, as I have stated before, this is not something that we wanted to do. It is something that we have found essential that we do, and we have worked it out the best way that we know how to work it out, with due regard to everyone concerned. Now, all of your captains are not going out; only 35 percent, and as to your twice-passed over commanders, 25 percent will remain on active duty. The difficulty involved here is that if you do not pass this bill, you have over 6,000 younger officers behind this hump many of whom are going to have to go out long before their time, without any opportunity to complete a career. And, with this legislation you will be in a position to be selective in the ones who are going out. They will be the men who have served the longest. It is as fair and equitable as we know how to work it out.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from West Virginia.

Mr. BAILEY. I would like to have the distinguished gentleman from Texas explain this to the Members of the House. The statement has been made that the Navy is going to go ahead and do this anyhow. I want the gentleman to give a direct answer. The Navy cannot do anything until this legislation is passed toward retiring these people; is that not right?

Mr. KILDAY. Not entirely; no, sir. The situation is this—when you say, "these people," you mean whom?

Mr. BAILEY. Your captains and colonels.

Mr. KILDAY. Captains and colonels and lieutenant colonels and commanders. Now, those men in those grades under existing law cannot be forced to retire until they complete 26 and 30 years of service, respectively. That is true. There must be a law passed in order to retire those two groups. But the gentleman had asked whether the Navy could do anything about it. In the absence of legislation the Navy must do something about it, but not as to those officers. They must go down to the lower grades,

to the younger men, the men who are now on the way up the line and release those men. And there will be nearly 6,000 of them who will fail of selection for promotion to the next higher grade on two occasions, because there is no vacancy in the next higher grade. You cannot promote men into a grade unless there are vacancies in the grade. Unless this hump comes out, nobody can go up.

Mr. BAILEY. We have clarified one point to this extent, then, that the members of the gentleman's Committee on Armed Services are not being misled into thinking that the Navy has authority peremptorily to let those four classifications—captains, colonels, commanders, and lieutenant commanders—to let those go. They would have to act on the entire existing list of officers.

Mr. KILDAY. Without legislation they could not act just on this group; that is true.

Mr. BAILEY. So it is necessary that this legislation be passed. Let me ask another clarifying question or two. The gentleman has told me that he was going to talk about the question of good faith that may be involved here. Am I to understand that this $6,000 contribution that they are making to them when they retire is in repayment for the failure of the Government to keep its good faith in the agreement concerning 26-year retirement and 30-year retirement?

Mr. KILDAY. It is an attempt to do something to alleviate their situation. They have to readjust themselves to civilian life at an earlier time than they may have anticipated had they completed 26 or 30 years of service. It is an attempt to do justice as nearly as we know how to do justice to a group of people unfortunately affected and which we regret has been so unfortunately affected.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Pennsylvania.

Mr. FULTON. The question arises as to the timeliness of this legislation, whether it should be brought to the floor at this time in view of the deadline on Berlin which has been given this country, of May 27. Should we not only on the question of the strength of our own forces but on the question of the propaganda value abroad at this time be discussing the cutting off completely from active duty of 3,500 officers?

Mr. KILDAY. May I read to the gentleman the provision on page 12 of the bill, section 5:

> SEC. 5. The President may suspend any provision of section 1 or 4 of this act during a war or national emergency hereafter declared. Such a suspension may not continue beyond June 30 of the fiscal year following that in which the war or national emergency ends.

Mr. FULTON. May I comment on that? That requires a specific action to be taken by the President, to declare a national emergency, which then would affect the whole economy of the country. As a matter of fact we are now in a continuing cold war threat and it might be better to let the President have more discretion. I would, therefore, recommend that there be added a provision for a broad presidential discretion both as to time and as to number.

Mr. KILDAY. May I point out to the gentleman that the convening of these boards is not mandatory. On the first page of the bill we say that "the Secretary of the Navy may, whenever the needs of the service require, convene selection boards."

Mr. FULTON. But the provision the gentleman read is certainly restrictive of the powers of the President. It restricts him to a declaration of a national emergency, which he may not want to make.

Mr. KILDAY. In a comparable situation I must point out that the Secretary of the Navy, a member of the President's administration, would not convene the board.

Mr. FULTON. Then why do we need the restrictive clause on the President either as to the matter of a declaration of war or the declaration of a national emergency?

Mr. KILDAY. That is to stop the retirement of these officers who have not been selected for continuation. We are utilizing the existence of the national emergency for that purpose.

Mr. FULTON. May I respectfully suggest with reference to that particular provision that the President be given broad discretion as to the going out of officers, without limiting him to a declaration of war or a time of national emergency. He must affirmatively declare that, and that would affect the economy of the whole country. These officers, I believe, are all in a 4-year period, are they not, so that the great bulk of them that constitute this bulge in our officer corps are in the 1942 to 1945 era?

Mr. KILDAY. That is true. They are compressed, as the report states, in a period of about 4 years.

Mr. FULTON. The 4 calendar years are consecutive, so my question is, Why do you not simply give them a lump sum and treat them all alike, because they are all in about the same age group, rather than extend this particular threat over a long period against good officers who have otherwise served well? Why do you not at one particular time say, "Look, boys, we cannot keep you on active duty, so we will give you a lump-sum payment?"

Mr. KILDAY. I assume there are many alternatives which might be suggested as to what might be done. The committee has worked on this thing for years, and this is the best we have been able to come up with. I might point out in this connection that when you give a readjustment allowance it must have some relationship to the active duty income of the individual. What would be enough to adjust a man of the highest pay bracket on active duty would be a very tremendous sum of money to a man in the lower pay bracket.

My personal experience has been, as far as I am able to determine from friends and associates, that we generally live up to whatever we happen to be earning. The same would be true here, that the man who had been in the higher pay bracket would require a little more for the adjustment than the man in the lower bracket.

Mr. FULTON. That raises the question, should you not have a factor of servicemen's allowances, because a person who would have a large family with many children coming into school and college age would have a need for extra money, while possibly some of the older ones would have a need for less.

Mr. KILDAY. I think the suggestion made by the gentleman from Pennsylvania proves the wisdom of the provision we have adopted here. We cannot possibly now go into a question of dependents' allowances for retired personnel. We have had enough difficulty with dependents' allowances for active-duty personnel in the lower brackets.

Mr. BAILEY. If the gentleman will yield further, would the gentleman have us believe that if we do not give the Navy this authority they would have to move out a few waterlogged admirals over here to make room for some people lower on the list?

Mr. KILDAY. I hope to bring in a bill some time when nothing will be said about the generals and the admirals. I have never seen anybody elected yet by attacking the admirals, but everybody seems to think it is a good way to get elected. If we wiped out every admiral in the Navy, I do not care whether he is a rear admiral of the lower half or a full admiral, if we wiped them all out we would have 297 vacancies. There are only 297 of them on active duty. They have been through every selection from the time they came into the service and they have survived every one of those selections. They were selected for rear admirals, and then for the next higher grade. If we took them all off the list there would be 297 vacancies. If we got rid of every general in the Marine Corps, from 1 star up to and including 4 stars, we would have 62 vacancies. I would like to know how you are going to fit 11,297 commanders into those 297 Navy spots, and 1,900 majors into 62 general vacancies in the Marine Corps?

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Iowa.

Mr. GROSS. Will the gentleman please restate the floor that is being used as the base for retirement of these officers? Is this payment a maximum of $6,000?

Mr. KILDAY. It is a maximum of $6,000.

Mr. GROSS. Is that predicated upon service of 20 years?

Mr. KILDAY. No.

Mr. GROSS. On what was it based?

Mr. KILDAY. No one will be retired under this provision who does not have at least 20 years. Of course, today nobody can retire with less than 20 years of service except for disability. Twenty years is the minimum for length of service. This affects the men who have served over 20 years and in one instance they have not completed 26 years, and in the other instance they have not completed 30 years. Of course, you could theoretically say that you have a period of 6 years there for a man when he re-

tired at 26 years during which he might qualify for a part of this and a period of some 6 or 8 years in the other instance. But, as a matter of fact, that is not true because nobody ever gets up to the grades of commander and then colonel and captain until they have served a longer period than that.

Mr. GROSS. For all practical purposes, it puts a floor of 20 years of service and a ceiling of $6,000; is that correct?

Mr. KILDAY. No; it continues the present law that no one can retire for length of service with less than 20 years. That is the present law in all cases, and then this is an attempt to compensate for that portion of the 26 or 30 years of total service which the man does not serve.

Mr. GROSS. I have just another question or two. This is confined to the Navy and Marine Corps?

Mr. KILDAY. That is correct.

Mr. GROSS. It does not go to any of the other services?

Mr. KILDAY. No, sir; this deals specifically with the problems existing in the Navy and in the Marine Corps. The same identical problem does not exist in the Army and the Air Force. They do have many problems and they have other problems, also, but they do not have this identical problem.

Mr. GROSS. And the gentleman is saying that this would cost over a period of years approximately $15 million?

Mr. KILDAY. That is projected over a period of 60 years. You see we are dealing with actuary tables here. There were three different sets of actuarial information. I assume that they figure that somebody in this group who is now, perhaps, forty and some-odd years old, and some of the captains up in the fifties, would probably live another 60 years. I do not know how they project it out, but that is actuarial terminology.

Mr. GROSS. Do I understand that the gentleman's committee is now considering legislation dealing with senior officers and that it is hoped to come out with legislation that would prevent impaction in the future, if it is possible to do so?

Mr. KILDAY. This is designed to remain in effect for 10 years or a little bit over. It will expire in 1970, to remedy the present situation. It is my personal view, and I do not know whether the Navy agrees with it or not, but I do not care whether they do, that the Officer Personnel Act of 1947, if it is complied with by the services in the manner in which it is written, will prevent this from happening—unless another Korea or something of that kind comes up.

Mr. GROSS. I can understand the effect that Korea had on the services. I can understand that. But, my question is—is there anything that the Congress can do to prevent a recurrence aside from a situation of that kind, to bring this back into focus, as we discussed the other day on the floor of the House with reference to the Marine Corps?

Mr. KILDAY. I am sorry that we did not get to finish that discussion. The gentleman cut us off too quickly there.

Mr. GROSS. Some 500 colonels and other senior officers in the Marine Corps seems to me to be too many.

Mr. KILDAY. I would like to discuss that with the gentleman some time. But it is a very long subject as we experienced the other day. But I do want to get into the RECORD that these special pays do not carry over into retirement—flight pay and so on. I did not get a chance to make that statement when the gentleman cut off the debate on the floor the other day.

Mr. BALDWIN. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. BALDWIN. The gentleman mentioned in his earlier remarks that all of us are hearing from those who retired prior to the 1958 act. As the gentleman knows, there have been a considerable number of bills introduced to restore the traditional relationship between retired pay and active duty pay. I wonder if the gentleman has any plan at the present time to hold hearings on those bills?

Mr. KILDAY. May I say to the gentleman from California that the principle and the first rule of the Committee on Armed Services is that a subcommittee shall have jurisdiction of all those bills referred to them by the chairman. The chairman has not referred that bill to me and I do not know what he contemplates doing. I do know that he enforces the rules and I have nothing to do with it at this time.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. VANIK. Is this uniquely a problem of the naval personnel? How is this handled in other branches of the service?

Mr. KILDAY. The identical problem has not arisen in the other services. There are other problems in the other services with reference to the distribution of rank. They will have their proposals here which deal differently with different problems, including a request for authority to pluck out some of those who are in higher ranks and matters of that kind.

I do not want to criticize the Committee on Naval Affairs, but when they integrated, after World War I, they were integrated at the ranks they held. This situation I do not believe could properly arise within the Army and the Air Force. But it is a practical situation that confronts us. It is difficult and it is distasteful, but something has to be done about it. This is the best your subcommittee could do with it, and I think it should be passed now.

The CHAIRMAN. The gentleman from Texas has consumed 43 minutes.

The Chair recognizes the gentleman from Pennsylvania [Mr. GAVIN].

Mr. GAVIN. Mr. Chairman, I yield myself 13 minutes.

Mr. Chairman, in opening my remarks I want, first, to pay tribute to the members of the Armed Services Committee, particularly to the most able gentleman from Texas, [Mr. KILDAY]. They, along with me, have studied, with such diligence and such attention to detail, the officer hump problem of the Navy and Marine Corps for a period of well over 2 years and extending through three sessions of Congress.

This is a most complex subject and the action taken by the committee and, subsequently, the Congress, in this matter will have the most far-reaching effect on the battle readiness of our Navy and Marine Corps not only today but, of prime importance, on the battle readiness of our Navy of tomorrow which will be made up of those nuclear submarines, jet aircraft and guided missile cruisers that we are authorizing in this session of Congress.

This bill, H.R. 4413, was introduced by the distinguished chairman of the Armed Services Committee for the express purpose of providing improved promotion opportunity for certain officers in the naval service.

The bill, while complex in language, is basically simple in its intended operation. It would permit the Secretary of the Navy to convene boards of officers for the purpose of selecting for retirement a percentage of the senior captains in the Navy and a percentage of the senior colonels in the Marine Corps who have been passed over for the rank of general.

In addition, it would allow Navy and Marine Corps selection boards to select for retirement a percentage of commanders and lieutenant colonels who had failed of promotion at least twice to a higher rank.

The vacancies thus created in the senior grades of captain and commander in the Navy and colonel and lieutenant colonel in the Marine Corps would be sufficient to enable those services to maintain a vitalizing flow of promotions and would insure an equitable opportunity for advancement to those officers who were called to the colors during the recent Great War and who remained in as Regulars to fight on the battlefields of Korea and to patrol the Straits of Formosa or off the shores of Lebanon.

I would like to point out here, that the 85th Congress made a tremendous contribution to the morale of the armed services through the passage of pay legislation early in the final session. But the very concept of the pay bill, which was to provide sufficient incentive for the best officers to remain in the service, would be defeated by closing off the avenue of advancement to those battle-trained Regulars commissioned between 1942 and 1945 who, as the Navy Department testified, make up about one-third of its total Regular strength.

It is now a matter of record before Armed Services Subcommittee No. 1, which held exhaustive hearings on this bill, that promotion to the senior grades in the Navy for the past 15 years has been based largely on seniority with little or no forced attrition at the promotion points. Therefore, the many officers who have achieved senior rank through mere longevity are a formidable block to many dynamic able officers below them who, even with this legislation, will face retardation in promotion as well as a vigorous weeding out process between lieutenant commander and commander, and between commander and captain.

On the basis of keeping faith with the principles of the pay legislation alone, this legislation, then, is essential.

Any legislative relief for the Navy's hump problem must, of course, have as the first consideration the needs of the service. If the needs of the Navy and Marine Corps could be met by continuing these senior officers on to the retirement points they contemplated, we would most certainly have recommended this course of action in the subcommittee.

But we considered carefully every method of approach to the problem and finally came to the inescapable conclusion that a substantial number of naval and marine officers must be involuntarily retired. Thus it is not only a case of who goes and when, but with what degree of selectivity will the removal process be conducted.

The magnitude of the problem is immediately apparent when we consider the fact that there are 8,000 Regular line officers in the Navy who were all commissioned within a period of 4 years—and the captain assignments eventually available for them number only 2,000. As a matter of simple arithmetic it would appear that some 6,000 officers from the group of 8,000 will not be selected for the rank of captain in the Navy and will, thus, be denied a 30-year career.

However, by combining the features of this legislation with some retardation in promotion flow, the Navy will be able to keep on for a full 30-year career many more line officers than would otherwise be possible.

As a matter of real interest to the House I would like, Mr. Chairman, to quote some of the figures that the Navy Department submitted to the committee with regard to retirements without the legislation. The number of line lieutenant commanders forced to retire in that grade within the next 10 years would be 3,000 in round numbers. The number of commanders forced to retire in that grade would be some 2,000.

This totals 5,000 in the line alone, and does not include the number who would also be forced out from the various staff corps.

Now, this bill will not save from early retirement all these young officers, but it will keep on active duty over 1,400 more of the best lieutenant commanders and over 600 more of the best commanders. In addition, it will permit about 50 percent of the remaining commanders to be promoted, eventually, to the rank of captain as opposed to only 25 percent who could be promoted without this legislation.

Very possibly the question may arise in your mind, as it did in mine, as to the immediate impact that this bill will have on the Navy and Marine Corps. What kind of captains and colonels will we be getting? Will we be in danger of losing experienced officers in the senior grades during these critical times?

Prior to voting in favor of this bill in committee, I questioned Vice Admiral Smith, the Chief of Naval Personnel, very closely in this regard. In substance, his answer to me was that first, under section 5 of the bill, the President may suspend any provision of the act during a war or national emergency as conditions may dictate; and second, as to the quality of senior officers that will be coming up, the Navy will get more able, vigorous captains with greater promise for the future.

I would like to enlarge on Admiral Smith's statement and point out that with more able, vigorous captains, the Navy's quality of leadership in the higher echelons will be enhanced to a marked degree, providing increased incentive for high quality young men to embark upon a naval career.

As I have indicated, I am thoroughly satisfied that this bill will have a healthy effect on the Navy and Marine Corps and will improve their military capability in the years to come.

But what of our moral responsibility for the senior captains and colonels who will retire somewhat sooner than they had anticipated? These people have been good officers with commendable records of long and faithful service. Although they might not have achieved the senior grade of captain or commander during a more competitive time, they were, nevertheless, on board when the Navy needed them and they discharged their duties in a sufficiently competent manner to warrant their retention until the hump problem became acute.

Now, can we turn around and let them go without some recognition of their loyalty and, in many cases, of their own laudable war records? I, for one, think not.

In fact, I would like to do more for these officers than the bill now provides.

But, extending continued active duty pay to officers who would be serving in unnecessary Navy or Marine Corps billets at the expense of the military pay—Navy appropriation would be neither ethical nor would it be in the best interests of the taxpayer. I am convinced, however, of the need for some separation gratuity to help these men establish themselves in worthy civilian occupations if they so desire.

In addition to their retired pay, which is in no case less than 50 percent of their base pay each month, the bill provides a separation allowance of fairly generous proportions. It would permit a readjustment payment equal to 2 months' base pay for each year of retirement in advance of the 26-year point for commanders and lieutenant colonels and the 30-year point for captains and colonels, but not to exceed $6,000.

It should be emphasized that this is a lump-sum payment on a one-time basis only—including an option to spread it over a period of 3 years—and does not add to the long-term costs of military retirements. While it is a generous method of caring for the people who are affected, nevertheless it also represents the most equitable settlement ever offered to members of the armed services under similar circumstances.

However, it is an essential feature of this bill, since we cannot, in good conscience, suggest that the laws be changed to foreshorten the careers of some of our officer personnel without, at the same time, appropriately safeguarding not only their accrued retirement benefits but their trust and confidence that the country will provide, in some measure, for their continued welfare.

The committee felt that this readjustment allowance would be sufficient to help these officers over the rough spots of their transition to civilian life, providing a sufficient amount of cash to relieve them and their family of financial worry until such time as they are established in a new position. In addition, let me emphasize once again that the captain retiring with 25 years of service will draw well over $6,000 a year in retired pay alone.

I am keenly aware of and share the concern of the Congress over the rising costs of military pay and military retirements. But insofar as active-duty pay is concerned, it was the position of the Navy Department that no increase in the number of captain and commander billets could be justified. As a consequence, this bill provides the solution to the hump problem without the use of additional numbers of senior officers who would not serve in useful billets but would be promoted for promotion's sake alone.

As to retired pay, it must be remembered that all the officers who are part of the hump problem already have retirement guarantees in law since the 8,000 hump officers in the Navy now hold the rank of lieutenant commander or commander and those in the Marine Corps are at least majors. Thus we are not going to add to retired costs in any appreciable degree in the long run. We are, in fact, going to preclude the early retirement of greater numbers of hump officers by involuntarily retiring more senior officers who are just a few years from the mandatory retirement points.

I would like to emphasize, finally, Mr. Chairman, that the question of costs, individual equity, moral obligation, and guarantees of service, though important considerations, are all secondary to the maintenance of a vital, effective Navy and Marine Corps in continual fighting trim. If we do not pass this bill, the country will lose not only those more senior officers who are due to leave the list shortly in any event, but also vast numbers of younger officers whose training, experience, and leadership we could and should employ for 10 to 15 years longer.

In my mind, Mr. Chairman, the choice is clear. We either temporize with the issue now and live to face the same problem from year to year in greater proportions with the future effectiveness of the Navy and Marine Corps held in the balance, or we vote favorably for this bill and resolve the problem here and now, with the decisiveness expected of us by our people for the good of the Navy, the country, and our posterity.

Mr. KILDAY. Mr. Chairman, I yield such time as he may require to the distinguished chairman of the Committee on Armed Services, the gentleman from Georgia [Mr. VINSON].

Mr. VINSON. Mr. Chairman, the purpose of H.R. 4413 is to equalize the attrition rate among regular officers of the Navy and Marine Corps in such a way that the full brunt of nonselection will

not fall upon regular officers of the Navy and Marine Corps who were commissioned in the period 1941 to 1946.

Now this bill is temporary legislation; it will expire in 1970 and the problem that it seeks to overcome will exist for about 10 years.

The problem has been created because there are not sufficient vacancies in the senior grades of the Navy and Marine Corps to permit a reasonable promotional opportunity for lieutenant commanders and commanders of the Regular Navy and majors and lieutenant colonels of the Regular Marine Corps.

If we do not pass this legislation, more than 6,000 unrestricted line officers of the Navy and Marine Corps now serving in the grades of lieutenant commander and commander in the Navy and major in the Marine Corps will fail of selection because there just are not sufficient vacancies to permit a reasonable number of these people to be promoted.

Now let me explain this in a little more detail.

If the proposed legislation is not enacted, 2,945 unrestricted line lieutenant commanders over the next 10 years will fail of selection because of lack of vacancies.

In the Marine Corps, approximately 1,348 majors will fail of selection to lieutenant colonel over the next 5 years because of lack of vacancies.

If we pass the proposed legislation, only 1,476 lieutenant commanders and 400 majors will fail of selection. Thus, we will make it possible for 1,469 lieutenant commanders now serving on active duty in the Regular Navy to be promoted; and we will make it possible for 948 majors to be promoted who would otherwise fail of selection.

In addition, if we do not pass this legislation, some 2,057 unrestricted line commanders will fail of selection during the next 5 years. With the legislation, only 1,400 unrestricted line commanders will fail of selection.

Thus, we will make it possible in the next 5 years to promote 657 more commanders to the grade of captain who otherwise would have to fail of selection because of lack of vacancies.

To put it in terms of percentages, the attrition rate for promotion from commander to captain will be 75 percent; that is, 75 out of 100 commanders will fail of selection to captain, and eventually 85 percent of the lieutenant commanders in the hump years will fail of selection to commander.

In the Marine Corps 75 percent of the majors in the hump years will fail of selection to lieutenant colonel.

This is over a period of the next 10 years.

These are the people who make up the more than 6,000 officers I mentioned who will fail of selection if we do not pass this legislation.

Now in order to make it possible for more of these officers to be selected, we have to create vacancies.

We do this by retiring regular officers of the Navy and Marine Corps in the grade of commander and captain, and lieutenant colonel and colonel, prior to the years of service that they might otherwise have served if we did not take this action.

Under existing law an officer who is selected to the grade of captain in the Navy, or colonel in the Marine Corps, is not required to retire until he completes 30 years of service and has twice failed of selection.

In other words, even after he has twice failed of selection he can continue to serve on active duty assuming his service is satisfactory until he completes 30 years of service.

Also under existing law a commander or lieutenant colonel is not required to retire until he has twice failed of selection and has completed 26 years of service.

In other words, even though he has twice failed of selection to captain or colonel, he is not required under existing law to retire until he completes 26 years of service.

Now the purpose of the proposed legislation is to bring about increased attrition in the grades of captain and colonel, and commander and lieutenant colonel, in order to bring about a constant and reasonable flow of promotion of officers below these grades.

Today we have stagnation at the top in the grades of captain and colonel, and commander and lieutenant colonel, and no vacancies are being created because so many officers have twice failed of selection and yet still have several years to serve until they complete the 30 or 26 years of service that present law contemplates.

Thus, elimination of these officers at the top must be brought about in order to permit promotion among the officers who are at the bottom of the ladder.

In other words, we have stagnation at the top which is forcing the Navy and Marine Corps to impose a very heavy attrition at the bottom. And the purpose of the legislation is to permit a constant and reasonable flow of promotion in the grade of lieutenant commander and major to the grades above that.

Now, what does the proposed legislation contemplate?

It contemplates that a commander who has twice failed of selection or a lieutenant colonel who has twice failed of selection, provided that he has more than 20 years of service, will be retired prior to completing 26 years of service. It also provides that a twice-passed-over marine colonel will be retired before he completes 30 years of service, and a captain who fails of selection for continuation after serving 5 years in grade, will also be retired before he completes 30 years of service.

Over the next 10 years, it is anticipated that 1,500 captains will have their services terminated short of completing 30 years of service.

It is also anticipated that 1,000 commanders will have their services terminated prior to completing 26 years of service.

During the next 10 years, approximately 400 colonels will have their services terminated prior to the completion of 30 years of service and 600 lieutenant colonels will have their services terminated prior to the completion of 26 years of service.

Now the committee has recommended a readjustment pay for individuals not selected for continuation who are now serving in the grade of colonel or captain, or lieutenant colonel or commander, which will give individuals now serving in these grades a sum of money equal to 2 months' pay for each year by which their retirement precedes the normal retirement point. No officer may receive more than $6,000.

We have also inserted a provision in the bill that will require the Navy and the Marine Corps to show in their records that these officers who will be required to retire before completing 30 or 26 years of service retired voluntarily.

In other words, these officers have performed in a satisfactory manner and no stigma should be attached to their records in any way. The bill specifically requires these officers to be carried on the rolls as having retired voluntarily.

In considering the equities involved in the proposed legislation, it must be remembered that the officers whose careers will be terminated short of the years of service that they might have otherwise anticipated have not been subjected to the attrition contemplated by the Officer Personnel Act.

Many of them were promoted without competition during World War II and thereafter were promoted if found qualified with practically no competition for selection.

In other words, many of these officers have been in selection zones where 100 percent of the qualified officers have been selected.

It also should be remembered that these officers, most of whom were promoted early in their careers to the more senior grades, have been drawing the full pay and allowances of the more senior grades far in advance of the period when they might have anticipated promotion to these senior grades.

If the proposed legislation is not enacted, most of these officers will continue on active duty drawing pay which increases with longevity while the officers junior to them will either face completely unacceptable heavy attrition or an excessively long wait for any promotional opportunity or a combination of both.

The proposed legislation must be considered from the viewpoint of what it does for our national defense. While we must always be conscious of the effect any legislation has on individuals, the overriding factor must be the security of the Nation.

Under the proposed legislation it will be possible to promote about 60 percent of the lieutenant commanders who are now in the hump to the grade of commander. Likewise, about 70 percent of the majors in the hump years will be able to be promoted to the grade of lieutenant colonel.

Under the proposed legislation, it will be possible for approximately 50 percent of the commanders in the hump years to be eventually promoted to the grade of captain, and about 60 percent of the officers in the hump years in the Marine Corps to the grade of colonel.

Without the legislation, 75 percent of the majors and lieutenant commanders in the hump years in the Marine Corps and Navy will fail of selection.

All of these officers are the combat tested, widely experienced officers who we will look to for leadership in the years ahead. To assess this attrition against these officers will seriously affect the capability of the Navy and the Marine Corps now and in the foreseeable future.

For that reason we must keep as many of these officers as we possibly can, and that is the objective of the proposed legislation.

Mr. KILDAY. Mr. Chairman, I yield such time as he may desire to the gentleman from Florida [Mr. BENNETT].

Mr. BENNETT of Florida. Mr. Chairman, it is certainly in the interest of national defense to make possible more rapid promotions to the upper officer grades of the Navy, which is the primary purpose of this bill. However, the bill provides for involuntarily retiring many commanders and captains to make way for the promotions of these junior officers. I have felt that the bill is deficient in not giving these competent and loyal naval officers an opportunity to remain in the Navy outside the chain of promotion until completion of 26 years in the case of commanders and of 30 years in the case of captains.

The Officer Personnel Act of 1947 provided:

SEC. 312. (a) Captains * * * of the line * * * whose names, on June 30 of the fiscal year in which they complete 31 years of total commissioned service * * * are not on a promotion list, shall, subject to the provisions of paragraph (1) of subsection 311(c) of this title, if not otherwise retired pursuant to law, be placed on the retired list on that date.

And:

SEC. 312. Commanders * * * whose names, on June 30 of the fiscal year in which they complete 26 years of commissioned service, are not on a promotion list, shall, subject to the provisions of paragraph (1) of subsection 311(c) of this title, if not otherwise retired pursuant to law and if they shall have twice failed of selection for temporary promotion to captain, be placed on the retired list on that date.

Prior to the enactment of this law the situation simply was that officers who had failed of selection to the next higher grade twice or more were required to be either separated or involuntarily retired—see pages 6–19 of NAVPERS 15898—"Officer Fact Book, Facts for Officer Counseling."

The purpose of this 1947 law was shown by the following statements in the committee report—House Reports No. 640:

In reporting the bill unanimously, the committee takes the position that it is bringing before the House an equitable, economical, and forward-looking officer promotion program for the services—a program that will offer careers satisfactory enough to attract capable men, promising enough to hold in service the capable men already in uniform, and economical enough to be acceptable from a budgetary standpoint.

* * * * *

Regular officers of the Army and Navy must be given some assurance, with the least possible delay, as to what the future holds in store for them, or the services will lose a high proportion of their most capable men and the morale of those who remain will be impaired.

Gen. Dwight D. Eisenhower, Chief of Staff at that time, approved of the 1947 act "completely and thoroughly"—hearings before Committee on Armed Services, U.S. Senate, July 16, 1947, page 2.

Specifically—

He testified—

we need to tell the young fellow who is coming in what his prospects are, how he stands, what he has to do, what standards he has to reach in order to go ahead.

The moral obligation which the unamended bill now before us would repudiate was thus embodied in the Officer Personnel Act of 1947. There was a commitment in that act that naval officers of captain and commander grade who completed certain service would not be retired until completion of 30 or 26 years respectively. Reference to the hearings on this legislation now before us show that both the representatives of the Navy and members of the subcommittee repeatedly referred to this as a "guarantee by law"—page 3, 1959 hearings—a "guaranteed 30 years of service"—pages 55, 56, 1959 hearings. Elsewhere in the hearings, it is pointed out that by enacting the unamended bill we would be "changing specific rules"—pages 34, 43, and 50, 1959 hearings—or effecting a "change in signals"—page 30, 1958 hearings.

The hearings show that the 1947 act was passed to prevent a loss of officers at a time when they were badly needed, that it was passed to assure these officers that if they completed certain service they would not be involuntarily retired until they completed 26 or 30 years, whichever was applicable, and that the officers affected by the bill before us so understood. This is shown by the hearings in 1958 at page 37.

On February 17, 1959, the testimony of Navy Secretary Thomas Gates shows that the 1947 act was understood as a guarantee and relied upon by these officers.

The amendment I offered in committee to correct the pending legislation left the bill intact as it came from the subcommittee but provided further that before an officer is separated under the act he will be given an opportunity to elect to fulfill his guaranteed service without further promotion, outside the chain of promotion, by reassignment in certain specified activity. This would first be within the Department of Defense and if no utilization is found there other assignments would be possible within other agencies of the Government or in the national interest as specified in the amendment.

Thus, although the amendment would cost some additional dollars these competent officers would be performing valuable service for the Nation, the Navy hump would be eliminated, the moral obligations fulfilled, and the interest of national defense would be served by assuring present and future officers of the integrity of the Federal Government guarantees upon which officers are induced to enter and remain in service.

I do not believe that the Government should repudiate the obligations which I believe are owed to those senior officers. To do so will lessen enthusiasm among others who may be considering entering upon or continuing officer service. Moreover, I dislike the result in the Government's losing the services of these fine officers who are to be separated. These men are in the prime of life. They stood the test of many years of competition with their peers and have survived many selection boards. If they are not to be used in the Navy, their experience and talents can be put to good use elsewhere in the Department of Defense, in the other Government departments and agencies, or in colleges carrying out projects in cooperation with the Federal Government.

The amendment I offered in the full committee reads as follows:

On page 10, immediately after line 16, insert the following:

"SEC. 5. (a) If, before the date prescribed in subsection (i) of the first section of this act for his retirement, an officer applies to the Secretary of the Navy for reassignment under this section, he shall not be retired, but—

"(1) shall be reassigned to perform duty in the Department of Defense;

"(2) shall be reassigned to perform duty with any other department, agency, or establishment in the Government of the United States; or

"(3) if not reassigned to duty under subparagraph (1) or (2), shall be reassigned to perform duties as a member of the faculty or staff of any institution of higher learning cooperating with the Federal Government in scientific, military research, or other Federal activity.

"(b) An officer reassigned pursuant to this section shall be carried as an additional number in grade, shall not be eligible for promotion, and shall be retired on the date applicable to him under section 6376, 6377, or 6379 of title 10, United States Code. For the purpose of applying such sections, such officer shall be treated in the same manner as are officers who have twice failed of selection for promotion and who are not on a promotion list."

I have been unsuccessful in making these views prevail within the Armed Services Committee. There is no solid testimony on the feasibility of my amendment within the committee hearings. There is much merit in allowing the younger officers a reasonable chance for promotion. Under these circumstances I have concluded that it would be best not to offer the amendment in this floor debate but to vote for the bill with the idea that in later stages of the bill's consideration it can be further heard and amended to eliminate its present objectionable features without damaging its good purpose of providing adequate promotional opportunities for younger officers.

Mr. KILDAY. Mr. Chairman, I yield such time as he may desire to the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Chairman, I desire to extend in the RECORD at this point comments by one of the officers affected by this legislation. I have received permission in the House.

The comments are as follows:

COMMENTS BY A NAVY COMMANDER ON H.R. 4413—THE NAVY'S PROPOSED HUMP LEGISLATION

Background: H.R. 4413 is the Navy's proposed temporary legislation to set aside certain provisions in the Officer Personnel Act (OPA) of 1947. Based upon this act, the Navy gave certain assurances to officers of the Navy upon which they could plan their careers. The purpose of this act was to provide incentives for young men coming in the Navy and to induce experienced officers of World War II to join the regular service, and it has been used by the Navy for this purpose. One of the assurances given the career service officer by the Navy under the OPA was a guarantee of the following years' service by ranks, provided, of course, the officer's performance of duty proved satisfactory: Major or lieutenant commander, 20 years; lieutenant colonel or commander, 26 years; colonel or captain, 30 years.

The problem: The hump consists of a large group of officers who were initially commissioned during the 4 years of World War II. This group, disproportionate to all other year groups before and behind it, constitutes about one-fourth of the regular officer strength of the Navy and Marine Corps. It has provided the large reservoir of combat-tempered experience which has been the backbone of the Navy during the past decade.

Officers in the hump are now in the grades of lieutenant-commander and commander in the Navy, and major and lieutenant-colonel in the Marine Corps. Unless remedial action is taken, about two-thirds of these officers will be retired in the grades in which they are now serving without having had a reasonable opportunity for promotion to a higher grade. This is not as serious as it appears because it is not much worse than normal.

Cause of the problem: The official stand is that too many officers were retained after World War II and promotions were stepped up during Korea. Why does not the Air Force and Army have the same problem? Could not the problem in the Navy have been caused in part by poor personnel management? If this is true, the men who caused the problem are either now admirals, or retired, and are not, therefore, affected by the proposed legislation.

H.R. 4413: The bill, as proposed by the Department of Defense, and as amended and approved by the Armed Forces Committee of the Congress at this writing, will authorize the Secretary of the Navy to convene plucking boards for eliminating certain numbers of captains (about 50 percent) who have 5 years service in grade. Certain numbers of commanders (about 50 percent) who twice fail of selection for promotion to captain, will be selected for forced retirement. The Armed Forces subcommittee amended the bill to provide a severance payment of 2 months base pay for each year of service short of the guaranteed 26 or 30 years for commanders and captains respectively, not to exceed $6,000.

Personal effect of H.R. 4413: If this bill is passed it will have the following meaning and effect on nearly all of those officers who are plucked out:

(1) The Congress broke faith (promised by the Navy).

(2) They chose the wrong career.

(3) They will be looking for a new job in their mid-40's. It will prove difficult to get any kind of a reasonable job at their age, especially with the stigma of being a discard. Irrespective of the "voluntary" termination added to the bill by the subcommittee, any man who is kicked out of any organization is severely handicapped in trying to reestablish himself.

(4) The insurance and investment plans for the education of their children would have to be canceled or radically altered and many related financial commitments would have to be terminated at disadvantage.

Recommendations: The following recommendations are respectfully submitted for consideration:

(1) It is recommended that H.R. 4413 be sent back to committee with no further action, thereby leaving the Officer Personnel Act of 1947 in force. The Navy can find more humane ways to solve this problem; or

(2) It is recommended that a severance sum be provided in an amount that will attract voluntary retirement of commanders after 20 years' service and captains after 26 years' service. In this manner the same objective can be accomplished at approximately the same cost and it will be eminently fair for the officers concerned. It is considered that a $10,000 maximum severance payment would attract sufficient early voluntary retirements to solve this problem. This could be financed by a bond maturing in 5 years, similar to the leave bond issued at the end of World War II.

The Navy will, in other words, eliminate a certain number of captains and commanders and promote an equal number into the ranks so vacated. With the selection procedures used by the Navy, it is entirely possible and probable that certain groups of officers will be discriminated against in the prosecution of H.R. 4413 and the bill contains no provision to prevent this.

Based upon the premise that it was good for the Navy to have a mixture of Academy, college and university graduates in the Officer Corps, the Holloway plan was sold to the Congress. This plan provided that all naval officers who did not have a college degree would be sent to college at Government expense for five semesters, then sent to the Navy Line Officers School for 1 year. After this extra education, non-Academy officers were to be considered equal to the Naval Academy officers from an educational and professional standpoint. (I had a college degree when I came in the Navy and was not sent to college under the Holloway plan.)

Captains and commanders who consider themselves the choice ones and all junior officers are in favor of this legislation because it enhances their promotion opportunities, but what will it do to their faith in the laws of the land? As a commander, I could possibly benefit by this law. The worse that could happen is that my career can be cut short by 4 to 5 years from the promise of 26 years. On the other hand my chances of being promoted to captain will increase from approximately 25 percent without the bill to 50 percent with the bill.

Therefore, my basic concern is the shattering of faith that this bill causes and the possible discrimination in its use. If I have no assurances, then even my ultimate retired pay is not sacred. Could I depend on it in my old age? No. Perhaps I would be wise to retire after 20 years' service and try a new career. The younger officers will use the same reasoning. Twenty years' service is not a career because a man's most productive years are between the ages of 40 and 60 years. After H.R. 4413, what will the young men think when the recruiters speak of the "guarantees" provided by the laws of the country? Even at the present time, the Armed Forces cannot attract sufficient young college graduates into the officer corps without compulsory military training. This is mentioned to show that H.R. 4413 can have far more drastic and costly results in the future than in its immediate effect. When any organization practices wholesale and heartless elimination of men near the top of the ladder, who have been successful in their profession, to make room for those down the ladder, even the confidence of those who benefit is severely shaken.

Subcommittee hearings on H.R. 4413: If this bill becomes law and if I am one of the unfortunate ones to be kicked out I could never blame the Armed Services Committee of the House of Representatives because I am convinced that this committee is trying to give the Navy legislation it has asked for. However, in hearings of this type it is suggested that a representative group of officers be called to testify and not a hand-picked group.

Mr. GAVIN. Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. ARENDS].

Mr. ARENDS. Mr. Chairman, like my chairman, the chairman of the Committee on Armed Services, I, too, want to congratulate the subcommittee under the leadership of the gentleman from Texas [Mr. KILDAY] and the gentleman from Pennsylvania [Mr. GAVIN] on this side of the aisle, for the splendid work they have done in the hearings and the report they brought to the full committee, which, as I recall, was unanimously adopted by the Committee on Armed Services. This has been an extremely intricate piece of legislation that they have dealt with. I think this is a good bill, something that the House must act favorably on, which will be so beneficial to the Navy in the years ahead.

Mr. Chairman, there has been much discussion concerning the effects of H.R. 4413 on the officers who would be retired as a result of its enactment. Let us turn for a moment to consider the effects on another group of officers if the bill is not passed.

In the Navy there are about 8,000 lieutenant commanders and commanders of the line who presently aspire to be promoted to captain. However, there are only 2,000 line captain vacancies to which this group can be promoted if H.R. 4413 is not enacted. This means that more than 6,000 officers will be retired without ever reaching the grade of captain. The situation in the Marine Corps is just as drab; 3,000 majors and lieutenant colonels must be fitted into 580 colonel's billets.

If the bill is not passed before the next selection board is convened this fall, three out of four of the lieutenant commanders under consideration must be failed of promotion. This is what happened last year: A fantastic 71 percent of the lieutenant commanders had to be failed of selection since relief was not provided by the last Congress. I am sure that most of us have received letters from our constituents as a result of that drastic action, complaining about a lack of a fair opportunity and the loss of morale. The Officer Personnel Act envisioned that only one out of four would be passed over at this stage. In other words, the present lieutenant commanders have been anticipating that three out of four would be promoted rather than only one out of four. If this bill is passed, and only if it is passed, three out of five of the lieutenant commanders can expect promotions and a continuance of their careers. Without it, their situation is hopeless. It is expected that it will get worse even with only 1 out of 4 being promoted; it could drop to 1½ out of 10 and have a devastating effect.

The picture is just as bleak for the full commanders. The Officer Personnel Act envisioned that three out of four

commanders would be promoted to captain. If this bill is not passed, only one out of four can expect promotions. If the bill is passed, their opportunities can be raised to about two out of four, a 50–50 chance.

The Secretary of the Navy, the Honorable Thomas S. Gates, Jr., painted this grim picture very clearly for the subcommittee of the Committee on Armed Services which considered the bill. He pointed out the evils of permitting promotions to stagnate, which would occur if this legislation is not passed and which would also cause the force-out of some of our finest and most needed officers. The officers behind the hump, those serving in the grade of lieutenant or who have been recently promoted above that grade, will also be affected, since they will be held back. In the words of the Secretary:

> We can expect many of these outstanding junior officers to leave the service unless we take action now. These officers are our seed corn for the future. The alternative to complete promotion stagnation would be to force out three-quarters of the officers in the hump group. This would be most unwise. The Navy needs these officers, who combine combat experience in two wars with potential for the future.

Mr. Gates very vividly displayed in atomic-age language the effects on the future Navy if the Congress does not take action to provide the requested relief: "Today we build nuclear ships—supersonic aircraft, missiles with uncanny intelligence—to equip the Navy and Marine Corps for the responsibilities of seapower in the future. The officers we speak of today are the officers who must design, control, and command these forces. We cannot risk second-class leadership. In the national interest, the service requires the best. I am convinced that the legislation we ask for is indispensable to that objective."

After reviewing the facts, which were presented so excellently by Vice Adm. H. Paige Smith, the Chief of Naval Personnel, and Maj. Gen. Donald M. Weller, Assistant Chief of Staff of Personnel of the U.S. Marine Corps, I feel that the Secretary of the Navy expressed himself factually and without any sense of exaggeration. He did not overstate the case or present it extravagantly. The Navy and Marine Corps have a most serious problem which can only be solved by legislation—and now! If more delay is added on the already existing delays, the harm which will be done to the careers of our future leaders will be compounded, possibly even wrecked to the point of not being recoverable.

Considerable soul searching has been done before bringing this legislation on the floor of this House. The Secretary of the Navy, along with the Chief of Naval Operations, and the Commandant of the Marine Corps, gave it his personal attention and concentrated study before recommending the solution to the Congress. The members of the Committee on Armed Services have reviewed it from every corner with the hope of finding a better solution. After months of study, even years, all have concluded that this bill provides the only fair and equitable system.

As has already been pointed out, a continuance of the devastating attrition rates on the junior officers would be unsound and unfair. Now for a moment let us look at the group which would be required to retire in order to provide a reasonable avenue toward a career for the junior officers. To quote from the Secretary of the Navy again:

> There are many officers senior to the hump who have been promoted with no serious attrition. Among them are officers who would not have achieved high rank under comparable competition. The maintenance of quality among our officers and simple equity demand that they should share this burden in some measure. Many of them realize it is in the best interest of a stronger Navy that they do so. Certainly everyone recognizes that they have served their country faithfully and well.

In the personal opinion of the Secretary, and which has been so ably supported here by the gentleman from Texas [Mr. KILDAY] this bill is in the best interest of both the need of the services and of equity and fairness between individuals. This legislation will preserve the equities between groups of people and preserve good faith and level off the problem in the best interests of the best kind of officer corps that you can envision. Without it, you do not maintain morale and you also lose the objectives which must be sought. All of these complex elements are inextricably interwoven.

And so, stated simply, the problem to be cured is which group of officers must be retired. If H.R. 4413 is enacted, about 35 percent of the senior officers—the individual officer being determined by the Navy's time-honored selection board procedures—will be retired after having had the unanticipated benefits of practically free promotion to the grade of captain and after having enjoyed a reasonable career. If the bill should fail, then about 75 percent of the junior officers will be retired without a fair opportunity of promotion or the completion of a satisfactory career. In other words, H.R. 4313 would provide a selective retirement system and the assurance of having our leaders of tomorrow trained and ready to command the fleets which must guard the seven seas.

With all my heart and strength I urge you to vote "aye" on this bill.

Mr. GAVIN. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Chairman, I, too, want to compliment the members of Subcommittee No. 1 of the House Committee on Armed Services for the bill that they have brought to the floor of the House today. It is a very complicated and technical matter. The House Committee on Armed Services has been looking into it for years, and in my opinion this is an equitable bill and the only approach to a most difficult problem. I intend to support the bill.

Mr. Chairman, during the hearings on H.R. 4413, the Secretary of the Navy and the Chief of Naval Personnel explained, in detail, the dilemma facing the Navy and Marine Corps in relation to their officer personnel structure arising from the post-World War II officer procurement problems. A searching analysis was made by each member of the Armed Services Committee with regard to the human factors involved and the decision to involuntarily retire some captains and colonels short of a 30-year career was made only when it became obvious that, within the next few years, some 3,500 naval and marine officers must be forced out in any event. The statement made to the full committee by my distinguished colleague, Mr. PAUL KILDAY, of Texas, sums up the problem as succinctly as possible and I will not do anything more than enlarge upon one or two of the questions that may have arisen in your minds concerning this legislation.

First, because of the problem of maintaining an effective Reserve force, ready for immediate mobilization in these times when the threat of war is constantly with us, the question arose in my mind of the active duty Reserve officers' chances for promotion and for continuation on active service with the forces at sea.

Naturally, since the noncontinuation features of this legislation apply only to Regular officers and the resulting promotion opportunity figures for commanders and lieutenant commanders submitted by the Navy Department were arrived at from calculations based upon considerations of Regular officers alone; this bill can be considered largely as a vehicle for the orderly promotion and retirement of Regulars. However, without this legislation, the Navy would be forced to release to inactive duty, without further delay, almost all of its senior grade Reserve officers which even then would not solve the problem but would have only an alleviatory effect of very short duration.

One of the questions asked of the Navy Department involved the possible reduction in the magnitude of the problem through the release of Reserve officers. Would such a release program solve the hump problem? In substance, the answer was no—that the release of some 250 Reserve commanders would ease but not remove the rigors of the immediate promotion problem of lieutenant commanders while the removal of the few Reserve captains remaining on active duty would have no effect whatsoever. It was largely the position of the Navy that a preferred course of action would be to permit as many as possible to remain on and take their chances for promotion with the Regulars based upon the competitiveness of their own records. It is obvious that if the promotion opportunity of the Regular is enhanced, the opportunity for the active duty Reserve officer is also somewhat improved.

Next, I would like to dwell in some detail on the cost aspects of the bill. There has been some apprehension that its enactment would lead to a loading of the retired payrolls—a marked increase in long-range retirement costs.

Let me say at the outset that the compelling need for this legislation would, in my opinion, require that we give this measure favorable consideration even though its anticipated cost was of nine digit proportions.

Happily, such is not the case.

The proposed legislation will have fiscal impact on both retired pay appro-

priations and active duty pay appropriations. Committee hearings brought out the following significant information relative to those two areas.

During the next 10 to 15 years our active duty military force will earn progressively more longevity credits for pay purposes. In other words, active duty pay costs per man will increase—with or without legislation. However, enactment of the proposed legislation will serve to decelerate average longevity of the active duty force. Under personnel plans with the needed legislation, a number of the Navy and Marine Corps more senior officers will be retired and replaced by officers with significantly less longevity credits for pay purposes. This means that on a comparative basis, active duty pay disbursements can be expected to decrease—with the legislation.

On the other hand, enactment of the needed legislation will lead to an increase in retired pay costs—now—and most probably in the long haul. Comparative retired pay costs can be viewed from many different vantages. However, from a true cost standpoint, retired pay disbursements to an early retiree—up to the date retired pay would normally have been due—must be considered as additional cost to the taxpayer. However, when the early retiree reaches the point where he normally would have been retired, a reversal takes place. Due to the lower rate of retired pay being disbursed to this individual, pay back against the earlier additional sum commences and continues each year the man lives. Therefore, depending upon how long they live, some of our early retirees represent an additional cost to the taxpayer, others constitute a long-range saving in retired pay dollars.

Readjustment pay for early retirees also constitutes increased cost during the 10-year period 1960–70.

We have carefully considered these financial implications—increased costs involved in retired pay and the readjustment allowance, and decreased comparative costs in active duty pay. In the main, decreases and increases serve to offset each other. As an outside estimate the maximum cost of the legislation will not exceed $15 million spread over the next 60 years.

In conclusion, I hark back to the statement that the compelling need for this legislation far overshadows its traceable financial implications. Of far greater significance are inestimable costs which I am confident will accrue if we do not enact this legislation thus enabling the Navy to pursue an aggressive, forward looking personnel program. Can one really pin a price tag on sound leadership? My answer to that is no. Can one truly assess the damages of mediocrity? My answer to that is no. There is, however, no question in my mind as to which is preferred.

Mr. KILDAY. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. STRATTON].

Mr. STRATTON. Mr. Chairman, as has already been indicated by the distinguished chairman of the subcommittee [Mr. KILDAY], this bill is important because it is designed to accomplish one major purpose, which is to keep the Navy from any stagnation that might accrue from a lack of regular and prompt and somewhat reasonably predictable promotions. We need to keep a Navy that is not only mobile on the seas, but one also mobile from an administrative standpoint, because unless we have a Navy that is mobile in that regard, a Navy in which a man can reasonably expect to move through certain grades with reasonably predictable speed, then the Navy cannot become the kind of an attractive career that it must become if we are to continue to attract and to hold men in positions comparable to those in private and civilian life. This has been a problem to which the House has addressed itself on many occasions in the past, and continues to be a real problem. This legislation, as I understand it, is another piece of legislation designed to make the armed services, and specifically in this case the Navy, an attractive career. The legislation is needed, as the subcommittee was advised, because of a "hump" which has been created, due very largely to the fact that large numbers of officers came in, as has been explained, in a very brief period of time during World War II, and because a very large number of senior officers were retained on active duty during the Korean emergency rather than suffering normal rates of attrition, simply because it would have been a little silly to call back Reserve officers and at the same time retire Regular officers. May I say, Mr. Chairman, in response to one of the questions that was addressed earlier to the distinguished gentleman from Texas [Mr. KILDAY], that the so-called hump does not refer to the captains and the admirals. It refers, rather, to those officers who are next behind the more senior ranks, the commanders and the lieutenant commanders; and this bill is not designed primarily to solve the hump problem by getting officers out of the hump, but is designed to get officers out of the more senior grades so that the officers in the hump may expect a reasonable promotion ratio in the future.

The officers in the hump are, to a large extent, lieutenant commanders. They are not the officers who are being affected by this legislation.

The problem of a hump is nothing new in the armed services although it probably has never been presented in quite such a substantial form as it is at the present time in the Navy. We had a hump, as I understand it, at the end of World War I. You will remember, for example, that the President of the United States served some 16 years in the grade of major, and General Omar Bradley served a comparable period because, again, the high commission rate for officers during World War I had created a similar problem which in those days had to be solved merely by the stagnation of officers in the middle grades.

In the Navy our officers in the days since World War II have been able to look forward to a reasonably rapid promotion rate. The Navy, in spite of the large number of officers who came in during World War II, has moved these officers up with reasonable rapidity. Perhaps the Navy has not had quite as many captains and admirals under the age of 21 which was reportedly the situation in the Air Force at least during World War II. But in general the Navy, along with the other services, has been able to point to a large number of fairly senior officers who are relatively young in years. This has indeed contributed to the effective and vigorous operation of the Navy.

But now the problem arises: If these officers who have been promoted with such reasonable rapidity are to be retained for the number of years that has been specified in existing legislation, then we are going to have the same kind of stagnation that existed in the Army after World War I, a kind of stagnation which would not only do a disservice to the Navy, but which would also do a disservice to the individual officers affected in all grades, and particularly those in the lower grades.

The only alternative to this legislation would be to pass no legislation. In that case we would either have to require that officers in the lower grades remain in those grades for an indefinite and unreasonable period of time, gradually being attrited out to civilian life at a percentage of up to 75 percent or else we would have to create all kinds of jobs to be filled by officers in senior billets which are not jobs that actually require that kind of high rank or broad experience.

The committee rejected both alternatives as not being in the interests of the service, in the interests of the Government or ultimately in the interests of the officers concerned themselves. Therefore, this legislation is advanced here to suspend for a limited period of time the guarantees of continued service that are prescribed in the Officer Personnel Act.

The only question remaining before our committee was to make sure that the type of suspension and the formula under which it was adopted was fair to the officers who were being affected. In my judgment, this is a fair provision. It provides a degree of retirement pay which will come in some cases to as high as two-thirds of the active duty pay which the officer could expect to receive had he continued on active duty for the full statutory period of his service. And, incidentally, in putting this legislation into effect, the officers who are closest to the statutory retirement point will be the first ones to be affected. Those who have a number of years to run will not be affected, as the Navy has explained it, for several years. So that someone who is facing a particular personal crisis in terms of two or three children in college, for example, will have a reasonable period of time in which to prepare for this eventuality if it should develop.

Mr. Chairman, I have had the opportunity to talk to a number of officers who are in the Navy and who may well be affected by this legislation. I have been surprised to find that in general the attitude of these officers is not unfavorable to this legislation. The big thing they are concerned about is the uncertainty that has existed while this bill has been discussed in the previous Congress and

in this Congress. I think they are prepared to accept the terms of this legislation and to consider it as meeting to a large extent their desires and their needs. What they want is a positive decision from this House and from the Congress so that they can begin to make their plans for the future. If we pass no legislation, we are creating a grave injustice to the other officers who came into the Navy in the latter days of World War II, those who are really in the hump, those who, without this legislation, will not be able to look forward to a reasonable career in the Navy and to a reasonable promotion opportunity. That in turn means, of course, that we will reduce the attractiveness of the military forces as a career service, and will undoubtedly jeopardize the opportunity of the Navy and the other services to attract the kinds of young men and young women that will be needed to carry on the military responsibilities of our Nation.

There may be some disappointment in this legislation for some individuals, but I think the committee has come forward with a proposal which will share that measure of disappointment on an equal basis and which will not make that disappointment so great as to offset the much greater good that will be done by this legislation to the naval service at large and to the country as a whole.

Mr. KILDAY. Mr. Chairman, I yield 15 minutes to the gentleman from Alabama [Mr. HUDDLESTON].

Mr. HUDDLESTON. Mr. Chairman, I was a member of the subcommittee that investigated the Navy and Marine Corps hump problem during the 85th Congress and was present during the exhaustive hearings just concluded by Armed Services Subcommittee No. 1 on the same subject. The bill—H.R. 4413—reported out by the full committee, is a synthesis of the views of the Navy Department, Department of Defense, and the Armed Services Committee. It is the culmination of weeks of hearings extending through at least three sessions of Congress, topped by many, many hours of soul-searching, nonpartisan debate. It is not the kind of bill that one can act upon with enthusiasm since it involves the unpleasant task of hurting some individuals even though the net effect is good and in the best interests of the naval service and the country. But I am convinced that it is a measure that we must support if we are to continue to have an effective Navy and Marine Corps capable of continuing in their present vital role as a major deterrent to this country's potential enemies during these critical times.

The Navy's hump problem had its origin in the unsettled period immediately following World War II when the postwar Regular officer strength was only some 7,000 line officers. The continuing requirements for officer strength—just to man our existing ships and units—was in excess of 24,000 Regular line officers. There was no other pool of trained officers from which to recruit Regulars in such numbers for this postwar fleet outside of those officers originally commissioned during the war and, as a consequence, the Navy hump was born. It started as a procurement problem but, with the passage of time, has now become a job stagnation problem of such proportions as to demand immediate remedial action. Some 8,000 Regular officers in the line of the Navy are concentrated in just a 4-year span. Although they are virtually contemporaries from the standpoint of years of service, age, and experience, there are only 2,000 captain jobs to which these officers can aspire. It would appear then, that roughly 6,000 of these hump officers will not be promoted to captain and, under present law, will be retired short of a 30-year career.

Now, had the 2,000 officers who are presently captains all have been promoted with the same degree of competition as that to be faced in the future by the hump officers, it could be argued that nothing should be done to disturb their tenure. However, this was not the case. Most of the 2,000 captains ahead of the hump were promoted without any significant promotion attrition, and to make the hump bear the entire cost of the problem through attrition on itself would be contrary not only to good sense and sound management practices but would run counter to the best interests of the service. However, the present law would allow the Navy only this course of action. They would have to levy catastrophic attrition on the lieutenant commanders, commanders, majors, and lieutenant colonels in the hump. On the other hand, the bill now before the House would permit the Navy to distribute this necessary attrition across its entire officer spectrum and, thusly, to retain on active duty the best officers in each grade. This is the only way that the best interests of the Navy can be served.

I share the concern of other Members of the Congress as to the number of useful officers who will be forced into early retirement. However, this bill not only reduces the number who will be forced out, but it makes the process selective. For example, by selectively retiring 780 captains before reaching 30 years of service between now and 1964, the Navy will reduce the number of line commanders that it must retire by over 500. The number of line lieutenant commanders retired at 20 years of service will be reduced from 3,400 to about 2,000, thus saving over 1,000 of these younger officers who will still have between 10 and 15 years of useful service remaining. But, equally important, the number of commanders and lieutenant commanders who will have been passed over but who will still be on active duty will have been sharply reduced. Instead of failing three out of four commanders at the promotion point to captain, two out of four will make the grade and continue on as effective leaders in the naval organization.

Without this bill, the Navy will eventually have better than 50 percent of its commanders in a passed-over status. The effect that this would have on the young men that are now in the junior grades would be so adverse in the immediate future as to become a real deterrent to those now contemplating a naval career.

With this bill, I believe that the morale of the Navy and Marine Corps will be considerably improved, since we will provide more vigorous leadership for the men we are recruiting today. In addition, the contact that the ensigns and lieutenants have with the officers in the hump, whose chances will be improved, is far more intimate than the contact they have with the senior captains who may be failed of continuation and involuntarily retired.

You may question whether or not this legislation is establishing a 20-year career pattern. Quite the contrary, it is designed to provide a reasonable opportunity for a certain group of officers to have a 30-year career. This bill will give a higher percentage of a greater number of people the opportunity to serve on active duty for no less than 30 years. For example, for those officers originally commissioned in 1930, 70 out of every 100 have been promoted to captain and, without a change in the law, will continue on to retirement by June of 1960. On the other hand, for those officers commissioned in 1945, only 10 out of every 100 can look forward to a full career if this bill is not enacted into law.

Although this change in the law cannot bring those Regulars commissioned in 1945 up to the opportunity enjoyed by many senior to them, it can raise the number of 30-year captains in each 100 from 10 to 17.

In summation, in terms of total numbers, this legislation would provide an opportunity for approximately 120 more officers out of those commissioned in 1945 to serve out their full time as effective naval officers. Extending this example still further through the other officers in the hump we find that some 1,500 more officers in the line of the Navy will fulfill the expectation of becoming captains and that a greater number will continue on for at least 30 years than would otherwise be the case. These figures do not include the various staff corps which are of such magnitude as to increase the numbers retained in the long run by at least one-third.

Mr. Chairman, every possible alternative solution to this problem was thoroughly investigated by the committee. It might appear that additional numbers in the senior grades would be a more humane method of solving the hump but, as we all know, the Armed Services already have an abundance of senior officers and the Navy testified that the numbers of captains and commanders presently on board are ample to meet their needs. Any increase of numbers in the senior grades would, indeed, provide promotion opportunity but with a concomitant loss of job opportunity to the extent that junior captains and commanders would be forced into duties normally performed by officers of lesser rank. This course of action would have a most debilitating effect on service morale and I do not feel that it can be countenanced to any degree.

In summation, this bill provides for a continued vitalizing flow of promotions in the Navy and Marine Corps, while, at the same time, protecting the equity of the individuals in and above the hump.

Most important, however, it provides for the needs of the Navy and the Marine Corps and will preserve them as effective fighting units now and in the years to come when the safety and survival of this Nation are at stake.

Mr. KILDAY. Mr. Chairman, I understand the gentleman from Pennsylvania does not desire to use more time.

Mr. GAVIN. I have no further requests for time, Mr. Chairman.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of the Navy may, whenever the needs of the service require, convene selection boards, or direct boards convened under chapter 543 of title 10, United States Code, to recommend for continuation on the active list officers of the Regular Navy and the Regular Marine Corps described in subsection (c) and shall convene or direct such boards to recommend for continuation on the active list officers of the Regular Navy and the Regular Marine Corps described in subsections (e)–(g). Except as otherwise provided in this section, the provisions of chapter 543 of title 10, United States Code (other than section 5701 (e)), concerning boards to recommend captains, commanders, colonels, or lieutenant colonels for promotion, apply to each board convened under this subsection.

(b) Each board convened under subsection (a) to consider captains in the Medical Service Corps or the Nurse Corps shall consist of not less than three or more than nine officers on the active list or the retired list of the Regular Navy in the grade of captain or above, two-thirds of whom are officers in the Medical Corps and one-third of whom are officers in the corps concerned. To be eligible for membership on such a board, an officer on the active list in the Medical Service Corps or the Nurse Corps must have been recommended for continuation on the active list by an earlier board convened under this section. When there is an insufficient number of officers of the Medical Service Corps or the Nurse Corps available to serve, the Secretary shall complete the minimum required membership by appointing as members of the board officers of the Regular Navy in the Medical Corps.

(c) Each officer of the Regular Navy or the Regular Marine Corps who has served on active duty for more than five years, who is not on a promotion list, and who will complete at least five years of service in the grade of captain in the Navy or colonel in the Marine Corps by June 30 of the fiscal year in which a board is convened under this section is eligible for consideration for continuation on the active list by that board. An officer who has once been recommended for continuation while serving in the grade of captain or colonel by such a board may not be considered by a subsequent board convened under this section and is not subject to the provisions of subsection (e) or (f). For purposes of this subsection, an officer is considered as serving in the grade of captain in the Navy or colonel in the Marine Corps from the date of rank assigned him upon appointment to that grade under chapter 539 or 545 of title 10, United States Code, until the effective date of his appointment in the next higher grade under chapter 545 of title 10, United States Code.

(d) When the Secretary convenes a board under this section to consider any category of officers described in subsection (c) or (e), he shall establish a continuation zone for that category. The continuation zone for each category shall include such number of officers as the Secretary determines to be necessary to best meet the needs of the service. The senior officer in a continuation zone, for each category of officers, shall be designated by the Secretary. When the Secretary convenes a board to consider for continuation a category of officers for which a continuation board has been previously convened, the senior officer for that category shall be the officer next junior to the most junior officer of that category considered for continuation by the preceding board. The junior officer in each continuation zone shall be designated by the Secretary. In each category, all officers junior to the senior officer and senior to the junior officer in a continuation zone shall be in the continuation zone for that category. Only officers who are in a continuation zone may be considered by a selection board.

(e) Each officer not restricted in the performance of duty serving in the grade of captain on the active list in the line of the Regular Navy, each officer serving in the grade of captain on the active list of the Regular Navy in the Supply Corps, the Chaplain Corps, or the Civil Engineer Corps, and each officer not restricted in the performance of duty serving in the grade of colonel on the active list of the Regular Marine Corps who is not on a promotion list, who has not been previously recommended for continuation in the approved report of a board, and who has at least twice failed of selection to the grade of rear admiral in the Navy or brigadier general in the Marine Corps is eligible for consideration for continuation on the active list by a board convened under this section.

(f) Each officer designated for supply duty serving in the grade of colonel on the active list of the Regular Marine Corps who is not on a promotion list, who has not been previously recommended for continuation in the approved report of a board, and who will complete at least twenty-seven years of total commissioned service, as computed under section 6387 of title 10, United States Code, by June 30 of the fiscal year in which a board is convened under this section is eligible for consideration for continuation on the active list by that board.

(g) Each officer on the active list of the Regular Navy or the Regular Marine Corps serving in the grade of commander or lieutenant colonel (except an officer designated for limited duty, an officer in the Nurse Corps, or a woman officer appointed under section 5590 of title 10, United States Code) who is not on a promotion list, who has not been previously recommended for continuation in the approved report of a board, and who has at least twice failed of selection for promotion to the grade of captain in the Navy or colonel in the Marine Corps is eligible for consideration for continuation on the active list by a board convened under this section.

(h) The Secretary shall furnish the appropriate selection board convened under this section with the names of the officers who shall be considered by the board and, based on the needs of the service, the number of these officers by categories that may be recommended for continuation on the active list. Of the officers considered for continuation by each selection board, the board shall recommend those officers whom the board considers best qualified for continuation on the active list. Each board shall certify in its written report that in the opinion of at least two-thirds of the acting members of the board the officers recommended are selected as best qualified for continued service on the active list. The report of each board shall be submitted to the President and shall become final upon his approval.

(i) Unless sooner selected for promotion to the next higher grade, each officer who is considered for continuation on the active list by a board convened under this section and who is not recommended for continuation in the approved report of the board, shall, not withstanding any other provision of law except subsection (j) or (k), be retired on June 30 of the fiscal year in which the report of the board is approved or in which he completes 20 years of total commissioned service, as computed under section 6387 or 6388 of title 10, United States Code, whichever is later.

(j) An officer in a grade below rear admiral on the active list of the Regular Navy who has the rank of rear admiral while serving in a statutory office and who would be retired under this act may have his date of retirement deferred by the Secretary during the period the officer has the rank of rear admiral and has not attained the age of sixty-two years.

(k) If the report of a board that considers officers for continuation on the active list under this section is approved less than six months before the end of the fiscal year, the retirement of officers who were considered but not recommended for continuation by that board shall be deferred until the first day of the seventh month following the month in which the report of the board is approved.

SEC. 2. (a) An officer who is retired under this Act, unless otherwise entitled to a higher retired grade or higher retired pay, shall be retired in the grade in which he was serving at the time of retirement and is entitled to retired pay at the rate of 2½ percent of the basic pay to which he would be entitled if serving on active duty in the grade in which retired multiplied by the number of years of service that may be credited to him under section 1405 of title 10, United States Code, or, if greater, the number of years of total commissioned service computed under section 6387 or 6388 of title 10, United States Code.

(b) The retired pay of any officer retired under this Act may not be less than 50 percent or more than 75 percent of the basic pay upon which the computation of retired pay is based.

(c) In determining the total number of years of service to be used as a multiplier in computing retired pay, a part of a year that is six months or more is counted as a whole year and a part of a year that is less than six months is disregarded.

SEC. 3. Notwithstanding section 1431 of title 10, United States Code, a change of an election made under that section by an officer who is retired under this Act is effective if made at such a time that it would have been effective had he been retired on the date prescribed by section 6376, 6377, or 6379 of title 10, United States Code, as appropriate, and a revocation of an election made under that section by an officer retired under this Act is effective if made before his retirement.

SEC. 4. (a) Until December 31, 1964, the Secretary of the Navy may establish zones of consideration for male officers of the Marine Corps serving in the grade of major, in addition to or instead of the promotion zones authorized by sections 5765 (b) and (c) of title 10, United States Code. The zone of consideration for that grade shall include such number of officers who are eligible for consideration for promotion as the Secretary determines to best meet the needs of the Marine Corps. The senior officer and the junior officer in a zone of consideration shall be designated by the Secretary. All officers junior to the senior officer and senior to the junior officer in a zone of consideration shall be in the zone of consideration. The zone of consideration for officers designated for supply duty shall consist of those officers who are junior to the senior officer and senior to the junior officer in the corresponding zone of consideration for officers not restricted in the performance of duty. Only officers who are in a zone of consideration or who are senior thereto may be considered

by the selection board. Notwithstanding any other provision of law except the second sentence of subsection (c) of this section, the selection board may recommend as best fitted for promotion, from among the officers who are in or senior to a zone of consideration, the number of officers serving in the grade of major that the board is authorized to recommend for promotion to the grade of lieutenant colonel. An officer who is included within a zone of consideration but is not within or senior to a promotion zone and who is not selected for promotion is not considered as having failed of selection for any purpose.

(b) Whenever a zone of consideration is established for the grade of major pursuant to this section the term "promotion zone" as used in section 5759 (b) of title 10, United States Code, is synonymous with the term "zone of consideration."

(c) Notwithstanding the last sentence of section 5765(b) of title 10, United States Code, the Secretary shall, until December 31, 1964, determine the number of officers of the Marine Corps in a promotion zone for promotion to lieutenant colonel on the basis of a consideration of the number of vacancies estimated for the grade of lieutenant colonel in the next five years, the required number of vacancies in the grade of major, and the age and service characteristics of the officers in the grade of major. The Secretary may, until December 31, 1964, specify the maximum number of officers who may be recommended for promotion to the grade of lieutenant colonel from within and above a promotion zone established under section 5765 of title 10, United States Code. That portion of section 5765(b) of title 10, United States Code, which reads "in order to maintain a flow of promotion consistent with the terms of service set out in section 5768 of this title and" is suspended until December 31, 1964, for the grade of major.

SEC. 5. The President may suspend any provision of section 1 or 4 of this Act during a war or national emergency hereafter declared. Such a suspension may not continue beyond June 30 of the fiscal year following that in which the war or national emergency ends.

SEC. 6. Title 10, United States Code, is amended as follows:

(1) Section 6387(b)(2) is amended by striking out the words "is, or at any time has been," and inserting the words "has been continuously" in place thereof.

(2) Sections 5707(a)(6) and 5708(e) are each amended by inserting the following before the period at the end thereof: "in the next higher grade".

SEC. 7. Section 1 of this act shall have no further force or effect after June 30, 1970.

Mr. KILDAY (interrupting the reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read, be printed in the RECORD, and be open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

On page 4, line 9, after the word "considered" insert the words "for continuation".

On page 7, line 18, after the word "Code" insert a period and strike out ", or, if greater, the number of years of" and all of lines 19 and 20.

On page 8, line 2, strike out the comma after the word "pay" and insert immediately thereafter the following: "under subsection (b), and in determining the resultant number of years of early retirement under subsection (d),".

On page 8, after line 5, insert the following new subsections:

"(d) An officer who on the date of enactment of this Act is serving in the grade of captain or commander in the Regular Navy or colonel or lieutenant colonel in the Regular Marine Corps or is on a promotion list for promotion to one of those grades, who is not thereafter recommended for promotion to a higher grade, and who is retired under this Act shall be paid, in addition to his retired pay, lump-sum payments under one of the following methods, at the option of the officer concerned:

"(1) Effective on the date of retirement, an amount equal to the product of two months' basic pay to which he is entitled at the time of retirement and a number which is equal to his number of years of early retirement, but such product may not exceed $6,000; or

"(2) Effective on the date of retirement and the first and second anniversaries thereafter, an amount equal to one-third of the product of two months' basic pay to which he is entitled at the time retirement and a number which is equal to his number of years of early retirement, but such product may not exceed $6,000.

The number of years of early retirement is determined by subtracting the number of years of service credited to an officer under section 6387 or 6388 of title 10, United States Code, as appropriate, at the time of retirement from the number of years of such service the officer would have had if he had been permitted to remain on the active list until completion of the amount of service specified in section 6376, 6377, or 6379 of title 10, United States Code, as appropriate. If the officer dies before receiving all the benefits due and payable under this subsection, the remaining unpaid amount shall be payable in accordance with the provisions of section 2771 of title 10, United States Code.

"(e) An officer who has the qualifications specified in subsection (d) and who has been considered but not recommended for continuation on the active list pursuant to section 1 of this Act shall be considered for the purpose of subsection (d) as being retired under this Act if the officer retires voluntarily prior to the date specified for his retirement under this Act. However, in computing the officer's number of years of early retirement, the number of years of service credited to the officer under section 6387 or 6388 of title 10, United States Code, shall be determined as of the date specified for his retirement under this Act.

"(f) An officer who is retired under this Act shall thereafter be considered as having retired voluntarily pursuant to section 6323 of title 10, United States Code."

On page 10, strike out lines 22, 23, 24, and 25, and on page 11, strike out lines 1, 2, 3, and 4, and insert in lieu thereof the following:

"SEC. 6. Section 6387(b)(2) of title 10, United States Code, is amended by striking out the words "is, or at any time has been," and inserting the words "has been continuously" in place thereof.

"SEC. 7. No officer of the Navy in the Medical Corps, Dental Corps, the Medical Service Corps, or the Nurse Corps is subject to the provisions of this act during the effective period of the Act of June 27, 1957, Public Law 85-62 (71 Stat. 208), as now or hereafter amended."

On page 11, renumber "SEC. 7" to "SEC. 8."

The committee amendments were agreed to.

Mr. BATES. Mr. Chairman, this bill has been under close study by your committee for several years. Definitive action on it has been delayed as various attempts were made to find the most satisfactory solution. It appears, at this time, that no perfect answer can be found but I do believe that this bill does approach the problem as fairly as possible.

We have reached a point where violent action must be taken by the Navy and the Marine Corps if this legislation is not enacted. The rate of attrition in the Navy in selection from commander to captain will be 74 percent; the attrition from lieutenant commander to commander will reach 85 percent; and 75 percent of the majors in the Marine Corps must be released to the retired ranks. This bill will provide a more equitable opportunity for promotion for those officers who are behind the so-called hump.

I believe the bill is the best that can be done to work out a very difficult problem and recommend its passage to the House.

Mr. McCORMACK. Mr. Chairman, I move to strike out the last word, and ask unanimous consent to speak out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Chairman, the temporary Unemployment Compensation Act will expire on April 1. It is very evident that the condition of unemployment in the country today and as it will be as we project our minds to the months ahead calls for an extension of that act. It is just as important that we extend that act as it was for us to pass the bill last year to meet the unemployment situation that existed at that time.

Between 350,000 and 400,000 jobless workers will lose their unemployment compensation benefits on April 1, when the 13 weeks of extended coverage under the Federal temporary unemployment compensation program is ended, unless something is done.

The tentative plan for the Easter recess is to adjourn on Thursday, March 26, at the close of business that day and to come back on Tuesday, April 7. Unless the Congress does something in connection with this bill extending it between now and the contemplated Easter recess, the law will expire and a tremendous economic hardship will be suffered by hundreds of thousands of Americans who are unemployed. Speaker RAYBURN and I conferred today with the chairman of the Committee on Ways and Means, the gentleman from Arkansas [Mr. MILLS] and we told him we thought something should be done and that the law should be extended. Economic conditions, particularly in relation to unemployment certainly call for an extension of the law just as much as they called for the passage of the original bill a year ago. The chairman of the Committee on Ways and Means has assured us that he will take the matter up with his committee next week and cooperate. I wanted to make these few remarks so that the men and women who are unemployed throughout the country will be aware of the fact that the leadership in the House of Representatives is aware of the situation and recognizes the necessity for action and that we are

taking action and are hopeful that a bill will pass both branches of the Congress before the Easter recess extending the present law for such a period as the Committee on Ways and Means reports. I repeat the economic situation is such that while there is a rising curve with respect to business, there certainly is also a rising curve with respect to unemployment. It is an unusual phenomenon, but it exists just the same and unless the law is extended, there is going to be tremendous hardship. A just consideration of this problem calls for an extension of the law in view of the unemployment situation which exists today and which, I think, is even higher than when we passed the bill a year ago. Also, in addition to the approximately 5 million persons who are totally unemployed, there are hundreds of thousands of persons who are partially unemployed. The Speaker and I feel that the situation in relation to unemployment throughout the country is just as much a pressing problem and as trying today, and that it will be in the months that lie ahead, as it was when the temporary unemployment compensation bill was acted upon and passed last year by both branches of Congress and enacted into law.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. EVINS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4413) to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes, pursuant to House Resolution 191, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

Mr. KILDAY. Mr. Speaker, I ask unanimous consent that all Members may have five legislative days within which to revise and extend their remarks on the bill just passed.

The SPEAKER. Is there objection?

There was no objection.

AUTHORIZING CREDITING OF CERTAIN SERVICE FOR PURPOSE OF RETIRED PAY FOR NON-REGULAR SERVICE

Mr. WINSTEAD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3365) to authorize the crediting of certain service for purpose of retired pay for non-Regular service, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 3365, with Mr. LANDRUM in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Mississippi [Mr. WINSTEAD] is recognized for 1 hour and the gentleman from Illinois [Mr. ARENDS] will be recognized for 1 hour.

The Chair recognizes the gentleman from Mississippi [Mr. WINSTEAD].

Mr. WINSTEAD. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman, I rise in support of H.R. 3365. This bill is a Department of Defense legislative proposal, the substance of which had previously been acted upon by this body during the 84th Congress as H.R. 2035. H.R. 2035 passed the House on July 16, 1956, but unfortunately the other body apparently did not have sufficient time to act upon it.

The committee had been advised by the Department of Defense that it had failed to resubmit the item for consideration during the 85th Congress because of administrative delays encountered in redrafting the proposal to conform to the codification of Public Law 810, 80th Congress, in title 10 of the United States Code.

The principal purpose of this proposed legislation is to correct certain inequities which had developed since the enactment of title III of Public Law 810. Title III of Public Law 810 authorized the payment of retirement pay at age 60 for personnel of the Armed Forces who complete 20 years of satisfactory Federal service, this service being a combination of both active and inactive Reserve service. This proposal would also authorize certain active service to be counted as commissioned service for the purpose of voluntary retirement and would also validate appointments made in the Army of the United States without component, which, through an administrative error, were continued in effect without legal authority until April 1, 1953.

In connection with the changes to title III of Public Law 810, the following purposes would be served:

First. It would permit Reserve personnel to count for this retired pay, service which they performed as an appointed aviation cadet or as a nurse, or service performed as a dietitian, physical therapist, or occupational therapist with the Medical Department of the Army. Such service may not now be credited for this purpose because of the present limitation that service to be credited must have been performed in the status of a "commissioned officer, warrant officer, flight officer, or enlisted person," in the Armed Forces. Therefore, because of statutory technicalities this language does not now permit credit for service as a naval aviation cadet under and appointment prior to the Naval Aviation Cadet Act of 1942, for service as a nurse prior to the Army-Navy Nurses Act of 1947, or service as dietitians or physical or occupational therapists in the Medical Department of the Army. In each case, current service which is factually similar is creditable under law.

Under the Navy's original aviation cadet law, the act of April 15, 1935 (49 Stat. 156), candidates were appointed as aviation cadets in the Naval Reserve. Following completion of their training they remained aviation cadets and performed active duty involving flying for a period of 3 years, at the expiration of which time they were appointed commissioned officers in the Naval Reserve. This period of service performed as an aviation cadet may not now be credited for this Reserve retired pay. Since 1942, when the Naval Aviation Cadet Act was enacted, aviation cadets of the Naval Reserve have an enlisted status and thus receive credit for their aviation cadet service. Aviation cadets of the Air Force have always had an enlisted status and thus receive credit for that service.

Until nurses in the Armed Forces were permanently given commissioned officer status by the Army-Navy Nurses Act of 1947 (61 Stat. 41) they had neither officer nor enlisted status. Consequently, Reserve personnel who served in the Army or Navy Nurse Corps before 1947 do not receive credit for that service for this retired pay. Similarly, Reserve personnel who served in a civilian capacity as dietitians, physical therapists, or occupational therapists in the Medical Department of the Army do not receive credit for that service for this Reserve retired pay. These specialists were also given commissioned officer status by the Army-Navy Act of 1947. As service in the Army or Navy Nurse Corps before 1947, and service in a civilian capacity in the Medical Department of the Army as a dietitian or physical therapist after April 6, 1917, and as an occupational therapist before appointment as a commissioned officer in the Army or Air Force, may be counted for all other purposes, no reason is apparent why this service should not be credited for this retired pay.

Second. It would allow credit for this retired pay for service in the National Guard after June 14, 1933, if the person served continuously therein from the date of his enlistment in the National Guard, or his Federal recognition as an officer, to the date of his enlistment or appointment, as the case may be, in the National Guard of the United States, the Army National Guard of the United States, or the Air National Guard of the United States. At present credit may be given for service in the federally recognized National Guard only before June 15, 1933.

The National Guard of the United States was established as a Reserve component of the Army of the United States, by the act of June 15, 1933 (48 Stat. 155). Under that act officers and enlisted members of the federally recognized National Guard did not automatically become members of the National Guard of the United States. Not until April 4, 1934, when War Department General

Order No. 3 was promulgated, were steps taken to blanket in all those persons who were members of the federally recognized National Guard on June 15, 1933. This general order fixed October 31, 1934, as the last day for acceptance of appointments in the National Guard of the United States. Thus, in some cases, over 16 months elapsed between the date the National Guard of the United States was established and the date the individual became a member of it. Under present law service during that period may not be credited to those who were not members of a Reserve component. Approximately 8,750 officers and warrant officers are thus adversely affected.

Officers and warrant officers who were federally recognized in the National Guard after June 14, 1933, and in the Army National Guard, and the Air National Guard after July 26, 1947, the date on which the Air National Guard became a separate component, also encountered administrative delay ranging from a few months to a year or more, in receiving National Guard of the United States or Army or Air National Guard of the United States appointments. It is estimated that 14,400 officers during the years 1934–52 suffered a delay in receiving those appointments. The effect on enlisted members was much less as in most cases enlistment in the National Guard and the National Guard of the United States and in the Army and Air National Guard and the Army and Air National Guard of the United States was concurrent.

Title 10, United States Code, provides for voluntary retirement under certain conditions, for Regular and Reserve commissioned officers of the Army, Navy, Air Force, and Marine Corps who have completed 20 years or more of active service at least 10 years of which have been commissioned service. As nurses and medical specialists were not permanently given commissioned officer status until 1947, they cannot qualify for retirement under this provision of law unless their service prior to 1947 can be counted as commissioned service. The Army-Navy Nurses Act of 1947 provided that active service in the Army or Navy Nurse Corps would be considered as commissioned service for voluntary retirement for Regular officers of the Navy Nurse Corps. No similar provision, however, was made for Reserve officers of the Navy Nurse Corps, or for Regular and Reserve nurses and medical specialists of the Army or Air Force whereby they could count as commissioned service for this voluntary retirement their active service prior to 1947. This bill would correct this present inequity.

This bill would also validate certain appointments made after December 7, 1941, in the Army of the United States without component under joint resolution of September 22, 1941.

The joint resolution of September 22, 1941, provided the authority for the Army to make temporary appointments of officers in the Army of the United States without appointing such persons as officers in any particular component, such as the Regular Army, the Officers Reserve Corps, or the National Guard of the United States. This act, which provided that appointments should continue during the emergency existing at that time and for 6 months thereafter, was repealed effective July 1, 1948. The Department of the Army considered that by virtue of the provisions of the National Defense Act appointments made under the joint resolution of September 22, 1941, continued in effect until April 1, 1953, and that the repeal of the joint resolution, effective July 1, 1948, merely terminated the authority to make new appointments under that statute. The Comptroller General, however, in a decision dated October 7, 1955, held that these appointments terminated on June 30, 1948, unless continued in effect beyond that date by special legislation, and that service under these appointments for the period July 1, 1948, to April 1, 1953, could not be credited in computing basic pay or in determining eligibility for retirement. This decision resulted in some loss of pay for approximately 5,000 members of the Army still in an active status and for an unknown number now on the retired list receiving retired pay. Among those on the retired list receiving retired pay, there are an unknown number who would be ineligible for retirement and would have to be removed from the retired list unless they can count their service during the period July 1, 1948, to April 1, 1953.

Because of the administrative burden of screening the records to determine how many persons served under these appointments during the period July 1, 1948, to April 1, 1953, and are now retired, and the effect on morale of stopping or reducing retired pay the Comptroller General has agreed to withhold action in this respect, provided the Department of Defense seeks and obtains remedial legislation from the 86th Congress. Section 2 of this proposed legislation would validate those appointments made under joint resolution of September 22, 1941, which were continued in effect to April 1, 1953.

Mr. VAN ZANDT. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I rise in support of H.R. 3365. As has been very accurately outlined by my colleague on the other side of the aisle, this proposal has as its primary objective the elimination of certain inequities in existing law primarily relating to Reserve personnel of the Armed Forces. These inequities are simply the result of technical errors or omissions in existing law, and therefore, enactment of this proposal will not result in an increase in the scope or breadth of the original purpose of enactment of Public Law 810, title III, which was designed to provide an inducement for Reserve personnel to continue participation in Reserve training while in a civilian status.

As you gentlemen well know, under the provisions of Public Law 810, title III, Reserve personnel who have completed the minimum service requirements prescribed by the Congress will, at the age of 60, be entitled to a very modest amount of retired pay.

I would like to elaborate on other considerations already covered by my colleague. In addition to those individuals affected by the change of title III of Public Law 810, I wish to address myself specifically to another category of personnel covered by this bill who are included in the provisions of the bill for the purpose of eliminating the present statutory inequity resulting from a Comptroller's decision affecting appointments made by the Department of the Army under the provisions of the joint resolution of September 22, 1941.

Under the joint resolution of September 22, 1941, 55 Statutes 728, the Army appointed thousands of officers in the Army of the United States without component. Based on Comptroller General's decision B–123992, Army of the United States appointments terminated on June 30, 1948. Prior to October 7, 1955, the Army held that AUS appointments remained in effect until April 1, 1953—end of the emergency plus 6 months. Because of this view, many Army officers retained AUS status through the period April 30, 1948, to April 1, 1953.

Upon receipt of the Comptroller General's decision of October 7, 1955, the Army immediately required all officers then on active duty to subtract any of this Army of the United States service from their total service for pay periods. However, no action was taken to collect back payments made for such service, nor was action taken to recheck the service of officers on the retired list. The Comptroller General agreed to withhold action in this regard pending the outcome of this legislative change.

It has been estimated that the costs involved in searching, finding, recomputing the service, and affecting collection action in the case of the many officers involved in this problem area will probably exceed the cost of paying them for such service.

It is known that some officers now drawing retired pay will be denied such pay if this AUS service is subtracted from their total service. Additionally, many officers on and off active duty will lose pay which they have earned if this legislation is not enacted.

Except for the Army service between July 1, 1948, and April 1, 1953, which this bill would validate, all other types of service that the bill would make creditable in determining eligibility for retirement are already creditable for all other purposes. The persons who would be benefited by enactment of this legislation have actually served in the Armed Forces for the periods for which they would receive credit under the bill. In order to do justice to these individuals, I urge that this bill be enacted.

Mr. WINSTEAD. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title 10, United States Code, is amended as follows:

(1) Section 1332(a)(1) is amended—

(a) by inserting the following new clause after clause (C):

"(D) the National Guard after June 14, 1933, if his service therein was continuous during the period beginning on the date of his enlistment in the National Guard, or his Federal recognition as an officer therein, and

ending on the day before the date of his enlistment or appointment, as the case may be, in the National Guard of the United States, the Army National Guard of the United States, or the Air National Guard of the United States;";

(b) by redesignating clauses (D), (E), and (F) as clauses "(E)", "(F)", and "(G)", respectively; and

(c) by striking out the word "and" at the end of clauses (E) and (F) and adding the following new clauses:

"(H) the Army Nurse Corps, the Navy Nurse Corps, the Nurse Corps Reserve of the Army, or the Nurse Corps Reserve of the Navy, as it existed at any time after February 2, 1901;

"(I) the Army under an appointment under the Act of December 22, 1942 (ch. 805, 56 Stat. 1072), or the Act of June 22, 1944 (ch. 272, 58 Stat. 324); and

"(J) an active full-time status, except as a student or apprentice, with the Medical Department of the Army as a civilian employee—

"(i) in the dietetic or physical therapy categories, if the service was performed after April 6, 1917, and before April 1, 1943; or

"(ii) in the occupational therapy category, if the service was performed before appointment in the Army Nurse Corps or the Women's Medical Specialist Corps and before January 1, 1949, or before appointment in the Air Force before January 1, 1949, with a view to designation as an Air Force nurse or medical specialist; and".

(2) Section 1332(a) is amended by adding the following sentence at the end thereof: "For the purpose of clauses (A), (B), and (C), service in the National Guard shall be treated as if it were service in a reserve component, if the person concerned was later appointed in the National Guard of the United States, the Army National Guard of the United States, the Air National Guard of the United States, or as a Reserve of the Army or the Air Force, and served continuously in the National Guard during the period beginning on the date of his Federal recognition and ending on the day before the date of that appointment."

(3) Section 1332(b) is amended by striking out clause (6) and inserting the following clauses in place thereof:

"(6) Service as an inactive Reserve nurse of the Army Nurse Corps established by the Act of February 2, 1901 (ch. 192, 31 Stat. 753), as amended, and service before July 1, 1938, as an inactive Reserve nurse of the Navy Nurse Corps established by the Act of May 13, 1908 (ch. 166, 35 Stat. 146).

"(7) Service in any status other than that as commissioned officer, warrant officer, nurse, flight officer, appointed aviation cadet, or enlisted member, and that described in subsection (a)(1)(J).".

(4) Section 3683(4) is amended to read as follows:

"(4) all active full-time service, except as a student or apprentice, with the Medical Department of the Army as a civilian employee—

"(A) in the dietetic or physical therapy categories, if the service was performed after April 6, 1917, and before April 1, 1953; or

"(B) in the occupational therapy category, if the service was performed before appointment in the Army Nurse Corps or the Women's Medical Specialist Corps and before January 1, 1949."

(5) Section 3926 is amended by adding the following new subsection at the end thereof:

"(d) For the purpose of determining whether a commissioned officer of the Army Nurse Corps or the Army Medical Specialist Corps may be retired under section 3911 of this title, all service computed under section 3683 of this title shall be treated as if it were service as a commissioned officer.".

(6) Section 6324 is amended by striking out the words "an officer" and inserting the words "a regular officer or a reserve officer" in place thereof.

(7) Section 8683(4) is amended to read as follows:

"(4) all active full-time service, except as a student or apprentice, with the Medical Department of the Army as a civilian employee—

"(A) in the dietetic or physical therapy categories, if the service was performed after April 6, 1917, and before April 1, 1943; or

"(B) in the occupational therapy category, if the service was performed before appointment in the Army Nurse Corps or the Women's Medical Specialist Corps and before January 1, 1949, or before appointment in the Air Force before January 1, 1949, with a view to designation as an Air Force nurse or medical specialist."

(8) Section 8926 is amended by adding the following new subsection at the end thereof:

"(d) For the purpose of determining whether an Air Force nurse or medical specialist may be retired under section 8911 of this title, all service computed under section 8683 of this title shall be treated as if it were service as a commissioned officer.".

SEC. 2. All appointments made after December 6, 1941, in the Army of the United States without component under the joint resolution of September 22, 1941 (ch. 414, 55 Stat. 728), that were not earlier terminated by administrative action or specific provision of law may be considered for all purposes to have continued in effect until the close of March 31, 1953.

SEC. 3. This Act does not deprive any person of any service credit to which he was entitled on the day before the effective date of this Act.

SEC. 4. Any person who, on the effective date of this Act, would not have completed 18 years of service for which he is entitled to credit in the computation of his basic pay under the laws in effect prior to the effective date of this Act, and who, as a result of the enactment of this Act, is credited with more than 17 years of such service, shall be allowed twelve months from the effective date of this Act to make the election provided by section 1431(b) of title 10, United States Code, notwithstanding the requirement of the second sentence of that section.

Mr. WINSTEAD (interrupting the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read and that it be printed in the RECORD in full at this point and be open for amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

On page 1, lines 8 to 11, strike out the words "during the period beginning on the date of his enlistment in the National Guard, or his Federal recognition as an officer therein, and ending on the day before" and substitute in place thereof "from the date of his enlistment in the National Guard, or his Federal recognition as an officer therein, to".

On page 2, lines 16 and 17, strike out ", or the Act of June 22, 1944 (ch. 272, 58 Stat. 324)".

On page 3, lines 15, 16 and 17, strike out "during the period beginning on the date of his Federal recognition and ending on the day before" and substitute the following in place thereof "from the date of his Federal recognition to".

On page 4, line 4, strike out "subsection (a)(1)(J)" and substitute in place thereof "clauses (I) and (J) of subsection (a)(1)".

The committee amendments were agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. LANDRUM, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3365) to authorize the crediting of certain service for purpose of retired pay for nonregular service, and for other purposes pursuant to House Resolution 190, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

THE CRUSADE AGAINST INFLATION IS OVERLOOKING THE PERILS OF UNEMPLOYMENT

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. PATMAN] is recognized for 30 minutes.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, the history of western civilization records many great crusades which have been conducted for theoretical causes. There have been mass hysterias, inquisitions, witch hunts, and so on, against evils that were imagined without the slightest support in fact. There is nothing new in the fact that vigilant campaigners among the opinion-makers of society can cause great masses of people to see ghosts. The general public has often been persuaded to see small evils in greatly magnified form, and as flowing from the wrong causes. Men have been caused to commit great depredations and cruelties to themselves and others in the certain conviction that such things were necessary in this world to avoid fire and brimstone in the world of the future.

In my own time I have never known a campaign conducted on a more theoretical and poorly defined cause than the present campaign against inflation. Nor have I known a campaign conducted with more sincerity, bordering almost on a religious zeal. The campaigners are describing fire and brimstone with an eloquency which would lead one to think

they had actually witnessed these holocausts. Inflation is such an all-consuming evil in the minds of our crusading friends that they are even calling it the "silent weapon of communism."

Here we are in a situation where 6 percent of the Nation's total labor force is unemployed. Just think of it. Six percent of all the eligible workers of this country who ought to be producing cannot find employment. The needs of millions of families for food, for shelter, for the essential services, and for the comforts of life are going unmet. Our economy stagnates while the Russians race on to greater scientific and industrial strength. Yet all these disturbing realities of the day are but nothing compared to the evils of inflation which the crusaders imagine they see looming on the horizon.

Those Members who happened to read the Associated Press article on "U.S. Money Troubles," which appeared in the Washington Evening Star last night, and appeared again in the Washington Post and Times Herald this morning, will have fresh in mind the theology which has been built up around the battle of the budget.

THE CRUSADERS' THEORY OF INFLATION

The writer of that article, Mr. Frank Cormier, had been in to see Secretary Anderson and got the whole explanation right from the high altar. The new trinity is this:

First. The Treasury is having a difficult time persuading people and institutions with savings to invest these savings in Government securities. The reason, we are told, is that investors are afraid of inflation. They are so sure that inflation is coming they are refusing to buy securities that will be paid off in cheap dollars in the years ahead.

Second. When the private commercial banks purchase Government securities they create new money and inflate the money supply.

This is what is called monetizing the debt and it is now admitted to be printing-press money, a fact that has not always been admitted.

Third. Inflating the money supply means that the value of the dollar goes down.

These, then, are the three main propositions in the theory which holds that a Federal deficit in the coming fiscal year would be disastrous.

Now it is most unusual that the Associated Press has made this article available to the newspapers of the country—just as unusual as that two local papers here in Washington covered the same article. Normally the press is not easily tempted to probe into monetary matters. And certainly on those occasions when it ventures into any temple of the money changers, it emerges in hushed silence, eyes turned downward.

So I feel that this is an occasion for congratulating the Associated Press for having made this article available to the newspapers and for congratulating Mr. Cormier for having written it. Although this article presents the doctrine of the new crusaders as certain fact, it also sounds one or two notes of caution which should cause us to examine the doctrine before swallowing it.

The first note is with reference to the recent factual relationship between the supply of money and the supply of goods and services for which this money might be used. Mr. Cormier points out that since 1955 the total supply of goods and services—the GNP—has increased by 7 percent, while the money supply has increased by only 3½ percent. Certainly these facts challenge the proposition that there is a relationship between prices and the supply of money available to purchase goods and services. Otherwise, how do we explain that prices have not gone down since 1955. These facts should also warn the great crusaders to pause and consider the possibility that the recent price increases have not been caused by increases in the money supply at all.

Mr. Cormier appears to have paused. At least he is a little more careful with his terms—and his conclusions, too, I suspect—than some of the other recent expounders on this subject. He speaks of the private banks' creating the money to buy Government securities only as an inflation of the money supply. He does not go so far as to say that inflation of the money supply will surely and automatically bring about inflation in the sense that prices will be increased and the value of the dollar will be decreased. The amount of the money which the commercial banks create he calls the only inflationary potential. These statements are considerably more cautious than those we have been hearing recently from some of the experts.

THE THEORY DOES NOT AGREE WITH THE FACTS

For example, many of us have been attracted by a lengthy address delivered on the floor of the Senate on February 17 by the Senator from Connecticut, Mr. BUSH. Senator BUSH has, of course, had an important background of experience as an investment banker, and I believe that he would be pleased to be called one of the outstanding crusaders for the balanced budget.

This is the way the Senator from Connecticut explained the matter:

He took, just as an illustrative figure, a $10 billion Federal deficit this year and explained what would happen if the commercial banks absorbed this additional $10 billion of Federal debt, pointing out that the banks create the money with which they acquire Government securities, he said: "This is the same as using printing-press money to dilute the value of our money supply. There is actually no difference in the result."

The Senator pointed out that the money supply would be increased by 7 percent if the commercial banks bought an additional $10 billion of Government securities. And on that basis he reasoned that this would surely result in a 7 percent devaluation of the dollar. He said that when we allow the private banks to purchase this $10 billion of securities "we have debased the existing money supply by 7 percent. Thus, the savers, pensioners, social security recipients, and all our people living on fixed incomes, have had the equivalent of a cut in income of 7 percent in 1 year, at one fell swoop. Their money has been debased, cheapened, clipped, by 7 percent."

Now what is wrong with this theory of what would happen as a result of a hypothetical increase of $10 billion in the money supply this year?

Well, the theory does not square with the experience of last year when we had an actual example of the very thing the Senator was talking about.

As I have pointed out previously, the commercial banks did in fact absorb $10 billion of Federal debt last year. Between the end of November 1957 and the end of November 1958, the commercial banks increased their holdings of U.S. Government securities by $10.4 billion. And this meant, as both Senator Bush and Mr. Cormier have said, these banks created the money to buy these securities. They created the money out of thin air, on the credit of the United States.

This should have meant, according to the theory, a 7.8-percent increase in the money supply last year. The total money supply was $134 billion at the end of November 1957, so an added $10.4 billion of bank-created money should have increased the supply by 7.8 percent. And so, too, if all three propositions in the crusaders' triad hang together, this country must have had a 7.8 percent increase in prices last year. The incomes of people living on pensions must have been cheapened by 7.8 percent. But, of course, no such thing happened.

Actually, the money supply was increased by only 3.4 percent from November to November. This was because, despite the $10.4 billion created there were offsetting reductions. There was an important shrinkage in business loans for example.

Here we should remember that the commercial banks create money when they make business loans, just as when they purchase Government securities. And I judge from recent testimony of Chairman Martin that the Federal Reserve would be perfectly happy to see now, and in the months ahead, an increase in the money supply through increased business loans. There is now no worry about inflating the money supply for business loans. Only Federal spending to put people back to work producing useful wealth is being condemned as inflationary.

But comes now the jackpot question. Did prices increase last year by 3.4 percent, the same as the increased money supply?

No, the wholesale price index increased by less than 1 percent, and the consumer price index increased by less than 2 percent.

Is it not interesting then, that the crusade for balancing a budget that leaves 6 percent of our families unemployed and out in the cold is built on visions of fire and brimstone which could be dispelled by a reference to factual experience.

Actually, can we say that any part of the price increases last year were the result of increases in the money supply? Certainly there is a great deal of evidence and common sense to the contrary.

GOOD TIMES AND BAD TIMES TO INCREASE CREDIT

There are times, of course, when it is reasonable to think that an increase in the supply of money would cause an increase in prices. These are times of full employment when production is at full capacity and demand for goods and services is outrunning the supply of goods and services immediately available. At such times as these, when both business and consumers are trying to bid for more goods and services than are available, an increase in the supply of credit with which business and consumers can bid for these goods and services is going to drive the prices up.

But under such conditions as we have today, with 6 percent of the labor force unemployed, with a large percentage of all productive capacity idle, and with great stores of goods piled up in inventories, there is no reason to think that an increase in credit which will bring people back into production should cause an increase in prices.

Considering the price increases which did take place last year, furthermore, it is now apparent that these had none of the earmarks of a monetary inflation. The now famous Gardiner Means paper has driven home the point that the price increases of last year, and the several years before that, were not general price increases. Prices of agricultural goods and prices of many industrial goods went down, while prices in a few big business fields—principally steel and steel fabricating industries—were increased. In other words, we had administered price increases in industries which have the arbitrary power to increase prices.

There is a serious question in my mind, then, about this new crusade against inflation. I cannot help wondering why, if the crusaders are so greatly concerned about the inflation which they think they can foresee and about the perils which they think they can foresee, why it is they are not willing to strike out against the realities of inflation.

THE TREASURY IS CRUSADING AGAINST ITS MARKET

Now there is no doubt that the Treasury is having difficulty selling its securities to investors. But this is not because investors have been loaded to the saturation point. Actually, the total Federal debt outstanding was almost as high 15 years ago. Considering the increase in wealth and the increase in savings, the present Federal debt is considerably less percentagewise than it has been in many periods of the past two decades. There is much to suggest that the Treasury is actually a victim of its own crusading. First, beginning in 1953 and continuing almost ever since, the Treasury has been crusading to get interest rates up. Investors have been conditioned to expect higher and ever higher interest rates; and to an important extent they are now holding back waiting for the still higher rates.

Furthermore, the Treasury has joined in the big crusade which seems to be convincing almost everybody that we are going to have inflation. This is a strange crusade, considering its sources. The life insurance companies are leaders in the crusade, and pretty soon they will convince people that they should not buy life insurance because of certain inflation.

PERILS OF UNEMPLOYMENT ARE NOT IMAGINARY

Perhaps there are real inflationary perils ahead, but I am afraid that the new crusaders are overlooking perils of unemployment that are with us today and do not have to be imagined. I believe that a letter which I received recently from an unemployed family will help to bring back in better proportion these cruel realities of the unemployed. The letter is as follows:

MARION, OHIO, *February 18, 1959.*
To The Honorable WRIGHT PATMAN,
Member of Congress.

ECONOMIC DECLINE AND UNEMPLOYMENT

Let us consider the families of the unemployed before the economic decline and the layoffs. Life was good. By savings, a home was bought—not expensively but nicely furnished. The table was always set, with a good diet for our lovable and growing children. They were always given doctors' or dentistry care when needed. High hopes were had for our children's education. Savings were set aside for them. They had a nice car for the family use. Yes, life was good.

Then came the layoff. Most shops were laying off. It was impossible to get another job. The economic decline was in full swing. Unemployment compensation was a help, but the family income was greatly reduced. The car payments could no longer be made; it had to be sold or be repossessed. Then to make payments on the home, the savings for the education of your children had to be used. How heart-rending to see the hopes and plans you had for your children die. As time goes by, money for family living becomes tighter and tighter. Doctors' and dentistry care must be put off for your children as long as possible. The children's clothes become old and worn. They need new and warmer clothes for the winter months. A good diet on the table is no longer possible. The parents are in tears, sorrow, and despair because they cannot adequately care for their children.

Finally, the home is lost and the family is forced deeper and ever deeper into the pits of despair and poverty.

In this hour in these United States, with God's abundance—produce of farm and factories piled high everywhere—this is an unthinkable and intolerable condition into which many of America's families are forced.

Economic progress and full employment—it is the sacred duty of governments to so govern as to forever guarantee this condition of existence. To do otherwise is to invite destruction and terror within the confines of the Nation's borders.

I plead with you in this hour and year of our Lord that you rectify and correct these conditions that brought on the economic decline and unemployment at once. I believe you men in Congress and the administrative branches of Government are equal to this all-important task. You must not fail, you cannot fail. You must do this to insure orderly procedures of Government and of the economic processes.

To permit economic decline, accompanied by the ravages of unemployment, in this space age, in this age of atomic energy, and of the ICBM missiles is a crime of terrifying and hideous proportions, committed against millions of American families, by those in high places, by those in control of the political, economic, and financial systems of these United States of America. By their acts or perhaps their inaction do economic decline and unemployment take place. And worse yet, it is permitted to exist without a hand being turned to stop it.

The economic structure of this Nation cannot and shall not stand upon the shifting sands of the terrible sufferings of the families of the unemployed. Already dark clouds appear on the horizon, the rumblings of discontent, the thunder of radical and revolutionary ideas, born out of despair and hopelessness. The dangers are ever present among desperate families. The lightning may strike and we in these United States may have an uprising, with the demands for an honorable and good life for the families of the unemployed.

(Signed) UNEMPLOYED.

Mr. Speaker, I wish to turn now to another topic.

I have had the privilege of serving in this House since my first election in 1928. I believe that nowhere has there been finer, better, more patriotic, or greater Americans than the men and women with whom I have had the privilege of serving during these many years. These are honest, sincere, conscientious representatives of the people here in this body—436 Members now—elected every 2 years.

THE HOUSE IS AND MUST BE THE BODY OF POPULAR GOVERNMENT

I believe that the 2-year system should continue. I have opposed the proposed amendment to make the term of Members of the House of Representatives a 4-year term, although a 4-year term would greatly increase the security and convenience of the Members. The great men who wrote our Constitution equalized and balanced the terms of the country's elective Representatives in a way that we should not overturn in any particular. As it is, the House of Representatives is elected every 2 years. It is this body that is closest to the people and most representative of the thoughts and views of the people. In the event of a dangerous trend of any kind, the people can quickly check it by electing an entirely new House of Representatives within 2 years. The House should remain with the people, elected every 2 years, the body of popular government.

All bills for raising revenue must originate in this body. They cannot originate in the other body. The people have a closer, firmer grip upon the purse strings of this Nation because they elect their Representatives every 2 years.

The executive branch is headed by the President of the United States who is elected by vote of the people every 4 years. The Members of the other body are elected for 6 years, one-third of their number every 2 years. The judicial branch of the Government, the judges, are selected for life. So far as the legislative branch of the Government and the executive branch of the Government are concerned, I believe there is a proper balance and the 2-year term should not be upset. It should remain as it is.

The Members in this House I say after long experience are anxious to do a good job for the people they have the honor to represent. They are eager to do their best to help all the people and to help the country. But they are handicapped. As I see it, they are most seriously handicapped because they do not have the

help they need to do their job. I am not talking about clerical assistants and stenographic help. I believe the Members have plenty of help of that kind.

POPULAR GOVERNMENT SHOULD BE EFFICIENT GOVERNMENT

But they are lacking in efficient, professional help. I refer to administrative assistants. If the Members could have administrative assistants, this would help their constituents more than anything else.

In the executive branch of our Government every Secretary, Assistant Secretary, and Under Secretary has at least one administrative assistant, plus assistants to the assistants. We vote appropriations for hundreds and thousands of them.

The judges in our judicial branch of the Government have their law clerks and other assistants. We vote for that. We make it possible, and we are glad to do it, because we want them well equipped to do their jobs. Furthermore, in the judicial branch, whenever there is a question to decide, a big decision to make, the judges have the advantage of professional briefs and arguments on both sides of the question at issue. Every question that can be raised is raised. The judges are not presented with arguments on only one side of a question as we frequently are. They do not have to go out and search for the holes in the arguments; they do not have to do their own research as we frequently have to do.

The Members of the other body—the U.S. Senate—are provided with administrative assistants—one to three each—all provided by our votes here in this body.

But in the House of Representatives we frequently get one side of the question only; and we must dig up all the answers if we are going to have the answers. Sometimes we do not have the answers. Sometimes we are misled, and sometimes we are deceived. These people who are working as lobbyists, which is an honorable work, tend to point out to us only one side of the issue. They are doing everything within their power to point out that one side only; and if that one side is not opposed by somebody else, we just have that one side. We have no one on our staff who is in a position to analyze and evaluate these complex and technical issues and advise us. We are not equipped when we must vote on some of the most important matters affecting the people's interest.

PROFESSIONAL ASSISTANTS WOULD SAVE THE TAXPAYERS THOUSANDS OF DOLLARS FOR EACH DOLLAR OF COST

Every Member of this House should have administrative assistants. Really, I would recommend two; one to do certain things, but one in particular whose work would be devoted entirely to taxes, appropriations, and monetary matters. Certainly Members should have the services of at least one professional assistant for these particular matters. I am not in favor of increasing the amount that a Member of Congress can pay to appoint some political friend. I am not advocating that, and I would not object to standards and requirements being set forth in the law. Certainly we could prescribe high standards that would have to be met in order for an appointment to be made. This has been done in the civil service.

I seriously believe if each Member of the House had the proper help this would save the taxpayers a thousand dollars for every $1 that would be spent for the help. Let me illustrate. Take, for instance, the interest rates on our national debt, which have gone up tremendously in the last few years, absolutely against conscience. I believe that if the Members of the House were able to devote some time to this subject, most of this increased cost to the taxpayers would not have come about.

Take also the fact that a few banks, comparatively speaking—2 or 3 percent of the banks—last year, 1958, received about $7 billion worth of Government securities as a free gift from the Government. All of the commercial banks last year had put in their laps, absolutely without charge, the Government's money-creating powers sufficient to allow them to acquire $10 billion worth of U.S. Government securities. This was absolutely without cost to these banks. And the taxpayers will have to pay between $300 million and $400 million each year in interest charges on this $10 billion gift.

Now, we have seen this sort of thing happen right here in broad daylight. We represent the people. We would like to do something about it, but we are not in a position to do much about it; we are not equipped to do the job. If we were to have a real, fair, objective investigation of the debt management and monetary systems in this country—by people who can do the job, and not by people who are biased in favor of those who are getting the benefits of these subsidies—we could, within a year's time, save $3 billion interest on the national debt.

Interest rates have gone sky high in the last few years. And, if this had been done just for the benefit of savers—the people who save a few pennies or a few dollars every month—why, perhaps we would not object too much. But remember, my friends, this increased interest is not going to the savers.

Most of the money in our country today is money created on the books of the commercial banks. The $67 billion of interest-bearing U.S. Government securities which the commercial banks now hold have all been acquired with money created on the books of these banks. Is there a Member within the sound of my voice who will dispute what I have said about that? Of course there is not. There is not a person in the Government who will dispute it, because it is an inescapable fact. It cannot be disputed. So, here we are, 436 Members of the House, sitting right here on the sidelines seeing this happen in broad daylight and feeling helpless to do anything about it. That is the reason I complain.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa.

Mr. GROSS. How did the gentleman vote on raising the debt limit?

Mr. PATMAN. Over the years I have had to vote for it, because we voted the appropriations here. The last time I voted against it because it was presented unfairly. But voting to keep down the debt limit does not do the job; that does not substitute for doing our jobs in an efficient and informed way.

The SPEAKER. The time of the gentleman from Texas has expired.

PLANS FOR A COMPREHENSIVE OBSERVANCE OF THE 175TH ANNIVERSARY OF THE CONSTITUTION OF THE UNITED STATES

Mr. BYRNE of Pennsylvania. Mr. Speaker, I ask unanimous consent to address the House for 15 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. BYRNE of Pennsylvania. Mr. Speaker, I have today introduced a resolution providing for the preparation and completion of plans for a comprehensive observance of the 175th anniversary of the Constitution of the United States.

As the Member of Congress from the Third District of Pennsylvania, it is my happy privilege and great honor to represent the people of this district which includes many hallowed patriotic shrines of the early history of our Nation.

Independence Square and its surrounding area, together with Independence Hall, Congress Hall, and Carpenters Hall, are now under Federal administration as Independence National Historical Park. A great program of restoration and beautification of the area is now well under way through cooperation of the city of Philadelphia, the State and National Governments.

Within this area much of the history of early America was enacted. Here the Philadelphia merchants framed the nonimportation agreement protesting the oppressive Stamp Act. Here both the First and Second Continental Congresses met, George Washington accepted his appointment as general of the Continental Army and later presided over the Constitutional Convention.

Here the world first came to know the brilliance of Thomas Jefferson, the wisdom of Benjamin Franklin, and learned presentments of John Adams, James Madison, and other great men of the time.

Here, too, the Declaration of Independence was written and proclaimed, the Colonies were joined under the Articles of Confederation, and the Convention of Deputies from the Colonies successfully labored to bring forth the document which today is still the foundation rock of our free Republic.

And within the bounds of this area were held the earliest sessions of this Congress until May 14, 1800, in what was then the first Capital of a new Nation, the United States of America.

Mr. Speaker, we are approaching the 175th anniversary of the formation of the Constitution, signed at Philadelphia on May 17, 1787.

This anniversary and related significant dates that followed up to and through the first session of the First Congress convened on March 4, 1789, should be the occasion of a nationwide observance in every community in our land.

As the late Honorable Sol Bloom, Representative from New York and director general of the U.S. Constitution Sesquicentennial Commission, wrote nearly 25 years ago, one of the main purposes of such a program was to promote "a proper understanding of the meaning of the Constitution and its place in the history and daily life of the country—of the origins and principles of our Nation."

In the nearly quarter of a century that has elapsed since the sesquicentennial we have gone through a Second World War, man has emerged into an age of scientific wonders that finds him reaching for the stars, our population has increased by nearly 50 million people, and we have thrived materially.

But at the same time there has risen to power a godless community of dictatorship holding in thrall many other millions of human beings in many other countries—to challenge our bright hopes of a world of peace and justice under the brotherhood of man and the fatherhood of God.

Now more than ever before do we need to renew at the well-springs of faith and patriotism that spirit which moved our Founding Fathers to "secure the blessings of liberty to ourselves and our posterity—to find sustenance there—and to present their example to the world."

Mr. Speaker, under unanimous consent, I include the text of my resolution in the RECORD as part of these remarks, and I hope the House will take favorable action on the measure. It is not too early to begin planning for this great event that will begin on May 17, 1962. And I urge that you, Mr. Speaker, appoint a committee or commission to study and recommend a program so that this great historic occasion may be fittingly commemorated.

HOUSE JOINT RESOLUTION 286

Joint resolution providing for the preparation and completion of plans for a comprehensive observance of the one hundred and seventy-fifth anniversary of the formation of the Constitution of the United States

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established a Commission, to be known as the "United States Constitution One Hundred and Seventy-fifth Anniversary Commission" (hereinafter referred to as the "Commission") for the celebration of the one hundred and seventy-fifth anniversary of the existence of the Constitution, and to be composed of twelve Commissioners, as follows: The President of the United States; the President of the Senate and the Speaker of the House of Representatives, ex officio; three persons to be appointed by the President of the United States; three Senators to be appointed by the President of the Senate; and three Representatives by the Speaker of the House of Representatives.

SEC. 2. The Commissioners shall receive no compensation for their services but shall be paid their actual and necessary traveling, hotel, and other expenses incurred in the discharge of their duties.

SEC. 3. The Commission shall select a Chairman and appoint a Director, who shall appoint, with the approval of the Commission, such assistants and subordinates as he deems necessary.

SEC. 4. That it shall be the duty of the Commissioners, after promulgating to the American people an address relative to the reason of its creation and of its purpose, to prepare a plan or plans, and a program for the adequate celebration of the one hundred and seventy-fifth anniversary, and to give due and proper consideration to any plan or plans which may be submitted to them; and to take such steps as may be necessary in the coordination and correlation of plans prepared by State commissions, or by bodies created under appointment by the Governors of the respective States, and by representative civic bodies.

SEC. 5. That the Commission shall, on or before the adjournment of the present session of the Eighty-sixth Congress, make a report to the Congress, in order that enabling legislation may be enacted.

SEC. 6. That the Commission hereby created shall expire upon the appointment of a permanent Commission to execute the complete arrangements for this celebration.

SEC. 7. That the Commission may receive from any source contributions to aid in carrying out the general purpose of this resolution, but the same shall be expended and accounted for in the same manner as any appropriation which may be made under authority of this Act.

SEC. 8. There is hereby authorized to be appropriated the sum of $10,000 to defray expenses.

SOLDIERS' HOMES

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include a letter.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, the following copy of a letter was presented to me today by Mr. G. H. Stordock, president, National Association of State Veterans Homes, by Mr. John L. Quigley, of Massachusetts Legislative Committee, who is also commandant of the Chelsea State Soldiers Homes. I believe the House will be much interested in the letter, especially those Members who have soldiers homes in their districts:

THE COMMONWEALTH
OF MASSACHUSETTS,
SOLDIERS' HOME,
Chelsea, March 4, 1959.

You, your committee, and your staff are quite familiar with both the history of State and Territorial Federal allotment statutes and the close relationship existing between Veterans' Administration facilities and State homes. Your familiarity with the background of this problem obviates the necessity for a written presentation of the background; it is, however, pertinent to remind you that the last Federal allotment became effective on September 1, 1954, as a result of a hearing before your committee in February of 1954.

State homes are presently experiencing substantial increases in operating expenses as are all segments of our population. State governments, for the most part, are making every effort to avoid tax increases and so State institutions must make similar efforts to make the same dollars appropriated in past years stretch further to cover the increased cost of providing the same services today. Thus we see that providing services today will be appreciably more expensive than providing identical services a few years ago owing to a general increase in the cost of living.

The general increase in the cost of living, however, is but one of the many valid reasons for increased operational costs of State homes. Among the other reasons are:

First, the gradual transition of State homes in recent years from a simple home or domiciliary to a hospital or rehabilitation center environment. This change has been largely voluntary on the part of States but in many instances has been forced upon us to care for veteran patients recently discharged or transferred from Veterans' Administration facilities for long term care at the State home. The transfers, in most cases, have been made by the Veterans' Administration to make more beds available for short-term cases in Veterans' Administration hospitals; in most cases, too, the transferred veteran has a chronic disability, is unemployed or bedridden, needs nursing, attendant or medical care, and has no place to go. All of these factors go to make a substantial increase in operating expenses since they are drastic changes from home domiciliary centers where minimal care is extended. Even without Veterans' Administration transfers, the homes would have similar problems since they too house veterans in an aging population.

Second, a portion of the increase has been caused by a general improvement in patient care brought about by exchanges of information and professional and educational advancement of home superintendents through annual meetings of our association, hospital association institutes, and participation in Veterans' Administration training program. All such meetings have resulted in presentation of ideas regarding improved patient care, while expensive to institutes, are nonetheless of great value to our veteran patients. The improvement in patient care in our State homes places the standard of care of our veterans on an equal footing with the care of veterans in Veterans' Administration hospitals.

The attached addendum will show a comparison of costs between the quarter ending March 31, 1954 (the time of our last hearing), and the quarters ending June 30, 1958 (the last quarter for which complete costs are available to the undersigned). Since the last increase in Federal allotment, Veterans' Administration auditors have given greater attention to accounting practices of State homes and disallowed a few items which were formerly reported as costs. These disallowances have generally reduced reported costs of State homes and any present report of costs actually is less than similar reports prior to September 1, 1954, since some items formerly allowed are not now included. A review of the addendum will show that only four homes report slight decreases in cost in this period while 26 showed increases. The decreases are partially due, the superintendents advise us, to changes in accounting practices and disallowances of some items by Veterans' Administration auditors. The increases vary from 4.5 percent to 171.8 percent and represent both increased cost of living and expansion of programs. The average of all homes (both increase and decrease) shows a 30.6 percent increase in the 4¼ years under study, or 7.2 percent per year, or 1.8 percent per quarter. The increase of 30.6 percent would appear to justify a dollar increase of $214.20 from Federal funds to meet the proportion of increased operating expenses as, we think, your committee and the Congress intended when the last increase was granted in 1954.

If an increase is approved by your committee, we assume that it could not be effective, as was the last increase, until approximately October 1, 1959. By then an

additional five quarters will have passed since the quarter ending June 30, 1958. Using the average quarterly increase of the March 1954–June 1958 period of 1.8 percent per quarter, we would then add 9 percent to the existing 30.6 percent for a projected total increase of 39.6 percent for the period March 1954–October 1959. This 39.6 percent would represent an actual dollar increase of $277.20.

Thus we see from the above analysis that State homes would appear to be entitled to an increase of from $214.20 to $277.20. We earnestly solicit your support for this increase and hope to enlist your support of H.R. 3752 or any other bill which your committee might care to draw incorporating this increase into new law.

Also attached you will find an addendum showing the actual cost of an increase based on the June 30, 1958, per capita cost for a $100 and a $200 and a $300 annual increase.

We have taken the liberty of reprinting this letter to you, as many of our homes desire to contact their Congressmen regarding this legislation. We felt that this letter would best express our statement of position to you.

With sincere thanks to you for the consideration given to our States' homes, I remain

Very truly yours,

G. H. STORDOCK,
President, National Association of State Veterans' Homes.

JOHN L. QUIGLEY,
Chairman, Legislative Committee.

LATEST PRICE-CUTTING ACTION BY SECRETARY BENSON BAD NEWS FOR THE FARMER AND FOR THE NATION

Mr. McGOVERN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from South Dakota?

There was no objection.

Mr. McGOVERN. Mr. Speaker, for the past 6 years, Secretary of Agriculture Benson has missed few, if any, opportunities to drive farm prices down, while at the same time expounding the impossible theory that lower farm prices would reduce production and raise farm income.

Needless to say, Mr. Benson's theory has had exactly the opposite effect—farm production has gone up each time he has lowered farm price supports, while farm income has dropped. Farmers have suffered a loss of approximately $18 billion in income under his administration. Farm surpluses held by the Commodity Credit Corporation have virtually quadrupled. Nearly 4 million farm people have been forced to give up farming and join the ranks of city residents seeking employment. The cost of the farm program has been multiplied many times since Mr. Benson took office.

During 1958, because of favorable growing conditions and other factors, net farm income rose to $13 billion, which is an increase of about 20 percent over the previous year. It should be pointed out, however, that it rose in spite of the Secretary's actions, not as a result of them, though he has tried hard to make us believe otherwise.

It should also be noted that last year's net income level was lower than that of any year in the 1946–1954 period, and is far below the reasonable return to which farmers are entitled on their labor, management and investment.

Farming is a costly operation requiring thousands of dollars of investment, as well as hard labor and managerial skill. The typical midwest farming operation represents an investment of about $50,000.

For those who contend that farmers are gaining adequate remuneration for their labors, I would point out that as late as 1957, per capita farm income averaged $967. Nonfarm per capita income averaged $2,082 in the same year. During that year, $309 of the farmer's $967 total income was derived from work off of the farm. The hourly return to farmers for labor and management averaged only a meager 69 cents an hour.

While farm income rose last year, for the first time in 5 years, Secretary Benson apparently has no intention of allowing this situation to repeat itself in 1959.

On February 19 of this year he announced that he was reducing price supports on most feed grains to 60 percent of parity.

I offer for the RECORD at this point a report on the Secretary's latest order by Associated Press writer, Ovid Martin, which appeared in the Sioux Falls Argus-Leader of February 19:

BENSON CUTS PRICE PROPS FOR EIGHT CROPS

(By Ovid A. Martin)

WASHINGTON.—The potential producer value of eight crops has been reduced more than half a billion dollars by a cut in Government price support levels.

The crops are rye, barley, grain sorghums, oats, soybeans, cottonseed, flaxseed and dry beans.

Secretary of Agriculture Benson announced Wednesday that his Department will support prices of these crops at lower levels this year than last.

Should market prices adjust to lower supports—as they are expected to do in view of the existing price-depressing surpluses—grower returns would be decreased correspondingly.

Likewise, the Government's own outlay on supplies which it would take over under price support operations would be reduced also.

In the case of a ninth crop-corn-Benson set a new rate which probably will have little effect on the value of this crop.

Newly announced supports for this year compared with last year, respectively, included: Grain sorghums $1.52 and $1.83 a hundred pounds; oats 50 cents and 61 cents a bushel; and soybeans $1.85 and $2.09.

In the case of corn, Benson set the 1959 rate at a minimum of $1.12 a bushel. This compares with last year's dual rate of $1.36 for corn grown on farms complying with acreage allotments and $1.06 for corn grown on noncomplying farms.

Under a new program in effect this year, there will be no acreage allotments. Farmers will be free to produce all the corn they desire. But there will be a single rate of $1.12.

Inasmuch as more than 80 percent of the affected farms exceeded corn allotments last year, the market price for this grain was largely determined by the $1.06 rate.

This year markets will be determined largely by a rate 6 cents higher.

Consequently, the value of this year's corn crop might well exceed last year's by a small amount assuming, of course, a crop of equal size.

At a minimum, the Secretary's latest action will result in a $15 million loss to the producers of oats, barley, rye, flax, corn, soybeans, and grain sorghums in my State of South Dakota. It could easily be as high as $25 million.

Already, the effects of this arbitrary and completely unjustified action have been felt in the sensitive market places

of the Nation, as the following news story from the same newspaper demonstrates:

SOME GRAINS DOWN SHARPLY

CHICAGO.—The sharpest price break in many months carried some grain futures to new low levels for the season today on the Board of Trade.

Price shifts were broad and rapid as the declines broke open a heavy volume of stop-loss selling in spots and some dealers moved toward reinstatement of positions as the setbacks appeared from time to time to have hit bottoms.

Wheat showed some rallying strength at times, but rye and soybeans, with losses running more than cents a bushel, were under constant heavy pressure.

The liquidation was attributed mainly to new lower price supports for 1959 crops of soybeans and most grains but the Government report on stocks held in price support loan on January 31 also was viewed as bearish by many interests.

At the finish, wheat was unchanged to 1⅛ cents a bushel lower, March $1.98–97⅞. Corn ⅛ higher to ½ lower, March old type contract $1.15¼. Oats ⅝–1½ lower, March 64½. Rye ½–4⅝ lower, March $1.37¼–½. Soybeans 1⅜–3⅜ lower, March $2.19½–¼.

The grain futures market dipped sharply as the news article points out. Furthermore, the break was directly attributed to Mr. Benson's price-cutting actions announced that day. The Secretary's ill-advised decision can only serve to heighten the prolonged agricultural depression, much of which he has created through his policies. It also threatens to lengthen out and perhaps even intensify the recession which this Nation has been experiencing for the past year and a half.

By the latest report, 4.7 million people are still unemployed. Heavy industries are far below full production levels, partly because of decreased farm purchasing power. Is it not, then, the height of irresponsibility to reduce further the incomes of one of industry's best customers—the American farm family?

Let us not forget that farmers provide a market for 6.5 million tons of finished steel annually. They buy more petroleum products than any other segment of the economy. Farmers consume 50 million tons of chemicals annually. They operate 12 million tractors, cars, and trucks on American farms.

Approximately 25 million workers, or about 40 percent of our gainfully employed, are directly dependent upon agriculture for their livelihoods, and millions more indirectly receive much of their incomes from agricultural activities.

It is my conviction that this Nation cannot hope to eliminate the chronic pockets of unemployment and regain its economic health until we deal with the depressed agricultural sector of our economy. The American farmer has provided us with the best food in the world at the lowest prices. He is entitled to an income on a par with his city cousin.

In the past, meaningful farm income improvement legislation has been stopped by Presidential veto. It is my hope, however, that in spite of the veto threat, Congress will make every effort to pass adequate farm legislation.

BARTER AGREEMENT WITH GOVERNMENT OF INDIA

Mr. COOLEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. COOLEY. Mr. Speaker, in view of the fact that I criticized the Department of Agriculture rather sharply on this floor Monday for its failure to carry on an effective barter program, it is a pleasure for me to be able to tell the House today that one particular barter transaction of importance, which has been hanging fire for 18 months, has finally been approved.

At 5:30 yesterday afternoon, officials of the Government of the United States and the Government of India signed an agreement which contemplates the barter of about 17 million bushels of wheat and other food grains for an equivalent value of manganese, ferromanganese, and other minerals produced in India. This is the barter transaction with India that Department of Agriculture officials have been referring to in various statements for the past year. It is indeed a pleasure to learn that the agreement under which it can be consummated has finally been signed.

While I do not want to detract from the accomplishment of Department of Agriculture officials, our natural elation is somewhat tempered by the fact that this proposal was first made in August 1957 and it has taken the Department of Agriculture from that time until yesterday to work out the transaction, and also by the fact that the original proposal was for the barter of several times the quantity of surpluses which are encompassed in the agreement which has just been signed.

Following is the announcement of this transaction which has just been issued by the Department of Agriculture:

BARTER AGREEMENT WITH GOVERNMENT OF INDIA ANNOUNCED

The U.S. Department of Agriculture announced today that basic agreement has been reached between the Governments of India and the United States regarding the exchange of 450,000 metric tons or more of Commodity Credit Corporation-owned foodgrains, principally wheat, for manganese, ferromanganese, and other materials originating in India or processed from materials originating in India.

The processing may take place within India or in friendly countries outside India, including the United States.

After expected completion in the near future of operational details, USDA's Commodity Credit Corporation will issue the terms and conditions under which interested U.S. firms holding firm offers of India material or materials processed from Indian materials may submit offers to CCC.

MISREPRESENTATIONS OF SECRETARY BENSON AND HIS PROGRAM

The SPEAKER. Under previous order of the House, the gentleman from Utah [Mr. DIXON] is recognized for 30 minutes.

Mr. DIXON. Mr. Speaker, it is within the nature of our great country and its Congress to be just. Recent statements upon the floor of the House and in the RECORD are in my opinion unjust to our great Secretary of Agriculture and his program.

Yesterday, the Secretary of Agriculture was attacked on the floor of this Chamber in a vicious, scurrilous and entirely uncalled for manner. Even his religion and integrity were challenged. I feel an obligation to apologize here to Secretary Benson in the name of the House of Representatives.

I was glad to see that the Secretary did not dignify the attack on him by a detailed rebuttal. Instead, he pointed out, as well he should, that responsibility for the situation in which we find ourselves today in agriculture lies at the doorstep of those who have the power to change the laws which have led to the shamefully high costs of the farm program and the unmanageable surpluses in a few of the basic crops.

I have asked for a few minutes' time today to correct a few of what I think are fallacies and misrepresentations.

Fallacy No. 1: That the mess we are in is the result of the Secretary's program. As a matter of fact the Democrats have been in control of the last two Congresses and all the Secretary can do is to carry out the mandates of the Congress even though it is not his program. I have been present in the Committee on Agriculture when the Secretary has pled, almost with tears in his eyes, for laws which would correct the very evils of which his opponents complain so forcefully. I do not blame them for complaining and I, like the Secretary, urge them now that they are in such complete control to enact real corrective measures.

Fallacy No. 2: That the rise in Commodity Credit Corporation inventories from 1953 to 1959 is due specifically to lower price supports. Would our critics honestly maintain that the farmers would have chosen to produce less if we had given them as incentives 90 percent or 100 percent price supports? If so, the human nature of the farmer defies analysis if when given such an incentive he decided to produce less. Furthermore, our successful World War II efforts to increase production by raising price supports was all wrong. According to the analysis of Mr. Benson's critics we should have lowered price supports to increase production.

Seriously now the chief reasons for the increasing surpluses are:

First. The miracles of production research and the technological revolution in agriculture production.

Second. The fact that our CCC inventories were low in 1953 only because two wars, involving our responsibility of feeding the world, had drained off our surpluses.

Third. The third great cause is that the Democratic-controlled Congress would not permit sufficient flexibility in price supports to move surpluses into markets rather than into Government storage. Our critics appear to have ignored all three of these most important factors.

Fourth. Our foreign neighbors are now back in production on a big scale—many of them with our help.

Fallacy No. 3: That Secretary Benson's program is the cause of staggering Agriculture Department expenditures. The facts are that 3 out of the last 4 years our Democratic-controlled Congresses have raised agriculture appropriations above what he, the Secretary, wanted to spend. I hope this year to see Democratic majorities vote for less rather than more agriculture spending.

I recall having seen our critics, who cry "economy," vote for a billion dollar a year corn bill, a billion dollar price support freeze bill, which the President had the courage to veto, a billion and a half omnibus farm bill, which we killed on the floor, and a billion and a half food stamp plan, all of which would have forced the Secretary to hire thousands of additional employees and spend additional billions of money.

Fallacy No. 4: That high price supports are the solution to the small low income farmer's problems.

On the contrary, the effect of many of these costly programs has been largely to enrich the big farmers.

In 1956 one-third of our farm products came from less than 3 percent of the farmers and 91 percent of products from 50 percent of the farms. In other words, half of all of the farmers—the small farmers who need the help—produce only 9 percent of the output. Again high price supports discriminate against the small farmer who produces other than the six basic crops. Yet in spite of this handicap it is the basic crops which get most of the help that are in the most serious trouble.

The poultry people have given the law of supply and demand a chance to operate and as a result consumption has increased prodigiously. Our livestock have done likewise and they have represented one of the bright spots in agriculture.

If our critics are so eager to cut costs and help the small farmer why did they refuse to pass bills which several of us introduced which would drastically limit the amount of money that could be paid to any one farmer?

Time and again in the years he has been Secretary, Mr. Benson has called for revisions in the basic legislation which would have permitted agriculture to make an orderly transition from war to peacetime demand. Each time the Congress either refused, or took steps in the opposite direction which caused Presidential vetoes, or grudgingly granted a little—but much too little—of what the President and the Secretary recommended after careful study of the whole situation.

Again and again, Mr. Benson warned of the consequences of this inaction. Today we are seeing the results. Again President Eisenhower and Mr. Benson have appealed to the Congress to revise the law. And what is the response?

Instead of statesmanship, we have the shameful spectacle of veteran Members of this body beating Mr. Benson over the head with the results of a program which certainly is not of the Secretary's making.

We might as well face up to it, Mr. Speaker. The President cannot change the law. He has urged changes again and again. Mr. Benson cannot make the law—it is his duty to administer it. Therefore, it is difficult to draw the conclusion that the failure of the farm law is the failure of the administration.

It is time to say right here and now that the failure of the program is the failure of the legislation—the old, outmoded, unworkable legislation—that this Congress has allowed to continue much, much too long.

The gentleman from Mississippi yesterday attempted to support his personal attack on the Secretary by selecting from a hearing record some carefully culled excerpts regarding the cotton program and the recent revision of the parity index.

I would like to present the facts to you at this point.

A dispassionate review of these facts will indicate that the Secretary was discharging his legal responsibilities as the chief executive officer in charge of the Department of Agriculture with respect to revision of the index of prices received by farmers and the parity index—index of prices paid, interest, taxes, and wage rates.

The law places upon the Secretary the responsibility of determining the indexes and prices used in computing parity prices. It was obviously clearly appropriate for the statisticians to advise the Secretary as to the implications of the data. Pursuant to his responsibility, the Secretary approved the request for funds for fiscal year 1956 for bringing the weighting pattern up to postwar conditions. These are the last major indexes of the Federal Government to be brought up to date after World War II.

Testimony before the Appropriations Committee clearly outlined the need for updating the index and implied the intention of the Department to proceed with the necessary surveys and revisions once the surveys were completed. This it appears the Department has done. Indeed, it is difficult to see how the Department could have withheld the completion of this work, after making the basic surveys and utilizing the funds requested for the purpose.

The situation was in some respects similar at the time of the 1950 revision of the indexes. At the time the 1950 index was revised the Congress had directed that allowance be made for cash wage rates. This addition more than offsets the downward effect which the revision had upon the parity index.

Thus the component for prices paid, interest, and taxes of the revised parity index as published in January 1950 was about 2½ percent lower than the index as computed prior thereto. The addition of the wage factor, however, served to cancel this so that the net effect of the revision, including the addition of wage rates and the revision of the prices received index was to raise parity prices about 4 percent, instead of around 6 percent, which would have resulted without the revision.

The testimony of Mr. O. V. Wells, of the Department, indicates that the farm expenditure survey, although necessarily a sample, was conducted by approved statistical techniques and represents all farms, whether large or small.

The memorandums from Stauber to Wells are clearly technical memorandums exploring the changes which might result from using the new, current data and were not written, as implied, for the purpose of reducing parity prices.

As to the matter of medical services, hospitals, insurance, and the like mentioned by the gentleman from Mississippi, they were not included in the index previously, and their continued omission obviously has changed nothing. These items could not be included because price series are not available.

Finally, the Parity Index continues to relate to all farms, just as it has in the past. It does, however, make use of up-to-date information.

Surely the Congress expects the Secretary to make use of the most accurate and up-to-date statistical information available in his determinations. This it appears the Secretary has done, and I am sure that it is in the interest of agriculture and the whole Nation for our statistical measures to be as accurate as it is possible to make them with available resources.

Mr. Speaker, in his attack on Secretary Benson the gentleman from Mississippi had quite a lot to say about how this administration has handled the cotton export program, his pet commodity. Some of it, unfortunately, was incorrect or misleading. I do not propose to answer my distinguished colleague point by point, but I would like to call attention to some things I think need correction.

The truth is that under the capable leadership of Secretary Benson, the Department of Agriculture since 1956 has sold about 15.5 million bales of cotton under its export program. Exports for the 3 years, including this year 1958–59, will average above 5 million bales. This is considered by the Department, on the basis of testimony and debate at the time the Agricultural Act of 1956 was before the Congress, to represent the U.S. fair share of the world market for cotton. The gentleman from Mississippi, capable representative of his constituents that he is, now would raise this fair share from 5.5 to 6 million bales. I suggest that a study of the record be made.

Later in his remarks the gentleman from Mississippi commented on a communique from the Washington Star concerning the recent visit of President Eisenhower to Mexico and quoted:

> The communique said there was agreement that there should be cooperation and consultation between the two Governments on the disposal of cotton. This might mean that Mexico will be protected in the future against sale abroad of United States cotton surpluses.

My distinguished colleague then went on to say that reestablishing and maintaining our historical share of world markets is not disposing of surpluses, adding that he could not believe that the President would feel he had the right to ignore the law.

The joint statement by the President of Mexico and the President of the United States at Acapulco on February 20, 1959, and made available here by the White House, says in the seventh paragraph—the only reference to cotton—the following:

> Since cotton is Mexico's major export commodity and one of great importance to the United States, the two Presidents agreed that their Governments should cooperate and consult together in their efforts better to protect the interests of both countries in this vital commodity.

The gentleman from Mississippi strayed far afield elsewhere in his speech.

It is ridiculous, for example, to accuse the Secretary of making huge and hasty Soil Bank payments because 1956 was an election year. As a matter of fact, he opposed making the Soil Bank operative in 1956.

The Soil Bank program was placed in effect hastily, it is true, but that was done to meet a specific directive of the Congress.

Early in 1956, Congress passed an agricultural bill in which a Soil Bank authorization was coupled with numerous unwise provisions which the administration had consistently opposed and could not possibly accept. Chief of these objectionable provisions was a return to a wartime rigid 90 percent of parity supports for the basic commodities. Had this provision become law in this period of huge surpluses and rising yields, the cost of the Federal farm program would have skyrocketed beyond all comprehension. The bill would have been self-defeating, because the Soil Bank provisions and the rigid supports would have pulled farmers in directly opposite directions.

Under those circumstances, the President had no choice but to veto the unworkable bill which was handed him by an unfriendly Congress and to request reenactment of the Soil Bank provisions in a form that made sense—and in time for use on 1957 production.

However, when Congress repassed the Soil Bank, the Department of Agriculture was directed to put the program into effect for 1956. That was nearly the first of June. Moving rapidly, the Department of Agriculture went to the field with what was admittedly a special program to meet a time emergency not of the Department's own making.

Launched under such difficult circumstances, the acreage reserve of the soil bank can nevertheless show an outstanding record of accomplishment during the 3 years the program was in operation.

For those 3 years, we can point with pride to perhaps the greatest record of crop adjustment ever accomplished under any farm program in a comparable period. For the five basic crops to which the program was applied, crops were reduced by approximately 50 million acres in the 3 years. Altogether, the acreage reserve prevented the production of many millions of bushels of crops that would have added to the surplus and run up the cost of the price-support program. For corn, the 3-year reduction was nearly one-half billion bushels. For cotton, there was a crop reduction of 3 million bales in 1958 alone. The program was so effective on cotton that the acreage last year was the smallest since 1876.

Why, then, was the program dropped after 3 years? The true reason is that it had accomplished in that 3-year period nearly everything that could be expected through that approach. Cotton acreage was reduced to such a level that Congress directed a program which would offer farmers an opportunity to increase their plantings. Corn farmers, offered a choice, voted for a program which would take controls completely away from corn. Only wheat was left among the major surplus crops, and the Department of Agriculture wisely elected not to offer this special approach to wheat farmers alone.

And, incidentally, payments under the soil bank are made after the acreage adjustment is carried out, not before. No farmer has ever been paid before carrying out his contract—in an election year or any other time.

I suggest in the interest of better information for Members of this House and less questioning of the President's intent to ignore the law that communiques be obtained from official sources.

In connection with the cotton export program the gentleman from Mississippi cited a figure of $135 million as rebates to private firms as the result of the Department's downgrading cotton sold to them. He added that much of this cotton was sold in world trade at higher than the new class and much higher than the original class. This leaves the inference that the firms that handled cotton under the export program received special treatment, or what, in effect, might be described as a bonus. The facts do not bear this out.

Cotton sold under the export programs of recent years came from the 1951 through 1957 crops. Cotton in storage over extended periods tends to change in grade particularly with respect to color. In offering this cotton for export, the Department provided that purchasers might have it reclassified by Government cotton examiners and make final settlement on the basis of that reclassification. I contend that this was only fair and in keeping with trade practices.

My colleague from Mississippi also knows that cotton normally is sold in export on the basis of private types or descriptions rather than on U.S. standards. To assume that cotton sold abroad on description is equal to or better than its classification by the Government leads to the false assumption that exporters made undue profits and that the Government made unjustified refunds for quality claims. This just is not so, as any well-informed cotton man well knows.

Although the acreage reserve was not offered this year, the soil bank remains very much alive and is getting good results. During this coming growing season, there will be some 23 million acres in the soil bank's long-range program called the conservation reserve. That is about 5 percent of all the cropland in the United States. Some of it is not the best land, but much of it is excellent land that would be producing crops on a large scale if it had not been diverted from crops to conservation practices through the soil bank.

A survey of conservation reserve participation shows that this soil bank land did produce in the 2 years before coming into the program large quantities of corn, wheat, cotton, peanuts, rice, oats, soybeans, grain sorghums, and a variety of other crops that would be adding to our surplus problems.

This is in addition to the fact that the entire 23 million acres will by the end of 1959 be in grass, trees, water, and wildlife conservation and other long-range practices that conserve and improve our American soil.

I submit that we cannot solve the farm dilemma by concentrating solely on one commodity—cotton—or by abusing an official of government for carrying out our own directives. Angry tirades will not dispose of surpluses, nor put more money in the pockets of cotton-growers or any other type of farmers. This is an hour and a situation demanding hard thinking and statesmanship.

Mr. WALLHAUSER. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from New Jersey.

Mr. WALLHAUSER. I congratulate the gentleman from Utah, the Honorable HENRY ALDOUS DIXON, on his able presentation of the true facts of the farm situation. The charge has been made that our distinguished Secretary of Agriculture has been unwilling to assume responsibility for the program. In my opinion, quite the contrary is true.

It was my privilege last Wednesday night to attend a dinner in Newark, N.J., at which our distinguished Secretary of Agriculture was the principal speaker. There were approximately 1,000 diners present from all over the great State of New Jersey, from all walks of life, many of them farmers.

Much of his speech was devoted to agriculture, its problems and his program. In my opinion, which was subscribed to and attested by the frequent and sustained outbursts of applause of the diners, all present were impressed by his profound knowledge of his subject, his clear presentation, and the fact that he indicated emphatically and without leaving any question in anyone's mind that he is the Secretary of Agriculture and he is the factual head of the Department in every respect.

It is my belief that his record is a very great one and his critics should not say that he is not the head of the Department or is not willing to stand behind his program. On the contrary, our citizens are fortunate to have Ezra Taft Benson as the Secretary of Agriculture.

Mr. DIXON. The Secretary is perfectly willing to stand behind his program. We should not force him to stand behind a program that is not his.

Mr. RHODES of Arizona. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield.

Mr. RHODES of Arizona. Mr. Speaker, I want to compliment my colleague, the gentleman from Utah, on a very able presentation in support of the

policies of a very able Secretary of Agriculture. I do not know of any person in my lifetime who has been as controversial as has been the present Secretary of Agriculture or a man who has with such fortitude and, indeed, bravery stood up to the criticism of so many people as have criticized the present Secretary of Agriculture. I think it should be pointed out even more fully than the able gentleman from Utah did that the Secretary of Agriculture has as his main goal the welfare of every farmer in the United States of America and that he believes, and I certainly will subscribe to this, that the welfare of those farmers is bound up in getting a higher net return from the acres that they till. The Secretary believes that in order to do this you cannot repeal the law of supply and demand, but you must recognize the existence of it. He also realizes that the farming industry, and it is an industry in many ways, has gone through a technological revolution, that it is an exploding sort of thing which defies the laws which have previously been used to try to understand agricultural economics, and that as long as this situation continues, it will be necessary for brave men and bold men to think bravely and boldly and not try to solve this problem by what has been done in the past. He has recognized the failure of the high, rigid price support formula. He has recognized the fact that something new must be done in order to protect the farmers of the future and to make sure that this Nation has the warp and the woof which is needed and which can be produced only by the farmers of this Nation to insure its future greatness. Again, Mr. Speaker, I congratulate the gentleman for his fine presentation.

I cannot help but join the gentleman in his query directed to the Democrat Members of the Congress. If the administration of the laws passed in Democrat Congresses has had the dire effects you say they have, why have you not, with your majorities in Congress, enacted new laws? Why have you not faced up to the effects of the agricultural revolution and the hardships it has imposed on the modern farmer? The Secretary of Agriculture, your castigate, has tried. He has recommended legislation you have scorned. You have chosen to play politics with the fate of the farmer. His hardships have been perpetuated and deepened by you, not by the Secretary of Agriculture.

Mr. DIXON. I thank the gentleman from Arizona.

Mr. GUBSER. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from California.

Mr. GUBSER. Mr. Speaker, I thank the gentleman from Utah for allowing me to participate and to express my own confidence, and I am sure the confidence of the entire 10th Congressional District of the State of California in the administration of Secretary of Agriculture Ezra Taft Benson. As the gentleman in the well of the House knows, I not only represent one of the fastest growing industrial areas in the United States, but also an area which contains the county which produces the 15th highest amount of agricultural products in the entire Nation. It so happens that these products contain very few if any, price-supported commodities. We have many poultrymen who feed price-supported grains and sell unsupported meat. We have cattlemen who feed price-supported grains and sell unsupported meat. We have countless vegetable farmers and orchardists who pay an inflated price for machinery, brought about by the price-support system, who do not receive price supports.

It happens that I am a third-generation farmer. I have seen farming change in those three generations. I have seen my grandfather, for example, labor long and hard to produce 10 tons to the acre of what we called cow beets. I have seen my father follow him and produce the more refined sugar beet, and work to get 15 to 20 tons per acre if he had a good crop. I have seen times change from my father's day. I have seen the development of new types of fertilizer, sugar beet seed which is blight resistant and rust resistant, new irrigation practices, and new methods of thinning. These developments have increased yields so that today on the same acreage that my grandfather produced 10 tons of beets and my father produced 15 or 20 tons, I produce 30 or 35 tons at a lower unit cost. Even in this day of high prices and higher wages and higher prices for machinery this has been done.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. GUBSER. I yield.

Mr. GROSS. Is that sugar you are talking about with regard to beets; are they supported?

Mr. GUBSER. Sugar beets are under the Sugar Act, and payments are made from the revenue from the duty imposed upon Cuban imports.

Mr. GROSS. Pretty well supported?

Mr. GUBSER. That is correct, from the industry itself; not from the U.S. Treasury. There is not a single dollar going into the sugar beet business from the U.S. Treasury. In fact, it pays a profit to the Treasury.

Mr. GROSS. The gentleman spoke of tractors. I presume they also use automobiles. Does he charge that excessive price of automobiles and tractors to that industry?

Mr. GUBSER. Of course, Government expenditures have had a great deal to do with inflation. Price supports are a part of Government expenditures.

Let me state that this improved technology that the farmer has experienced in three generations has been responsible for making the present price-support philosophy completely invalid. Today we are basing price supports upon circumstances which existed years and years ago. We have forgotten that it is now possible to produce more of any commodity from a given acre of ground, with less labor and less expended human effort.

I commend Secretary Benson for having the courage to recommend that this outmoded program be brought up to date, and that we use modern theories and modern applications in solving the farm problem.

Yesterday in the colloquy on this floor cotton was mentioned. Secretary of Agriculture Benson was given the blame for the plight of the cotton farmer. I would like to present another theory. I say the cotton farmer of the South has been hurt by the fact that California has gone into the business of producing cotton. Price supports have lured nonfarmers into the cotton-producing business, to produce the surplus which has hurt the southern cotton producer.

The area called the West Side in the San Joaquin Valley, just across the hill from my district, was, until a few years ago, a stretch of thousands upon thousands of arid acres which had never raised anything but jackrabbits. With the lure of a guaranteed profit, men who had never farmed before in their lives, stockbrokers and doctors and lawyers, came to the West Side. They had the money and the capital to sink the wells for each 640 acres, which cost $25,000, and another $25,000 for a pumping plant to lift the water.

They had the money to buy the large crawler tractors which could go over hundreds of acres day and night, and which the little fellow cannot afford. The lure of a guaranteed profit in the cotton industry made cotton farmers out of men who had never done anything with cotton before except perhaps to wear it. These are the kind of men who were brought into competition with the small farmer. It was the price support system which created the corporation farm and drove the small farmer right smack out of business.

I laud Secretary of Agriculture Benson for having the courage and the personal integrity to face this problem squarely. I sincerely hope that we can continue to take a realistic approach to the problem of price supports. I hope that some day the farmers of the country can compete as other businessmen compete, that we can return honest competition to the farm. The Wall Street banker, the doctor, and the lawyer will then be out of the picture, farming will revert to farmers, and we will not have these terrific investments by financial syndicates to operate big corporation farms and drive the small man out of business. I say to you that if you give us a chance to compete under the laws of supply and demand and if you will follow Secretary of Agriculture Benson, we will have prosperous small farms.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. I want to commend the gentleman for taking the floor and trying to clarify this very important matter of our farm program. I think he very rightly draws the attention of the Congress, and I hope of the people of the country, to the fact that the past two Congresses have been Democratic controlled, and the present Congress is Democratic controlled, and that the farm program we have been trying to make sense out of has not been Secretary Benson's program.

About 3 years ago, I believe in 1955, the minority members of the Joint Economic Committee on which I have the honor to serve, filed supplemental views to the committee report on the Presi-

dent's economic report in regard to the agricultural sector of our economy, pointing out some of the economic factors the gentleman has pointed out. The Secretary of Agriculture has pointed up in his proposed program many of these same points over a period of years. To some degree, as a result of those minority views last year, a subcommittee of the Joint Economic Committee, under the chairmanship of Senator SPARKMAN, conducted extensive hearings and research into the economic aspect of U.S. agriculture. The results of those hearings when we were through, and the scope was nationwide, clearly revealed that Secretary of Agriculture Benson's economic theories on this subject have been right, and the report of the Joint Economic Committee on this subject submitted last year bears that out. That is the report my Democratic friends do not like to talk about. It does not back up the oratory we listen to here on the floor of the House from people on the majority side who do not like what is going on in agriculture and try to make a political football out of the serious national economic problem.

The usual epithet that we hear here is that Secretary Benson is trying to drive the farmers off the farm. If you analyze that charge you find it probably is as foul a blow as a person could strike, because what in effect a person is saying is when he charges any man with such objectives is that he is lacking in the basic Christian virtues; and, of course, that is not so. We can debate to some advantage the economic effects of the policies which are devised by the Secretary of Agriculture or the Democrat leaders of the Congress or anyone else, but that is not what has been said. The attack has been personal and it has been vicious. I submit that anyone reviewing the hearings of the Joint Economic Subcommittee on Agricultural Policy can come to only one conclusion: That this is a very serious problem that no one man or group of men or party, Republican or Democrat, has created it, and probably that it will take all of us working together and hammering at each other in honest debate to correct it. It is a serious problem and there is only one way we can get to the bottom of it and that is to start bringing out these economic factors into the open and trying to solve them.

I commend the Secretary of Agriculture for trying his best to bring these matters out in the open and, right or wrong on his proposed solutions, his presentation has been hitting at the real nub of the problem. His critics have not earned similar commendation. They have distorted the facts, conceded the issues, and resorted to personal vilification. Then, to top it off, they have offered no solution to the problem and tried to escape the responsibility for their inaction in trying to make the people forget that the Democratic Party has controlled the Congress where action can be taken. We must get at the economics of the situation so we can go forward in this program and solve this very difficult problem for our people.

I thank the gentleman again for taking this time to bring the matter to the attention of the Congress.

Mr. JENNINGS. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Virginia.

Mr. JENNINGS. I have listened to the gentleman uphold the Secretary of Agriculture in his announced program. The gentleman is a member of the Committee on Agriculture of the House and I would like to ask him the question: Has he introduced legislation which would carry out and enact the program that has been advocated by the Secretary of Agriculture?

Mr. DIXON. My answer to that, is definitely "Yes." Representative Hill, of Colorado and I both introduced bills designed to place into operation the exact program which the Secretary of Agriculture recommended. Furthermore, those bills were never considered by our Committee on Agriculture. May I correct the gentleman. I have defended the Secretary and his program. I would like to say again the program that he is being accused of advocating and following is not his program. It is the program of the Democratic majority of the Members of Congress who have been in control of the Congress during the last 4 years.

Mr. JENNINGS. And the administration of that program in effect has caused many of the things that we have just discussed. However, I will say to the gentleman in all fairness, that Representative Hill is not a Member of the Congress any more. The gentleman, I am sure, will recognize there are many new Members of Congress here this year who were not Members of the last Congress.

I would like to ask the gentleman, has he ever introduced any legislation that will carry out and implement the Secretary's or the President's recommendations in this session of the Congress to roll back the price supports and do the other things he is advocating?

Mr. DIXON. The Secretary appeared before our committee and told the committee that it was in control of the Department and that it was in control of the Congress. That if they are dissatisfied with his program they should make one of their own.

Mr. JENNINGS. Which program is the gentleman referring to?

Mr. DIXON. He said that he will go to the end of the road to help the committee build a program. Now it is up to you to build it instead of just complain.

Mr. JENNINGS. We have a program and we would like to have it fairly administered in the interest of all segments of agriculture, in the interest of the economy of America. We are not advocating a particular change in some of the programs that we have; we are advocating a change in the administration of those programs. We are not interested in introducing the legislation which is advocated by the Secretary. To my knowledge, neither the gentleman nor any member of his party has introduced that legislation.

Mr. DIXON. I introduced that legislation last year, and the gentleman knows it.

Mr. JENNINGS. We are talking about a different Congress. As I pointed out, we have many new Members who would, perhaps, like to do the job of legislating to implement the Secretary's program. My question is, Has the gentleman introduced it or has any member of the Committee on Agriculture introduced it, or has any member of the minority in this House introduced it? Certainly, the majority is not going to introduce his program because we do not believe in it.

Mr. DIXON. What good is it to introduce such legislation when we could not even get it before the committee?

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Indiana.

Mr. HALLECK. I want to commend the gentleman from Utah for the statement he is making. The plain fact of the matter is that the Department of Agriculture can only administer the laws that are enacted by the Congress of the United States. Another fact that is crystal clear is that for 4 years past the Congress of the United States has been under the control of the Democrat Party. Proposals have been made by the administration for legislative enactments in the field of agriculture. They have been spurned by the Democrat-controlled Congresses to whom they have been presented.

I think it also ought to be emphasized that the primary responsibility for the legislative program is in the Congress of the United States. The House of Representatives is presently controlled by a Democrat majority, 283 to 153. Now, I do not believe that the farmers of this country are going to be fooled by threats of investigation of the Secretary or of the Department or by constant criticism and sniping. If corrective farm legislation is indicated as desirable and necessary, and if no action is had, then I think the Democrats here in the Congress who control the Committee on Agriculture and the Congress of the United States are going to have to answer to the American farmers and to the American people for the situation, and not much longer are they going to be able to confuse the issue as they have sought to do through recent years and months.

The SPEAKER. The time of the gentleman from Utah has expired.

Mr. DIXON. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. TEAGUE] and the gentlewoman from Washington [Mrs. MAY] may extend their remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. TEAGUE of California. Mr. Speaker, Secretary of Agriculture Benson continues to be the recipient of blasts from pressure groups. He is standing his ground well, however. It should be fully realized that most of the difficulties faced by agriculture and the terrific cost of the present programs are the fault of a Democrat Congress and not of the administration. Secretary Benson must enforce laws which Congress passes, whether he likes them or not. A very high percentage of legislation affecting

agriculture was placed on the books against the Secretary's recommendation. There is much more which Congress has refused to remove, in spite of Mr. Benson's pleas.

The cost of these programs is fantastic. For example, the cost to the Federal Government for agricultural surpluses presently in warehouses is almost $9 billion. This amount would do—or is equivalent to—any one of the following:

(a) Pay for all veterans' benefits programs for almost 2 years.

(b) More than pay a year's interest on the national debt.

(c) Pay for school lunch programs for 30 years.

(d) Pay for all space flight activities for 10 years.

(e) Pay all Regular, Reserve, and retired military personnel for a year.

(f) Run the FBI for longer than any of us will live—80 years.

(g) Equal three times the value of all property in the 13th Congressional District.

(h) Equal the total personal income of everyone in the 13th Congressional District for almost 10 years.

(i) Be almost 10 percent of the value of all Government property.

(j) Equal total California farm income for last 3 years.

Eighty-two percent of these surplus commodities consists of wheat, corn, cotton, rice, peanuts, and tobacco. And yet these particular crops constitute only about 20 percent of the total agricultural production of the United States in dollar value. This comparatively small segment of agriculture is receiving billions of their Government's dollars at the expense of housewives and taxpayers in general.

Furthermore, most of these dollars go to large producers: 90 percent of the funds for wheat go to 50 percent of the farms—the largest ones; 75 percent of the funds for cotton go to 25 percent of the farms—again, the largest ones. For cotton and rice, those with 100 acres or more get an average of $10,000 each per year. The smaller ones get almost nothing. Just 10 farms received almost $4 million from the Federal Government in 1957 for soil bank and price-support payments:

The total cost of handling these surplus crops is over a billion dollars a year. As the President has pointed out, this is more than is being spent on all water resource projects in the whole of the United States this year.

Again, it should be emphasized that the blame for this fiasco should be placed mostly on the Democrat Congress—not on the Secretary of Agriculture. It is my hope that the citizens of the country will wake up and demand that their Congressmen stop voting for extremely costly and unsound agriculture legislation.

Mrs. MAY. Mr. Speaker, throughout recent years the gentleman from Mississippi [Mr. WHITTEN] has been an ardent supporter of mandatory, rigid, high-level support at 90 percent of parity, which was dropped on such major commodities as wheat, cotton, and corn at the end of the 1954 crop season. If Mr. WHITTEN's proposals had been continued after 1954 the CCC (a) would have accumulated even larger supplies of these major basic commodities, (b) would have incurred much heavier costs in storage, interest, transportation, and handling these increased quantities, and (c) would have taken heavier losses in all of the surplus disposal operations.

It has been necessary to raise the CCC borrowing authority from $4¾ billion 10 years ago up to $14½ billion at the present time to provide funds to conduct price-support programs directed by Congress. If Mr. WHITTEN's program had been continued in operation it would have been necessary for Congress to have raised the borrowing authority well above the $14½ billion.

THE STRATEGIC AIR COMMAND

The SPEAKER. Under previous order of the House, the gentleman from Pennsylvania [Mr. FLOOD] is recognized for 15 minutes.

Mr. FLOOD. Mr. Speaker, steps must be taken to get SAC off the ground and one-third perpetually airborne as a minimum essential of defense for national survival.

The American people have the mistaken impression, through no fault of their own, that the Strategic Air Command, operating B–52's and B–47's, representing our Sunday punch presently, has one-third of its planes aloft at all times in a state of operational readiness.

Nothing could be further from the truth.

As a member of the Department of Defense Subcommittee of the Committee on Appropriations, it is my opinion that the United States is wide open when it comes to a surprise military attack. Our big bombers are like so many sitting ducks to an enemy that has Intercontinental Ballistic Missiles operational.

Our present defenses indicate we have learned precious little from the Pearl Harbor attack that wiped out our Pacific Fleet in 1941, our failure to keep at least a third of SAC always airborne is a virtual invitation to a trigger-happy enemy to spark off world war III with nuclear missiles.

I call on the administration to submit a new emergency supplemental appropriations bill immediately to give SAC the funds necessary to keep the bombers aloft and dispersed, and/or to make a transfer of funds with congressional approval from other accounts without delay so this vital defense step can be activated. I will be glad to assume responsibility for introducing legislation if necessary and to stay with it until enactment, as well as an additional supplemental appropriation and later as an amendment to the 1960 appropriation bill.

It is an ironic and regrettably dangerous development which finds the American people being deceived by propaganda not denied officially that SAC at all times has one-third of its big bombers roaming the skies around the world. Our people have been led to believe that these guardians of the air are on duty 24 hours a day, needing only the word to discharge nuclear weapons. Such is by no means the case: the administration knows it is not so; the Pentagon knows it isn't so, and certain congressional committees know it is not so. But the sooner we make it so the better, and curing the deficiency cannot come too soon.

The situation is one of massive deception and unreasonable neglect in the atomic age. When the Soviets are brandishing their missiles, continuance of this sorry condition is setting the stage for another Munich. This is the sort of thing that encourages Khrushchev to adopt his bullying tactics toward the West. If it continues uncorrected, one of these days, and pretty soon, too, he will call the boys in and give them the bad news. It is getting awfully late and the price of our unpreparedness could be capitulation.

Fortunately there is time enough to repair the damage, but it is running out rapidly. We must act promptly and with decision. What is our wealth going to be worth if we lose our freedom? It is the supreme irony of history, as has been noted, that the richest country in the world seemingly can't afford to buy a defense system that will protect itself. The guardians of the national safety who are more concerned with a fictitious balanced budget than they are with a defense system second to none have much to answer for. If they cannot free themselves from their dangerous thinking, then the people must rally and demand the necessary steps be taken at once. SAC is a great outfit—let us get them into the air, and keep them flying.

The activation of selected Army Reservists is essential also so the country can be prepared for any emergency. We have what it takes to cope with any form of organized tyranny, but in these days of lightning warfare, it is force in being and in readiness that count. Should there be another war, M-day will be D-day. We must be ready to go at the opening gun.

And further, Mr. Speaker, I strongly urge the administration to a mobilization of economic resources and preparedness program to meet the emergency forecast by the looming Berlin crisis.

The grim challenge posed by Khrushchev's intransigence must be met with firmness, we must strengthen the hand of the Bonn Government and strongly reaffirm our solidarity with our NATO allies.

I deplore those who favor appeasement by accommodation and hide behind flexibility as a shield for what would be another and disastrous retreat before the Kremlin's predatory policy, backed by its war machine. We need a full facing up, by our Government, to the realities of the situation.

I call for full speed ahead on the military procurement and planning front, a state of national readiness and support for a program of full employment at the earliest possible date.

We have only to recall that we supplied the Soviets with the materials to stave off Hitler's assaults and help bring about his defeat, to realize we have the resources, know-how, and capacities to deal with any Kremlin threats. But, to these assets must be added the will to do, and the readiness to meet any threat.

I stress the necessity of making the most of our economic powers, it is a prodigal waste of strength to have upward of 5 million available workers jobless at a time when we are confronted with such a grave threat. In my district, Luzerne County, Pa., we have 25,000 men able, ready, and willing to do their part to ready America for any eventuality. It is a sad commentary that these men are denied the opportunity to participate in a preparedness program. The national interest dictates that the administration cooperate with the Congress in the enactment and approval of legislation that will give workers, everywhere in America, the chance to do their bit. To fail to do so is seriously short-changing the national welfare. We need to accelerate our pace of readiness on the one hand, and aim toward the goal of full employment on the other.

I point to the Flood-Douglas bill, presently being considered in congressional hearings, as the kind of constructive action needed to restore the national economy to full strength. The measure calls for funds for loans to communities plagued by chronic unemployment, and for community facilities that will give the jobless ridden communities the tools to qualify for job-producing industry. The measure, in substantially the same form, was passed by the Congress last year but was vetoed by the President.

On the opening day of the present session of Congress I decried the action of the administration in sequestering $1 billion which the 85th Congress had voted to beef up our military forces. The passing weeks have only confirmed the urgent necessity of our getting on with the task of readying the world's best defense forces—anything less is an invitation to disaster. The gathering storm only gives grim emphasis to the urgency of our getting on with the twin tasks of preparedness and the achievement of full employment. I testified before the Senate Banking and Currency Committee on Wednesday of this week on the aid to distressed areas bill. The House Banking and Currency Committee will begin hearings on the measure, known in the House as the Flood-Douglas bill, on March 9. I have been working in close collaboration with Representative WRIGHT PATMAN, of Texas, chairman of the House subcommittee, who will preside over the hearings. The United States is the greatest Nation on the face of the earth, let us keep it so for the sake of peace on earth.

VETERANS' ADMINISTRATION HOSPITAL IN LAKE CITY, FLA.

Mr. LEVERING. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. FASCELL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. FASCELL. Mr. Speaker, I have been advised by Veterans' Administration Administrator, Sumner G. Whittier, that he has approved plans calling for the modification and conversion of existing buildings at the Veterans' Administration hospital in Lake City, Fla., to provide hospital facilities which will accommodate approximately 114 additional beds. The Lake City, Fla., facility is presently operating 354 beds and the addition will raise this total to 468.

One June 26, 1958, I introduced a bill calling for the construction by the Veterans' Administration of not less than 2,000 additional beds for care of the disabled veterans in the State of Florida. At that time I cited facts from the records of the Veterans' Administration that attested to the need and the serious hospital-bed shortage in Florida.

Shortly thereafter, Mr. Whittier recommended and offered approval for the construction of an additional 350 beds each for the Veterans' Administration hospitals in Coral Gables and Bay Pines, Fla.

I wish to commend Mr. Whittier, and I feel sure that each of my Florida colleagues join with me, for his latest recognition of the problem and the constructive action that he has taken in providing the additional beds at Lake City.

Florida's growth is continuing at an alarming rate. It is the fastest growing large State in the Nation. It is estimated that Florida's immediate gain in population averaged 5,032 persons each week during the past 3 years.

Florida has grown from a population of 2,771,305 in 1950 to a U.S. Bureau of Census mid-1958 calculation of 4,442,000, or a total 8-year, 60-percent gain of 1,671,000. Only California has added more permanent residents.

Florida's population gain is about the same as the total population of Arkansas, Arizona, or Oregon. In fact Florida is now the 12th largest State in the Union; whereas in 1940 it ranked 27th, and in 1950, 20th. Census Bureau estimators affirm that Florida will take ninth place between the years 1965 and 1970.

The largest growth has taken place in the area now serviced by the Veterans' Administration hospital at Coral Gables, Fla. In my two-county congressional district, alone, the population has grown from 525,041 in 1950 to a 1958 estimated population of 1 million. Dade County alone is showing a 42.2 percent population increase every 5 years. These figures are confirmed by Bureau of Census estimates. The eight other counties in the area serviced by the Coral Gables Veterans' Administration hospital have grown similarly.

The waiting lists for Florida Veterans' Administration hospitals are continually growing larger. Facts show that a 1,000-bed Veterans' Administration hospital is needed now in Dade County to properly care for the veterans of the area. Veterans' Administration officials long ago recognized this need.

As of January 1, 1958, there was a national ratio of 186 veterans to every Veterans' Administration hospital bed. In Florida that ratio was 405 to 1. For neuropsychiatric—NP—patients, the national ratio was 352 NP veterans to each Veterans' Administration NP bed. In Florida, the Veterans' Administration NP ratio was 2,840 to 1. The national ratio of Veterans' Administration TB patients was 1,748 to 1. Florida's ratio was 1 Veterans' Administration hospital bed for 5,287 TB patients.

It is interesting but appalling to note here that of 1,060 Florida veterans who are listed as NP cases, only 14 percent are hospitalized in Florida Veterans' Administration hospitals.

The Veterans' Administration advises me that there were 308,000 veterans in Florida in April of 1950. January 1958 reports show that Florida had 534,000 veterans, an increase of 73 percent.

In comparison, a review of the national veteran population for approximately the same period shows conclusively the alarming rate of veteran influx to Florida. In April of 1950 there were nationally 19,070,000 veterans, and by January of 1957 that figure had reached 22,710,000, an increase of only 19 percent.

So, while Mr. Whittier's foresight will eventually prove to be of great assistance, the Lake City, Bay Pines, and Coral Gables additions still do not fill the need. I trust that the Veterans' Administration will further review their proposed construction program for Florida and that approval will be granted at an early date for the construction of a minimum of 200 additional beds for Veterans' Administration hospital facilities at Coral Gables, 1,000 beds at Gainesville, Fla., and 200 beds at Bay Pines, Fla. From the standpoint of economy, while the Coral Gables and Bay Pines projects are in the present planning stages, it would be wise now to plan for and approve the additional needed beds.

In addition, very serious consideration should be given to the construction in Florida of a diagnostic center specializing in geriatrics. The great portion of our beds are now occupied by older veterans. The problem will be tremendously magnified when the World War II group arrives at this age level. Only immediate research and long range planning can avert an impending national crisis. Planning for such a diagnostic clinic should start immediately.

OHIO NEEDS MORE FLOOD-CONTROL PROJECTS

Mr. ASHLEY. Mr. Speaker, this has been a hard winter in many parts of the country. It has been one of the hardest the State of Ohio has seen in many a year, with scores of lives lost and flood damage estimated to have caused upward to $200 million damage.

Because the Flood Control Act of 1936 created a Federal responsibility for protecting against flood disaster, I recently undertook to ascertain the extent of the Corps of Engineers' flood-control activities in Ohio.

The results of this inquiry were most revealing.

I was informed that since 1936 Congress has authorized a total of 76 Corps of Engineers projects in the State of Ohio. The estimated Federal cost of these 76 projects was put at $416,851,600. At first glance, this is a pretty imposing figure; it almost suggests that Ohio has received her fair share of Federal flood protection.

But let us take a closer look. Of the 76 authorized projects, 34 have been designated inactive, with the explanation

that they probably will not be undertaken because of economic changes in the area which have taken place since their authorization.

So instead of 76 projects we now have 42. But of these 42, 18 have been deferred for restudy, that is, indefinitely postponed, in order to get an up-to-date analysis of their economic value.

This leaves 24 projects. But on 10 of the 24, construction has not started, either because the Bureau of the Budget has ruled the project outside the scope of Federal activity or because funds otherwise have not been made available.

So this reduces our 76 projects to 14. Of the 14, construction has been completed in 12—over a period of 22 years—and on the final 2 projects construction is under way.

For Ohioans who look to the Federal Government for some measure of protection against another winter as destructive as this one, it should be pointed out that next year's budget contains for Ohio the staggering allocation of $5,823,000 for continued construction on 2 flood-control projects already under way and preconstruction planning on 2 others.

I mentioned at the outset, Mr. Speaker, that the estimated damage from recent floods in Ohio goes as high as $200 million. Certainly it is noteworthy that the Federal cost of the 12 flood control projects which have been constructed in Ohio since 1936 totals $95,150,000, less than half this amount.

I am drawn to the reluctant conclusion, Mr. Speaker, that Ohio has been badly shortchanged. As a representative from the fifth largest taxpaying State in the country, I feel it my duty to develop further facts and figures to ascertain and point out exactly where the billions of dollars have been spent which have been allocated since enactment of the Flood Control Act of 1936. These facts and figures, more than anything I can say, will prove conclusively the extent to which the State of Ohio has been asked to pay but not participate in a program designed to minimize human suffering and property damage for all citizens, including those of Ohio.

At this point, Mr. Speaker, I would like to submit for the RECORD tabulations pertaining to authorized Corps of Engineers flood-control projects for the State of Ohio:

Authorized Corps of Engineers' flood-control projects in the State of Ohio

Project	Estimated Federal cost	Allocated through fiscal year 1959	Balance to complete after fiscal year 1959
Construction completed:			
Berlin Reservoir	$6,288,700	$6,288,700	0
Cincinnati	10,118,000	10,118,000	0

Total	416,851,600	118,161,600	298,690,000

[1] Funds for these projects are included in the President's budget for fiscal year 1960 as follows:

Project:	*Fiscal year 1960 budget allocation*
Roseville (to complete construction)	$284,000
Dillon Reservoir (continue construction)	5,160,000
Shenango River Reservoir (continue preconstruction planning)	150,000
West Branch Mahoning River Reservoir (complete preconstruction planning)	229,000

[2] Authorized projects which require reanalysis of their present economic value. Cost data not current.

[3] Projects which probably will not be undertaken because of physical or economic changes in the project area. Cost data not current.

INCREASING COMMODITY CREDIT CORPORATION FUNDS

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include certain tables.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, today I am introducing two bills that would increase the amount of Commodity Credit Corporation funds which could be used for the special milk program. I have recently learned that the program has grown to the point where many States will have to curtail operations in this field for the remaining months of the school year unless more funds are made available. In addition, the uncertainty over funds will seriously hinder the summer camp milk program, for now is the time when camp managers begin to make their food plans.

The special milk program is one of the most successful programs of the Department of Agriculture. This year, over 2 billion half pints of milk will be consumed under the plan. Added to the 2 billion half pints used in the school lunch program, this represents about 3.5 percent of all the fluid milk consumed by our nonfarm population. Around 80,000 schools and camps are taking part

in the milk program, and about 22 million children are drinking milk at school either under the school lunch program or at recess breaks as part of the special milk plan.

My first bill proposes that the authorization for the special milk program for the fiscal year ending July 1, 1959, be increased from $75 million to $80 million. The second bill provides for future expansion of the program as well as for a temporary increase for fiscal 1959. Under the provisions of this bill, $80 million would be authorized to carry the program through this fiscal year, and the funds would be increased to $85 million for both 1960 and 1961.

Frankly, I can think of no finer investment than this one to insure that our children and our dairy industry continue to receive the full benefits of the special milk program. To my way of thinking, it is far better to use CCC funds to encourage children to drink more milk than to use the money to buy surplus butter, cheese, and dry milk. That is the choice we are facing—more money for the special milk program or more price-support purchases of dairy products.

Although the funds for the special milk program come under the Department of Agriculture budget, I do not feel it is fair to charge the cost of this program to the farmers. Here is one farm program that does more good for the city children than it does for farm kids.

Few responsible citizens will quarrel with the idea that the kids of this country are entitled to an adequte supply of the world's most complete food—milk. That is why the cost of this humanitarian program should not be lumped with the cost of Government purchases of surplus food, as is now being done. This kind of accounting presents an untrue picture of the expense of the price-support program, a picture which is grossly unfair to our farmers.

I have a chart which shows the allocation by States of present funds for the special milk program, the estimated needs for the current fiscal year and the indicated deficit. I would like every Congressman to have chance to check this chart to see the situation in his State. Under leave to extend my remarks, I want to include the chart in the RECORD:

SPECIAL MILK PROGRAM

Apportionment of funds, State estimated needs, and indicated deficit, fiscal year 1959

Administrative unit	Apportionment [1] (1)	State estimated needs [2] (2)	Indicated deficit (3)
State agencies:			
Alabama	$1,075,610	$1,095,680	$20,070
Alaska	17,715	18,675	960
Arizona	326,033	357,223	31,190
Arkansas	641,539	658,127	16,588
California	7,211,353	7,892,289	680,936
Colorado	513,697	591,332	77,635
Connecticut	769,829	843,470	73,641
Delaware	177,535	194,735	17,200

[1] Division of funds among States is based on the pattern of expenditures in fiscal year 1958.
[2] Estimates received in late February 1959, based on actual expenditures through December 1958.

SPECIAL MILK PROGRAM—Continued

Apportionment of funds, State estimated needs, and indicated deficit, fiscal year 1959—Continued

FEDERAL HAZARDOUS SUBSTANCES LABELING ACT

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. ROBERTS. Mr. Speaker, I am today introducing legislation designated as the new Federal Hazardous Substances Labeling Act. The purpose of the bill is to provide nationally uniform standards for the adequate labeling of potentially hazardous substances sold in interstate commerce and intended or suitable for household use. The new bill would replace the present out-moded and out-dated Federal Caustic Poison Act.

This new bill covers substances which are toxics, corrosives, irritants, strong sensitizers, flammables, and also substances which generate pressure. The bill provides that the following information must appear on the label of a hazardous substance: First, name and place of business of manufacturer; second, the name of the product; third, a signal word, such as "danger," "warning," or "caution"; fourth, an affirmative statement of the principal hazard or hazards, such as "flammable," "vapor harmful," and so forth; fifth, precautionary measures describing action to be followed or avoided; sixth, first-aid treatment if there is a hazard through contact or exposure; seventh, "poison" for any substance meeting the definition of highly toxic; eighth, instructions for handling and storage of packages which require special care in handling or storage; ninth, the statement "Keep out of the reach of children."

This proposed bill is intended to provide a sound legislative pattern at the Federal level for informative precautionary labeling of hazardous substances intended or suitable for household use. Representatives of major industry groups, including toxicologists, chemists, physicians, company labeling personnel, and lawyers, have participated in a number of conferences on this subject over the past several years. A series of conferences was held last year with regulatory officials, physicians and others interested in this problem. This proposed bill was prepared after careful study to provide a model bill for uniform legislation in this field.

The use of this bill on the Federal level should provide a uniform precautionary labeling program which will adequately advise the consumer of the hazards in the use of the product, as well as make available immediate information for physicians who are called upon to treat cases of accidental injury. It should also provide a pattern which the States may follow in enacting similar legislation.

During the last Congress, three bills on this subject were introduced. These were S. 1900, introduced by Senator BUSH of Connecticut, H.R. 7388, introduced by Representative CURTIS, of Missouri; and H.R. 9063, introduced by Representative WILLIAMS, of Mississippi.

Since introduction of these bills, considerable discussion has occurred among industry groups and with the American Medical Association to draft a new bill which would adequately protect the public, especially young children who comprise the largest number of casualties from the use of hazardous substances.

The present bill incorporates many of the provisions developed by the American Medical Association. It differs from the bills such as H.R. 9063 introduced in

the last Congress in the following principal ways:

First. H.R. 9063 used a definition of "poison" which is now widely used in existing legislation and in industry. It was developed by the Manufacturing Chemists' Association. This poison definition specified animal tests and required that the animals be observed for a period of 48 hours. The new bill has extended the 48-hour observation period to 14 days. This change in the bill should give greater protection to the public and assure proper testing to ascertain which substances should be designated as poisons.

Second. H.R. 9063 provided that one of the signal words, "danger," "warning," or "caution," should be used on the label. The new bill specifies that two categories of hazard are to be recognized in selecting the appropriate signal word. Those products which present the most hazard will bear the signal word "danger," while a lesser hazard will call for the word "warning" or "caution." Danger is used when the substances are extremely flammable, corrosive, or when they meet the requirements of animal test, of the same type as those used for the "poison" designation. All other hazardous substances carry the signal words "warning" or "caution." Animal tests to determine the use of the signal word "danger" is a new requirement as compared to H.R. 9063. It was agreed that these animal tests were necessary to determine with more certainty which substances should carry the signal word "danger."

Third. H.R. 9063 did not cover "strong sensitizer." Strong sensitizers are now included in the new bill as hazardous substances and are defined in section 2 (k). Strong sensitizers are required to be labeled after the Secretary of Health, Education, and Welfare has found that the frequency of occurrence and severity of the reaction indicates a significant potential for causing hypersensitivity.

Fourth. The term "label" in H.R. 9063 has been redefined in the new bill. There is now a requirement that precautionary information must appear not only on the wrapper but also "on all accompanying literature where there are directions for use, written or otherwise."

Fifth. H.R. 9063 included radioactive substances in the definition of the term "hazardous substance," while the new bill has deleted radioactive substances from coverage. The reason for this action is that it is felt that such substances are more properly under the jurisdiction of the Atomic Energy Commission and, furthermore, there is a lack of technical knowledge necessary to properly regulate such products.

ENGINEERS REPORT ON COOSA-ALABAMA RIVER

Mr. ROBERTS. Mr. Speaker, I have spoken many times of the Coosa-Alabama River system and its importance to the economy of the Nation and our State of Alabama.

Recently, I placed in the RECORD a letter that all members of the Alabama delegation forwarded to Gen. W. K. Wilson, Chairman of the Board of Rivers and Harbors, requesting that the Board consider the latest report on the development of this system at its next meeting on the 13th of March of this year. I also have previously stated that we hope to introduce an amendment to the public works appropriation bill to provide for some $150,000 planning money for the Millers Ferry Dam below Montgomery.

We have received the following letter from General Wilson wherein he has stated that the project has been authorized since 1945 and that the report currently under consideration does not change the authority for the entire project or the ability of the Engineers to proceed with construction of the work below Montgomery for which the plan is essentially firm. He further has stated that consideration of the report presently before the Board is not necessary.

In other words, Mr. Speaker, in analyzing the situation, General Wilson has indicated that the Engineers are satisfied with the need for the development of the river system below Montgomery but have failed over a period of years to incorporate planning money in their request for funds. I believe it imperative to develop our water resources, and to this end, particularly in view of General Wilson's remarks, to request such funds as are necessary, namely, $150,000 be incorporated in the public works appropriation bill to provide for the planning and design of Millers Ferry Dam.

There follows the letter:

HEADQUARTERS,
DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D.C., February 26, 1959.

Hon. KENNETH A. ROBERTS,
House of Representatives.

DEAR MR. ROBERTS: I have received the letter of February 19 signed by you and other members of the Alabama congressional delegation in which you urge that the Board of Engineers for Rivers and Harbors consider the navigation report on the Alabama-Coosa River at its next meeting in March.

You request this action because of the importance of the project and in order that construction may be started at the earliest possible date. Since I believe there is some misunderstanding of the status of the Alabama-Coosa project with respect to authorization and availability for construction I would like to review this matter briefly.

The entire project for development of the Alabama-Coosa was authorized by the River and Harbor Act of March 2, 1945 (Public Law 14, 79th Congress) in accordance with plans being prepared by the Chief of Engineers. This included authorization of 9 foot navigation up the Alabama River to Montgomery and up the Coosa to Rome, Ga. The project was modified by the River and Harbor Act of June 1954 (Public Law 436, 83d Congress) to permit power development on the Coosa River under license from the Federal Power Commission. Under the basic authorization the Congress has appropriated funds for preconstruction planning or design of the three projects, Millers Ferry, Jones Bluff, and Claiborne, required for navigation on the Alabama River up to Montgomery.

In the appropriations act for 1956 (Public Law 163, 84th Congress) funds were appropriated for the present study of the Alabama-Coosa which is now before the River and Harbor Board for review. The purpose of this study is to firm up the plans and justification for the project, but with particular reference to including navigation locks in the dams on the Coosa River which have been or will be built by the Alabama Power Company. This study does not change in any way the existing authority for the entire project, or our ability to proceed with construction of the work below Montgomery for which the plan is essentially firm.

I have reviewed this status because I find that limitations of time will not permit the River and Harbord Board to consider the Alabama-Coosa report at its next meeting which is scheduled for March 13. The Board has just received material from both proponents and opponents of the project and it has been necessary to refer this to our district engineer for review. And I wished to point out that consideration of this report is not necessary to proceeding with the plan below Montgomery, although we recognize the desirability of completing this report in order that the Congress may have further evidence of justification for this project. I am sure, however, you will agree that acceptability of the findings of the report should not be prejudiced by hasty review.

We consider that in a logical development of this river system for navigation the work on the Alabama River up to Montgomery should be undertaken first, and prior to improvements upstream on the Coosa River. Consequently, we had concentrated our planning largely on Millers Ferry and Jones Bluff, the two larger projects below Montgomery. We feel that one of these should be initiated first, as the smaller Claiborne lock and dam and the channel work below could be initiated at a later date, but completed at about the same time as the larger upstream projects. Preconstruction planning for the Millers Ferry and Jones Bluff projects is about 40 percent complete.

I regret that it is not possible to consider the current report on the Alabama-Coosa at the next meeting of the River and Harbor Board, but we plan tentatively to take it up at the first subsequent Board meeting in May 1959. As I have said, however, such action is not necessary for initiation of the project. The Corps of Engineers is aware of the importance of development of the Alabama-Coosa River and I can assure you that we are ready to proceed with the authorized work below Montgomery as soon as funds are appropriated for completion of design and for construction. As you may know, however, there are no funds included in the budget request for fiscal year 1960 for resumption of planning on these projects.

Sincerely yours,

W. K. WILSON, Jr.,
Major General, USA, Deputy Chief of Engineers, for Construction.

TWO SIDES TO TRUJILLO?

Mr. PORTER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, I am including, following these remarks, a speech by the distinguished former Senator from Indiana, Mr. Jenner, in the Dominican Republic September 11, 1958.

He was addressing a joint session of the legislature there, as was done by our

two colleagues, Mr. WITHROW and Mr. JACKSON, earlier this year. Mr. REUSS referred to Mr. WITHROW's remarks last week and on Monday of this week and inserted two versions in the RECORD. Mr. REUSS made it clear that he did not think that the people of Wisconsin agreed with Mr. WITHROW. I would like to add that the people of Oregon, in my opinion, do not agree with Mr. WITHROW and Mr. JACKSON, and they do not agree with former Senator Jenner in his endorsement of Trujillo's government.

It occurred to me, Mr. Speaker, that our colleagues might have missed reading this speech which does present a side of Trujillo's nation which is quite different from the side that keeps appearing to me and, I believe, to most other people. On the other hand, it is plain that this gentleman failed or neglected to read various remarks I inserted in the CONGRESSIONAL RECORD during the 85th Congress or, if he did read them, gave them no weight at all.

Two sides to Trujillo? Well, maybe. Anyway former Senator Jenner believes so.

The former Senator no doubt was too busy with other matters to read about the Haitian massacre or about the State Department rejecting the official Dominican explanation as to the death of my constituent, Gerald Lester Murphy, of Eugene, Oreg. Or refusing to make an important witness in the Murphy-Galindez case available for questioning here. Or of a thousand other things, matters involving official murder and thievery over many years.

Former Senator Jenner in his remarks stated:

> My daddy used to say a man can't roll in a hogwallow and come up smelling like a rose.

But this shows what you can do quoting out of context. He really likes the smell of Trujillo. He detects more of the rose than of the hog. He winds up asking God to bless Trujillo. "May you increase and may your example be followed," is his conclusion.

To get the whole flavor, Mr. Speaker, one must read this speech in its entirety, as it was reported in the September 1958 issue of A Look At the Dominican Republic, a monthly magazine of the Embassy of the Dominican Republic, Washington, D.C. I ask under unanimous consent that this speech be appended hereto:

SPEECH DELIVERED BY SENATOR JENNER

Mr. President, members of the Legislature of the Dominican Republic, and friends all by inviting me here you have accorded me an unexpected honor and accorded yourselves an unexpected ordeal, for I don't claim to be an orator like my friend, JIM EASTLAND. I'm just a country boy. I was raised on a farm, so I can appreciate the fine agricultural development I have found in your island paradise. I practiced law in a small country town, so I can appreciate the feeling of at least some of the lawyers among you at finding themselves transplanted to this dignified chamber.

I was transplanted myself, but I didn't take root deep enough to keep me from packing up and moving back home when I decided that was what I wanted to do; however, I spent enough time in the U.S. Senate to learn how bad it is for a country if its leaders do not serve their country's best interests. And, how important it is for a national leader to really lead and not just drift with the tide. I can appreciate how happy and how lucky you have been with the generalissimo.

Where I come from a man is judged mostly by what he does. If he hoes his own row and pays his debts, stands by his friends and stands up to his enemies, we like him and we respect him. I think a country can be judged pretty much the same way. On that basis I like your country and I respect it.

You have proved by your actions that you have learned the most important lesson for any nation in this hemisphere—or any free nation anywhere else—that you have got to stand up to communism or bow down to it. There isn't any inbetween.

Some men and some countries seem to think it is all right to back up a little. But the more you back up, the more you have to back up. When you have backed up long enough to get the habit, the Communists will just push you off the earth, or stamp you into it, and start backing somebody else up until these isn't anybody else for them to push.

Every time a freedom-loving nation, or a freedom-loving man is pushed off the earth, or stamped into the ground anywhere in this world, every other freedom-loving man and freedom-loving nation that is left is worse off than before, because then there is one less freedom-loving man or freedom-loving nation to join the united front against the world Communist conspiracy which we are going to have to put together some day—unless all of us are to be pushed off the earth, or stamped into the ground.

My daddy used to say a man can't roll in a hog wallow and come up smelling like a rose. The Good Book says you can't touch pitch and not be defiled. Any compromise with evil is evil in itself and communism is wholly evil.

Every redeeming feature it seems to have in the eyes of those who do not see clearly is just camouflage. Every fair-sounding Communist promise is just propaganda intended to fool you and me and to be broken whenever it suits Communist purposes to break it.

The Subcommittee on Internal Security studied the record on all the treaties Soviet Russia ever made and there are not a handful of them in the whole history of the country that have not been flagrantly violated by Soviet Russia.

I am not telling you anything you do not know and I thank God for that. This is the only place I have ever been in this whole hemisphere where everybody seemed to have a clear idea of what this fight with communism is all about, and to be willing to take his place in the fight.

I say, God bless you, and God bless your leader, and God bless your country. May you increase and may your example be followed.

FOREIGN POLICY IN SOUTH AMERICA

Mr. DORN of South Carolina. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN of South Carolina. Mr. Speaker, the Time-Life foreign policy does not seem to be working too well in South America at the present time. If the Time foreign policy is a good one, it does seem that with its tremendous foreign circulation we would have an ever-increasing number of foreign friends, but such is not the case. As reports come in from Bolivia the Time policy of foreign economic aid, foreign aid in the form of mutual security, and foreign aid in the form of giving away our markets to foreign imports is simply not working. It cannot work. It creates unrest and dissatisfaction in foreign lands, and unemployment, inflation, and bankruptcy at home.

South American countries have traditionally been stanch friends of the United States until adoption of the Time-Life-Luce foreign policy.

Mr. Speaker, we must return to the Monroe Doctrine policy, which cost the taxpayers nothing and won respect from our South American friends.

THE HANCOCK CLARION HAS OCCUPIED A PUBLIC ROLE OF THE KIND FORESEEN FOR A FREE PRESS

Mr. NATCHER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. NATCHER. Mr. Speaker, on February 19, 1959, the Hancock Clarion, of Hawesville, Ky., completed 66 years of continuous publication.

In 1893 when John W. Maston, Sr., and Clarence Sterret started their venture in journalism they probably did not realize that the new century upon which they were entering would be replete with history-making events. And certainly these first publishers of the Hancock Clarion could not have envisioned the progress that has been made in astronautics and space exploration, or, for that matter, that the airplane would become one of our main means of transportation. During the 20th century we have undergone the industrial age, the atomic age, and now we are entering the age when the secrets of outer space will be discovered. But these two gentlemen of the old school were not only concerned with disseminating news of national and international importance. It was also their purpose to serve the people locally through the coverage of personal events and pursuits, particularly in the field of agriculture. For the communities in Hancock County, Ky., are primarily rural, and, to quote the present editor and publisher of the Hancock Clarion, Mr. Roscoe I. Downs:

> From the soil comes most of our substance, and from the ground we have our living.

Mr. Roscoe I. Downs has conscientiously carried out the principles and practices as laid down and initiated by the Messrs. Maston and Sterrett. He has never failed to realize the great potential that is vested in the people of Hancock County, and his objectives have been to see that the true facts are brought to them through the medium of

his newspaper. The statements in his editorials are never marred by disrespect for the facts. Honorable is one of the strongest words in our language. Surely Mr. Downs has merited the title of "honorable" in public service, and this, in itself, is the acme of moral attainment. Like his predecessors, the founders of the Hancock Clarion, he has never forgotten that it is the people who count. Mr. Downs has realized the necessity of harmonizing differences in schools, in communities, and in our Nation. His precepts could well serve in helping us to live with other nations in a world where peace based on human freedom should prevail.

It is my confirmed opinion that any community is made stronger by virtue of having a good newspaper in its midst. The Hancock Clarion has occupied a public role of the kind foreseen for a free press by such men as Macaulay and Lecky. The influence which this newspaper has wielded in the past 66 years shall not cease, but shall continue to have its impact upon public life, not only in Hancock County but throughout adjoining sections of Kentucky.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORBETT (at the request of Mr. FULTON), on account of death in the family.

Mr. SCHERER, for March 17, 18, and 19, 1959, on account of hearings of the Committee on Un-American Activities at Pittsburgh, Pa., on said dates.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. ELLIOTT (at the request of Mr. EDMONDSON), on Monday, March 9, for 20 minutes.

Mr. SAYLOR (at the request of Mr. EDMONDSON), on Monday, March 9, for 20 minutes.

Mr. SLACK (at the request of Mr. EDMONDSON), on Monday, March 9, for 20 minutes.

Mr. MOORE (at the request of Mr. EDMONDSON), on Monday, March 9, for 20 minutes.

Mr. SILER (at the request of Mr. EDMONDSON), on Monday, March 9, for 20 minutes.

Mr. EDMONDSON, on Monday, March 9, for 20 minutes.

Mr. ZABLOCKI, for 45 minutes, tomorrow, and to vacate the special order he had for today.

Mr. DIXON (at the request of Mr. RHODES of Arizona), for 30 minutes, today.

Mr. GROSS, for 30 minutes, on tomorrow, Thursday, March 5, 1959.

Mr. O'NEILL, for 30 minutes, tomorrow.

Mr. FLOOD, for 10 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. DEROUNIAN.

Mr. TABER.

Mr. CHAMBERLAIN.

Mr. BRADEMAS.

Mr. PELLY.

Mr. ASPINALL and to include extraneous matter.

Mr. METCALF in five instances.

Mr. DORN of South Carolina.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mr. WOLF.

Mr. GUBSER (at the request of Mr. ARENDS).

Mr. HOLT and to include extraneous matter.

Mr. PATMAN, his remarks in Committee of the Whole today and to include extraneous matter.

(At the request of Mr. LEVERING, and to include extraneous matter, the following:)

Mr. FOLEY.

Mr. DOLLINGER in three instances.

Mr. POWELL in four instances.

ADJOURNMENT

Mr. LEVERING. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 49 minutes p.m.) the House adjourned until tomorrow, Thursday, March 5, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

657. A letter from the Under Secretary of Agriculture, transmitting a report for the month of January relating to the cooperative program of the United States with Mexico for the control and the eradication of foot-and-mouth disease, pursuant to Public Law 8, 80th Congress; to the Committee on Agriculture.

658. A letter from the Acting Secretary of the Treasury, transmitting two reports of the U.S. Secret Service covering restoration of balances withdrawn from appropriation and fund accounts under the control of the Treasury Department, pursuant to section 1(a)(2) of the act of July 25, 1956 (70 Stat. 648) (31 U.S.C. Supp. V, 701 (a)(2), 84th Cong.); to the Committee on Government Operations.

659. A letter from the Comptroller General of the United States, transmitting a report on the review of the loan guarantee program as administered by the Civil Aeronautics Board from its inception September 7, 1957, to June 30, 1958; to the Committee on Government Operations.

660. A communication from the President of the United States, relative to recommending that the Congress establish a Special Commission on Telecommunications; to the Committee on Interstate and Foreign Commerce.

661. A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting a draft of proposed legislation entitled "A bill to establish a commission to study and report on the U.S. telecommunication resource with special attention to the radio spectrum"; to the Committee on Interstate and Foreign Commerce.

662. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession contract with DeSoto Hotel & Baths, Inc., for a period of 10 years from January 1, 1959, pursuant to the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

663. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession contract with Jack Tar of Arkansas, Inc., for a period of 10 years from January 1, 1959, pursuant to the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

664. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders suspending deportation as well as a list of the persons involved, pursuant to Public Law 863, 80th Congress; to the Committee on the Judiciary.

665. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders suspending deportation as well as a list of the persons involved, pursuant to the Immigration and Nationality Act of 1952; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HENDERSON: Committee on the Judiciary. H.R. 4012. A bill to provide for the centennial celebration of the establishment of the land-grant colleges and State universities and the establishment of the Department of Agriculture, and for related purposes; without amendment (Rept. No. 148). Referred to the Committee of the Whole House on the State of the Union.

Mr. BURLESON: Committee on House Administration. H.R. 5045. A bill to authorize each Member of the House of Representatives to employ an administrative assistant; to restrict the payment of dual compensation by the Clerk of the House; to provide that the basic compensation of certain positions under the House of Representatives shall be fixed at multiples of $50; and for other purposes; with amendment (Rept. No. 149). Referred to the Committee of the Whole House on the State of the Union.

Mr. MCMILLAN: Committee on the District of Columbia. H.R. 4282. A bill to supplement and modify the act of May 24, 1828 (6 Stat. 383, ch. CXII), insofar as it relates to the corporate powers of the Sisters of the Visitation, of Georgetown in the District of Columbia; without amendment (Rept. No. 150). Referred to the House Calendar.

Mr. LANE: Committee on the Judiciary. H.R. 2741. A bill to amend section 2734 of title 10, United States Code, so as to authorize the Secretary of the Treasury to settle claims arising in foreign countries incident to noncombat activities of the Coast Guard; without amendment (Rept. No. 168). Referred to the Committee of the Whole House on the State of the Union.

Mr. LANE: Committee on the Judiciary. H.R. 2975. A bill to validate payments of certain quarters allowances made in good faith, and pursuant to agreements by authorized officials, to employees of the Department of the Navy, but which were subsequently determined to be inconsistent with applicable regulations; without amendment (Rept. No. 169). Referred to the Committee of the Whole House on the State of the Union.

Mr. KASEM: Committee on the Judiciary. H.R. 4615. A bill to relieve certain members

and former members of the naval service of liability to reimburse the United States for the value of transportation requests erroneously furnished to them by the United States and for other purposes; without amendment (Rept. No. 170). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LANE: Committee on the Judiciary. H.R. 4318. A bill for the relief of D. A. Whitaker and others; with amendment (Rept. No. 140). Referred to the Committee of the Whole House.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 4121. A bill for the relief of certain members of the Armed Forces of the United States, or their survivors, who were captured and held as prisoners of war in the Korean hostilities; without amendment (Rept. No. 141). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3960. A bill for the relief of Patrick W. Gowan, David Dooling, Harlie L. Mize, James H. Blaes, and William L. Perkins; without amendment (Rept. No. 142). Referred to the Committee of the Whole House.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 3939. A bill for the relief of Virginia E. Speer; without amendment (Rept. No. 143). Referred to the Committee of the Whole House.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 2286. A bill for the relief of Joseph E. Gallant; without amendment (Rept. No. 144). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2063. A bill for the relief of Otis Parks, W. B. Dunbar, and J. C. Dickey; without amendment (Rept. No. 145). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1631. A bill for the relief of Joseph B. Kane, Jr.; with amendment (Rept. No. 146). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1462. A bill for the relief of Logan Duff; without amendment (Rept. No. 147). Referred to the Committee of the Whole House.

Mr. HENDERSON: Committee on the Judiciary. H.R. 1411. A bill for the relief of T. V. Cashen; with amendment (Rept. No. 151). Referred to the Committee of the Whole House.

Mr. HENDERSON: Committee on the Judicary. H.R. 1471. A bill for the relief of Jim B. Hill; with amendment (Rept. No. 152). Referred to the Committee of the Whole House.

Mr. CAHILL: Committee on the Judiciary. H.R. 1691. A bill for the relief of Oliver O. Newsome; with amendment (Rept. No. 153). Referred to the Committee of the Whole House.

Mr. TOLL: Committee on the Judiciary. H.R. 1739. A bill for the relief of Lt. Col. John M. Brizzard; without amendment (Rept. No. 154). Referred to the Committee of the Whole House.

Mr. TOLL: Committee on the Judiciary. H.R. 1744. A bill for the relief of Gordon E. Martin; without amendment (Rept. No. 155). Referred to the Committee of the Whole House.

Mr. LINDSAY: Committee on the Judiciary. H.R. 1749. A bill for the relief of Mrs. Maxine L. Cowan Harrison; without amendment (Rept. No. 156). Referred to the Committee of the Whole House.

Mr. TOLL: Committee on the Judiciary. H.R. 2099. A bill to provide for a posthumous cash award in recognition of the scientific contributions in the field of electronic ordnance made by the late Paul M. Tedder; with amendment (Rept. No. 157). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 2281. A bill to provide for the payment of relocation expenses to Milo G. and Patricia Wingard; without amendment (Rept. No. 158). Referred to the Committee of the Whole House.

Mr. HENDERSON: Committee on the Judiciary. H.R. 2289. A bill for the relief of Mrs. Gertrude E. Shetler; without amendment (Rept. No. 159). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2294. A bill for the relief of the Ellis Timber Co.; without amendment (Rept. No. 160). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2295. A bill for the relief of the Sterilon Corp.; without amendment (Rept. No. 161). Referred to the Committee of the Whole House.

Mr. CAHILL: Committee on the Judiciary. H.R. 2603. A bill for the relief of the American Hydrotherm Corp.; with amendment (Rept. No. 162). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2949. A bill for the relief of Lois K. Alexander; without amendment (Rept. No. 163). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2950. A bill for the relief of Lt. Col. James A. Beplat; without amendment (Rept. No. 164). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 3095. A bill for the relief of Hilary W. Jenkins, Jr.; without amendment (Rept. No. 165). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 3248. A bill to provide for the payment of just compensation to certain claimants for the taking by the United States of private fishery rights in Pearl Harbor, island of Oahu, T.H.; without amendment (Rept. No. 166). Referred to the Committee of the Whole House.

Mr. KASEM: Committee on the Judiciary. H.R. 3243. A bill for the relief of Col. Fred E. Dueker; with amendment (Rept. No. 167). Referred to the Committee of the Whole House.

Mr. SMITH of California: Committee on the Judiciary. H.R. 1400. A bill for the relief of Berta Reitberger; with amendment (Rept. No. 171). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H.R. 1453. A bill for the relief of Mrs. Mathilde Ringol; with amendment (Rept. No. 172). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 1535. A bill for the relief of Sister Mary Damion (Maria Saveria D'Amelio), Sister Maria Tarcisia (Maria Giovanna Fenuta), and Sister Mary Regina (Maria Lizzi); without amendment (Rept. No. 173). Referred to the Committee of the Whole House.

Mr. MOORE: Committee on the Judiciary. H.R. 1727. A bill for the relief of Dimitrios Kondoleon (also known as James Kondolous); without amendment (Rept. No. 174). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H.R. 2589. A bill for the relief of Elizabeth Lucie Leon (also known as Lucie Noel); without amendment (Rept. No. 175). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BERRY:

H.R. 5234. A bill to provide for a scientific study and research program for the purpose of developing increased and additional industrial uses of agricultural products and to increase the income of farmers, and for other purposes; to the Committee on Agriculture.

H.R. 5235. A bill to provide for the establishment of a national cemetery on or near the site of the Wounded Knee Battlefield, S. Dak.; to the Committee on Interior and Insular Affairs.

By Mr. BOYLE:

H.R. 5236. A bill to provide financial assistance for the support of public schools by appropriating funds to the States to be used for constructing school facilities and for teachers' salaries; to the Committee on Education and Labor.

By Mr. BROWN of Georgia:

H.R. 5237. A bill to amend section 19 of the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits; to the Committee on Banking and Currency.

By Mr. BROYHILL:

H.R. 5238. A bill to provide for health and medical services for civilian employees in Government service overseas and their dependents, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CHENOWETH:

H.R. 5239. A bill to amend title I of the Social Security Act to provide that the ownership by an individual of his home shall not be taken into account in determining his need for old-age assistance; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 5240. A bill to make appropriations for the planning and construction of certain rivers and harbors and flood-control projects by the Secretary of the Army acting through the Chief of Engineers; to the Committee on Appropriations.

By Mr. DOLLINGER:

H.R. 5241. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. FEIGHAN:

H.R. 5242. A bill to authorize the construction of a Federal office building in Cleveland, Ohio, and for other purposes; to the Committee on Public Works.

By Mr. FOGARTY:

H.R. 5243. A bill to establish a temporary Presidential commission to study and to report on problems related to blindness and the needs of blind persons, and for other purposes; to the Committee on Education and Labor.

By Mr. FOLEY:

H.R. 5244. A bill to amend the act approved April 11, 1956, to extend the jurisdiction of the Domestic Relations Branch of the Municipal Court for the District of Columbia to cover the adjudication of the interests of husband and wife, of personal and real property in the District of Columbia; to the Committee on the District of Columbia.

By Mr. GUBSER:

H.R. 5245. A bill to amend the Dependents' Medical Care Act to provide that members of the Armed Forces retired under chapter 67 of title 10, United States Code, after having served on active duty in World War I and World War II shall have the same privileges with respect to medical care as members so retired after having served on active duty for

8 years or more; to the Committee on Armed Services.

By Mr. HOLLAND:

H.R. 5246. A bill to extend by 6 months the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Ways and Means.

By Mr. JOHNSON of Wisconsin:

H.R. 5247. A bill to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; to the Committee on Agriculture.

H.R. 5248. A bill to increase the authorized maximum expenditure for the fiscal years 1959, 1960, and 1961 under the special milk program; to the Committee on Agriculture.

By Mr. JONES of Alabama:

H.R. 5249. A bill to protect the right of the blind to self-expression through organizations of the blind; to the Committee on Education and Labor.

By Mr. KARTH:

H.R. 5250. A bill to legalize maritime and building trades hiring halls; to the Committee on Education and Labor.

By Mr. KING of California:

H.R. 5251. A bill to amend section 162 of the Internal Revenue Code of 1954 to provide that certain expenditures incurred in connection with measures submitted to the electorate shall be allowed as business deductions; to the Committee on Ways and Means.

By Mr. McMILLAN:

H.R. 5252. A bill to amend the Federal Trade Commission Act, as amended, so as to equalize rights in the distribution of merchandise identified by a trademark, brand, or trade name; to the Committee on Interstate and Foreign Commerce.

By Mr. MAILLIARD:

H.R. 5253. A bill to amend section 249 of title 2 of the Canal Zone Code, as amended; to the Committee on Merchant Marine and Fisheries.

By Mr. MORRISON:

H.R. 5254. A bill to prohibit the charging of a fee to view telecasts in private homes; to the Committee on Interstate and Foreign Commerce.

H.R. 5255. A bill to provide for the issuance of a special postage stamp in commemoration of the 100th anniversary of the founding of Louisiana State University; to the Committee on Post Office and Civil Service.

By Mr. REECE of Tennessee:

H.R. 5256. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. RODINO:

H.R. 5257. A bill to amend section 1915 of title 28, United States Code, relating to proceedings in forma pauperis; to the Committee on the Judiciary.

By Mr. ROBERTS:

H.R. 5258. A bill to establish a program of survival depots in order to provide subsistence for the large numbers of civilian population of the United States who would be evacuated from the devastated areas in the event of attack on the United States; to the Committee on Armed Services.

H.R. 5259. A bill to provide certain employment preference for Government employees disabled in line of duty; to the Committee on Post Office and Civil Service.

H.R. 5260. A bill to regulate the interstate distribution and sale of packages of hazardous substances intended or suitable for household use; to the Committee on Interstate and Foreign Commerce.

By Mr. SIMPSON of Pennsylvania:

H.R. 5261. A bill to amend the Internal Revenue Code of 1954 to provide the same treatment for prepaid dues income received by a nonprofit motor club as is provided for prepaid subscription income; to the Committee on Ways and Means.

By Mr. UDALL:

H.R. 5262. A bill to revise the boundaries of the Montezuma Castle National Monument, Ariz., and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WAMPLER:

H.R. 5263. A bill to make permanent certain temporary increases in rates of compensation of employees of the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. WOLF:

H.R. 5264. A bill to amend the Public Health Service Act to protect the public from unsanitary milk and milk products shipped in interstate commerce, without unduly burdening such commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. YOUNGER:

H.R. 5265. A bill to require that at least 50 percent of the passenger and cargo air transportation requirements of the Government of the United States be obtained from civil air operators, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BROOKS of Louisiana:

H.R. 5266. A bill to establish a program to foster and promote the conduct of basic and supporting scientific research through contracts entered into by the United States; to the Committee on Science and Astronautics.

H.R. 5267. A bill to amend the Internal Revenue Code of 1954 to exempt from income tax certain amounts received under Government contract for basic or supporting scientific research; to the Committee on Ways and Means.

By Mr. FULTON:

H.R. 5268. A bill to authorize the National Science Foundation to conduct a research and development program to encourage and stimulate the production and conservation of coal in the United States; to the Committee on Science and Astronautics.

By Mr. GALLAGHER:

H.R. 5269. A bill to extend by 6 months the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Ways and Means.

By Mr. KING of Utah:

H.R. 5270. A bill to authorize the Secretary of the Interior to convey to the Metropolitan Water District of Salt Lake City, Utah, all right, title, and interest of the United States in certain lands located in Salt Lake County, Utah; to the Committee on Interior and Insular Affairs.

By Mr. KOWALSKI:

H.R. 5271. A bill to provide that the Secretary of the Interior shall develop and carry out an emergency program for the eradication of starfish in Long Island Sound and adjacent waters; to the Committee on Merchant Marine and Fisheries.

H.R. 5272. A bill to amend section 15 of the Pay Readjustment Act of 1942 with respect to the retired pay of commissioned officers and enlisted men who served on active duty before November 12, 1918; to the Committee on Armed Services.

By Mr. LINDSAY:

H.R. 5273. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

H.R. 5274. A bill to amend title II of the Social Security Act to provide monthly insurance benefits for dependent sisters of certain insured individuals; to the Committee on Ways and Means.

By Mr. NIX:

H.R. 5275. A bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas; to the Committee on Banking and Currency.

H.R. 5276. A bill to effectuate and enforce the constitutional right to the equal protection of the laws, and for other purposes; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5277. A bill to prevent discrimination in any public or semipublic place or by any public or semipublic transportation against members of the Armed Forces because of race, color, or creed; to the Committee on the Judiciary.

By Mr. BRADEMAS:

H.J. Res. 284. Joint resolution providing for the issuance of a special postage stamp in honor of Col. Michael de Kowats; to the Committee on Post Office and Civil Service.

By Mr. WOLF:

H.J. Res. 285. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. BYRNE of Pennsylvania:

H.J. Res. 286. Joint resolution providing for the preparation and completion of plans for a comprehensive observance of the 175th anniversary of the formation of the Constitution of the United States; to the Committee on the Judiciary.

By Mr. LESINSKI:

H. Con. Res. 95. Concurrent resolution authorizing reprinting of House Document 451 of the 84th Congress; to the Committee on House Administration.

By Mr. WILLIS:

H. Con. Res. 96. Concurrent resolution authorizing reprinting of House Document 451 of the 84th Congress; to the Committee on House Administration.

By Mr. FRIEDEL:

H. Res. 197. Resolution fixing the basic compensation of the expert transcribers, office of the official committee reporters, and the seven expert transcribers, office of the official reporters of debates, House of Representatives; to the Committee on House Administration.

By Mr. SPENCE:

H. Res. 198. Resolution to provide funds for necessary expenses of the Committee on Banking and Currency; to the Committee on House Administration.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By Mr. BURKE of Massachusetts: Memorials of the Legislature of the State of Massachusetts, memorializing the Congress of the United States to investigate and determine the causes of inflation and to enact remedial legislation; to the Committee on Banking and Currency.

By Mr. BURKE of Massachusetts: Memorials of the Legislature of the State of Massachusetts, memorializing the Congress and the President of the United States to enact and enforce legislation to implement the decisions of the Supreme Court of the United States outlawing segregation in the public school system; to the Committee on Education and Labor.

By Mr. BURKE of Massachusetts: Memorials of the Legislature of the State of Massachusetts, memorializing the Congress of the United States to establish a national cemetery in New England; to the Committee on Interior and Insular Affairs.

By Mr. LANE: Memorial of the Commonwealth of Massachusetts, memorializing the Congress of the United States to establish a national cemetery in New England; to the Committee on Interior and Insular Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States with respect to recording its opposition to any further increase in the Federal excise tax on gasoline; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDONIZIO:

H.R. 5278. A bill for the relief of Giovanni Freda; to the Committee on the Judiciary.

H.R. 5279. A bill for the relief of Bruno Granelli (also known as Luigi Granelli); to the Committee on the Judiciary.

By Mr. ANFUSO:

H.R. 5280. A bill for the relief of Pierino Filosa; to the Committee on the Judiciary.

By Mr. BOYLE:

H.R. 5281. A bill for the relief of Adelina Rosasco; to the Committee on the Judiciary.

H.R. 5282. A bill for the relief of Pon Choy Kim and Tom Dun Wai; to the Committee on the Judiciary.

By Mr. CURTIS of Massachusetts:

H.R. 5283. A bill for the relief of Comdr. Austin S. Kibbee; to the Committee on the Judiciary.

By Mr. CURTIS of Missouri:

H.R. 5284. A bill for the relief of Christine Fahrenbruch, a minor; to the Committee on the Judiciary.

By Mr. HOLTZMAN (by request):

H.R. 5285. A bill for the relief of Aida Rosen; to the Committee on the Judiciary.

By Mr. JOHNSON of Colorado:

H.R. 5286. A bill for the relief of Victoriano Daviz Verastique (Victor Davis); to the Committee on the Judiciary.

By Mr. KEITH:

H.R. 5287. A bill for the relief of Edwina L. Lincoln, widow of W. Irving Lincoln; to the Committee on the Judiciary.

By Mr. LANE:

H.R. 5288. A bill for the relief of Branka Mardessich and Sonia Silvani; to the Committee on the Judiciary.

H.R. 5289. A bill providing for the extension of patent No. 119,187; to the Committee on the Judiciary.

By Mr. MONTOYA:

H.R. 5290. A bill for the naturalization of Leslie L. Nemes; to the Committee on the Judiciary.

By Mr. OLIVER:

H.R. 5291. A bill for the relief of Angelina Rossini Caucci; to the Committee on the Judiciary.

By Mr. O'NEILL:

H.R. 5292. A bill for the relief of Anthony Flambouris; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5293. A bill for the relief of Clifford S. and Ethelreda Jorsling; to the Committee on the Judiciary.

H.R. 5294. A bill for the relief of Fitzgerald Devonish; to the Committee on the Judiciary.

By Mr. REECE of Tennessee:

H.R. 5295. A bill for the relief of Rahmi Tugrul; to the Committee on the Judiciary.

By Mr. REUSS:

H.R. 5296. A bill for the relief of Lucille Collins; to the Committee on the Judiciary.

By Mr. RHODES of Pennsylvania:

H.R. 5297. A bill for the relief of Stylianos (Stellios) Anastase J. Theodossiou; to the Committee on the Judiciary.

By Mrs. ROGERS of Massachusetts:

H.R. 5298. A bill for the relief of Stavros Orfan; to the Committee on the Judiciary.

By Mr SANTANGELO:

H.R. 5299. A bill for the relief of Maria Rubinstein; to the Committee on the Judiciary.

By Mr. TELLER:

H.R. 5300. A bill for the relief of Ho Yuen Mak, also known as George Mak; to the Committee on the Judiciary.

By Mr. TOLLEFSON:

H.R. 5301. A bill for the relief of Harry E. Nelson; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Cambodia

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, I wish today to salute the March 6 independence day of the people of the monarchy of Cambodia, His Majesty Prince Norodom Sihanouk, and His Excellency Nong Kimny, Ambassador to the United States.

Cambodia is a country of 6 million inhabitants, 400,000 of whom are Vietnamese and 350,000 Chinese. The Cambodian economy is essentially agricultural with rice as a principal crop and source of wealth and rubber a close second. Large-scale industry is virtually nonexistent. Most manufacturing consists of agricultural processing in rubber plants, rice mills, oil mills, with limited industries producing lumber, tile, brick, woven goods, rope, baskets, pottery, jewelry, and skins for local needs. Investigations have not revealed substantial mineral resources, but an adequate geological survey has not yet been made of Cambodia. However, some deposits of iron ore, copper, manganese, gold, coal, zircons, and phosphates have been revealed.

Private capital investment has been little utilized in Cambodia in its economic development largely for the fact that emphasis is on projects which are of the basic type frequently carried on by governments. But, says the report of the U.S. Department of Commerce, it also derives from obstacles to private capital investment. Among obstacles to private capital investment are lack of managerial, technical, and mechanical skills and relatively limited domestic capital. Private enterprise has been slow to invest in Cambodia in response to a climate of economic nationalism which inclines the Government toward close supervision of private economic activity. Thus the Government requires prior authorization of new investments by the Minister of Finance who together may decide which proposed activities are useful to the economy of Cambodia. Moreover, the law requires some Cambodian capital participation and the employment of Cambodian personnel, but it also adheres to the principle of a just and equitable indemnity in case of nationalization, and offers the possibility of a 10- and 30-year guarantee against the risk of nationalization.

Cambodia achieved real and complete independence from France on November 9, 1953. The freedom to determine her future which she now enjoys is jealously guarded. The Cambodians, so Prince Noradom Sihanouk has written, will be lackeys of no foreign powers and their policy will be suited to their national needs.

In their foreign relations, the Prince explains, they are favoring neutrality which neutrality, he asserts, has been imposed on them by necessity—a position forced upon Cambodia by its geographical position, lying as it does between the Western bloc and Eastern bloc countries of North Vietnam and the vast Peoples' Republic of China. What choice have the Cambodians but to try to maintain an equal balance between these blocs?

Morever, the Prince inquires, how could their neutrality be taken seriously if Cambodia maintained diplomatic commercial and other relations exclusively with the Western bloc? Prince Sihanouk revealed that although China has given, with no strings attached, $25 million in economic aid, they do not forget that American economic and military aid to Cambodia amounted to $40 million for the 1957 and 1959 budgetary year and that it also was offered unconditionally, as is the aid offered by France, for equipment. But, the Prince explains, he wishes aid would be less rigid, particularly American aid since its purpose is to provide the Cambodians with the framework of a modern state.

Finally, the Prince wishes Americans to clearly understand they are not Communist inclined nor flirting with the Reds; certainly Americans must know that the first concern of the Communists is to get rid of the King and the natural elite of any country they succeed in laying hands on.

I would like to close this salute to Cambodia on this 6th day of March 1959, by giving expression in the Congress of the United States to the words of Prince Noradom Sihanouk which appeared in Foreign Affairs, July 1958, for I am convinced the explanation of their policy and the wisdom which undergirds it should be at our fingertips hereafter

when we discuss our relations with the Afro-Asian bloc countries:

If I have no particular liking for communism, neither have I any cause or means to join a crusade, even a moral one, against the nations that have adopted that ideology and which since 1954 have not given my country sufficient grounds for complaint. It would be absurd to suppose that a tiny country like mine, geographically situated as it is, would risk provoking the Chinese and Soviet colossi now that planes fly so fast and rockets so far.

We are not a breach in the Western bloc merely because we cannot be a rampart. In the event of a world conflict, we might very well become one of the first victims of a harsh occupation. In that case, the free world would have other things to do besides undertaking our liberation, or rather the liberation of what little remained of us.

Are we selfish or wrong-minded in thinking as we do? I maintain that we are merely being realistic. By practicing a genuine neutrality which eliminates any pretext for aggression we have a chance of not bringing down a storm on our heads; and a storm can be dangerous where there is no lightning conductor.

Our precautions may be to no avail and we may one day be invaded notwithstanding them. (I am not afraid of internal subversion which stands no chance here.) If, in spite of our manifest good intentions and our utter propriety in respect to the blocs, one of these should attack us, then I would be the first to advocate reconsidering our policy and invoking aid from the opponents of our aggressors. I profoundly hope that our country will never have to take such a step.

I have quoted here at length the expressions of an Asian country, friendly disposed toward the West but with a mind of its own, with a program for survival that is consistent with its strategic relationship and the aspirations and needs of its people. They are loud and clear enough for all to hear with the force of determination and maturity. It is important that we of the United States listen, comprehend, and react intelligently to the rising expectation unleased in this world and gage our actions accordingly. We must lower our anchors and prepare to ride the tide on an equal surface with justice and humility toward all.

Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. METCALF. Mr. Speaker, our new Secretary of Health, Education, and Welfare, Dr. Flemming, has developed the Flemming formula to solve the classroom shortage.

He has discovered that if the States will repeal their statutory debt limits, amend their constitutions and cooperate by making other fundamental changes in their basic laws that the States and local school districts can raise more money for school construction. This discovery can have results in other educational fields beyond actual school construction.

The application of the Flemming formula to basketball would permit Ohio Wesleyan, the college of which Flemming was formerly president, to announce that it was going to win every game next season and set alltime records—an alltime high in scoring by Ohio Wesleyan and an alltime low in points scored on Ohio Wesleyan.

Under the Flemming formula, two midgets would be added to the Ohio Wesleyan team, one perched on each basket. The midget on the Ohio Wesleyan basket would deflect shots by the opposition. The midget on the opponents' basket would catch a ball fired by an Ohio Wesleyan player and drop it through the net.

Now this would require a change in the rules. Instead of limiting the number of players on a team, the limitation would be their total height. To do so would require a change in the rules of basketball and consent from the other teams, in addition to perfecting a side-saddle perch for the midgets. But those are minor problems for a man who claims he can solve the school construction shortage if only the States will change their constitutional or statutory debt limitations, and their basic tax concepts.

Health Insurance for Our Older Citizens

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. DOLLINGER. Mr. Speaker, I have today introduced a bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes.

The benefits provided by my bill would be allowed as part of our established social-security system; such benefits would be financed by adding one-quarter of 1 percent to the contribution rates of employers and employees and three-eighths of 1 percent to the contribution rates of the self-employed.

The protection afforded by my bill is vitally needed by those many thousands of our older people who now cannot afford necessary medical, nursing, or hospital care; they cannot obtain or afford private insurance and they cannot meet the expense of illness. Costs of such care continue to rise.

Many outstanding organizations have strongly endorsed health benefits under the old-age, survivors, and disability insurance program, and it is generally conceded that health services for the aged are inadequate throughout the Nation.

It is incredible that, in our Nation of plenty, countless older persons are suffering pain and discomfort, jeopardizing their lives, because they cannot afford medical care; many are denied hospitalization and nursing care which are necessary for their recovery. Mounting evidence proves that present social-security benefits are still grossly inadequate to meet the barest necessities of life—there is nothing left over to pay for the high expenses of illness or medical aid.

I have received hundreds of letters describing pitiful circumstances and great hardships in this regard being suffered by older people in my district; petitions have been sent me bearing the names of thousands of those who need the help provided by my bill.

Numerous studies of the situation have been made. It is obvious that such a health program cannot be provided satisfactorily in any other way; the Federal Government must act. Our older citizens and others covered by the bill are in dire need of the assistance provided. It is unconscionable that their hardships continue.

It is the duty of Congress to take favorable action on legislation providing for an adequate health program for our aged without further delay; our older people rely upon us to give them the assistance and relief now denied them.

Foreign Aid Results

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. PELLY. Mr. Speaker, I was pleased to read about a foreign-aid program of which I thoroughly approved. Our U.S. consular representatives in Brazzaville, Congo Republic, have introduced the first baseball there and since January, when we opened our consulate, a league of six teams has been organized.

Apparently, the Americans give their time, but the program costs nothing—the players have no shoes, no gloves or any fancy equipment. Notwithstanding this, these barefoot youngsters and the citizens of this young Republic are developing a tie of friendship with the United States and more power to them.

Compare this with the attitude of Bolivians where our $129 million in aid, more per capita than to any other foreign people during a 6-year period, has resulted in our Embassy and the U.S. Information Service being attacked by mobs and our flag being burned.

An alleged remark of an American official as reported by Time magazine was taken by Bolivia as an insult to the dignity of a friendly nation.

Once under private ownership the tin mines of Bolivia made a profit and paid taxes. However, since these mines were nationalized they lose money and pay no taxes; but our financial assistance to the tune of about $25 million has contributed more than Bolivian income taxpayers toward their budget deficit.

In the interest of restoring good will, perhaps we should cut off sending dollars

and also eliminate other sources of Bolivia's indignity. Instead, we could send some consular representatives who can organize a baseball league. I would suggest Jackie Robinson, Mickey Mantle, Joe DiMaggio, or any one of a dozen others, as foreign service diplomats. They would make friends with the people of other lands. I doubt if the good will sought by our mutual security program reaches much below the high official level of foreign governments.

National Milk Sanitation Act

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. WOLF. Mr. Speaker, I have today introduced a bill which may be cited as the National Milk Sanitation Act. There has been considerable controversy here in Washington recently concerning the quality of milk, and I hope that my proposal will resolve some of this controversy. I believe it is time that we consider seriously the desirability of a national sanitary milk law.

The main objectives of my bill are to protect the public health and to eliminate the use of unnecessary or unreasonable sanitary regulations which burden interstate commerce. Such regulations, in some cases, eliminate the possibility of a competitive market in milk. This bill would establish uniform standards of quality for milk so that if milk produced in Iowa or anywhere in the country meets these standards it can be sold anywhere in the United States.

The quality yardstick for fluid milk moving in interstate commerce, which would be used under my bill, would be that single standard for high quality milk which has already been set up by the U.S. Public Health Service as the U.S. Milk Ordnance and Code. Designed as a model for the industry, the code is now being followed in 15 States, 2 Territories, and 1,900 cities and counties.

Mr. Speaker, my bill does not require any State or municipality to adopt the code, nor does all milk shipped in interstate have to conform to the code. However, milk which does meet the requirements cannot be excluded from any fluid milk market in the United States, regardless of varying local health regulations. Dairy plant inspections would be certified by the U.S. Public Health Service. Milk from certified plants could not be kept out of any market on health grounds.

This bill provides many safeguards for areas receiving milk shipped from certified plants. Local health authorities would retain the right to inspect the milk upon arrival to make sure it had not deteriorated in transit. From there on, the handling, processing, and sale of the interstate milk would be required to meet the standards applied to milk entering the market from sources inside the State.

Mr. Speaker, I am glad to join with Members on both sides of the aisle in both Houses of Congress who have introduced similar bills which would protect the State and municipal health authorities' right to control the quality of milk shipped within their State, but which would at the same time go a long way toward eliminating the use of sanitation regulations as trade barriers against good, clean milk from other States.

Civil War Centennial Award

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. HOLT. Mr. Speaker, with the presentation by Gen. Ulysses S. Grant, III, of certificates of commendation to film stars John Wayne and William Holden and motion picture director John Ford for their efforts in producing the new multi-million dollar historical spectacle "The Horse Soldiers," another step was marked today in the Civil War Centennial Commission's official 6-year nationwide program to commemorate the 100th anniversary of the epochal conflict.

The presentation ceremony took place at the Washington headquarters of the Civil War Centennial Commission, of which General Grant is Chairman. It was followed by a reception in honor of Messrs. Wayne, Holden, and Ford, held at the exclusive Army and Navy Club, and attended by members of the Commission, including high-ranking military, naval, and Government officials, and other distinguished guests.

In presenting the commendations, prepared in the form of scrolls, General Grant welcomed the United Artists film as one of the first contributions to the Commission program, "the avowed aims of which are to pay tribute to the memories of our forefathers who took part in the bitter conflict and to provide Americans with a new understanding of the way in which we built from sacrifice and suffering an enduring Nation and a lasting peace."

"The Horse Soldiers," which cost $5½ million to produce and was filmed on location in Louisiana, Mississippi, and in Hollywood, is a recreation of the famous Grierson raid of 1863, a commando-type operation in which several hundred Union cavalry invaded and rode across the State of Mississippi in order to cut the railroad lines of supply and distract the enemy's attention from General Grant's maneuver to take Vicksburg. It was characterized by General Sherman as "the most brilliant expedition of the war." The first General Grant acclaimed it as "one of the most brilliant cavalry exploits of the war."

Today his grandson, the present general, described this horse soldiers' raid as "one of the most strategically important, colorful, and fascinating stories to come out of the Civil War." Of the film he said, speaking for the Commission, "We expect it will prove of great interest and significance to all Americans."

After accepting the commendations for themselves and Mr. Ford, Wayne, and Holden in turn presented to General Grant, for the Centennial Commission collection, an assortment of Civil War memorabilia used in the motion picture, including a McClellan saddle, carbines and carbine holders, and authentic reproductions of gabions (portable wicker cylinders filled with earth to give protection to men digging approach trenches) and guidons (banners mounted on standard poles).

While at Commission headquarters, Messrs. Wayne and Holden arranged with General Grant and the Commission's executive director, Karl S. Betts, for a special showing of "The Horse Soldiers" to the Commission Council as soon as the first technicolor print has been processed. The picture is scheduled for public viewing in motion theaters across the country, beginning on July 4 of this year.

Mr. Kearns' Trip to Far East

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. DORN of South Carolina. Mr. Speaker, Assistant Secretary of Commerce Henry Kearns has just returned from a significant trip to the Far East. While in Japan and Hong Kong some of Mr. Kearns' statements were taken out of context which, of course, alarmed and shocked our textile employers and employees who are struggling to break even in this great essential industry.

I had a very pleasant and constructive conference with Mr. Kearns on Monday concerning this Far Eastern trip. I am happy to report to the House that at no time during his visit did Mr. Kearns advocate more Japanese textile imports into the United States. On the contrary he explained to the Japanese and Hong Kong manufacturers the detrimental effects of excessive imports on our American industry. He warned the Japanese that more exports to America could result in restrictive action by the U.S. Government. He pointed out that demands would rise in Congress for a lower quota and higher tariffs.

Mr. Kearns was not empowered to negotiate trade agreements but was on a factfinding trip to study the situation in the Far East and inform our friends of the difficult predicament of the American industry. After studying the facts, Mr. Speaker, I must say that Mr. Kearns did a fine job and very ably represented American business interests.

I do believe that in the coming negotiations for a voluntary Japanese quota America will be ably represented by our distinguished Acting Secretary Mr.

Strauss, Mr. Kearns, and other dedicated men in the executive branch of our Government.

I hope and trust that during these negotiations the Japanese quota will not be increased. I sincerely believe satisfactory negotiations will be held with our Japanese allies and another voluntary agreement worked out substantially along the lines of the present one. I am sure our Japanese friends are beginning to realize that the present voluntary quota is working to their advantage with the increasing threat of textiles flooding the world markets from Red China.

Sudan

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, today I wish to salute the Republic of the Sudan as it moves into its third year of independence.

After 56 years under the flag of Codomini of the Anglo-Egyptian Sudan this state became the sixth sovereign independent state of Africa. On January 1, 1956 the green, yellow, and blue flag of the Republic of the Sudan was flown for the first time.

His Excellency, Sayed Abdulla Bey Khalil, the former Premier, stated on its second anniversary, "When we celebrate Independence Day, we honor the struggle of the present generation of Sudanese who have by their sincerity, patriotism, and patience cast out colonialism from our country. Thus we close that chapter in our history when our country was dominated by foreigners and we entered a new era of freedom and progress."

Sudan, a country situated on an immense plateau of 967,500 square miles in the northeast corner of the African Continent, lies astride the middle reaches of the Nile River. Its 12 million population reflects culturally and racially an admixture hardly duplicated in any other African country. While its citizens of the north may be primarily conditioned by Moslem culture, those of the South are essentially pagan and Christian; though there are on their color chart some who are caucasian in skin texture and physiononic features, the vast majority are brown to black. Though the anxieties which beset the Arab world have their political tremors in the Sudan, that state likewise absorbs and shows grave concern for the independence and welfare of dependent African territories to the south of her.

The Sudan is in the main, a corporate part of the Arab world which accounts for the fact that they hasten to join the Arab League.

The outstanding characteristics of the newly independent Government of the Sudan is its intense desire to remain independent of the influence of other nations. Although they have been eager to attract foreign capital and particularly American industries and are undertaking measures to make such investments appealing, they exercise greater caution in requesting other forms of aid and technical assistance or help from other countries. The Sudan has become a member of the International Bank and the International Monetary Fund as a necessary measure to complete their major development projects.

The Sudanese are very proud of the government which they believe they are laying down a foundation of a sound and durable basis both internally and externally. Moreover, they believe the government's foreign policy has been such as to gain for the country the confidence and admiration of other governments, which constructive progress of the Khalil government has been successfully taken over into the government of General Ibrahim Abhoud. In spite of numerous speculations to the contrary, the enlightened administration of the previous regime and more precisely its relations to the West remains today constructive.

The Sudan is a country with a bright economic future and their leaders are determined to insure that its people are contented and in time overcome ignorance, poverty, and disease.

Cotton production is the basis of their economy and that one crop brings in nearly half the country's annual revenue—the backbone of which production, and thus mainstay of the nation's finances, is the British-initiated Gezira Scheme which is the largest agricultural scheme under one management in the world. The scheme's uniqueness is derived not alone for its economic significance but for its social impact upon every aspect of citizen life. This Western inspired economic and social experiment is a major factor in developing cooperation and social progress, avoiding the disasters of the feudal system, yet it has maintained individual liberty while achieving a unique combination of collective work. Of this scheme Dr. Mohammed Afzal, Director of Research, Pakistan Central Committee, noted it as "one of those outstanding experiments in socio-economic problems of the current century." The scheme is today the property of the people of the Sudan and is a source of annual income, not to captalism or feudal lords, but to the 25,000 tenants who work on it, and in an indirect way it belongs to all the people of the Sudan.

In the economic sphere they have issued their own currency and are able to conclude satisfactory agreements with the former Republic of Egypt now a part of the United Arab Republic and the United Kingdom in this respect.

The Sudan is the world's principal exporter of gum arabic accounting for 80 to 90 percent of the total supply. The United States is the second largest importer of gum arabic, a product used for making sweets and as an adhesive for stamps and envelopes.

The Sudanese people remember affectionately the Western World for its impact on its educational system and its agricultural development plan—the Gezira canalization scheme and we of the West are indebted to the Sudan for their all-out support when we were fighting for our democratic lives for freedom against the Italian invasion of World War II. For the Sudanese volunteers responded from all parts of the country for military duty assisting to their utmost in our war effort. Their industry, though limited, produced an amazing variety of war materials. The leaders of that noble country are to be commended for the nation's movement from virtual British control to complete independence with such marked and exceptional foresight, patience, and peaceful negotiation. We today rejoice at the progress in welding together which is consistently being made in Moslem-Christian relations and the good will which it is exhibiting toward all the people of the world with equal determination that the rule of law shall prevail in its provinces and in international relations.

This third anniversary in the words of our Department of State, "We applaud the tenacious desire of the Sudanese people to guarantee their national sovereignty against usurpation from any quarter."

Tomorrow's Scientists

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. DEROUNIAN. Mr. Speaker, the 18th annual science talent search for the Westinghouse science scholarships and awards has ended and I am very proud to say that five young men from the Second Congressional District of New York, which I represent, were chosen for the honors group. Of these, Jeffrey Alan Greenhouse, 16, of 153 Emery Street, Hempstead, was 1 of 40 chosen as winners of the Washington trip.

The other boys from my congressional district in the honors group are: Glenn Own Myers, Jr., 16, of 2017 Dutch Broadway, Elmont; Virgil Dixon Bogert, 17, of 62 Brixton Road, Garden City; Jeremiah Morris, 17, of 5 Grace Court, North, Great Neck; and Michael Adamowicz, 17, of 80 Urban Avenue, Westbury.

These boys were chosen from more than 28,000 candidates on the basis of scientific potential, measured by intricate aptitude tests, by their original science project, and by their all-around record.

I had dinner with Jeff Greenhouse, Monday evening. He's a fine youngster—top student in Uniondale High's graduating class of 285, captain of the math team, editor of the yearbook, and an aspiring chemist. He told me his interest in science is due to the fact that he was taught science from the first grade of school.

For his science search project, Jeff prepared and tested extracts from 32 flowers to determine if the flowers contained acid base indicators. He found

that all of them contained a substance that can be used to show the acidity of solutions.

Last summer, Jeff was 1 of 12 high-school seniors in New York State chosen to attend the 2-week summer science institute at the New Paltz State Teachers College. Following graduation, he plans to study chemistry at Syracuse University. His proud parents are Mr. and Mrs. Bernard D. Greenhouse.

Jeff and all the boys and girls who participated in the science talent search will determine the future progress of our country and its position in the world tomorrow. The science talent search banquet, when 40 of them were the guests of honor, was a memorable occasion for me.

Civil Rights

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. DOLLINGER. Mr. Speaker, the vitally important subject of civil rights is now under consideration by the Committee on the Judiciary of the House of Representatives; hearings were begun today.

I am including in the CONGRESSIONAL RECORD my statement to the committee, in which I urged that a strong, effective civil rights bill be approved:

Mr. Chairman and members of the Committee on the Judiciary, the need for stronger, effective civil rights legislation is more apparent than ever. Since your committee last considered civil rights legislation, denials of such rights because of color, race, religion, and national origin, have been rampant. The time for moderation and compromise is past; we must end the unconscionable discrimination, harassment, intimidation, and other human indecencies which are being inflicted upon a vast segment of our population.

Civil rights, the denial of such rights, continue to be of great concern to me. I have again reintroduced my many bills dealing with various phases of the subject and I will not take the time to enumerate them, as your committee is fully cognizant of my efforts through the years. I do repeat, however, that we cannot claim to have true democracy in our country, equality of man, equality of opportunity, freedom as guaranteed by our Constitution, until every vestige of discrimination of race, color, or religion, is abolished.

One of my bills which you scheduled for hearing is H.R. 759, to provide further means of securing and protecting the right of persons within the jurisdiction of the several States to the equal protection of the laws and other civil rights guaranteed by the Constitution or laws of the United States. It enlists the powers and influence of the Attorney General in a determined attack upon denials of civil rights. It perfects the procedure by which civil rights may be vindicated. My bill provides a workable solution to many serious problems. The Federal Government must act to assure persons discriminated against or denied their constitutional rights, the assistance and protection they need.

You also scheduled for hearing, my bill H.R. 1902, for the better assurance of the protection of citizens of the United States and other persons within the several States from mob violence and lynching, and for other purposes. We need only recall the Little Rock incidents, the bombings of places of worship, the terrible threats against innocent persons and groups of persons, to recognize that the protection afforded by my bill is necessary, if innocent persons are to be saved from mob hysteria and unfounded hatred which have at their roots the evils of discrimination.

Your committee has before it many bills on civil rights. I am pleased, Mr. Chairman, that you scheduled hearings early in this session of Congress, and I hope your prompt action presages passage of a strong civil rights bill during the present session. I wish to take this opportunity to state that I also favor your bill, Mr. Chairman, which would give Federal technical and financial help to communities that want to integrate their schools.

You have a grave responsibility and a great decision to make in this matter of civil rights. Every right-thinking American looks to you to discharge that responsibility fairly and wisely. I trust that you will vote out a bill of which we can be proud and which will restore, to some extent at least, the prestige which we have lost as a Nation because of our present undemocratic practices.

Maritime Unions Seek Destruction of Our Merchant Marine Fleet

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. TABER. Mr. Speaker, the National Maritime Union, headed by Joseph Curran, and the International Seafarers Union, headed by Paul Hall, are waging a propaganda campaign designed to destroy a vital portion of our merchant marine fleet.

Our citizens now have approximately 1,500 oil tankers, ore carriers, and tramp steamers flying the flags of Panama, Liberia, and Honduras. These are American-owned ships and they receive no subsidy from the United States Government. These ships are called flags of necessity ships; that is, it is necessary to fly under these flags if they are to survive. They simply could not fly under the American flag where seamen would be organized and receive wages three and even four times higher than wages paid to seamen flying under the flags of Western European maritime countries.

The Federal Government already is spending $130 million in annual subsidies to seamen who sail under the American flag. American ship owners do not get a dime out of this. I certainly have no quarrel with this expenditure. It is money well spent and necessary if we want any kind of a healthy and strong merchant marine.

Messrs. Curran and Hall want the flags of necessity ships returned to the American flag. They have a selfish motive in pressing for this radical change in our merchant marine policy. They want more dues-paying members in their unions.

Flags of necessity ships have received the enthusiastic endorsement of the Congress through passage of the Shipping Act of 1916, the Defense Department, and Federal Maritime Administrator Clarence G. Morse. The Congress gave Mr. Morse the authority to transfer these ships to the flags of Panama, Honduras, and Liberia, and only the Congress can take away that authority.

If, perchance, we changed our merchant marine policy and returned these flags of necessity ships to the United States flag, the Federal Government would be saddled with an additional four or five hundred million dollars in annual subsidies to these seamen, because, as I said, these ships cannot possibly compete with low-paid Western European seamen without the subsidy.

We have effective control over these flags of necessity ships. They are doing a great job and they are not asking a dime from the Federal Government. They came to our rescue during the Korean conflict, and they will be available to our Government tomorrow if an emergency should arise.

Of course, if Mr. Curran and Mr. Hall persist in their violent and unfounded attacks on the flags of necessity shipowners, the owners will sell these ships to Great Britain, Norway, or the Dutch. That would be disastrous to our national security. I am not concerned one bit about the profits or losses of these ships, but I am concerned about our national defense and the added burden to the taxpayer if these ships ever should be returned to the American flag.

If flags of necessity ships were sold abroad I do not see how Mr. Curran or Mr. Hall would gain anything. I strongly doubt that these men are thinking in terms of the consequences of their propaganda campaign. They would gain nothing and the United States would lose a lot along the national security and economy front.

The Flemming Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. METCALF. Mr. Speaker, Dr. Flemming, former president of Ohio Wesleyan University, and now Secretary of Health, Education, and Welfare, has a formula for the relief of the classroom shortage which is dependent upon constitutional amendments and repeal of debt limits in most States and fundamental changes in the internal tax structure of many of the States. But Dr. Flemming says with cooperation of the States, he can do the job.

In another Cabinet office, Secretary Benson has some problems. One of them is storage of surplus eggs. If eggs were square they would store much more compactly and there would be less

breakage, and conserve space in the refrigerator, too. At this Easter season, a square egg would be especially utilitarian and would not roll off the table while the children were coloring it and it would stay where you hid it for the Easter egg hunt. One application of Dr. Flemming's formula would take care of this problem. Of course, it would mean some fundamental changes in the internal structure of the hen and depend on her cooperation but under the Flemming formula, those are minor obstacles.

Col. Michael de Kowats, Symbol of Hungarian Freedom

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. BRADEMAS. Mr. Speaker, today I had the privilege of introducing in Congress a resolution authorizing the Postmaster General to design and issue a commemorative postage stamp honoring a man who not only gave noble service to our country in the days of its struggle for independence, but who stands today as a symbol of the yearning for freedom of a brave people now held in bondage behind the Iron Curtain.

Col. Michael de Kowats was a Hungarian cavalry officer who volunteered his services to help the American Colonies win their independence in the Revolutionary War. One authority on Hungarian-American history declares Colonel Kowats to have been the only Hungarian who served in the Continental Army.

It is an instructive commentary on the forces that have molded the American Nation that Michael de Kowats was the Hungarian colonel and righthand man of Count Casimir Pulaski, the champion of Polish and American liberty. General Pulaski recommended, in a report to General Washington dated Trenton, January 9, 1778, the appointment of a master of exercise for the cavalry and urged that Colonel Kowats be named to the post. "I can recommend him," wrote Pulaski, "and assure your excellency will never have reason to repent your confidence in him. If this proposal should be agreeable to your excellency, the sooner I am informed the better, as he will be of infinite service to the cavalry this winter in quarters."

Colonel Michael de Kowats is one of thousands of Hungarians who have given their lives in defense of liberty. On March 15 Hungarians throughout the free world will pay homage to their forefathers who have died fighting tyranny. It was on that day in the middle of the 19th century that Hungary won its freedom from the Hapsburgs and it is on that day that free Hungarians renew their vows to return the blessings of liberty to their compatriots now in the chains of Soviet despotism.

Mr. Speaker, all of us in America will recall, I am sure, the valiant fight not too many months ago of the Hungarian people in the streets of Budapest against the onslaught of Soviet tanks and troops.

Mr. Speaker, on March 15, 1959, the Hungarian-American community of South Bend, Ind., in the district I have the honor to represent, will celebrate Hungarian Independence Day in the William Penn Fraternal Association Hall. The meeting, which will be attended by a predicted 1,500 persons, is being held under the sponsorship of the Hungarian Veterans Club of which Mr. Joseph Farkas is president. The Honorable Edward F. Voorde, mayor of South Bend, will be master of cermonies. Albert Tellson, an American of Hungarian extraction, and a councilman at large of the city of South Bend and himself a fine example of the splendid civic service given by Hungarian-Americans in my district, will also take part in the ceremonies.

I join with these fine Americans in observation of Hungarian Independence Day by offering my resolution in honor of Colonel Michael de Kowats together with the hope that some day the people of Hungary will again be free.

The text of my resolution follows:

JOINT RESOLUTION IN THE HOUSE OF REPRESENTATIVES

Joint resolution providing for the issuance of a special postage stamp in honor of Col. Michael de Kowats

Whereas the love of freedom and a hatred of tyranny has characterized the Hungarian peoples in their centuries-old fight against oppression and dictatorship; and

Whereas this spirit is exemplified in the conduct and service of Col. Michael de Kowats, who volunteered his services to General Washington's Continental Army and helped organize the cavalry of that Army into an effective fighting force and later died on the battlefield at Charlestown; and

Whereas Colonel Kowats' love of liberty was also present in the hearts of his countrymen who died fighting the forces of oppression in Hungary in 1956; and

Whereas Hungarians the world over celebrate March 15, the date of Hungarian independence from Hapsburg rule in 1849, as Hungarian Freedom Day, dedicated to the restoration of freedom in that land: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Postmaster General is authorized and directed to design and issue a special commemorative postage stamp in honor of Col. Michael de Kowats. Such stamp shall be of such denomination and shall be issued in such quantity and for such period, beginning March 15, 1960, as the Postmaster General shall determine.

Congressman Dollinger's Annual Report

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. DOLLINGER. Mr. Speaker, at the close of the 1st session of the 86th Congress, I shall prepare and include in the CONGRESSIONAL RECORD my annual report to my constituents. The report covers legislative work done by the Congress, and my efforts in behalf of the people I represent.

Burma

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, on January 4, 1959, Burma celebrated her 11th year of independence. Today I wish to congratulate its leaders, Prime Minister General Ne Win, and His Excellency U Win, Ambassador of Burma, for their leadership and for the good will which exists between the United States and their country.

Although Burma, as an independent country, is only 11 years old the country has made great strides forward in developing its own Government and in advancing democratic administration. In that short period of time the Burmese people have moved far ahead economically as well as in external relations.

While eager to share in the greater material well-being which modern technology affords, the Burmese hasten to explain they will not go overboard for industrialization. Moreover, they have announced their determination to resist the building of uneconomic industrial facilities which would have to be protected by high import duties because they believe in a liberal foreign-trade policy. In fact, they explain they intend to actively explore ways of stabilizing markets and expanding trade with all countries. In all, the Burmese have managed to maintain a balanced economic and social development, while carrying on an extensive program in the training of professional people, technicians, and administrators, including civil servants. The Burmese are a thrifty people determined to protect their newly won economic and political freedom and to preserve their spiritual heritage.

Burma is a natural democracy; a man's birth counts for so little that there are no family names. Women enjoy full equality and marriage and divorce are easier to obtain than in most parts of the United States.

Judge Nadine Lane Gallagher, formerly of municipal court of the District of Columbia, was reported recently as giving credit to the Burmese women along with other women of Asia for being their countries' active forces on social reform.

The Burmese are dedicated to parliamentary democracy and an aversion to totalitarianism which characterizes the approach of the Burmese leaders both to national and international problems. His Excellency U Thant, Ambassador of Burma to the United Nations, stated recently that the Burmese see the world as plagued by age-old tensions, political,

social, and economic and the people of Burma are convinced that the safety and survival of free political institutions depend upon resolving these tensions before they become intolerable. Though Burma herself subscribes to democratic principles and supports democratic institutions, she declines to pass judgment on the international affairs of other countries subscribing instead to policies based on peaceful coexistence.

Mr. Thant's contribution to American thinking is of greatest significance to our present purpose when he seeks to explain the common cause that is the peoples of the Afro-Asian bloc countries follows in the quote taken from an article which appeared last July in the Annals of the American Academy of Political and Social Science:

Victory will come to the side which understands and takes into account the most important phenomenon of the 20th century—nationalism. The problem is, in essence, the problem of equality of opportunity.

Let me touch briefly on this.

There are millions of people in the world who do not have enough to eat and enough to cover themselves with, and whose children cannot go even to the primary schools.

It seems comic to talk to them about the virtues of democratic ideals and the dignity of man. During the last war there was a great deal of talk of the imperative need for democracy to triumph over fascism. Mr. Churchill had then invited the Burmese people to take part in that war for democracy. Young Burmese nationalists had said then that Burma would not fight for democracy when she herself was enchained in slavery. And for that answer democracy did not hesitate to shut up a number of young Burmese leaders in prison.

Is the situation different today? Take Africa for instance. Over a hundred million people are being ruled today by the free nations of the world. What does the fight against totalitarianism mean to these millions of people? When France, for instance, proudly proclaims to the world that her soldiers are killing 4,000 Algerians every month, is the cause of the democracies enhanced? The white settlers of South Africa, who treat the colored people as worse than lepers, are greater enemies of democracy than the Communists. They are generating tensions much more ruthlessly than the cold war tactics allegedly employed by the Communists.

Let us not delude ourselves with the oversimplification of the world issue. The issue today is not only that of communism versus democracy. The more essential issue is the division of the word into the weak and the strong, the prosperous and the abject poor, the ruler and the ruled, the master race and the subhuman.

Therefore, if the war for democracy has any meaning, it is necessary that we all sit together and create here and now the conditions that will guarantee freedom, justice, well-being, and equality to all.

In all our discussions of the excolonial and colonial world it is well for us to bear in mind the driving determination of the progressive leadership with the support of the overwhelming masses for national solidarity and for advancing and welding of Pan Asian-Pan African as a prerequisite of economic viability and international peace. In the words of Judge Gallagher in all of this, "Our most potent weapon is friendship."

Newly Modernized D.C. Post Office

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. CHAMBERLAIN. Mr. Speaker, on March 3 the President and the Postmaster General dedicated the new modernized Washington, D.C., post office. A distinguished audience, including many Members of the Congress, were in attendance.

The introduction of mechanized mail-handling machinery and equipment and the resultant beneficial effects on better mail service are of such significance to the American people that I believe the comments made on that occasion should be inserted in the RECORD.

Mr. Speaker, under unanimous consent, I include President Eisenhower's and Mr. Summerfield's remarks in the RECORD:

COMMENTS BY POSTMASTER GENERAL ARTHUR E. SUMMERFIELD AT DEDICATION OF THE MODERNIZED WASHINGTON, D.C., POST OFFICE, WASHINGTON, D.C., MARCH 3, 1959

Members of the Congress, distinguished guests, my colleagues in the postal service, ladies and gentlemen, today we add a most significant chapter to the long and honored traditions of the U.S. Post Office Department.

This official opening of the world's most mechanized post office—the showplace of the postal world—is a major breakthrough in our efforts to provide better, more efficient mail service for the American people.

The introduction of mechanized mail-handling devices here in the modernized Washington, D.C., post office opens a new era in the postal service, fully as important as the start of railroad service for mail in 1831, or the inauguration of regular air mail service in 1918.

This great advance we are witnessing today is the culmination of 6 years of intensive research and engineering work. It could not have occurred without the wholehearted, enthusiastic support of the President and the vision and cooperation of the Congress. Every American is indebted to our leaders for their support of this effort.

Would the Members of the Congress present here today please arise so we may give you a deserved round of applause?

Thanks are due also to the many industrial, business, and commercial groups whose technicians have worked so cooperatively with the Post Office Department's fine staff of engineers in developing and fitting this equipment so ingeniously and efficiently into floorspace not originally designed for such purposes.

Will these representatives of industry and our own engineers please stand so we may appropriately acknowledge your efforts?

The postal employees of this post office deserve particular praise for their fine efforts in continuing with normal delivery of mails, including holiday mail, during the most trying period while this building was being rehabilitated and this large amount of mechanical equipment installed. Let us give them a round of applause, too.

Will the employee association leaders here today arise so we may pay tribute to you?

Also, I would like to give special recognition to four of my close associates for their dedicated service in carrying this important project through to such a successful conclusion. They are Deputy Postmaster General Edson O. Sessions, who has charge of the entire modernization program for the postal service; Rollin Barnard, Acting Assistant Postmaster General of the Bureau of Facilities; the Director of the Office of Research and Engineering, Wade S. Plummer; and the Regional Director of the Washington Region, Malcolm Clarke.

I should like also to acknowledge the many fine contributions to this effort made by Assistant Postmasters General McKibbin, Siedle, Gillette, Lyons, and Chief Inspector Stephens. Will they please stand so that we may recognize their efforts?

Why have we mechanized this big city "gateway" post office?

Like many others, it has long been out-of-date. It's mail-handling methods were old-fashioned and had not changed much since Ben Franklin's day.

On its workroom floors mail was hand-pushed, hand-sorted, hand-moved in old-fashioned hampers. Working conditions were poor; the work tedious; the results costly to the taxpayers.

In short, the major bottleneck to better, faster mail service is the time now required to sort and distribute mail, to move it through the large "gateway" post offices of the United States.

The seriousness of this problem is highlighted by these facts.

The American people send and receive two-thirds of the world's mail.

This astonishing volume now totals 61 billion pieces of mail plus a billion parcels a year.

As the Nation grows and its economy expands, the number of pieces of mail per person per year, now averaging 350, is expected to double to 700 within the next 25 years.

Necessity, they say, is the mother of invention.

Faced with the facts I have just briefly mentioned, it was apparent your postal managment must speed mail sorting and distribution of mail in its present physical quarters with modern machines and new methods, some of which are commonly used in American industry.

The mechanization in this Washington, D.C., post office will move the mails continuously, make better use of the work floor-space, eliminate drudgery, and use the abilities of postal workers to better advantage. Most importantly, too, this mechanization will decrease the floor space needed to process the increased mail volume of the years ahead.

The modernization work in the Washington, D.C., post office will produce benefits for the entire Nation:

1. It will provide mechanization experience to convert other post offices.

2. It will be a testing ground for the mail processing equipment of tomorrow.

3. It will be close by for postal engineers to conduct tests on further development, and will serve as a national showcase so that visitors from everywhere may see what the Post Office Department is doing about their mail-handling problems. This is the first large office to be completed although many other large offices are now in the planning or construction stage and will be completed soon.

4. It will provide better working conditions for our employees.

An efficient modern postal service is essential to our national welfare.

That is why this Washington, D.C., post office, with its promise of better mail service, is so important. That is why the developments that will take place here, in this working postal laboratory, have great significance for every American.

Ladies and gentlemen, I would now like to introduce some of the distinguished guests on this platform today. They are:

Franklin G. Floete, Administrator, General Services Administration.

Mrs. Barbara Gunderson, Civil Service Commissioner.

Rowland Jones, Jr., president, American Retail Federation, and a member of the Post Office Department Advisory Board.

It is now my privilege to present the Assistant to the President, Gen. Wilton B. Persons, who is here today as the personal representative of the President. General Persons will join me in unveiling this plaque which will be permanently mounted in the lobby of this post office. General Persons.

Ladies and gentlemen, as we hear the band play "Hail to the Chief," it is my privilege to talk to President Eisenhower in the White House.

The President will press the button starting the machinery in this first modern post office in the United States.

Mr. President, we are just concluding our dedication ceremony. The distinguished guests and postal employees gathered here eagerly await a word from you.

REMARKS BY PRESIDENT EISENHOWER

In a moment I shall press the button which will start the machinery rolling in the new mechanized Washington, D.C., post office.

This development, a banner one in the Post Office Department's modernization program, will benefit all Americans as their mail is handled more expeditiously and more economically.

The lessons learned in this working postal laboratory here in Washington will be used in post offices throughout the entire Nation.

It is a pleasure to congratulate Postmaster General Summerfield on this achievement and to now press the button which sets into motion the most newly mechanized postal facility in the world—the Washington, D.C. post office.

Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. METCALF. Mr. Speaker, one of the serious problems that labor unions have run into in organizing the dairy industry is that the cows have to be milked twice a day every day. No 5-day week for a dairyman. Many commentators on the changing conditions in farming have pointed to the decline of the family cow. This, too, is mostly caused by the fact that one family cow requires milking every morning and every evening. No weekends permissible when "old bossy" is home bawling to be milked.

Dr. Flemming, Secretary of Health, Education, and Welfare, has evolved a formula whereby he says 75,000 classrooms can be built without unbalancing the budget if the local subdivisions will only change their tax concepts, if the States will change statutory debt limits and if constitutions in more than half the States be changed. But Dr. Flemming points out these statutory and constitutional changes will be minor obstacles in the working out of his plan if the States and districts will only cooperate.

Dr. Flemming's formula should be used to put cows on a 5-day week. Of course, it will mean a basic change in the constitution of the cow and her cooperation but with the application of the Flemming formula, those minor obstacles can be easily overcome.

Pertinent Information on Puerto Rican Taxation and Cost of Living

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. ASPINALL. Mr. Speaker, in anticipation of a number of questions which will arise in our forthcoming floor debate on Hawaiian statehood I have asked our colleague, Resident Commissioner FERNÓS-ISERN of Puerto Rico to prepare a memorandum on, first, the economic and fiscal relations between Puerto Rico and the United States; second, tax exemption in Puerto Rico; and third, cost-of-living differential in Puerto Rico allowed civil servants of the Federal Government. Invariably, in Hawaiian statehood debates these matters arise and usually are discussed with much of the factual information not being utilized. In order to provide those persons who wish to discuss these Puerto Rican matters as they relate to Hawaii with reliable information I wish to insert in the RECORD the following memorandum prepared by Resident Commissioner FERNÓS-ISERN:

MARCH 4, 1959.

DR. JOHN TAYLOR,
Professional Staff Member, House Committee on Interior and Insular Affairs, House of Representatives, Washington, D.C.

DEAR DR. TAYLOR: With reference to our recent conversation I am enclosing the memorandum which I have prepared at your request on (1) the economic and fiscal relations between Puerto Rico and the United States; (2) tax exemption in Puerto Rico; and (3) cost-of-living differential in Puerto Rico allowed civil servants of the Federal Government.

If you feel that further details are required, I should be happy to provide them.

Sincerely,

A. FERNÓS-ISERN,
Resident Commissioner.

MARCH 4, 1959.

Memorandum with reference to: (1) Economic and fiscal relations between Puerto Rico and the United States; (2) tax exemption in Puerto Rico; (3) Cost-of-living differential in Puerto Rico.

1. Ever since the United States acquired sovereignty over Puerto Rico under the Treaty of Paris in 1899, the Organic Acts enacted by Congress to organize a civil government in Puerto Rico (1900 and 1917), as well as the Puerto Rico Federal Relations Act (since Puerto Rico became a Commonwealth) have provided that all expenses incurred by the Government of Puerto Rico shall be paid out of the Treasury of Puerto Rico. (See sec. 12, Organic Act of 1900, and sec. 6 of the Second Organic Act of 1917.) No Federal appropriations have ever been made to pay for the expenses of local government, as has been the case in the Territories. This refers, of course, to the government establishment of Puerto Rico and not to the operation of Federal activities and programs undertaken by the United States in Puerto Rico.

The expenses of the U.S. Government in Puerto Rico can be classified into three groups:

(1) The Defense Establishment, including payments to veterans. (Thousands of Puerto Ricans have served during the First World War, the Second World War, and the Korean action and, of course, are entitled to the same compensations as their mainland fellow citizens.)

(2) Civilian Federal agencies, which operate in Puerto Rico in the same way as in any State of the Union. (Federal agencies in Puerto Rico include, of course, the post office system, the Immigration Service, the U.S. district court, buoys, lighthouses, agricultural agencies, etc.)

(3) Grant-in-aid laws, which have been extended to Puerto Rico and which operate with joint Federal-Commonwealth funds, under the supervision of the respective Federal departments.

The same rates of tariff applying in the United States to imports from foreign countries apply to merchandise from foreign countries coming into Puerto Rico. The expenses incurred for collecting the customs duties in Puerto Rico are paid out of collections made, and the remainder is covered into the treasury of Puerto Rico (see sec. 4 of the Organic Act of 1900 and sec. 58 of the Second Organic Act of 1917). There are no customs between United States and Puerto Rico. The U.S. internal revenue laws would have no force and effect in Puerto Rico (see sec. 14 of the Organic Act of 1900 and sec. 9 of the Second Organic Act of 1917).

In other words, Puerto Rico was accorded free trade with the United States, within a common tariff, and was given fiscal autonomy, while it was supposed to support its own government with its own revenues.

This treatment was accorded Puerto Rico on the theory that Puerto Rico was not incorporated into the United States under the terms of the Treaty of Paris with Spain in 1899, nor has it been incorporated by act of Congress at any later date. It was not a Territory in the traditional sense, but "a people" under the sovereignty of the United States. (See sec. 7, Organic Act of 1900.)

The provisions of the Constitution of the United States concerning the uniformity in tax laws do not apply in Puerto Rico as they have always applied to incorporated territories such as the present Territory of Hawaii.

The distinction between incorporated and unincorporated territories was early made by the Supreme Court in the well-known insular cases, *de Lima* v. *Bidwell*, 182 U.S. 1 (1901); *Jones* v. *Bidwell*, 182 U.S. 244 (1901); *Dooley* v. *U. S.*, 183 U.S. 151 (1901); and later confirmed in *Balzac* v. *People of Puerto Rico*, 258 U.S. 298 (1922).

All these congressional and judicial decisions took place long before the Commonwealth of Puerto Rico was organized. The Commonwealth has evolved within this framework of relations. The fact that the Commonwealth of Puerto Rico was created in 1952 did not alter the above situation. As a matter of fact, the sections in the Organic Act of 1917 which dealt with these matters were specifically continued in force and effect, as the Puerto Rico Federal Relations Act (sec. 4 of Public Law 600, 81st Cong., which enabled the people of Puerto Rico to organize the Commonwealth). The Commonwealth of Puerto Rico, therefore, now has the same fiscal situation and economic relationships which Puerto Rico had before it became a Commonwealth.

Although the general rule is that United States internal revenue laws do not apply

in Puerto Rico, it should be noted that the U.S. income tax law applies to the income of residents of Puerto Rico when such income is derived from sources outside of Puerto Rico. This includes Federal salaries paid to residents of Puerto Rico who serve the Federal Government in Puerto Rico. The fundamental fact, then, is not that Puerto Rico is exempt from Federal taxes, but that Puerto Rico is not included in the tax area of the United States and has its own separate tax system as an unincorporated area.

The tax system of Puerto Rico includes income tax laws, excise tax laws, real estate tax laws, inheritance tax laws, etc. The tax laws in Puerto Rico are comparable to those prevailing in the mainland.

2. Puerto Rico has adopted a program of tax exemption for a short period of years, for new industries that may wish to establish themselves in Puerto Rico. This program was implemented in view of the enormous unemployment problem in Puerto Rico and in view of the very limited natural resources. Without this temporary dispensation to new industries, they would have no reason to come to Puerto Rico, and Puerto Rico would neither collect taxes on unexisting industries nor be able to create new opportunities of employment for the unemployed. Since it was not possible to have both taxes and employment from new industries, Puerto Rico had to decide to have one of the two, i.e., employment, and temporarily give up taxes that it would not have received anyway. The program has met with a great deal of success. Employment opportunities in Puerto Rico have increased rapidly. The standard of living has been raised, the purchasing capacity of the average citizen has increased, and as a result (since Puerto Rico does most of its outside shopping in the U.S. mainland) the purchases made by Puerto Rico in the last year exceeded $600 million, actually approaching the $700 million mark. Puerto Rican sales to the United States were about $450 million. Puerto Rico is today the third largest market for U.S. products in the New World.

It should be emphasized that the tax exemption program is applied exclusively to new industries coming into Puerto Rico which duly qualify for the exemption; that each case is decided on its merits. Also that except for these new industries the people of Puerto Rico do pay taxes to the Commonwealth, as aforesaid, in a comparable manner as the citizens of the United States pay taxes to the States and to the Federal Government. It should also be emphasized that the tax exemption given to new industries is a temporary measure, limited to a fixed period of time, and that after that time elapses, the new industries are subject to taxation the same as the old-established industries. It should also be emphasized that tax exemption is not granted to industries that may pull out of the United States and come into Puerto Rico. Only brandnew industries which represent an expansion in the industrial organization of the United States are eligible to tax exemption under the Commonwealth law.

3. Although the average per capita income in Puerto Rico is lower than the lowest average per capita income in any State, it has been found, through surveys carried out at the initiative of the Civil Service Commission, that the cost of living in Puerto Rico is about 17½ percent higher than it is in Washington, D.C. Although there may be differences of opinion as to the reasons for this higher cost of living, it seems logical to assume that among the factors creating this higher cost is the fact that Puerto Rico buys in the mainland no less than 50 percent of the food it consumes and pays very high freight rates for transportation. These high freight rates are paid not only in transportation from the mainland to Puerto Rico but also on what is transported from Puerto Rico to the mainland. All this transportation, according to law, must be made within the terms of the coastwise shipping laws of the United States which apply to Puerto Rico, i.e., in vessels registered in the United States.

Since the same situation prevails in other offshore areas, namely, Alaska and Hawaii, the Congress has adopted the policy of compensating United States officials and employees serving in these offshore areas, for this higher cost of living. It seems to be a sound policy, since what it does in fact is to equalize the income of Federal employees in the offshore areas to the income of Federal employees in the mainland areas.

The fact that the Federal Government follows this policy serves to emphasize the difficult economic problem the people of Puerto Rico must meet in their endeavor to attain a standard of living comparable to that of their fellow citizens in the mainland. They must cope not only with unemployment and the fact that their income is lower than that of the average income in the mainland, but also with the fact that their cost of living is higher than in the mainland.

Puerto Rico is making great strides in improving the lot of its people. It has attained Commonwealth status which the multitudes of its people endorse and support. Commonwealth status means that the people of Puerto Rico have full self-government in a measure comparable to that enjoyed by a State of the Union. But the U.S. Government exercises authority in Puerto Rico also in a measure comparable to the authority it exercises with respect to any State. The people of Puerto Rico, fully participating in the election of their Commonwealth officials, do not participate in Federal election or legislation, except that they have a spokesman in the Resident Commissioner, who may present the views of the people of Puerto Rico before Congress as well as before the executive departments in such matters as affect Puerto Rico and are within the province of the Federal Government.

The people of Puerto Rico do not participate in the election of the President, or the Vice President; they do not elect two Senators; they do not elect a proportionate number of voting Members of the House. If Puerto Rico were a State, it would be entitled to no less than five House Members. Nevertheless, Federal laws apply in Puerto Rico equally as in any State, except tax laws, but including, of course, selective service.

Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare, has come up with a proposal which he says would solve the school classroom shortage. But application of the Flemming formula would require States to alter their constitutions, their statutory debt ceilings and their basic internal tax concepts. Dr. Flemming says these alterations would be a minor obstacle.

The Flemming formula has other applications.

According to Hoyle, the best possible 5-card poker hand is a royal flush. The relative value scales down through a straight flush, four of a kind, a full house, a flush, a straight, three of a kind, two pairs, one pair, to high card.

With individual application of the Flemming formula, a pair of deuces could take the pot over a royal flush. Now this would require a change in the rules—a revision of Hoyle's book—and there undoubtedly would be some constitutional, perhaps even internal, alterations of the players in the resulting disputes. But these would be a minor obstacle to Dr. Flemming.

Of course, it is difficult to see any possible benefit resulting from application of the Flemming formula to poker. It is just as difficult to see any possible benefit resulting from its application to the classroom shortage.

Ghana

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, I wish to salute on the second anniversary of the independence of Ghana, March 6, the Prime Minister, His Excellency Kwame Nkrumah, and the country's Ambassador to the United States, His Excellency Daniel Chapman. There is added pride for us in the United States of America in the 2-year accomplishments of Ghana coast and more particularly to the command post of present-day Ghana. Although Ghana's population is little more than 5 million, inhabiting roughly only 91,843 square miles, its richness and its people have figured most prominently in the direction of the modern world. From the 15th century to the present, Ghana's gold or cocoa or bauxite or people have enriched the coffers of others. Ghana's gold and her human resources, beginning in the 16th century, laid the foundation of, first, the Portuguese, later the Dutch, English, Swedes, Danes, and still later the American economy. The influence of the Guinea coast and its impact upon America is seen every day in virtually one-tenth of the population of this great country. Add today to Ghana's continuing contribution of mineral resources and cocoa, and the impact of her descendants throughout the West, and a new story of Ghana's influence begins to unfold. In the span of 2 years Ghana has hostessed two major conferences where convened representatives from all parts of Africa in an effort to light the torch of liberation throughout Africa. Moreover, the leadership, the solidarity, the consciousness of the combined strength of all Africans for continent welfare and international peace has been asserted with such force that the whole universe world may experience the constructive impact of this small country a disordered world.

During Mr. Nkrumah's recent tour of India, Dr. Sarvapalli Radhakrishnan, the

chancellor of Delhi University, when presenting the scroll of the university said:

I wish to assure you that you have our full support and sympathy in our attempts to build up a new United States of Africa.

To which Dr. Nkrumah responded:

Since Ghana became independent we have grown increasingly conscious that the responsibility for determining our own evolution as a community rests fully on our own shoulders. We are particularly aware of the need to develop our physical, intellectual, and spiritual resources in such a way that the contribution made by our generation and by our country is for the general progress of mankind.

We believe this contribution must be not only distinctly African in character but also international in its approach.

In an address to the Indian Council of World Affairs, Dr. Nkrumah said he had doubt that Africa would involve forms of government rather different from the traditional western pattern but no less democratic in their protection of the individual and his inalienable right.

To the criticism that Ghana has not proceeded in precisely the same way as old Western democracies, the Prime Minister informed the Indians that: "First, Ghana society is by its own form and tradition fundamentally democratic in character." And, he explained, that in time their present form of parliamentary democracy may be expected to conform more closely to their own national and traditional methods of government.

To the criticism by a section of the western press for so-called undemocratic methods Nkrumah retorted:

It would have been more helpful in creating better understanding if these critics had first carefully considered the reality of the situation. As a new and young Government, our first responsibility has been to preserve independence and the security of our state.

Commenting on the African liberalism movement and Ghana's role in it, Nkrumah explained that never before had so many African leaders from all parts of the continent come together to find a solution for their common problems as assembled in Accra when political and trade union leaders met there recently. And, he added, that the process for the total liberation of Africa has begun; the union of Ghana and Guinea, representing the first step along the momentous road toward African union. In this regard, the Prime Minister concluded:

We realize that our union may involve many difficult issues but the basic and decisive fact is that we are determined in spirit and endeavor to unite in order to form the nucleus for a union of African states or republics.

The recent meeting of Nkrumah with Indian leaders has added significance for it symbolizes the realization of Asian and African struggle for a common cause. It denotes a breaking through of African nationalism and a seeking of unity and solidarity with others for international good will. For, as the Prime Minister stated, Ghana shares India's own ideals and aspirations and looks forward to working on solutions for their basic problems. This is continuation of the true meaning of the spirit born in Bandung at the Afro-Asian conference in 1955.

As the whole world totters on the brink of disaster, it is well that the big powers lend a greater ear to the misgivings of the little powers. Maybe there can be found in some cases where we have gone wrong. As for Americans, Dr. William Appleman Williams in his new book, "The Tragedy of American Diplomacy," contends that "the idea that other people ought to copy America contradicts the humanitarian urge to help them and the idea that they have the right to make such key decisions for themselves * * * in some cases the American way does not work for other people." Bearing in mind Dr. Williams' conclusion that other societies come to feel that American policy causes them to lose their economic as well as their political right of self-determination, we must periodically take time to understand the motivations and aspirations of others especially the members of the popularly known Asian-African bloc. Time thus spent can be highly rewarding in terms of good will and human survival. We must listen and hear with sympathy what the smaller countries are trying to tell us for they wish like us to be spared an atomic holocaust.

In conclusion, a message from the African tradition, a proverb, which Prime Minister Nkrumah included in the foreword to Barbara Ward's new book, "Five Ideas That Change the World," is appropriate:

When the bull elephants fight, the grass is trampled down and pleads with the small and uncommitted nations to make their voices heard constructively while there is still time, for in this age of the ultimate weapon the bull elephants would disappear with the grass.

ACHIEVEMENT IN GHANA SINCE THE CELEBRATION OF FIRST ANNIVERSARY OF INDEPENDENCE, 1958

POLITICAL

1. Opening of new diplomatic missions abroad and in Ghana by other countries.
2. Represented at:
(a) Geneva International Conference on the Law of the Sea.
(b) Second Geneva Atoms for Peace Conference.
(c) U.N. Conference on Peaceful Uses of Atomic Energy.
(d) Inauguration of West Indies Federal Legislature.
3. Visits by Prime Minister to:
(a) Independent African States.
(b) Canada and the United States.
(c) India.
(d) Nigeria.
4. His Excellency Ambassador D. A. Chapman elected first Vice Chairman of Governing Council of new U.N. Special Fund.
5. Establishment of:
(a) Regional assemblies.
(b) Houses of chiefs primarily concerned with questions of customary law.
6. Arranged:
(a) Conference of Independent African States.
(b) All-African People's Conference.
7. Union with Guinea to form basis of Union of West African States.
8. Contribution of $3,000 to the programs of the United Nations High Commissioner for refugees.
9. Presentation of a Speaker's chair to the National Assembly by the British House of Commons.

ECONOMIC

1. Venue of First Regional Conference of Food and Agricultural Organization of the United Nations.
2. Trade and goodwill missions to Britain and Western Europe.
3. Trade missions from:
(a) The Netherlands.
(b) Czechoslovakia.
(c) Italy.
(d) West and East Germany.
(e) Poland.
4. Establishment of state lotteries.
5. Issue of own coinage to replace former West African currency.
6. Article of agreement signed with International Finance Corporation.
7. Establishment of:
(a) Tourist bureau.
(b) Committee on Aid to Ghanaian Business.
(c) Insecticide factory.
(d) Commercial vehicles assembly plant.
(e) Nautical college for training of ships' officers and ratings; Ghanaians also being trained as seamen.
(f) Investment promotion board.
(g) Food and Agricultural Organization Regional Office for Africa.
(h) ICA operation mission.
(f) Rockefeller Brothers' Fund to help obtain investment funds and financial assistance for economic development.
(j) Bankers' clearinghouse.
8. Plan to develop Accra Airport to international standards.
9. Formation of iron and steel mill.
10. Modernization of fishing industry.
11. Formal inauguration of Ghana airways, and plans for creation of completely jet-powered airfleet.
12. Training of Ghanaians to become air hostesses.
13. Visit by team of experts from Henry J. Kaiser Co. to make survey and bring up-to-date engineering report on Volta River project. Main factors of scheme: Dam the Volta, produce 600,000 kilowatts capacity and smelt 210,000 tons of aluminum yearly from Ghana bauxite.
14. Revision of company law for speedy development.
15. Signing of investment guarantee agreement to attract private American capital to Ghana.
16. Scheme for establishment of oil mill factory.
17. Represented at:
(a) First session of U.N. Economic Commission for Africa at Addis Ababa.
(b) Forty-first (Maritime) session of International Labor Conference in Geneva.
(c) Conference of International Federation of Agricultural Producers in Brussels.
(d) Montreal Commonwealth Trade and Economic Conference.
(e) New Delhi talks of World Bank and International Monetary Fund.
18. Formation of Ghana National Construction Co. for building factories, carrying out construction works, and training of Ghanaians.
19. Study progress of Tema Harbor, one of the major harbors of Africa.
20. New trade union structure to (a) help develop the country, (b) train the workers to contribute to this development.
21. Preparation of a second development plan which will mark an important step forward in the further development and consolidation of the independence of the country.

SOCIAL

1. Represented at (a) Commonwealth games in Montreal, (b) Conference of Afro-

Asian writers in Tashkent in Soviet Union, (c) World Assembly of Youth in New Delhi.

2. Debut of (a) Ghana Times (daily newspaper), (b) the Ghanaian (monthly magazine).

3. Increased operations of Ghana News Agency which receives and distributes domestic and overseas news to various news organizations in Ghana.

4. Opening of (a) police college for advanced training for police officers, (b) law school, (c) school of journalism.

5. Admission to (a) full membership of UNESCO, (b) membership of International Criminal Police Organization.

6. Arts and crafts exhibitions to develop distinctive Ghanaian culture.

7. Agricultural shows to increase number and variety of crops and the flourish of livestock industry.

8. Training of Ghanaians to become officers in Ghana's Army.

9. Plans (a) to enable Radio-Ghana to cover the whole of Africa, (b) for establishment of medical school, (c) for inauguration of television service, (d) to establish an arts council.

10. More towns connected by new VHF radio-telephone link.

11. Visits by Ghanaians to the United States under various forms of grants.

12. Statue of Prime Minister added to others in Madame Tussaud's exhibition in London.

13. Installation of new automatic street lights.

14. Represented at:

(a) World Health Assembly in Minneapolis.

(b) Sixth International Congress on Tropical Medicine and Malaria in Lisbon.

(c) International Conference on Organization of Community Development in Tripoli.

(d) Sixth Meeting of International Scientific Committee for Trypanosomiasis Research in Brussels.

(e) Eighth International Students' Conference in Peru.

15. Ghana Film Unit Productions shown at Film Festival in Russia.

16. Issue of special stamps commemorating 150th birthday anniversary of Abraham Lincoln.

17. Assistance by WHO and UNICEF in battle against diseases.

18. Opening of new blind vocational training center.

19. Extension to supplies of water, electricity, railways, telephone, medical supplies, and other services to many parts of the country.

20. Construction of bridges, trunk and feeder roads.

21. Venue of International Rally of Girl Scouts.

22. New policy to enable more people to own houses.

23. Provision of primary schooling for all who wanted it.

24. Expansion of middle (similar to junior high) school system.

25. Increase in enrollments in secondary schools.

26. Improvement in existing teacher training colleges.

27. New buildings at university college and college of technology.

28. Award of local and overseas scholarships.

29. Receipt of several offers of scholarships from other countries to commemorate attainment of independence.

30. Recognition of Ghana Red Cross Society by International Committee of Red Cross Societies in Geneva.

31. Furthering of new and better ways of rural life in raising of living standards through community development.

The Farm Problem

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 4, 1959

Mr. GUBSER. Mr. Speaker, the national farm price support programs are being closely scrutinized, and rightly so. These programs have failed to fulfill their purpose.

Price support and acreage control had their beginnings more than 20 years ago. Despite some changes, the basic legislation governing these programs is still the Agricultural Act of 1938. No wonder these programs are now outmoded. They have been rendered obsolete by the technological revolution in agriculture.

These outmoded programs have piled surplus on surplus and cost on cost until the Government investment in farm commodities will shortly be $10 billion or more. In the coming fiscal year the cost of storage, transportation, and interest on our Government holdings of surplus farm commodities, accumulated under the old outmoded programs, will exceed $1 billion.

Despite these huge expenditures, agriculture has been harmed not helped by the operations of these programs. Farmers have lost markets for cotton, wheat, corn, tobacco, peanuts, rice, and some dairy products. Dislocations have been caused in the whole agricultural economy. Producers have been subjected to increasing controls and regimentation. As Government has interfered more and more in agriculture, the farmer has had less and less to say about what, where, and how he shall plant.

These defects in the programs have become more and more apparent in recent years. But what has been less apparent—though perhaps most damaging in the long run—has been the extent to which the old outmoded, costly, and harmful farm programs have discriminated against the vast majority of our farmers in favor of producers of a few crops on a comparatively few big farms.

Yes; the old farm programs, whether by design or accident, have been unfair to the great majority of American family farmers. They have channeled most of the vast expenditure of Federal funds in the direction of the big farms, including the corporation farms, the factory farms.

And it is high time that the blame for this sad situation be placed where it belongs.

These programs stem back to the 1930's—and the leadership of the 1930's. They have been changed by various amendments over the past 20 years—but the amendments did not remove the fundamental discrimination against the majority of farmers that is inherent in the programs. On the contrary, efforts to remedy defects in the programs have met the tooth-and-nail opposition of the same political leadership that sponsored these programs more than 30 years ago.

The irony of it is that this same political leadership poses as the friend of agriculture—and in particular as the friend of the small farmer. How their hearts bleed for the low-income farmer—but how they drag their heels and struggle and kick and fight when they are asked to do anything practical to help him.

Let me cite chapter and verse.

In his agricultural message of January 11, 1954, President Eisenhower said:

> No single program can apply uniformly to the whole farm industry. Some farm products are perishable, some are not; some farms consume the products of other farms; some foods and fibers we export, some we import. A comprehensive farm program must be adaptable to these and other differences, and yet not penalize one group of farmers in order to benefit another.

Then, turning specifically to the problems of those families on small farms, the President said:

> The chief beneficiaries of our price support policies have been the 2 million larger, highly mechanized farming units which produce about 85 percent of our agricultural output. The individual production of the remaining farms, numbering about 3,500,000, is so small that the farmer derives little benefit from price supports. During 1954 the Secretary of Agriculture, in cooperation with the National Agricultural Advisory Commission, will give further special attention to the problems peculiar to small farmers.

As a result of that recommendation the rural development program was inaugurated 1 year later. It was the first attempt of this nature in the history of the Nation to make a broad attack on the problems of the small farmer, the farmer who had been largely passed over not only by the technological revolution but by the price support programs. Yes; it was the first real attempt to do something about the forgotten man in American agriculture.

After careful study, clear-cut recommendations for attacking the problems of low income farm families were submitted to the Congress. Although these recommendations for legislation and appropriations were extremely modest, they were adopted only in part. And they were even ridiculed by some who pose as saviors of agriculture.

In his agricultural message of January 9, 1956, the President included a strong plea for adoption of the full rural development program. He concluded this plea with these words:

> Not only the welfare of these families but also of the people as a whole require that this program go forward. Once again, therefore, I urge the Congress to enact the full program recommended in my message of April 26, 1955.

The budget requested at that time for the rural development program for the upcoming fiscal year was less than $4 million. The amount appropriated was less than $2.6 million.

Here is a program of practical aid to underemployed farmers who desire to continue in agriculture. In cooperation with States and localities, the rural development program offers research,

education, supervised credit, and cost-sharing by the Federal Government in improving land, timber, and water resources. Farm and home improvements are a major part of the program.

For those who wish to supplement or replace limited farm incomes with greater income from nonfarm sources, the program helps to establish vocational training in trades and skills. It helps set up additional industries in farming areas where more employment and higher incomes are needed. Under this program farm families are informed of job opportunities in other segments of the economy.

Yet, even to this day the rural development program has not received the support in expression of interest and appropriations from the majority party in the Congress that the program so richly deserves. This is the fundamental reason why the rural development program is now going forward in only about 100 counties out of approximately 3,000 counties in the entire country. If the desire of the majority party is really to improve the lot of small family farmers, why is there not greater support of the rural development program?

And why is there such last ditch opposition to needed changes in the old, outmoded, costly, unfair, and harmful farm programs?

In his agricultural message of January 16, 1958, President Eisenhower pressed these issues again:

There are millions of rural people—

He said—

who, for reasons of small farms, poor soils, limited resources, age, inadequate credit, lack of education, poor health, or insufficient managerial ability, have been unable to make the adjustments called for by modern technology.

Few of the dollars spent on agricultural programs have been of appreciable help to this group.

Price supports have scant meaning to a farmer with little to sell.

Reductions in acreage to support higher prices are contrary to the needs of a farmer whose production is already too small to give him a proper livelihood.

The majority party responded by passing a bill to freeze agriculture in the mold of the old discriminatory programs.

The President vetoed this freeze bill—this bonanza to the few at the expense of the many.

And now this year, on January 29, he pointed out the discriminatory nature of the old programs more clearly than ever before.

There are produced, in the United States, some 250 farm commodities. The law requires that prices of 12 of these be supported. Three of the 12—wheat, corn, and cotton—account for 85 percent of the Government inventory of price-supported commodities, but they produce only 20 percent of the total cash farm income.

Is such a program fair to producers of other commodities? Obviously it is not.

But this is only part of the discrimination. Nearly a million and a half farms produce wheat. Ninety percent of the dollars spent for price support on wheat go to two-fifths of these farms—the largest ones. Actually 140,000 wheat producers account for more of the price-support cost than all the other 1¼ million combined.

Nearly a million farms produce cotton. Seventy-five percent of the dollars spent for cotton price support go to about one-fourth of these farms—the largest ones.

For rice producers it is the same story—one-fourth of the growers have three-fourths of the allotment.

For corn—28 percent of the growers have 65 percent of the allotment.

About 900,000 producers of wheat, corn, cotton, and rice—out of 4½ million farmers—account for most of the price support expenditures.

For wheat producers who have allotments of 100 acres or more, the net budgetary expenditures for price support this fiscal year average about $7,000 per farm.

For cotton producers who have allotments of 100 acres or more, expenditures average $10,000 per farm.

For rice producers who have allotments of 100 acres or more, expenditures also average $10,000 per farm.

Where is the principle of fairness in such a program? How does this help the small producer—the man and his family who really need help?

We are spending in price support programs of various kinds over $5 billion this fiscal year—to subsidize production by comparatively few farm operators—the operators of the larger farms, the more productive farms, the more prosperous farms.

Relatively small numbers of farms—usually those with the highest income—account for the greatest proportion of these Government price support outlays.

In his message of January 29, 1959, President Eisenhower recommended changes in the price support programs—changes that would make the level of supports more realistic—changes that would recognize the existence of the technological revolution—changes that would serve the best interests of agriculture and the whole Nation.

He urged that price supports no longer be related to a standard 25 years old, but to a percentage of the average market price during the previous 3 years.

He recognized that the Congress might still prefer to relate price supports to parity standards. If so, he urged that discretion be provided for establishing the level of support in accordance with guidelines fixed by law. This is what is now done for all commodities except the few for which supports are mandatory.

The recommended program would give growers more freedom to produce and compete for markets.

It would eliminate some of the unfairness of the present programs.

Let us remember that the majority of farm families have received little or no benefit from these programs. Most of agriculture is operated without price supports. There are no supports on cattle, hogs, poultry, eggs, fruits, and vegetables. Producers want no supports on these products.

We need more freedom in agriculture. The commercial farmers of the United States will do a better job of shifting production in answer to economic conditions than the Government can do for them under rigid formulas.

Our problems are difficult, but they are not impossible to solve.

Adoption of the President's recommendations will result in sounder price and acreage programs.

Expansion of the rural development program will help low-income producers make the adjustments necessary to sound permanent progress.

The interest of this administration in the family farmer and our efforts to improve opportunities for a higher standard of living on the small farms of the Nation is indicated by many other actions.

Loan programs have been substantially improved and expanded. This has enabled many more farmers to acquire family sized farms and to make needed improvements in their farms and their homes. Family type farms received loans totaling $170 million in fiscal 1958, compared to $130 million in fiscal 1953. Farm ownership loans totaled more than $50 million in fiscal 1958, compared to less than $30 million in fiscal 1953.

After being out in the cold 19 years, farm families and farm workers were made eligible for the benefits of social-security protection.

More loans for the expansion and improvement of rural electrification and telephones have been made available, and at a faster rate, than ever before.

Conservation has been speeded up and streamlined. More conservation has been applied in the past few years than at any time in history. Limitations are in effect on the total conservation payments that can be earned on a single farm.

These actions indicate who has the interest of the family farmers at heart—and which party is actually the party of the big farm, the corporate farm, the factory farm.

Let us pin the tail where it belongs.

Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. METCALF. Mr. Speaker, Secretary Flemming, of the Department of Health, Education, and Welfare, has brought to Congress a new proposal which he says will help meet the shortage of more than 140,000 classrooms. However, in order to build the 75,000 classrooms Dr. Flemming says will be built under his formula for Federal aid, State constitutional and statutory debt limits will have to be revised and basic tax concepts of many States will have to be changed.

Dr. Flemming should devote his considerable talents to other national programs which are in trouble. The United

States lags behind the Soviet Union in ability to put heavy loads of instruments into space. He could offer a wealth of ideas to solve this problem. He could announce a new ratio of translation between Soviet kilograms and American pounds, which by a simple shift of two decimal points could make the United States payloads heavier than the Soviet performance. Better yet would be to abolish the law of gravity by Executive order, applicable only within the confines of U.S. launching areas. Then we could send our battleships on good will cruises to the moon.

Either of these proposals should be minor problems to an official of the executive branch who cannot see the difficulties in other jurisdictions. A simple edict should suffice, and if the Russians do not see things his way, that is only what should be expected of backward people.

Maryland Voluntary Weather Observers Praised

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. FOLEY. Mr. Speaker, the Weather Bureau of the Department of Commerce recently issued a special edition of the Weather Bureau's daily weather map in honor of 21 veterans of the nationwide corps of about 7,000 cooperative volunteer weather observers who take and record weather observations every day of the year without compensation.

Among the 21 veteran volunteers—those who have taken weather observations daily for more than 50 years—Maryland is the only State in the Union that can claim two of these distinguished citizens as her sons. And, it happens that the Sixth Congressional District of Maryland is the only congressional district in which two of these honored volunteers reside. I refer to Mr. D. Paul Oswald, of Hagerstown, Md., who has been a weather observer for 57 years, and Mr. Ralph E. Weber, of Oakland, Md., who has served for 56 years.

Dr. F. W. Reichelderfer, Chief of the Weather Bureau, in praising the work of these remarkable senior citizens said that without the daily records of these cooperative observers our knowledge of the climate of the United States would be meager. He added that this weather work is an outstanding example of people serving their Government without pay, and he thought their daily but unsung efforts merited the applause of their fellow citizens.

Mr. Speaker, I would like to include in my comments at this point a brief background statement on both Maryland veteran volunteer weather observers which was included in the Weather Bureau citation:

D. Paul Oswald was born March 15, 1886, on the family farm in Chewsville, Md. In May of 1898 his father consented to the establishment of a weather station at his home as a hobby and education for his sons. D. Paul Oswald began sending in weather observations in February 1902. In January 1948 he moved to Hagerstown, Md., where he still makes his daily observations at the weather station called Chewsville-Bridgeport, a combined name of the two stations he has operated. He was recently on the Science Program closed circuit television for Washington County schools, and has for decades provided weather facts to local newspapers and radio stations.

Ralph E. Weber, cooperative observer at Oakland, Md., since September 1903, has the second longest period of service of any present Maryland observer. He was born in March 1887 in Oakland, and has lived all his life on the family farm. Here he makes his daily weather observations, and here he read the lowest surface temperature ever recorded south of the Mason-Dixon line, 40 degrees below zero, on January 13, 1912.

And I want to add my own sincere congratulations and best wishes to these two distinguished gentlemen, on behalf of myself and the entire Nation. Their citation for special merit by the Weather Bureau is a great tribute to their dedicated and unselfish public service. They perform an invaluable and indispensable service to industry, commerce, agriculture, and national defense without fanfare and without sufficient public recognition of their service to the community.

In addition, Mr. Speaker, I should like to include in my comments part of a statement released by the Weather Bureau on February 26, 1959, which illustrates the kind of important function that these volunteer observers fulfill:

The help of cooperative weather observers to record the Nation's climate was started early in the last century, even before the Weather Bureau was established in 1891. Dozens of individuals who had been taking observations at scattered locations were urged by the new Weather Bureau to continue, and hundreds of additional citizens in all parts of the country and from all walks of life soon volunteered to make local weather observations and keep records of climatological data. More than 7,000 citizens now are taking weather observations without pay. The Weather Bureau furnishes observation instruments, such as rain gages and thermometers, and also supplies the record forms on which the observations are logged at least once daily. Observers are drawn from all ranks of life, and by their constant and faithful service have made available to all users an invaluable storehouse of weather data.

Each observer gives an average of about 15 minutes a day to take and record the observations, to answer numerous questions from neighbors in the community about the local weather, and to complete and mail the regular monthly reports. It is estimated that the total time contributed by each observer to the Government over a 50-year period amounts to about 600 8-hour workdays. The daily services of the thousands of voluntary observers would add up to about 80,000 full 8-hour days of work each year provided our citizens without cost.

In addition to the basic job of weather reporting, cooperative observers are occasionally invited to perform a wide variety of special reporting jobs. Some of these jobs in recent years include (a) reporting dates of the stages of development of various plants to assist in special agricultural studies, (b) telephoning special reports to designated collection centers to assist research work on the development and forecasting of tornadoes, and (c) reporting on the accuracy of weather forecasts.

I think we can take renewed inspiration from the high-minded and public-spirited contribution to the Nation that is being made every day by Mr. Oswald and Mr. Weber and by the some 7,000 other Americans who make this important contribution to our knowledge of the weather.

SENATE

THURSDAY, MARCH 5, 1959

Rev. James Roy Smith, minister, Mount Olivet Methodist Church, Arlington, Va., offered the following prayer:

In this historic place, Almighty God, we pause a moment to ask Thy blessing ere we begin our day's work. Make us aware that Thou hast entrusted to this group the power of decision concerning the great issues of our day.

Create within them the awareness that without Thee they are not equal to the task. Make them mindful that the basis upon which they should govern is in accordance with the principles of truth, justice, and honor. Remind them constantly that Thou art the source of truth; Thou art the fount of justice; Thou art the standard of honor; in Thee is to be found their help.

Eternal God, who art the source of all need, the rule of all action, be especially with the Members of the Senate this day. Give them wisdom for their thinking, patience for their problems, understanding for their dealing in human relations, courage for their decisions, and satisfaction for their work. Deliver them from any cowardice that turns its back on new truth, from any complacency that is content with half-truth, and from any pride that thinks it knows all the truth. Make them aware that they best serve their country and their people by keeping themselves close to Thee. Help them to live above the clamor of the crowd, so that they may hear Thy "still, small voice" and follow its message. May this be their guide today and every day. In Thy name we pray. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, March 2, 1959, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, notified the Senate that, pursuant to the provisions of section 8002 of the Internal Revenue Code of

1954, Mr. MILLS, of Arkansas, chairman, Committee on Ways and Means, had appointed Mr. MASON, of Illinois, as a member of the Joint Committee on Internal Revenue Taxation, on the part of the House, to fill a vacancy thereon.

The message announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 75. An act providing for the design of the flag of the United States;

H.R. 1992. An act to repeal section 791 of title 18 of the United States Code so as to extend the application of chapter 37 of title 18, relating to espionage and censorship;

H.R. 2339. An act to revise, codify, and enact into law, title 39 of the United States Code, entitled "The Postal Service";

H.R. 2639. An act to amend section 2385, title 18, United States Code, to define the term "organize" as used in that section;

H.R. 2978. An act to amend section 1870 of title 28, United States Code, to authorize the district courts to allow additional peremptory challenges in civil cases to multiple plaintiffs as well as multiple defendants;

H.R. 3365. An act to authorize the crediting of certain service for purpose of retired pay for nonregular service, and for other purposes;

H.R. 3648. An act to regulate the handling of student funds in Indian schools operated by the Bureau of Indian Affairs, and for other purposes; and

H.R. 4413. An act to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 75. An act providing for the design of the flag of the United States;

H.R. 1992. An act to repeal section 791 of title 18 of the United States Code so as to extend the application of chapter 37 of title 18, relating to espionage and censorship;

H.R. 2339. An act to revise, codify, and enact into law, title 39 of the United States Code, entitled "The Postal Service";

H.R. 2639. An act to amend section 2385, title 18, United States Code, to define the term "organize" as used in that section; and

H.R. 2978. An act to amend section 1870 of title 28, United States Code, to authorize the district courts to allow additional peremptory challenges in civil cases to multiple plaintiffs as well as multiple defendants; to the Committee on the Judiciary.

H.R. 3365. An act to authorize the crediting of certain service for purpose of retired pay for nonregular service, and for other purposes; and

H.R. 4413. An act to provide improved opportunity for promotion for certain officers in the naval service, and for other purposes; to the Committee on Armed Services.

H.R. 3648. An act to regulate the handling of student funds in Indian schools operated by the Bureau of Indian Affairs, and for other purposes; to the Committee on Interior and Insular Affairs.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements made in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the American Republics Affairs Subcommittee of the Committee on Foreign Relations, and the Rural Electrification Administration Subcommittee of the Committee on Agriculture and Forestry were authorized to meet during the session of the Senate today.

On request of Mr. MANSFIELD, and by unanimous consent, the Committee on Labor and Public Welfare was authorized to meet in executive session during the session of the Senate today.

On request of Mr. MANSFIELD, and by unanimous consent, the Antitrust Subcommittee of the Committee on the Judiciary was authorized to meet during the session of the Senate today.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to consider executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

CONVENTION WITH CUBA FOR CONSERVATION OF SHRIMP—REMOVAL OF INJUNCTION OF SECRECY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the injunction of secrecy be removed from Executive B, 86th Congress, 1st session, a convention between the United States of America and Cuba for the conservation of shrimp, signed at Habana, on August 15, 1958, and that the convention, together with the message from the President, may be referred to the Committee on Foreign Relations, and that the President's message may be printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith a convention between the United States of America and Cuba for the conservation of shrimp, signed at Habana on August 15, 1958.

I transmit also, for the information of the Senate, the report by the Acting Secretary of State with respect to the convention.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 5, 1959.*

(Enclosures: (1) Report of the Acting Secretary of State; (2) convention for the conservation of shrimp, signed at Habana on August 15, 1958.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

James W. Riddleberger, of Virginia, to be Director of the International Cooperation Administration, in the Department of State; and

Lampton Berry, of Mississippi, and sundry other persons, for promotion in the Foreign Service.

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service:

Rollin D. Barnard, of Colorado, to be an Assistant Postmaster General;

Geraldine T. Forbus, to be postmaster at Kellyton, Ala.;

George T. Hara, to be postmaster at Honolulu, T.H.; and

Virgil S. Davis, to be postmaster at Anaconda, Mont.

The PRESIDENT pro tempore. If there be no further reports of committees, the nominations on the calendar will be stated.

DEPARTMENT OF COMMERCE

The Chief Clerk read the nomination of Robert J. Dodds, Jr., of Pennsylvania, to be General Counsel of the Department of Commerce.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

FEDERAL AVIATION AGENCY

The Chief Clerk read the nomination of Elwood R. Quesada, of California, to be Administrator of the Federal Aviation Agency.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that this nomination go over for the time being.

The PRESIDENT pro tempore. The nomination will be passed over.

The Chief Clerk read the nomination of James Tolman Pyle, of Maryland, to be Deputy Administrator of the Federal Aviation Agency.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

INTERSTATE COMMERCE COMMISSION

The Chief Clerk read the nomination of Charles A. Webb, of Virginia, to be an Interstate Commerce Commissioner for a term of 7 years expiring December 31, 1965.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

COLLECTOR OF CUSTOMS

The Chief Clerk read the nomination of George N. Sundquist, of Wisconsin, to be collector of customs for customs collection district No. 36, with headquarters at Duluth, Minn., to fill an existing vacancy.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

U.S. COAST GUARD

The Chief Clerk proceeded to read sundry nominations in the U.S. Coast Guard.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDENT pro temproe. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of all these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

EXECUTIVE REPORTS OF A COMMITTEE

Mr. JOHNSTON of South Carolina subsequently said: Mr. President, I desire at this time to present two reports on nominations from the Committee on Post Office and Civil Service.

Mr. President, the nominations of Roger W. Jones to be Chairman of the Civil Service Commission and Rollin D. Barnard to be Assistant Postmaster General for Facilities were unanimously approved by the Committee on Post Office and Civil Service on Tuesday, March 3.

Mr. President, the term of the former Chairman of the Civil Service Commission, Harris Ellsworth, expired last Saturday, February 28, and as a result the Commission is currently operating under the supervision of two Commissioners, one of whom is Acting Chairman. There was an unavoidable delay in the confirmation of Mr. Jones, and since the nominee cannot take office until after he has been confirmed by the Senate, I now ask unanimous consent that his nomination be considered at this time.

Mr. President, I have consulted with the majority leader and with the minority leader, and the request has been cleared on both sides.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from South Carolina? The Chair hears none, and it is so ordered.

Mr. DIRKSEN. Mr. President, I have no objection to the confirmation of the nomination.

The PRESIDENT pro tempore. The clerk will state the nomination.

The Chief Clerk read the nomination of Roger W. Jones to be Chairman of the Civil Service Commission.

The PRESIDENT pro tempore. The question is, Will the Senate advise and consent to the nomination?

The nomination was confirmed.

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

Mr. CARLSON. Mr. President, the Senate has just confirmed the nomination of Roger W. Jones to be a member of the Civil Service Commission. I wish to commend President Eisenhower for sending to the Senate the nomination of Mr. Jones to this important position.

Mr. Jones is a career service employee. He began his service with the Federal Government in 1923. He has held many positions in the Federal Government. He is familiar with the operation of the Government. His background and his present position in the Government, together with his many years of service, not only make him familiar with the problems of the Federal Government's employees, but enable him to render outstanding service in seeing to it that the administrative section of the Government is in good hands.

Mr. President, in November 1953, a very splendid article regarding Mr. Jones was published in Fortune magazine. The article was entitled "This Is a Bureaucrat." I ask unanimous consent that the article be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS IS A BUREAUCRAT

(By Katharine Hamill)

"President Eisenhower today signed 20 bills into law. * * * The legislation was flown from Washington and General Eisenhower penned his signature to them shortly after he arrived at his office at 8 a.m., MST." (Associated Press dispatch from Denver, Aug. 12, 1953.)

The Associated Press correspondent neglected to report that before penning his signature the President read through a letter attached to each bill, a letter summarizing the intention of the bill, its background, and meaning, noting approval or objection from Government agencies concerned with the legislation, and ending with a recommendation from the Budget Bureau for approval or veto. The letters were addressed to "My Dear Mr. President," signed "Respectfully yours, Roger W. Jones, Assistant Director for Legislative Reference."

Roger Warren Jones is a bureaucrat, a paper pusher, a civil servant. Like most of the other 234,000 civilian employees in Washington, he is almost unknown to the public he has served faithfully and well for 20 years. His job in the Budget Bureau as Assistant Director for Legislative Reference is close to the top in civil-service rating, but he is not unrepresentative of many others in the service who devote themselves to running the Government agencies and bureaus regardless of party politics and changes in administration. In his 20 years' service Jones, now 45, has risen from CAF (clerical, administrative, and fiscal) 5 with a salary of $2,000 a year to GS (general schedule) 17 with a salary of $13,400. He heads a staff of 22 legislative analysts, clerks, and stenographers. As one of the major subdivisions of the Budget Bureau, Legislative Reference is part of the Executive Office of the President; Jones and his aids are members of the President's staff. Their functions are to review and analyze all proposed legislation in order to determine its conformity with the President's program and its fiscal impact; to summarize and appraise all bills passed by Congress for the President's information before he takes action; to study all Executive orders and proclamations with an eye to avoiding duplication and confusion. The office is, in short, a clearinghouse for legislation, before and after it is acted upon by Congress. "We try to determine," says Jones, "whether a measure is right or wrong, whether it fits in with the President's overall program, and whether we have the money to pay for it."

In a normal year Jones and his staff process some 5,500 requests and reports from Congress and the agencies, about 1,000 enrolled bills (legislation passed by Congress), and 100 Executive orders and proclamations. The processing is sometimes long-drawn and involved, with dozens of memorandums and letters written in formidable federalese. ("We have to use it to avoid misunderstanding," says Jones. "It's the common language of all Government agencies.") A controversial bill may end up with an inch or more of superimposed paper, may have been the subject of days of conference and discussion as well as research and study. The peakload of work comes at the end of each session of Congress when the legislators push through a big last-minute batch of bills. At the close of the 1st session of the 83d Congress last August, for example, 207 bills (out of the session's total of 515) were passed in the last few days and had to be processed in Jones' office and rushed to President Eisenhower for action within the prescribed 10 days.

On the day before President Eisenhower left for Denver, Jones crossed the street from his office in the old State Department Building to the White House with 72 bills and his 72 covering letters. He stood by with the President's special counsel, Bernard M. Shanley, for an hour and a half to answer questions while the President read and signed. ("He's quick minded. He seems to know what's in the third paragraph before he finishes the second.") In the next week several packets were sent out to Denver by plane, and on the morning before the 10-day deadline Jones ducked across the street with the last 15 bills and turned them over to Shanley, who flew to Denver with them that afternoon.

JONES PROPOSES, IKE DISPOSES

The President, naturally, does not base his decision to approve or disapprove solely on the recommendation of Roger W. Jones, but the summaries and recommendations save his time and facilitate his decision. "It's a great satisfaction, of course, to know our staff work helps him," says Jones. In presenting routine bills to the President, Bernard Shanley groups them according to subject (veterans' benefits, etc.), and introduces them with a verbal report. Such bills are usually quickly signed. More complex or controversial legislation requires more consultation, and may involve policy conferences at the White House. Jones has nothing to do with that. "We do the pro and con, the institutional review. We recommend, but the President and his staff make policy decisions."

When Congress adjourns, the immediate pressure that keeps Jones and his aids working hard and late is off, but there is pending legislation to be reviewed before Congress reconvenes and a constant stream of reports and queries from the agencies coming into the office. (All departments and agencies are required to submit to the Bureau their proposed legislation and reports on bills pending in Congress; congressional committees are not bound by law to consult the Bureau, but many do.) Jones and his staff report on 100 to 150 cases a week all through the year.

Usually about half the legislation enacted is composed of so-called private bills, acts setting aside a section of the Immigration Act to allow the entrance of specific persons, for instance, or acts awarding land patents or veterans' benefits. These are minor bills, but their merits must be closely studied in Jones' office. They must be checked with the Department of State and the Immigration Service or with the Department of the Interior or the Veterans' Administration. Part of Jones' value is that he knows where to check, whom to call, what channels to move through. That is common bureaucratic

knowledge, acquired by long years of service. More important values are Jones' administrative ability and his grasp of the whole legislative program. We're right in the middle of the whole panorama of government. It's a nerve-center operation.

Department and agency men are, necessarily, special pleaders for their own bills, and so are Congressmen. Jones and his staff must review legislation in relation to the general policies of the administration—regardless of the administration's politics or the President's personality. Jones, as he says, is a liberal New England Republican, but that doesn't make him work any more conscientiously now than he did during the Democratic regime. In that respect he resembles the classic conception of a British civil servant. The President is an institution, Jones says; partisan politics don't affect the consideration of most legislation. Politics don't affect Jones' judgment of legislation. Neither have they affected his career in government under Franklin Roosevelt, Harry Truman, and Dwight Eisenhower.

PAPER PUSHER'S DAY

Jones' wide desk in the big, high-ceilinged office in Old State is usually heaped with papers and there are half a dozen blue telephone-call slips stuck on his desk pen when he gets to work at 9. He has been up since 6:30, had a leisurely breakfast, spent three-quarters of an hour reading the Washington Post, and listened to a local broadcast so he can plan his day around any legislative crises. He has driven in from Chevy Chase with his car-pool members (three other Budget Bureau officials) and talked business during the half-hour drive. The first 15 minutes in the office are spent assigning reports on bills to his lieutenants and putting the day's work in motion. There is a staff meeting (the directors and his assistants) at 9:15 every morning.

Staff problems are discussed at the meeting in Mr. Dodge's office at the other end of the long corridor ("saves writing a lot of memos") and Jones gets back to his own room at ten. There are agency reports to read, proposed legislation, requests for information from congressional committees. There is a call from a department's legislative-liaison man, John Adams of Defense, say, or Carl Sapp of Agriculture, or John Carlock of Treasury. One of the department's proposed bills may have come back from Jones's office with a note "not in accord with the President's program" and the liaison man wants to talk it over, to find out just where the difficulty lies so he can try to straighten it out in the department.

At 1 o'clock Jones goes downstairs to the executive cafeteria with two or three other bureau staff members. Over lunch (a salad, maybe, iced tea, and a piece of pie—55 cents) the men talk over problems that have come up during the morning. After lunch, staff members come into Jones's office with the mail, questions are asked about specific reports, decisions made orally to save time. Later, Jones goes across the street to the White House with a briefcase full of papers for Mr. Shanley. Shanley may have questions on pending legislation or on some of the enrolled bills that have to be signed within the next few days. (Except at the rush time when Congress adjourns, Jones tries to send enrolled bills to the President 5 days before he must act upon them.) Another member of the White House staff may ask to see Jones on the wording of an Executive order. Jones may want to check a point of presidential policy with one of the staff.

Back in his own office at 4:30, Jones finds a batch of calls from congressional-committee members and agencies and he is on the telephone most of the rest of the day, except on Thursday, when there is a general top-staff meeting with the director. Official quitting time is 5:30, "but we make no effort to keep it." Jones gets away between 6:00 and 6:30, half the time with a briefcase under his arm.

Jones is happy doing what he is doing, he feels qualified for the job, "although there are days when nothing falls into place and I scream inside," and he can't help knowing he does his job well. Not only Director Dodge and Deputy Director Rowland Hughes think highly of him ("Jones is excellent * * * outstanding"), but so do the department liaison men, White House officials, and his own staff.

There were times when congressional committeemen or department officials resented what they termed the "undue influence" of the Bureau of the Budget on legislation, but that is mostly in the past and most of them now rely on Jones and his staff.

BLAMED BOTH WAYS

Back in 1950, when called before the House Select Committee of Lobbying Activities, Jones testified that "the net effect of the legislative operation of the Budget Bureau has sometimes been construed as an interference with the direct relationship of executive agencies with the Congress, or with the committees of the Congress. On that, I should like to be very categorical.

"Every President of the United States, beginning with President Harding and coming straight down through President Truman, has taken exactly the same position with respect to this Budget Bureau function—that it was not the function of the Budget Bureau in any way to censor the reports of agencies, or to tell them what they might or might not say to committees of Congress. The Bureau's sole role has been to indicate to the agencies the relationship of what they had to say, or the measure they were opposing or advocating, to the President's program. It is perfectly appropriate for the Chief Executive to require that in transmitting a report to the Congress the agency should clearly indicate what the relationship of the measure was to the President's program, or what the relationship of their views with respect to it were."

"The CHAIRMAN. Are you not apt to get blamed both ways, usually by the same group of people, for not having a unified policy on the one hand and having a strict disciplinary policy on the other?

"Mr. JONES. That is correct, but that is pretty much the role of the Budget Bureau straight across the board, and we are, frankly, rather used to it."

Another annoyance that Jones is rather used to is the ridicule, sometimes vilification, of "bureaucrats" by the press and public. He is used to it, but still it makes him angry. That and the jibe "you never had to meet a payroll." He admits that it would be comparatively easy to do a routine job, to push the papers around to the proper departments and let it go at that. But he doesn't want to. In fact, being the kind of man he is, he couldn't.

SOLID NEW ENGLANDER

Roger Jones came to his civil service job by chance, and had been in it 15 years before he realized fully, that it was a career and he was a career man. But it was not by chance that he became a public servant. His inheritance and training had a lot to do with that.

He was born on February 3, 1908, in New Hartford, Conn., a small town 20 miles northwest of Hartford. His father, Henry Roger Jones, Jr., now the elder statesman of New Hartford, was practicing law in those days and running the local weekly, the New Hartford Tribune. The Jones family had been in New England since 1635, and Roger's mother, Eleanor Drake Jones, was old Connecticut, too. The son grew up in a strong New England Congregationalist atmosphere, with 10 generations of Yankee citizens behind him.

After going through local grade school and the Gilbert School in nearby Winsted, Roger was ready for Cornell (where his father had gone before), at 16. He was a good scholar, a battalion commander in the ROTC, and manager of the university musical clubs. After he was graduated with a B.A. in 1928, he spent a year teaching in the Coral Gables (Fla.) Military Academy. The next year he married Dorothy Heyl, Phi Beta Kappa, Cornell, 1929, daughter of a Washington physicist, Paul Renno Heyl. Dorothy was working for a degree in library science at Columbia University and Roger had a job selling books for Doubleday, Doran in New York. He considered going into publishing, but after the crash there wasn't much left to go into, and anyway he found publishing too competitive for his liking.

DEPRESSION YEARS

He decided that what he really liked was teaching American literature, particularly the literature of government and politics. He kept a part-time job with Doubleday while he took an M.A. at Columbia in 1931, and then quit the job to study full time for his doctorate. But life was hard in 1932; he couldn't afford to stay at Columbia, no teaching jobs were open, and his wife was going to have a baby. They went to New Hartford to live with his parents. Roger helped in his father's law office, and got an occasional tutoring job. He was unhappy, even bitter, about a society that wouldn't allow a man to earn a living in his chosen profession. After their first child, Cynthia, was born, the Joneses stayed on in New Hartford long enough to save a small amount of money. With that and a loan, Roger set out for Washington in the fall of 1933 to study in the Library of Congress for his doctor's dissertation. His ambition was to "bridge the gap between belles-lettres and political literature."

It was hard to keep going financially, though, and when his wife's brother-in-law recommended Roger for a temporary job with the Central Statistical Board, he was glad to take it. Jones's job, helping to write a report on the activities of the board, was to last a month, pay him about $200. When the month was up he was offered a 6-month appointment by the board to work on administrative aspects of the general task of coordinating Federal statistics. He needed the money and he thought that practical experience in the Government would be valuable later in academic work. Also, he began to be interested in a government that came down to the level of people's lives through the New Deal programs.

The first appointment was followed by another 6-month stretch. He was classified CAF grade 5, which was automatic for college graduates, at a salary of $2,000 a year, less a 15-percent economy cut. In January 1935 he accepted a regular appointment from the board, expecting to stay for a year or so and accumulate a nest egg so he could continue working for his doctorate. He was an assistant executive officer and in 5 years he rose from CAF–5 to 7 to 9 to 11, taking the civil-service examinations to stay in good standing although he had been classified in the beginning by statutory procedure.

In 1939 the Central Statistical Board was placed in the Bureau of the Budget, which at the same time was moved from Treasury to the Executive Office—where it remains. Jones decided to leave and go back to his studies. Harold D. Smith, then the new Director of the Budget, asked him to stay on to help pull together the Bureau's administrative work. He was made administrative officer, CAF–12, salary $4,600.

WAR YEARS

In addition to his administrative duties for the Bureau, Jones had a hand in setting

up some of the defense organizations before World War II, notably the Office of Facts and Figures under General Donovan. Ever since his ROTC days at Cornell, he had been in the Army Reserve and spent 2 weeks each year in summer training. At Pearl Harbor time he was a Reserve captain of Infantry. He expected regular duty, but Harry Hopkins and Isador Lubin, who were establishing the Munitions Assignments Board, knew Jones' aptitude for staff work and arranged to have him ordered to duty with the Combined Chiefs of Staff, assigned to the board. He stayed there throughout the war, working with American and British officers on munitions pooling and assignment. He worked long, hard hours, rose from captain to major to lieutenant colonel to colonel. The strain caught up with him in 1944 and he was ill for several months, but at the end of the war he was back helping to liquidate the board. For his services he was awarded the Legion of Merit and the Order of the British Empire. Harold Smith asked the Army to release him in 1945 and he went back to Budget to take a hand in liquidating other war agencies. He went back at his pre-war rating, CAF 13, at $6,440 a year. And he still thought he would quit soon to finish his doctorate and go into teaching.

The Joneses had three children, Cynthia, born in 1933, Roger, Jr., born in 1935, and Edward Chapman, born in 1940. They lived in a rented house in Chevy Chase. The family spent the summer in a house they owned in New Hartford, where Jones joined them for his vacation of 26 working days or 5 weeks a year. He still felt more at home in Connecticut than in Washington, and he made a point of keeping in touch with people there, and reading the local weekly so that he wouldn't become "insular or ivory-towerish" in his bureaucratic job. In 1946, after Harold Smith resigned and James E. Webb was made Director of the Budget, Jones was put to work on special assignments (CAF-14) for the bureau's Estimates Division. A year later he was made assistant to the Director for Legislative Liaison (CAF-15), which meant that he was in charge of Bureau contacts with Congress. He spent much of his time on the Hill and became familiar with the workings of House and Senate committees. (Today, Jones seldom sees individual Congressmen. His work is with Congress and he wants to keep it impersonal.)

THE WAY UP

The next step, in 1948, made him Deputy Chief of Legislative Reference. At the same time he began to realize that he was no closer to taking that doctorate than he had been in 1933, that he might as well face the fact that he was not a teacher but a career man in government service. The pay wasn't high, but it was more than he might have made teaching, and there was security in it for himself and his family. He was close to the civil service top and since it was a nonpolitical job he was unlikely to lose it under a new boss or a new administration.

The Joneses sold their New Hartford house and made a substantial down payment on the house they now live in in Chevy Chase. Before long, in 1949, Jones was made chief of the office (his present job). When supergrades were created by law, his job was classified grade 17, which then had a salary of $12,200. The succeeding Directors of the Bureau, Frank Pace and Frederick J. Lawton, kept him on, and when the Republicans came in last January, Joseph M. Dodge, the new Director, made it clear that he wanted everyone except the political appointees at the top to go on working as usual. Mr. Dodge (see "The Banker in the Budget Bureau," Fortune, March 1953) is more involved in the administration's general policymaking than former directors have been and he leaves the second-string jobs in the hands of his assistants. Jones is completely responsible for the work of his aids and for his own decisions; only when serious controversy arises with an agency does he go to the front office. His long administrative training and Army staff work (he learned a lot, he says, from the British on the Munitions Board) serve him well now.

The work of the office is categorized and each aid has charge of a segment. Jefferson Burris, for instance, is in charge of legislation dealing with commerce and finance, James Hyde for international and military affairs, Edward Bowers for enrolled bills (he also drafts most of the covering letters), Harry McKittrick for public works, etc. Mary Sabine, Jones' personal troubleshooter, has worked with him since the thirties; Ann Parshall, his secretary, was secretary to the two former chiefs of the office. Staff members think Jones is a fair and generous boss. "He tells you what he wants," says Mrs. Parshall, "but he lets you do it your own way." Morale is high, contrary to the prevailing climate in certain other Washington offices. Some 40,000 Government people have been fired and another 40,000 vacances have not been filled since the start of the Eisenhower administration; many civil service workers can't be sure of their jobs from one day to another. The Budget Bureau, with comparatively few employees, most of them specialists in the higher grades, has not had severe cutbacks and the offices along the marble-floored corridors are quite calm. Jones' office, is, if anything, understaffed. The men think Jones himself works too hard. "We try to keep work away from him," says Jim Hyde. "We try to make our own decisions, but he keeps everything in his mind and always makes the final decisions."

MEMO TO JONES

Some of the things Jones keeps in his mind are indicated by a typical file attached to one bill signed by the President last August. It concerned legislation to improve factory inspection of food and drugs by removing the necessity of written permission from the factory. The correspondence began on December 29, 1952, under the Truman administration, with a letter from John L. Thurston, acting administrator of the Federal Security Agency, to Frederick Lawton, then Director of the Budget: "There are transmitted to you herewith four copies of a draft bill 'To protect the public health and welfare by restoring authority for factory inspections under the Federal Food, Drug, and Cosmetic Act,' together with four copies of the proposed letter of transmittal to the Speaker of the House of Representatives. Please advise us as to the relationship of this proposed legislation to the program of the President."

The bill and letter were routed to Roger Jones and turned over by him to Earl Radley, his assistant in charge of legislation for labor, welfare, and education. Mr. Radley, in an office memorandum on January 14, 1953, proposed certain word changes and suggested the idea be developed "that from a budgetary standpoint inspection is the most inexpensive and practical method of regulation." The memo further noted that Mr. Jones already had checked Justice and telephoned a "no objection" clearance to Rufus Miles at FSA. The telephone conversation was confirmed by letter on January 15. The Treasury and the Federal Trade Commission were asked for opinions and returned "no comment" letters.

UNDER NEW ADMINISTRATION

On January 26 Senator H. Alexander Smith wrote Mr. Dodge, asking for a report on the bill, and the letter came to Jones's office. On March 2, Oveta Culp Hobby, the new administrator of FSA (later Secretary of the Department of Health, Education, and Welfare), wrote Senator SMITH and Congressman WOLVERTON urging passage of the legislation (S. 835 and H.R. 2769), and 2 days later copies of these letters were sent to Jones with a covering note saying "These reports were cleared by telephone with Mr. Bowers of the Bureau by Mr. Ellenbogen of this Agency." On March 16 the Budget Bureau advised Senator SMITH that enactment of the legislation would be in accord with the President's program.

On July 20, Senator SMITH sent a revised bill, H.R. 5740, which had been passed by the House, to Mr. Dodge (Jones) asking for a report at the earliest possible moment. On July 24 there was a yellow memo from Ellenbogen in H.E.W. to Jones sending copies of the proposed report to the Senate committee, and asking for quick review. Miles, said the memo, would call. On July 27 there was a blue memo to Jones from Radley saying clearance was being rushed, with a penciled addition for the record, "Mr. Jones advised Rufus Miles NOB (no objection)." Another blue memo on the same date came from H.E.W.; the bill, it said, was not perfect, but would meet basic needs. On July 30, Lane of H.E.W. submitted Mrs. Hobby's recommendation to Roger Jones, "this report was cleared by telephone with you by Mr. Miles of this Department." On August 3 the bill was passed by the Senate.

FINAL PROCESSING

The next day Mr. Jones wrote Justice and HEW for their reports on the enrolled bill. On August 6, Justice replied that it had no objection, and Mrs. Hobby wrote to Mr. Dodge, "This is in response to Mr. Jones's letter of August 4. The legislation * * * may limit the inspection authority. * * * Whether and to what extent this legislative history may adversely affect enforcement of the law and indicate the desirability of amendatory legislation can only be determined on the basis of accumulated experience under the new law." Mrs. Hobby recommended that the bill be approved.

On August 7, Roger W. Jones wrote his covering letter to the President. The bill, he said, would provide basic inspection authority although it might not provide all the authority considered necessary. "The constitutionality of the proposed legislation was questioned during the course of its consideration by the Congress. We believe that the presumption of constitutionality attaching to measures passed by the Congress should be accorded to H.R. 5740 and that any question in this regard should be left to the judiciary." He pointed out that HEW recommended approval and that Justice interposed no objection. "In view of the urgent need for legislation to enable the Food and Drug Administration to carry on its inspection program, the Bureau of the Budget recommends that the bill be approved." The same day the bill was signed by President Eisenhower.

AT THE END OF THE DAY

Jones comes home from work about 6:30 in the evening, tired, with a clear conscience. After supper with the family, he and his wife may sit for awhile on the terrace by the fish pool out in the backyard or help Edward with his homework. Later Jones takes a look at the Evening Star and settles down to an hour's reading of reports or the CONGRESSIONAL RECORD. Perhaps he and his wife will go for a walk in the evening or take a drive or drop in on friends for a talk. They don't entertain often, don't like big cocktail parties or official affairs.

Jones doesn't have much time for reading; when he does, it is usually history or poetry, particularly Browning. ("I even play around with verse forms myself sometimes. Very relaxing.") He likes to garden, but doesn't have time to do more than keep up the lawn and shrubbery. When Congress is not in session, he has Saturday afternoons off and can catch up on such chores as getting his hair cut or having the car, a

1951 Chevrolet, greased. On Sundays there are the morning papers to read, church, dinner, a call on Mrs. Jones' mother and father. Occasionally Jones takes Edward to a baseball or football game in the afternoon. More often he takes a walk or works in the yard.

The house at 10 West Leland, a quiet, shady street in Chevy Chase, is unpretentious and comfortable. Edward, 13, is the only child at home now. Cynthia is married and has a daughter of her own. Roger Jr., went to Cornell as a freshman this year. Mr. and Mrs. Jones give time and energy to All Saints Church, the Community Chest, and the Washington Institute of Mental Hygiene, but Mrs. Jones is not content to be just a middle-aged do-gooder. She has put her library-science degree to work and has taken a part-time job with the Montgomery County Library. She likes it, and even a small addition to Jones' salary helps. She has a cleaning woman once a week, but does the rest of the work herself, the cooking and dusting and most of the washing and ironing.

BUDGETEER'S BUDGET

As might be expected, the Joneses keep a careful budget—and stick to it. From the $13,400 salary, $2,147.12 is deducted for income tax and $804 for retirement, leaving take-home pay of $10,448.88 a year. Ceilings have been fixed on regular recurrent items in the monthly budget. They total $706 a month and include college expenses for Roger Jr.; payment on the mortgage (now reduced to $9,000); an allowance of $1 a day for each member of the family for food (plus milk, eggs, and butter at $30 a month); utilities, cleaning, gas and oil for the car; church; newspapers, Edward's allowance; recreation, medical and dental bills. The Joneses allow $60 a month to meet all their clothing and other purchases from Washington stores. A repair-and-maintenance account of $30 a month is kept for the house. Jones allows himself $40 a month for personal expenses, including lunches.

When all these items are accounted for, there is left an annual balance of $1,976.88. This is reserved for paying bills that accrue on an annual basis. This year the balance is allocated as follows:

Life insurance	$536.00
Household and car insurance	166.00
House taxes	375.00
Maryland income tax	160.00
Federal income tax (in addition to the deducted tax)	200.00
Charities	150.00
Water	40.00
Car repair and upkeep	100.00
Reserve for contingencies	249.88
Total	1,976.88

So long as the boys are being educated and the house is being paid for, not much money will be left in the bank at the end of the year. But a good thing about a civil-service job is the security it offers. If Jones works another 10 years, as he intends to do, he can retire from Federal service at the age of 55 with an annual pension computed on the basis of 1½ percent for each year of service, figured on his highest 5 years' overall salary. After 30 years that will mean an annuity of something over $5,000. If he should die, Dorothy and the children would get a pension of half the annuity he had earned at the time of his death, plus his life insurance. The pension is one reason that he has turned down several offers of higher-paid positions in private industry. One reason. The others are that he likes his work and does it well. And above and beyond them all is his sense of duty. He is serving the President of the United States (whether a Democrat or a Republican) and the people of the United States to the best of his ability. And when he leaves the Government in 1963 he intends to go on serving, either as a teacher ("I feel I have an obligation to pass on to others what I have learned here") or in some local office ("I shall have done my duty at the Federal level, but I owe something to Connecticut and New Hartford, too"). If he can't get a teacher's post at Cornell, his first choice, or Wesleyan or the University of Connecticut, he probably will go back home and run for selectman or the legislature.

Roger Jones is pleasantly content with his life and work. He makes enough money to live comfortably and to educate his children and provide for the future. He is devoted to his family, and to his job. "God and the Government," he says, "have been very, very good to me."

Mr. KEATING. Mr. President, will the Senator from Kansas yield to me?

Mr. CARLSON. I am glad to yield to the Senator from New York.

Mr. KEATING. I served with Roger Jones during World War II, and came to know a great deal about his capabilities. So I am happy to join in commendation of the President for sending to the Senate the nomination of Mr. Jones, and to speak in the highest terms—as has the Senator from Kansas—of the outstanding record which I am sure Mr. Jones will make in his new position.

Mr. CARLSON. Mr. President, the statement which has just been made by the junior Senator from New York is typical of the statements I have heard from everyone who has had the privilege of working with Mr. Jones during his many years of public service.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

AMERICANS WILL STAND FIRMLY BEHIND THE PRESIDENT IN SUPPORT OF AMERICAN POLICY

Mr. JOHNSON of Texas. Mr. President, the President has told us that there is an easing on Russia's stand on Berlin. I believe this arises from the fact that America has demonstrated unity on this issue.

In my judgment, this country will continue to be united. The President will find—and Khrushchev will note—that Americans will stand firmly behind the President in support of American policy.

Mr. President——

The PRESIDENT pro tempore. The Senator from Texas is recognized.

COMMITTEE SERVICE

Mr. JOHNSON of Texas. Mr. President, the majority leader has recommended the appointment of the Senator from Massachusetts [Mr. KENNEDY] to the Joint Economic Committee. This is a result of the increased majority membership, and is pursuant to the ratio provided for under Public Law No. 1. The recommendation is based upon discussions with various persons who are concerned.

The Joint Economic Committee is set up to be representative of the standing committees of the Senate. Senator KENNEDY, as a Democratic member of the Committee on Labor and Public Welfare, will fill an important gap.

It is also essential, in my opinion, that a Senator from the industrial east should serve on this committee.

This, I believe, will be a very fine appointment. Senator KENNEDY is experienced, able, and prudent. He can bring to the assignment not only his background from the Labor Committee, but also the knowledge he gained as a member of the Small Business Committee—a position which he gave up 2 years ago only because it was necessary to make room for other Senators in need of committee assignments.

Mr. DIRKSEN. Mr. President, will the majority leader yield?

Mr. JOHNSON of Texas. I yield.

Mr. DIRKSEN. The law is quite specific—namely, that membership on the Joint Economic Committee shall conform, insofar as possible, to the party ratios in the Senate. This nomination is in pursuance not only of the law, but also of the discussion we have had. I think it consummates that action.

Mr. JOHNSON of Texas. I thank the Senator from Illinois.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following communications and letters, which were referred as indicated:

REPORT ON COOPERATION OF THE UNITED STATES WITH MEXICO IN ERADICATION OF FOOT-AND-MOUTH DISEASE

A letter from the Under Secretary of Agriculture, reporting, pursuant to law, that during the month of January 1959 there have been no significant developments to report relating to the cooperative program of the United States with Mexico for the control and eradication of foot-and-mouth disease; to the Committee on Agriculture and Forestry.

REPORT ON PROPERTY ACQUISITIONS BY OFFICE OF CIVIL AND DEFENSE MOBILIZATION

A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, reporting, pursuant to law, on property acquisitions by that Office, for the quarter ended December 31, 1958; to the Committee on Armed Services.

REPORT OF SMALL BUSINESS ADMINISTRATION

A letter from the Administrator, Small Business Administration, Washington, D.C., transmitting, pursuant to law, a report of that Administration, covering operations between July 1, 1958, and December 31, 1958 (with an accompanying report); to the Committee on Banking and Currency.

REPORT ON LIQUIDATION OPERATIONS OF RECONSTRUCTION FINANCE CORPORATION

A letter from the Administrator, Small Business Administration, Washington, D.C., transmitting, pursuant to law, a report on the progress made in liquidating the assets formerly held by the Reconstruction Finance Corporation which were transferred to the Administrator of Small Business Administration, for the quarterly period ended September 30, 1958 (with an accompanying report); to the Committee on Banking and Currency.

EXCLUSION FROM GROSS INCOME AMOUNTS PAID BY THE UNITED STATES TO CERTAIN NONRESIDENT ALIEN EMPLOYEES

A letter from the Secretary of the Treasury, transmitting a draft of proposed legis-

lation to amend the Internal Revenue Code of 1954 to exclude from gross income amounts paid by the United States to certain nonresident alien employees or their beneficiaries (with an accompanying paper); to the Committee on Finance.

EXTENSION OF AUTHORITY FOR MAINTENANCE OF CERTAIN OFFICES IN THE REPUBLIC OF THE PHILIPPINES

A letter from the Administrator, Veterans' Administration, Washington, D.C., transmitting a draft of proposed legislation to extend the authority of the Administrator of Veterans' Affairs to maintain offices in the Republic of the Philippines (with accompanying papers); to the Committee on Finance.

REPORTS PRIOR TO RESTORATION OF BALANCES, U.S. SECRET SERVICE

A letter from the Acting Secretary of the Treasury, transmitting, pursuant to law, two reports of the U.S. Secret Service covering restoration of balances withdrawn from appropriation and fund accounts under the control of the Treasury Department, as of February 9, 1959 (with accompanying reports); to the Committee on Government Operations.

REPORT ON REVIEW OF LOAN GUARANTEE PROGRAM, CIVIL AERONAUTICS BOARD

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on review of the loan guarantee program, Civil Aeronautics Board, dated June 30, 1958 (with an accompanying report); to the Committee on Government Operations.

AUDIT REPORT ON ABACA FIBER PROGRAM

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Abaca fiber program administered by General Services Administration, fiscal year 1958 (with an accompanying report); to the Committee on Government Operations.

SPECIAL COMMISSION ON TELECOMMUNICATIONS

The President pro tempore laid before the Senate a communication from the President of the United States, addressed to the President of the Senate, recommending that the Congress establish a Special Commission on Telecommunications, to be composed of five members, appointed by the President; which was referred to the Committee on Interior and Insular Affairs.

REPORT ON SALINE WATER DEMONSTRATION PLANTS

A letter from the Secretary of the Interior, reporting, pursuant to law, on the construction and operation of saline water demonstration plants; to the Committee on Interior and Insular Affairs.

PROPOSED CONCESSION CONTRACTS IN HOT SPRINGS NATIONAL PARK, ARK.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract with DeSoto Hotel and Baths, Inc., in Hot Springs National Park, Ark. (with accompanying papers); to the Committee on Interior and Insular Affairs.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract with Jack Tar of Arkansas, Inc., in Hot Springs National Park, Ark. (with accompanying papers); to the Committee on Interior and Insular Affairs.

AUTHORIZATION FOR COAST GUARD TO SELL CERTAIN SUPPLIES

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to amend title 14, United States Code, entitled "Coast Guard," to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

ESTABLISHMENT OF COMMISSION ON TELECOMMUNICATION MANAGEMENT

A letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting a draft of proposed legislation to establish a commission to study and report on the U.S. telecommunication resource with special attention to the radio spectrum (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Three letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

AUDIT REPORT OF ARMY AND NAVY LEGION OF VALOR OF THE UNITED STATES OF AMERICA, INC.

A letter from the Navy Cross corporation agent, Army and Navy Legion of Valor of the United States of America, Inc., Washington, D.C., transmitting, pursuant to law, an audit report of that corporation, for the period July 24, 1957, through July 17, 1958 (with an accompanying report); to the Committee on the Judiciary.

CHANGE OF BASIS FOR FINANCING MILITARY SERVICE CREDITABLE UNDER RAILROAD RETIREMENT ACT AND SOCIAL SECURITY ACT

A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to amend the Railroad Retirement Act and the Social Security Act to change the basis for financing military service creditable under these acts, and for other purposes (with accompanying papers); to the Committee on Labor and Public Welfare.

RESTORATION OF AUTHORITY OF POSTMASTER GENERAL TO ADJUST CERTAIN POSTAGE RATES

A letter from the Postmaster General, transmitting a draft of proposed legislation to restore the authority of the Postmaster General to adjust the postage rates for airmail weighing in excess of 8 ounces, and for other purposes (with an accompanying paper); to the Committee on Post Office and Civil Service.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Montana; to the Committee on Appropriations:

"HOUSE JOINT MEMORIAL 2

"Joint memorial of the Senate and House of Representatives of the State of Montana to the President of the United States, Dwight D. Eisenhower; Senator James E. Murray, of Montana; Senator Mike Mansfield, of Montana; Congressman Lee Metcalf, of Montana; Congressman LeRoy Anderson, of Montana; the Committee on Appropriations of the U.S. Senate; the Committee on Appropriations of the U.S. House of Representatives; the Committee on Interior and Insular Affairs of the U.S. Senate; the Committee on Interior and Insular Affairs of the U.S. House of Representatives; the Committee on Public Works of the U.S. House of Representatives; the Secretary of the Interior, Fred A. Seaton; the Commissioner of the Bureau of Reclamation, Wilbur A. Dexheimer; the Secretary of the Army, Wilber M. Brucker; the Director of the Budget, Maurice H. Stans; requesting the introduction and enactment into law of the necessary and proper legislation to authorize and provide funds to start the construction of Yellowtail Dam on the Big Horn River in the State of Montana for 1959

"Whereas since the turn of the century, men of good will and great vision have labored long and wisely to bring Yellowtail Dam into being; and

"Whereas many and high were the hurdles and obstacles that had to be overcome before construction of the Yellowtail Dam could be started; and

"Whereas one by one these many obstacles preventing the construction of Yellowtail Dam were overcome, until one alone remained, and that one was the acquiring of the dam site, upon which the proposed Yellowtail Dam would in time be built, from the Crow Indian Tribe; and

"Whereas that one remaining obstacle, the acquiring of the Yellowtail Dam site, has, due to the wise action of the last Congress, been overcome with the paying of $2½ million to the Crow people for this valuable piece of property; and

"Whereas the American people have a large investment in the proposed Yellowtail Dam; and

"Whereas no returns can be had from the moneys already invested in Yellowtail Dam until said Yellowtail Dam is constructed: Now, therefore, be it

"Resolved by the 36th Legislative Assembly of the State of Montana now in session (the Senate and House of Representatives concurring), That the Congress of the United States be requested and urged to appropriate the sum of $10 million so that the construction of the sorely needed Yellowtail Dam project may begin at once; be it further

"Resolved, That the amendment include reservation of a block of power for Montana; be it further

"Resolved, That copies of this memorial be submitted by the Secretary of the State of Montana to each of the individuals, and to the chairmen of each of the committees mentioned in this memorial, as well as to the presiding officers of both Houses of the U.S. Congress, RICHARD M. NIXON and SAM E. RAYBURN.

"JOHN J. MACDONALD,
"Speaker of the House.
"PAUL CANNON,
"President of the Senate."

A joint resolution of the Legislature of the State of Alaska; to the Committee on Banking and Currency:

"SUBSTITUTE FOR HOUSE JOINT RESOLUTION 1

"Be it resolved by the Legislature of the State of Alaska in the first legislature, first session assembled:

"To the President of the United States; the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, the Secretary of Commerce, the Chairman of the Commerce Committees of the U.S. Senate and House, U.S. Senator Mike Mansfield, U.S. Senator E. L. Bartlett, U.S. Senator Ernest Gruening, U.S. Representative Ralph Rivers.

"The first Legislature of the State of Alaska respectfully represents:

"The prosperity of the United States in general and the State of Alaska in particular depends in large measure upon the successful utilization of their natural resources with which both are so generously endowed.

"The production of gold, until recent years, played a large and important role in the development of America.

"The decline in U.S. gold production is the result of the following factors all dating from 1934:

"(1) Price of gold being artificially fixed at $35 an ounce;

"(2) The tripling of wage and other production costs; and

"(3) Prohibition against U.S. producers of gold selling on the open world market.

"The revival of the Alaska gold industry would not only be of enormous importance to the economy of the State but would also tend to stabilize and strengthen the position of the United States as the leader of the free enterprise system.

"Alaska's legislators urge various reasons for this resolution, among them are:

"(1) Increase in the price of gold by the United States and the free nations would broaden the credit base of world trade.

"(2) Increased employment and prosperity would result and the market for our national exports would be extended without further dependence on foreign trade subsidies in the form of loans and gifts to other nations.

"(3) Loss of United States gold reserves would be halted.

"(4) Strengthening of commodity markets so essential to the stability of restless people in other nations would result.

"(5) It will counter the Russian attempt to gain control of world trade through increased production of their gold.

"The first Legislature of the State of Alaska, therefore, respectfully urges the enactment of congressional legislation that will raise the fixed price of gold to $70 an ounce as proposed by Senators MANSFIELD, BARTLETT, GRUENING, and Congressman RIVERS, in their bills now before the U.S. Congress.

"Passed by the house February 10, 1959.

"WARREN A. TAYLOR,
"Speaker of the House.

"Attest:

"ESTHER REED,
"Chief Clerk of the House.

"Passed by the senate February 16, 1959.

"WILLIAM E. BELTZ,
"President of the Senate.

"Attest:

"KATHERINE T. ALEXANDER,
"Secretary of the Senate."

A resolution of the Legislature of the State of Alaska; to the Committee on Finance:

"HOUSE RESOLUTION 5

"Resolution relating to the Federal excise tax on gasoline

"Be it resolved by the House of Representatives, First Alaska Legislature, in first session assembled:

"Whereas since the State gasoline tax has been historically and rightfully a State tax; and

"Whereas the gasoline tax has traditionally provided the major portion of the funds needed by the States to construct and maintain their highway systems; and

"Whereas in 1932, the Federal Government also imposed an excise tax on gasoline, as a temporary, emergency, revenue-producing measure; and

"Whereas the expressed, and reaffirmed, intent of Congress to vacate this tax field has not been carried out; and

"Whereas instead, the original Federal excise tax on gasoline has been continued and increased by 200 percent; and

"Whereas the mounting Federal tax on this product threatens to preempt this legitimate tax source belonging by priority and equity to the States; and

"Whereas further increase in the Federal gasoline tax rate would lead to serious restriction upon the ability of the States to secure funds for needed highway improvements: Now, therefore, be it

"Resolved, That the House of Representatives of the First Alaska Legislature in first session assembled does respectfully record its opposition to any further increase in the present Federal excise tax on gasoline; and be it further

"Resolved, That a copy of this resolution be transmitted to the office of the President of the United States; to the Members of the U.S. House of Representatives; to the Members of the U.S. Senate; to the chairman of the Ways and Means Committee of the House of Representatives; to the chairman of the Finance Committee of the U.S. Senate; to the Honorable E. L. BARTLETT and the Honorable ERNEST GRUENING, U.S. Senators from the State of Alaska; and to the Honorable RALPH J. RIVERS, U.S. Representative from the State of Alaska.

"Passed by the house February 17, 1959.

WARREN A. TAYLOR,
"Speaker of the House.

"Attest:

"ESTHER REED,
"Chief Clerk of the House."

A joint resolution of the Legislature of the State of Wyoming; to the Committee on Interior and Insular Affairs:

"JOINT MEMORIAL 1

"Joint memorial memorializing the Congress of the United States of America with reference to the opposition of the people of the State of Wyoming to any form of Federal, regional or watershed rules or regulations set up either by legislative act or Executive order, in which the States involved would have no real voice in administration thereof

"Whereas any form of Federal, regional or watershed authority, however disguised, would supersede and nullify existing State laws under which water users have acquired water rights and by which these rights have been protected and administered; and

"Whereas existing water rights established under Wyoming State law would be subject to condemnation proceedings under provisions of acts creating such Federal authority; and

"Whereas the citizens of Wyoming would have no voice in the selection of the directors of the Federal authority, who would have unlimited control over the development of their land and water resources, and

"Whereas under a Federal authority, the only voice permitted the people of the State of Wyoming and their local and State officials would be of an "advisory" nature; and

"Whereas such Federal legislation would place exclusive jurisdiction over water litigation involving the Federal authority in the Federal courts; and

"Whereas such Federal authority would tend to create a Federal power monopoly; and

"Whereas such Federal legislation would to a large extent reduce the States to mere geographical entities, replacing the present powers of local and State governments with a superstate in which the final control is vested in the Federal Government; and

"Whereas such Federal legislation would add nothing to the program of development of land and water resources which is not already available through existing State and Federal agencies, except better coordination which could be accomplished through more democratic means: Now, therefore, be it

"Resolved by the House of Representatives of the 35th Legislature of the State of Wyoming (the senate of such legislature concurring) That the President and Congress of the United States of America, be and they are hereby memorialized to consider against any proposed legislation or Executive order setting up any form of Federal, regional or watershed authority, however disguised, the strong, unequivocal and unalterable opposition of the people of the State of Wyoming to any such proposition and their determination to resist by every device at their command any such usurpation of the rights, laws, customs, powers, and sovereignty of their local and State governments; be it further

"Resolved, That certified copies hereof be promptly transmitted to the President and Vice President of the United States, the Speaker of the House of Representatives of said Congress, U.S. Senator JOSEPH C. O'MAHONEY, U.S. Senator GALE W. MCGEE, and Representative in Congress E. KEITH THOMSON, to the Secretary of the Interior, the Commissioner of Reclamation and to the Governors and legislatures of the following States: Alaska, Arizona, California, Colorado, Idaho, Iowa, Kansas, Minnesota, Missouri, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, and Washington.

"NORMAN BARLOW,
"President of the Senate.
"JAY R. HOUSE,
"Speaker of the House.

"Approved February 26, 1959:

"J. J. 'JOE' HICKEY,
"Governor."

A joint resolution of the Legislature of the State of Idaho; to the Committee on Government Operations:

"HOUSE JOINT MEMORIAL 3

"Joint memorial to the honorable Senate and House of Representatives of the United States in Congress assembled

"We, your memorialists, the Legislature of the State of Idaho, as assembled in its 35th session, do respectfully represent that:

"Whereas the State of Idaho and the other States of the United States of America are confronted with difficult fiscal problems in connection with their respective general funds because of the loss of revenue potential which has been precipitated by the heavy tax loads enacted by the U.S. Congress on the taxpaying public of the various States; and

"Whereas the tax sources have been thoroughly exploited to the saturation point; and

"Whereas the State governments are unable to match many of the Federal funds available to the States because of insufficient State revenue income for matching funds; and

"Whereas the States have very little or no control in the manner in which these matching funds are appropriated and expended; and

"Whereas a reduction in Federal expenditures would be accomplished, and at the same time make available urgently needed funds to the general fund of the State of Idaho, and the general funds of the various other States of the United States: Now, therefore, be it

"Resolved by the House of Representatives, State of Idaho (the Senate concurring), That we most respectfully urge upon the Congress of the United States of America that 15 percent of all Federal income taxes paid into the Federal Treasury by the public in the State of Idaho and the various other States be retained in the State of Idaho and the various other States to be placed in the general funds of the respective States; be it further

"Resolved, That a reduction of 15 percent be made in Federal grants in aid connected with State legislative appropriations, to the State of Idaho and the various other States; be it further

"Resolved, That the State of Idaho respectfully requests that the Governors of the various States urge their respective States to take similar action; be it further

"Resolved, That the Secretary of State of the State of Idaho be authorized and he is hereby directed to immediately forward certi-

fied copies of this memorial to the Senate and the House of Representatives of the United States of America, to the Senators and Representatives in Congress from this State, and to the Governors of all the 49 States and the Territory of Hawaii."

A joint resolution of the legislature of the State of Oregon; ordered to lie on the table:

"SENATE JOINT MEMORIAL 1

"To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

"We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

"Whereas there have been, from the earliest hours of our history as a State, the closest ties and relationship between the people of the Sandwich Islands now the Territory of Hawaii, and the people of Oregon; and

"Whereas these fine Americans have long ago fully demonstrated their capacity to govern themselves as a free commonwealth within the American Union; and

"Whereas we know and respect the people of Hawaii as a result of close association through commercial, cultural, recreational and social exchanges; and

"Whereas the State of Oregon, alone among the States, has enriched our association and strengthened our bonds with the people of Hawaii through the free interchange of territorial students in our State system of higher education; and

"Whereas this February 14 is the 100th anniversary of the admission of Oregon to the Union; and

"Whereas the admission of Oregon's respected friend Hawaii to the sisterhood of States of the Union would further strengthen these bonds and would give added cause for jubilation on the commemoration of our own Statehood: Now, therefore, be it

"Resolved by the Senate of the State of Oregon (the House of Representatives jointly concurring therein), That the Congress of the United States be memorialized to grant immediate statehood, under legislation now pending, to our sister Hawaii, as the 50th State of the United States; and be it further

"Resolved, That copies of this memorial be sent to the President of the United States, to the President of the Senate and the Speaker of the House of Representatives of the United States, to the delegate in Congress from Hawaii and to all members of the Oregon congressional delegation.

"Adopted by senate February 11, 1959.

"MEDA COLE,
"Chief Clerk of Senate.
"WALTER WEAMON,
"President of Senate.

"Adopted by house February 13, 1959.

"ROBERT S. DUNCAN,
"Speaker of House."

A resolution adopted by the National Association of Attorneys General, at Chicago, Ill., relating to internal security; to the Committee on the Judiciary.

RESOLUTIONS OF GENERAL COURT OF MASSACHUSETTS

Mr. SALTONSTALL. Mr. President, on behalf of my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], and myself, I present two resolutions of the General Court of the Commonwealth of Massachusetts memorializing Congress to investigate and determine the causes of inflation, and to enact remedial legislation; and relative to the reenactment and enforcement of legislation to implement decisions of the Supreme Court of the United States. I ask unanimous consent that the resolutions may be appropriately referred.

The PRESIDENT pro tempore. The resolutions will be received, appropriately referred, and, under the rule, will be printed in the RECORD.

The resolutions were referred as follows:

To the Committee on Banking and Currency:

"RESOLUTION MEMORIALIZING CONGRESS TO INVESTIGATE AND DETERMINE THE CAUSES OF INFLATION AND TO ENACT REMEDIAL LEGISLATION

"Whereas inflation, as evidenced by price increases which continually raise the cost of living, is partly responsible for the soaring tax rates of our cities and towns as well as for the ever-mounting annual budgets of the States; and

"Whereas inflation is undermining the value of the endowments of colleges, hospitals, libraries and other institutions and rendering inadequate individual provisions for retirement security: Therefore be it

"Resolved, That the General Court of Massachusetts memorializes the Congress of the United States to take immediate steps to investigate and determine the causes of inflation and, on the basis of its findings, to enact such remedial legislation as will tend to stabilize our economy; and be it further

"Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the President of the United States, the presiding officer of each branch of the Congress and to each Member thereof from this Commonwealth.

"House of Representatives, adopted, February 16, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"Senate, adopted in concurrence, February 18, 1959.

"IRVING N. HAYDEN,
"Clerk."

The PRESIDENT pro tempore laid before the Senate resolutions of the General Court of Massachusetts identical with the foregoing, which were referred to the Committee on Banking and Currency:

"RESOLUTIONS MEMORIALIZING THE CONGRESS AND THE PRESIDENT OF THE UNITED STATES TO ENACT AND ENFORCE LEGISLATION TO IMPLEMENT THE DECISIONS OF THE SUPREME COURT OF THE UNITED STATES OUTLAWING SEGREGATION IN THE PUBLIC SCHOOL SYSTEM

"Whereas the Supreme Court of the United States, on the 17th day of May 1954, by unanimous decision, held that 'in the field of public education the doctrine of separate but equal has no place'; and

"Whereas the same Court expressed its desire that its decision should be complied with 'with all deliberate speed'; and

"Whereas the 14th amendment to the Constitution of the United States provides that no State shall deny to any person within its jurisdiction equal protection of the laws; and

"Whereas the interests of orderly government demand that respect and compliance be given to orders issued by courts possessed of jurisdiction of persons and subject matter: Therefore, be it

"Resolved, That the General Court of Massachusetts respectfully urges the Congress and President of the United States to enact and enforce legislation to implement the decisions of the Supreme Court of the United States outlawing segregation in the public school system; and be it further

"Resolved, That the Secretary of the Commonwealth transmit forthwith copies of these resolutions to the President of the United States, to the presiding officer of each branch of the Congress of the United States, and to each member thereof from this Commonwealth.

"House of Representatives, adopted, February 16, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"Senate, adopted in concurrence, February 18, 1959.

"IRVING N. HAYDEN,
"Clerk."

By Mr. KERR:

A resolution of the Senate of the State of Oklahoma; to the Committee on Finance:

"ENROLLED SENATE RESOLUTION 17

"Senate resolution commending Gov. J. Howard Edmondson, Senator Robert A. Trent, Representative Glen Ham, Lloyd Rader and others for working out a program which resulted in an increase for the aged citizens and other welfare clients of Oklahoma

"Whereas the aged citizens and other welfare recipients of Oklahoma will soon receive an increase in their grants; and

"Whereas this increase has resulted from the tireless efforts of certain elected and appointed officials; and

"Whereas the State senate desires to commend these officials: Now, therefore, be it

"Resolved by the Senate of the 27th Legislature of the State of Oklahoma, That Gov. J. Howard Edmondson, Senator Bob A. Trent, chairman of the Senate Social Welfare Committee, Representative Glen Ham, chairman of the House of Representatives Social Welfare Committee, and Lloyd Rader, director of the Department of Public Welfare, be commended for their efforts in working out a program which resulted in a $4 increase per month for the aged citizens and other welfare recipients of Oklahoma; and be it further

"Resolved, That Senator Trent be commended also for his efforts in the several trips he has made to Washington, D.C., in promoting national legislation which resulted in both the recent $4 grant and the very popular hospitalization program for the aged citizens and other welfare recipients; and be it further

"Resolved, That Senator Trent be commended also as author of Senate Resolution 31 of the 1957 session which set up the hospitalization program for the aged citizens of our State and other welfare recipients—the best hospitalization program in the United States; and be it further

"Resolved, That the doctors of medicine and osteopathy, and hospitals of the State who have unselfishly contributed to the medical program be commended; and be it further

"Resolved, That U.S. Senator ROBERT S. KERR and U.S. Senator MIKE MONRONEY and the entire congressional delegation from Oklahoma be commended for their tireless efforts in securing the enacting of legislation in Congress which made possible the increasing of payments under the welfare program of the State of Oklahoma.

"Adopted by the Senate the 26th day of January 1959.

"HAROLD T. GARVIN,
"President of the Senate."

RESOLUTIONS OF ORGANIZATIONS OF THE STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a series of resolutions adopted by organizations of the State of New York.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION 24

A resolution for elimination of unfair foreign competition affecting local industry urged

Whereas an agency for the United States Government has ordered a large steam turbine generator for some $12 million from a foreign country; and

Whereas the city of Schenectady, the Nation's largest builder of large steam turbine generators, has been classified by the Federal Government as a labor surplus area; and

Whereas this classification gives Schenectady a priority for orders from the Federal Government because of Schenectady's high unemployment figure; and

Whereas the large steam turbine department at General Electric in Schenectady is the largest operating department at the company's local plant employing nearly 9,000 persons; and

Whereas an order such as that placed with the foreign country would have kept 600 men working in the department for 1 year at the Schenectady plant; and

Whereas the order was given to a foreign country despite the fact the work could be done in the United States more efficiently and more dependably, particularly on replacement parts, as it affects home defense; and

Whereas the foreign order places American industry and labor in an unfair competitive class due to the lower standard of living in the foreign country: Now, therefore, be it

Resolved, That the Schenectady County Board of Supervisors urge the Congress of the United States of America to take a closer look at the purchasing policies of the various Government agencies with the view of eliminating unfair competition, particularly in the manufacture of heavy apparatus constructed by General Electric Co. and ALCO Products, Inc.; and be it further

Resolved, That the Congress take a closer look at Government policies regarding the awarding of contracts to priority areas where unemployment is high but where the work needed by the Government could be done efficiently and competently; and be it further

Resolved, That the Congress consider the tragic circumstances which could arise in the time of war if power for American cities is supplied by foreign generators needing foreign service; and be it further

Resolved, That copies of the foregoing resolution be forwarded to United States Senators JACOB K. JAVITS, and KENNETH B. KEATING, and Congressman SAMUEL S. STRATTON.

RESOLUTION NO. 6571 OF CITY COUNCIL OF SCHENECTADY, N.Y.

Whereas the Tennessee Valley Authority recently awarded a contract for a large steam turbine generator to a foreign manufacturer, outbidding the General Electric Co.; and

Whereas it is reported that four (4) foreign firms are now bidding against General Electric Co. for a large order soon to be placed by the city of Los Angeles; and

Whereas because of the low-cost labor in foreign countries, it is possible for a foreign firm to outbid a domestic concern; and

Whereas General Electric Vice President W. S. Ginn, estimated that the Tennessee Valley Authority and Los Angeles orders involve a total of more than 3 million man hours of work, enough to supply jobs to 750 office and factory employees for 2 full years; and

Whereas the granting of such contracts to foreign firms will increase our unemployment throughout the Nation, and even more important, will endanger our national security in time of war inasmuch as we might have to rely on foreign labor and foreign skills to maintain equipment in our arsenal of democracy; and

Whereas in the city of Schenectady, the awarding of such contracts to foreign firms effects management not only of the General Electric Co. but Alco Products, Inc. as well, together with the IUE Local 301 and the United Steelworkers of America, AFL–Local 128 Steamfitters, Plumbers, and Helpers, as well as all of the Schenectady business enterprises and their employees: Now, therefore, be it

Resolved, That the council of the city of Schenectady, on behalf of its citizenry indignant because of the jeopardy of their economic security and national war-time stability, vigorously protests the awarding of contracts to foreign powers by governmental units in competition with domestic bidders; and be it further

Resolved, That the present contract between the Tennessee Valley Authority and the C. A. Parsons Co., Ltd., of Newcastle, Great Britain be rescinded; and be it further

Resolved, That before any contract be entered into between the U.S. Government or any agency thereof and any person, firm, or corporation of and located in a foreign country, the entire matter shall be referred to the proper congressional committee for review and approval; and be it further

Resolved, That this resolution be spread upon the minutes of the council of the city of Schenectady and copies thereof be sent forthwith by the clerk of the city of Schenectady to Senator JACOB K. JAVITS, Senator KENNETH B. KEATING, Congressman SAMUEL S. STRATTON, Congressman J. ERNEST WHARTON, Congressman LEO W. O'BRIEN, and Congressman DEAN P. TAYLOR and to each and every other Member of the New York State congressional delegation.

This resolution was unanimously adopted by the council of the city of Schenectady on Monday, February 16, 1959.

FREEMAN K. KELLER,
Clerk of the City of Schenectady.

RESOLUTION ADOPTED BY THE LITHUANIAN RALLY ON FEBRUARY 15, 1959

We, Lithuanian Americans of Greater New York, loyal citizens and residents of the United States, gathered on February 15 of this year of Grace 1959 at Webster Hall in New York City to commemorate the 41st anniversary of the restoration of the independent Lithuanian state after a prolonged eclipse of its liberty;

Voicing once again our indignation at and our protest against the brutal suppression by the Government of the Soviet Union of Lithuania's independence and freedom and her subjugation to ruthless Soviet colonial exploitation, perpetrated at a time when Lithuania was living in peace with the U.S.S.R. and was bound to her by a peace treaty and a nonaggression pact;

Stating that the present Soviet challenge to the West, with Berlin as its direct objective, is aimed at the settlement on Soviet terms of the political problems resulting from World War II, namely, at the legalization and consolidation of Soviet criminal conquests in Europe and at creating conditions for further Communist expansion in Europe and elsewhere;

Considering that the present abnormal and dangerous situation in Europe, characterized by the division of Germany, the subjugation of nine formerly sovereign states of central and eastern Europe, including Lithuania, and by the division of the continent, requires an urgent and global settlement in conformity with the wartime and postwar commitments and pledges of the great powers;

Stressing the indivisibility of the problem of central and eastern Europe, of which the restoration of Lithuania's independence is an integral part, and of that of Germany and the European security system—these problems being the major cause of the present international tension;

Resolve, 1. To appeal to the President, the Secretary of State, and the Congress of the United States firmly to pursue and vigorously to promote their repeatedly declared policy of the restoration of the independence and freedom of Lithuania and other captive countries of central and eastern Europe through free and unfettered elections after the withdrawal of Soviet armed forces and agents, and to reaffirm the determination of the government of this great country not to be party to any agreement or treaty which would confirm or prolong the subjugation of Lithuania, now held in bondage by the U.S.S.R.;

2. To rededicate ourselves to the just cause of Lithuania's independence and freedom and to combat Communist aggression and Soviet-Russian imperialism;

3. To assure the Lithuanian people under Soviet occupation of the indissolubility of our ties and of our unswerving determination to spare no efforts and sacrifices for the attainment of the sacred goal of the Lithuanian nation—its independence and freedom;

4. Actively to support the policy of the U.S. Government aiming at the establishment in Europe and elsewhere of a just and durable peace based on the inalienable right of the respective peoples to governments of their own choosing.

DR. EUGENIJUS NOAKAS,
President.
J. DZIKAS, *Secretary.*

RESOLUTION OF NORTHEAST QUEENS COUNCIL FOR SCHOOLS

Whereas there is still a serious shortage of classrooms and of teachers requiring emergency action on the part of the Federal Government; and

Whereas limited financial resources available to many communities are not adequate to support construction programs of sufficient size to eliminate their classroom shortages and not sufficient to provide proper compensation to their teachers; and

Whereas the national interest requires that the Federal Government assist State and local governments in solving these pressing problems: Therefore be it

Resolved, That the Federal Government provide Federal financial assistance on a grant basis to help meet the problems of inadequate facilities and inadequate teachers' salaries by enacting such Federal aid to education legislation in 1959.

NAOMI GARSTEIN,
President.

NATIONAL ASSOCIATION OF RAILROAD AND UTILITIES COMMISSIONERS RESOLUTION URGING REPEAL OF EXCISE TAXES ON COMMUNICATION SERVICES AND TRANSPORTATION OF PERSONS PASSED ON NOVEMBER 19, 1958

Whereas the Federal excise taxes on public utility and transportation services were initially levied or greatly increased during World War II to help defray war costs and to discourage unnecessary use of such services, and

Whereas Congress has acted to remove a substantial portion of this discriminatory tax burden on public utility and transportation services by elimination of excise taxes on the use of electrical energy and the shipment of goods and property, and

Whereas today, 13 years after cessation of hostilities, the excise taxes on communication services and the for-hire transportation of persons are still in effect and are continuing to discourage the public use of these services which are now the only services, regulated or unregulated, against which any Federal excise taxes are levied, and

Whereas a committee of the 85th Congress rejected a proposal for the enactment of legislation which would have continued the Federal excise tax on local telephone service at a lesser rate and which also would have required the imposition of the balance of this unpopular tax by the individual stages as a means of financing a proposed transfer to the States of certain activities completely unrelated to communication services; and

Whereas the Joint Federal-State Action Committee has recommended that Congress authorize distribution for a period of 5 years, 40 percent of the present Federal excise tax on local telephone service to the States in such amounts as to provide revenues equivalent to 140 percent of Federal grants now being made to the respective States to carry on vocational education, and to construct facilities for abatement of water pollution, which are completely unrelated to communications service, and

Whereas the proposal of the Joint Federal-State Action Committee would tend to cause the States to pass laws imposing excise taxes on local telephone service and would tend to make such taxes a permanent part of the tax structure of both the Federal and State Government: Now, therefore, be it

Resolved, That the National Association of Railroad and Utilities Commissioners is of the opinion that the discriminatory excise taxes on communication and transportation services are not in the public interest, that such taxes should not continue to be levied by the Federal Government; and be it further

Resolved, That any similar tax on communications should not be levied by the individual States against the users of this essential service as a means of financing specific programs which bear no relation to the service taxed; and be it further

Resolved, That Congress is hereby petitioned to terminate the discriminatory excise taxes on communication and transportation services at the earliest possible date; and be it further

Resolved, That the special committee on repeal of excise taxes, the committee on legislation, and the legal officers of the association are hereby authorized to appear on behalf of the association before any committee of Congress at any hearing which may be hereafter held upon legislation pertaining to the above matters and to take such further action as may be appropriate to accomplish the objectives of the association in respect to the repeal of the excise taxes on both communication services and transportation of persons.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with amendments:

S. 50. A bill to provide for the admission of the State of Hawaii into the Union; (Rept. No. 80).

By Mr. STENNIS, from the Committee on Aeronautical and Space Sciences, without amendment:

S. 1096. A bill to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes (Rept. No. 82).

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, without amendment:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law (Rept. No. 81).

By Mr. KEFAUVER, from the Committee on the Judiciary, with amendments:

S. 726. A bill to amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease and desist orders issued thereunder, and for other purposes (Rept. No. 83).

REPORT ENTITLED "ACTIVITIES OF THE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY—1958" (S. REPT. NO. 77)

Mr. KEFAUVER, from the Committee on the Judiciary, submitted a report entitled "Activities of the Subcommittee on Antitrust and Monopoly—1958," pursuant to Senate Resolution 231, 85th Congress, 2d session, as extended, which was ordered to be printed.

REPORT OF COMMITTEE ON THE JUDICIARY ENTITLED "IMMIGRATION AND NATURALIZATION" (S. REPT. NO. 78)

Mr. EASTLAND, from the Committee on the Judiciary, pursuant to Senate Resolution 235, 85th Congress, 2d session, as extended, submitted a report entitled "Immigration and Naturalization," which was ordered to be printed.

REPORT OF COMMITTEE ON THE JUDICIARY ENTITLED "CONSTITUTIONAL RIGHTS" (S. REPT. NO. 79)

Mr. HENNINGS, from the Committee on the Judiciary, submitted a report entitled "Constitutional Rights," pursuant to Senate Resolution 234, 85th Congress, 2d session, as extended, which was ordered to be printed.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BUTLER:

S. 1247. A bill for the relief of Donald O. Olin; and

S. 1248. A bill for the relief of Mrs. Anna Toezser; to the Committee on the Judiciary.

By Mr. BUTLER (for himself and Mr. BEALL):

S. 1249. A bill to permit the use of appropriated funds in purchasing land in connection with the Antietam battlefield site; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. BUTLER when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina:

S. 1250. A bill to amend the Act of July 28, 1916, so as to provide procedures for the adjustment of rates or compensation to be paid to carriers for the transportation of mail;

S. 1251. A bill to provide for the transportation of mail by common carriers;

S. 1252. A bill to provide for the training of postmasters under the Government Employees Training Act; and

S. 1253. A bill to preserve the rates of basic salary of postal field service employees in certain cases involving reductions in salary standing, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. JOHNSTON of South Carolina (by request):

S. 1254. A bill to clarify and make uniform certain provisions of the law relating to special postage rates for educational, cultural, and library materials, and for other purposes; and

S. 1255. A bill to provide, in the event of an emergency evacuation, certain authority relating to the pay of civilian officers and employees on duty outside the United States or at other places designated by the President; to the Committee on Post Office and Civil Service.

By Mr. HARTKE:

S. 1256. A bill for the relief of Lee You Young; to the Committee on the Judiciary.

By Mr. HARTKE (for himself, Mr. CAPEHART, Mr. DOUGLAS, and Mr. DIRKSEN):

S. 1257. A bill granting the consent and approval of Congress to the Wabash Valley Compact, and for related purposes; to the Committee on the Judiciary.

By Mr. ELLENDER (for himself and Mr. LONG):

S. 1258. A bill for the relief of the State of Louisiana; to the Committee on the Judiciary.

By Mr. ALLOTT:

S. 1259. A bill for the relief of Major Elmer L. Greek; to the Committee on the Judiciary.

By Mr. MURRAY:

S. 1260. A bill to grant minerals, including oil and gas, on certain lands in the Crow Indian Reservation, Montana, to certain Indians, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BEALL:

S. 1261. A bill to provide for the enlargement of the Antietam National Cemetery at Sharpsburg, Md.; to the Committee on Interior and Insular Affairs.

By Mr. FULBRIGHT:

S. 1262. A bill to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. FULBRIGHT (by request):

S. 1263. A bill to extend certain privileges and immunities to judges of the International Court of Justice; to the Committee on Foreign Relations.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON:

S. 1264. A bill to amend the act providing for a program to eradicate the dogfish shark on the Pacific coast in order to expand such program; to the Committee on Interstate and Foreign Commerce.

S. 1265. A bill to amend the Vocational Rehabilitation Act in order to provide assistance to the States for certain workshops, rehabilitation facilities, and rehabilitation evaluation services; to the Committee on Labor and Public Welfare.

By Mr. KERR (for himself, Mr. HRUSKA, Mr. RANDOLPH, and Mr. SCHOEPPEL):

S. 1266. A bill providing for the amendment of title 23, section 131, of the United States Code (sec. 122 of the Federal-Aid Highway Act of 1958), to clarify the said section with relation to municipalities and areas zoned under the laws of the States, and to recognize the laws of the States relating thereto; to the Committee on Public Works.

(See the remarks of Mr. KERR when he introduced the above bill, which appear under a separate heading.)

By Mr. KERR (for himself and Mr. MONRONEY):

S. 1267. A bill to set aside certain lands in Oklahoma for the Cheyenne and Arapaho Indians; to the Committee on Interior and Insular Affairs.

By Mr. McNAMARA (for himself, Mr. HART, and Mr. MURRAY):

S. 1268. A bill to provide for notice to States owning surface of lands in which minerals are reserved to Federal Government of proposals to lease such minerals; to the Committee on Interior and Insular Affairs.

By Mr. BUTLER:

S. 1269. A bill authorizing the construction by the Maritime Administration of 30 merchant vessels of appropriate types; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. BUTLER when he introduced the above bill, which appear under a separate heading.)

By Mr. DIRKSEN (by request):

S. 1270. A bill to authorize the use of Great Lakes vessels on the oceans; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. DIRKSEN when he introduced the above bill, which appear under a separate heading.)

By Mr. ANDERSON:

S. 1271. A bill to donate to the Pueblo of Isleta certain Federal property in the State of New Mexico; and

S. 1272. A bill to provide for the extension of certain oil and gas leases; to the Committee on Interior and Insular Affairs.

By Mr. HENNINGS:

S. 1273. A bill to amend title 28 of the United States Code, "Judiciary and Judicial Procedure," and incorporate therein provisions relating to the United States Labor Court, and for other purposes;

S. 1274. A bill to amend title 28 of the United States Code, "Judiciary and Judicial Procedure," and incorporate therein provisions relating to the United States Tax Court, and for other purposes;

S. 1275. A bill to amend title 28 of the United States Code, "Judiciary and Judicial Procedure," and incorporate therein provisions relating to the United States Trade Court, and for other purposes; and

S. 1276. A bill for the relief of Irene Cambouris; to the Committee on the Judiciary.

By Mr. HENNINGS (for himself, Mr. LANGER, and Mr. O'MAHONEY):

S. 1277. A bill to extend to uniformed members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard; to the Committee on the Judiciary.

By Mr. SALTONSTALL:

S. 1278. A bill for the relief of Mary E. Preston, surviving widow of James David Preston; to the Committee on Post Office and Civil Service.

S. 1279. A bill to provide for the appointment of a district judge for the district of Massachusetts; to the Committee on the Judiciary.

By Mr. DODD:

S. 1280. A bill to amend the Immigration and Nationality Act; to the Committee on the Judiciary.

(See the remarks of Mr. DODD when he introduced the above bill, which appear under a separate heading.)

By Mr. YOUNG of North Dakota:

S. 1281. A bill to authorize the Secretary of the Interior to receive from the Devils Lake Sioux Tribe of the Fort Totten Reservation, North Dakota, a deed conveying certain property on such Reservation to the United States, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. YOUNG of North Dakota (for himself, Mr. LANGER, Mr. MUNDT, and Mr. CASE of South Dakota):

S. 1282. A bill relating to acreage allotments for durum wheat; to the Committee on Agriculture and Forestry.

By Mr. MAGNUSON (for himself and Mr. BUSH):

S. 1283. A bill to regulate the interstate distribution and sale of packages of hazardous substances intended or suitable for household use; to the Committee on Interstate and Foreign Commerce.

By Mr. EASTLAND (for himself and Mr. STENNIS):

S. 1284. A bill for the relief of William E. Stone; to the Committee on the Judiciary.

By Mr. ALLOTT (for himself, Mr. MURRAY, Mr. BARTLETT, Mr. BENNETT, Mr. BIBLE, Mr. COOPER, Mr. DIRKSEN, Mr. GRUENING, Mr. MANSFIELD, Mr. MORTON, and Mr. MOSS):

S. 1285. A bill to provide for the preservation and development of the domestic fluorspar industry; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. ALLOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS:

S. 1286. A bill to authorize the Secretary of Health, Education, and Welfare to make grants to the States to assist in the provision of facilities and services for the day care of children; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS (for himself and Mr. KEATING):

S. 1287. A bill to provide for the issuance of a postage stamp in commemoration of the 125th anniversary of the granting (at the Rensselaer Polytechnic Institute, Troy, N.Y.), of the first degrees in science and engineering ever granted in any English-speaking country; to the Committee on Post Office and Civil Service.

By Mr. HUMPHREY:

S. 1288. A bill to amend title II of the Social Security Act to increase from $1,200 to $1,800 the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits payable to them under such title; to the Committee on Finance.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY (for himself, Mr. McCARTHY, Mr. PROXMIRE, and Mr. WILEY):

S. 1289. A bill to increase and extend the special milk program for children; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. WILLIAMS of Delaware:

S. 1290. A bill for the relief of Dexter Phillips and Jeanette H. Phillips; to the Committee on the Judiciary.

By Mr. KEATING:

S. 1291. A bill for the relief of Marko Klapan; and

S. 1292. A bill to prohibit eavesdropping under certain circumstances, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bill, which appear under a separate heading.)

By Mr. NEUBERGER:

S. 1293. A bill to provide a temporary 1½-cent increase in the tax on gasoline and the tax on diesel fuel and special motor fuels used in highway vehicles; and

S. 1294. A bill to reduce the rate of percentage depletion for oil and gas wells from 27½ percent to 15 percent; to the Committee on Finance.

S. 1295. A bill to provide for the equitable adjustment of postal rates, and for other purposes; to the Committee on Post Office and Civil Service.

S. 1296. A bill to reimpose the Excess Profits Tax Act of 1950 effective for taxable years ending after June 30, 1959, and beginning before July 1, 1961; to the Committee on Finance.

(See the remarks of Mr. NEUBERGER when he introduced the above bills, which appear under a separate heading.)

By Mr. PASTORE:

S. 1297. A bill for the relief of Salim Menashi Eliahoo Reuben; and

S. 1298. A bill for the relief of Concetta Marcella; to the Committee on the Judiciary.

By Mr. EASTLAND:

S. 1299. A bill to protect the effectiveness of State antisubversive laws against unintended Federal preemption;

S. 1300. A bill to define the term "organize" as used in the Smith Act;

S. 1301. A bill to make full disclosure respecting loyalty to the United States a condition of Government employment;

S. 1302. A bill to amend sections 241 and 242 of the Immigration and Nationality Act;

S. 1303. A bill to amend the Immigration and Nationality Act with respect to travel in time of war or national emergency and passport procedures;

S. 1304. A bill to broaden the application of the Summary Suspension Act of 1950; and

S. 1305. A bill to amend section 2385 of title 18 of the United States Code; to the Committee on the Judiciary.

(See the remarks of Mr. EASTLAND when he introduced the above bills, which appear under a separate heading.)

By Mr. MONRONEY:

S. 1306. A bill to readjust the size and weight limitations on fourth-class mail matters; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. MONRONEY when he introduced the above bill, which appear under a separate heading.)

By Mr. ELLENDER (by request):

S. 1307. A bill to amend section 508(b) of the Federal Crop Insurance Act, as amended; to the Committee on Agriculture and Forestry.

By Mr. LANGER:

S. 1308. A bill to amend the Internal Revenue Code of 1954 so as to allow a deduction from gross income for funeral expenses and for all medical expenses incurred in an individual's last illness; and

S. 1309. A bill to amend the Internal Revenue Code of 1954 to provide that the full amount of any annuity received under the Civil Service Retirement Act shall be excluded from gross income; to the Committee on Finance.

(See the remarks of Mr. LANGER when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. MUNDT:

S. 1310. A bill to encourage the construction of farm grain storage facilities; to the Committee on Agriculture and Forestry.

By Mr. MUNDT (for himself and Mr. GOLDWATER):

S. 1311. A bill to require the bonding of certain labor union officials; to the Committee on Labor and Public Welfare.

By Mr. CARROLL:

S. 1312. A bill for the relief of Kalliope Giamnias; to the Committee on the Judiciary.

By Mr. GOLDWATER:

S. 1313. A bill for the relief of Rosa Lee Wallace; to the Committee on the Judiciary.

By Mr. MORSE (by request):

S. 1314. A bill to amend the Railroad Retirement Act of 1937; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. SALTONSTALL (for himself and Mr. WILLIAMS of Delaware):

S.J. Res. 62. Joint resolution authorizing the President of the United States of Amer-

ica to proclaim October 11, 1958, General Pulaski's Memorial Day for the observance and commemoration of the death of Brigadier General Pulaski; to the Committee on the Judiciary.

(See the remarks of Mr. SALTONSTALL when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. SCOTT (for himself, Mr. JAVITS, Mr. KEATING, and Mr. NEUBERGER):

S.J. Res. 63. Joint resolution designating the rose as the national flower of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. SCOTT when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. MORTON:

S.J. Res. 64. Joint resolution designating grass as the national flower of the United States; to the Committee on the Judiciary.

By Mr. DIRKSEN:

S.J. Res. 65. Joint resolution proposing an amendment to the Constitution of the United States, relating to the legal effect of certain treaties and other international agreements; to the Committee on the Judiciary.

(See the remarks of Mr. DIRKSEN when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. EASTLAND (for himself, Mr. CURTIS, Mr. SYMINGTON, Mr. BENNETT, Mr. RANDOLPH, Mr. ENGLE, Mr. CANNON, Mr. STENNIS, Mr. AIKEN, Mr. SPARKMAN, Mr. MORTON, Mr. HUMPHREY, Mr. TALMADGE, Mr. YARBOROUGH, Mr. NEUBERGER, Mr. HRUSKA, Mr. BARTLETT, Mr. YOUNG of North Dakota, Mr. JACKSON, Mr. HILL, Mr. MCGEE, Mr. WILEY, Mr. MAGNUSON, Mr. MOSS, Mr. CHAVEZ, Mr. MURRAY, Mr. MORSE, Mr. CARLSON, Mr. JAVITS, Mr. CASE of New Jersey, Mr. ANDERSON, Mr. DIRKSEN, Mr. PASTORE, Mr. KEFAUVER, Mr. CASE of South Dakota, Mr. HART, Mr. MUSKIE, Mr. WILLIAMS of New Jersey, Mr. MUNDT, Mr. HICKENLOOPER, Mr. MCCARTHY, Mr. CARROLL, and Mr. COOPER):

S.J. Res. 66. Joint resolution to provide for the centennial celebration of the establishment of the land-grant colleges and State universities and the establishment of the Department of Agriculture, and for related purposes; to the Committee on the Judiciary.

(See the remarks of Mr. EASTLAND when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. CASE of New Jersey:

S.J. Res. 67. Joint resolution proposing an amendment to the Constitution of the United States to limit the power of the States and their political subdivisions to tax the salaries and wages of persons who are not domiciliaries or residents thereof; to the Committee on the Judiciary.

By Mr. WILLIAMS of New Jersey (for himself and Mr. CASE of New Jersey):

S.J. Res. 68. Joint resolution providing for the establishment of the New Jersey Tercentenary Celebration Commission to formulate and implement plans to commemorate the 300th anniversary of the State of New Jersey, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. WILLIAMS of New Jersey when he introduced the above joint resolution, which appear under a separate heading.)

CONCURRENT RESOLUTION

Mr. DOUGLAS submitted a concurrent resolution (S. Con. Res. 13) to provide additional funds for a special study by the Joint Economic Committee, which was referred to the Committee on Rules and Administration.

(See the above concurrent resolution printed in full when submitted by Mr. DOUGLAS, which appears under a separate heading.)

MAJ. ELMER L. GREEK—REFERENCE OF BILL TO COURT OF CLAIMS

Mr. ALLOTT submitted the following resolution (S. Res. 87), which was referred to the Committee on the Judiciary:

Resolved, That the bill (S. 1259) entitled "A bill for the relief of Maj. Elmer L. Greek," now pending in the Senate, together with all accompanying papers is hereby referred to the Court of Claims; and the court shall proceed with the same in accordance with the provisions of sections 1492 and 2509 of title 28 of the United States Code and report to the Senate, at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand as a claim, legal or equitable, against the United States and the amount, if any, legally or equitably due from the United States to the claimant.

CURTAILMENT OF CERTAIN RAILROAD PASSENGER OPERATIONS

Mr. CASE of New Jersey. Mr. President, I submit a resolution to express the sense of the Senate that the Interstate Commerce Commission utilize the full procedure available to it in curtailment of railroad passenger operations. I ask unanimous consent to have printed in the RECORD a news release, prepared by me, relating to the resolution.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The resolution will be received and appropriately referred; and, without objection, the resolution and news release will be printed in the RECORD.

The resolution (S. Res. 88) was referred to the Committee on Interstate and Foreign Commerce, as follows:

Whereas there are presently pending before the Interstate Commerce Commission 27 applications to curtail or abandon rail passenger service affecting not only many thousands of passengers but also the well-being of hundreds of communities;

Whereas the United States Courts have held that when the Interstate Commerce Commission does not, under the 1958 Transportation Act, exercise its authority to investigate and hold hearings on applications to discontinue service, the Courts have no power to review the Commission's decision not to exercise its authority;

Whereas accordingly, the New York Central Railroad has now been authorized, under the 1958 Transportation Act, to discontinue its Hudson River passenger ferry from Weehawken, N.J., to New York City without opponents having had the opportunity to be heard at public hearings;

Whereas the Congress approved the Transportation Act chiefly to provide improved regulatory procedures and financial assistance to the railroads;

Whereas the Congress did not intend that wholesale curtailment of essential passenger service should be the result of the passage of the Act; and

Whereas legislation to amend the Act will be considered by the 86th Congress: Therefore be it

Resolved by the Senate of the United States, That the Interstate Commerce Commission be urged to investigate and conduct public hearings on all proposed curtailments of railroad passenger operations or services to insure, in the light of current efforts by State and local governments to meet the short-haul traffic deficit, that essential mass transportation services are not irreparably lost through inadequate public consideration; and be it further

Resolved, That the Commission not permit curtailment of essential services without utilizing the full procedures available to it under the law to protect the public interest.

The news release presented by Mr. CASE of New Jersey is as follows:

Senator CLIFFORD P. CASE, Republican, of New Jersey, a member of the Senate Interstate and Foreign Commerce Committee, will ask the Senate today to go on record against the handling of future train discontinuance cases as the Weehawken Ferry abandonment was handled.

He said yesterday his Senate resolution would call for public hearings on abandonment cases before the Interstate Commerce Commission, thus leaving open to commuters the possibility of judicial review in such cases in the future.

No hearings were held and the courts refused to review the ICC's decision in the Weehawken Ferry discontinuance case brought by the West Shore Division of the New York Central Railroad in proceedings under the Transportation Act of 1958.

His resolution, Senator CASE said he would tell the Senate, would call on the ICC to "not permit curtailment of essential services without utilizing the full procedures available to it under the law to protect the public interest."

Senator CASE said, "the Weehawken Ferry case may be history, but there are 27 applications involving about 100 trains still pending before the Commission. And railroads in the New York-New Jersey area are threatening to abandon additional service affecting many more thousands of passengers and the well-being of hundreds of communities requiring the continued residence of these commuters."

Senator CASE's resolution noted that the current Congress will have an opportunity to amend the Transportation Act of 1958 under which current and threatened discontinuance proceedings will be before the ICC.

Senator CASE is a member of the Senate Surface Transportation Subcommittee to which this resolution will be referred.

EMILY B. GRIER—REFERENCE OF BILL TO COURT OF CLAIMS

Mr. SMATHERS submitted the following resolution (S. Res. 89), which was referred to the Committee on the Judiciary:

Resolved, That the bill (S. 1238) entitled "A bill for the relief of Emily B. Grier, widow of Samuel Grier, Junior", now pending in the Senate, together with all accompanying papers, is hereby referred to the Court of Claims; and the court shall proceed with the same in accordance with the provisions of sections 1492 and 2509 of title 28 of the United States Code and report to the Senate, at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand as a claim, legal or equitable, against the United States and the amount, if any, legally or equitably due from the United States to the claimant.

REVISION AND RENEWAL OF INTERNATIONAL WHEAT AGREEMENT

Mr. KENNEDY, on behalf of himself, and Senators BIBLE, CARROLL, CHURCH,

HART, HARTKE, HUMPHREY, JACKSON, MAGNUSON, MANSFIELD, MCCARTHY, MORSE, MOSS, MURRAY, NEUBERGER, PASTORE, YOUNG of North Dakota, and YOUNG of Ohio, submitted a resolution (S. Res. 90) relating to a revision and renewal of the International Wheat Agreement, which was referred to the Committee on Foreign Relations.

(See the above resolution printed in full when submitted by Mr. KENNEDY, which appears under a separate heading.)

USE OF APPROPRIATED FUNDS TO PURCHASE LAND IN CONNECTION WITH ANTIETAM BATTLEFIELD SITE—CONSTRUCTION OF 30 MERCHANT VESSELS

Mr. BUTLER. Mr. President, I introduce, for appropriate reference two bills, and I ask unanimous consent that statements I have prepared in connection with the bills be printed in the RECORD.

The PRESIDING OFFICER. The bills will be received and appropriately referred; and, without objection, the statements will be printed in the RECORD.

The bills, introduced by Mr. BUTLER, were received, read twice by their titles, and referred as indicated:

To the Committee on Interior and Insular Affairs:

S. 1249. A bill to permit the use of appropriated funds in purchasing land in connection with the Antietam battlefield site.

The statement accompanying Senate bill 1249 is as follows:

STATEMENT BY SENATOR BUTLER

In his book "Mr. Lincoln's Army," Bruce Catton described the battlefield of Antietam as follows: "And over above all this perfection of peace and quiet, on the 16th of September, there was a silent running out of time and a gathering together of the fates, as issues that reached to the end of the earth and the farthest borders of national history drew in here for decision * * * there was never another day like Antietam."

Today the battlefield of Antietam consists of less than 200 acres. The acreage is comprised of widely separated plots, a small national cemetery, and a system of narrow roadways. Heretofore, this was adequate inasmuch as the land actually involved in the battle was farmed as it had been 96 years ago, and thus the view was left unimpaired. With the last several years, however, the situation has changed alarmingly. Commercial and residential developments have sprung up along the highways leading into Sharpsburg and have not only marred the site but have threatened to engulf it altogether.

We should welcome this opportunity to set aside forever the field where men struggled to preserve the unity of this Nation, and in so doing, wrote one of the most dramatic chapters of its history. If we are to prevent Antietam battlefield from passing into the heap of forgotten landmarks, we must act now.

If enacted, the proposed legislation which I am introducing today would amend the act of May 14, 1940 (54 Stat. 212) entitled "An act to authorize the Secretary of the Interior to acquire property for the Antietam battlefield site in the State of Maryland, and for other purposes," by striking out ": *Provided*, That payment for such property or interests shall be made solely from donated funds." This amendment would have the effect of releasing appropriated funds for use in purchasing land in connection with the Antietam battlefield site.

To the Committee on Interstate and Foreign Commerce:

S. 1269. A bill authorizing the construction by the Maritime Administration of thirty merchant vessels of appropriate types.

The statement accompanying Senate bill 1269 is as follows:

STATEMENT BY SENATOR BUTLER

It is impossible to envisage a strong and prosperous America or the continued fulfillment of our obligations to the free world without an adequate, modern American merchant marine. Yet, in review after review by both Government and industry groups over a period of several years, there is but one clear and overriding conclusion. Unless present trends in ship construction are altered, America will soon become a second- or even third-rate maritime power. The present status of the American merchant marine, in terms of quality of ships in being, falls far short of the minimal standards established by the Merchant Marine Act of 1936. The one outstanding fact, undisputed in all of the expert studies and analyses of the merchant marine is this—that the present capability of the maritime industry is less than would be required in a moment of sudden emergency, and to the very extent of the disparity between what we have and what we need, to this extent is our national security jeopardized. Furthermore, to the extent that we fail to maintain an adequate, modern, competitive merchant marine—to that extent we jeopardize America's vital position in world trade.

Our national policy, the role of our merchant marine and its responsibilities, is succinctly stated in the "Declaration of Policy" of the 1936 Merchant Marine Act:

"It is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water borne commerce and a substantial portion of the water borne export and import foreign commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water borne commerce at all times, (b) capable of serving as a naval and military auxiliary in time of war or national emergency, (c) owned and operated under the U.S. flag by citizens of the United States insofar as may be practicable, and (d) composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient civilian personnel. It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine."

Thus, our merchant marine is to perform a dual function. Our merchant fleet must conform to a dual set of standards and specifications. On the one hand, the fleet must be sufficient to carry this Nation's commerce on essential shipping routes, and on the other, it must be capable of "serving as a naval and military auxiliary in time of war or national emergency."

The most recent count (November 1, 1958) shows the privately operated active fleet to contain 940 ships, of which approximately 65 percent are freighters, 31 percent tankers, and 4 percent combination type vessels. Out of the total 940, 833 ships are more than 10 years old, and out of this number, 648 were built in the 3 war years, 1943, 1944, and 1945.

Forty percent of the ships in the active fleet work the domestic trade while the remaining 60 percent work the foreign trade. Some one-third of the vessels in the privately owned are subsidized.

Most of the inferior emergency-type vessels built under the stepped-up wartime program have been removed from active service and placed in the reserve fleet. This fleet, the six divisions of which are strategically located in positions on the east, west and Gulf coasts, consists of 1,713 freighters, 226 combination-type vessels, and 54 tankers. Of the 1,713 freighters, 1,415 are low-speed, low-efficiency Liberty ships.

The briefest glance at the figures quoted above should sponsor an appreciation of the critical situation facing the merchant marine. An overwhelming fraction of the active fleet is of uniform age and is approaching obsolescence in a concentrated block, while the reserve fleet is already overcrowded with ships that are not worth the expense of preserving or reactivating, except for defense reasons in an extreme national emergency.

If it were possible to graduate the replacement of the fleet, to replace with a ship of new and modern design each ship that had become economically obsolete, then the fundamental problem of obsolescence would be easy of solution. And if our active fleet were composed of units of varying ages, if, that is, construction over the last twenty years had been undertaken at an even and balanced rate, then such a program of phased development would be feasible and would probably already have been put in operation. Unfortunately, however, the facts do not square with these ideal conditions; the construction of our active fleet was not spaced evenly over the last 20 years but rather was concentrated in the large part during the 5 war years.

Figuring upon an economic lifetime of 20 years, 70 percent of our active fleet will pass into obsolescence between the years 1963–65. To replace this many ships in such a short span of time would be far beyond the present capacity of the shipbuilding industry, and such intensive replacement, even if it could be accomplished, would be inadvisable inasmuch as it would simply perpetuate the block obsolescence problem.

What then, are the present needs of our merchant marine? Although replacement is now figured on a lift-carrying capacity basis rather than on a ship-for-ship basis, and although fewer ships will have to be replaced than actually go out of service, the Maritime Administration estimated in its "Review of Maritime Subsidy Policy of 1954" that to bring both the fleet and the shipbuilding industry up to an acceptable level of strength and activity, a program which called for the construction of 60 ships per year was necessary.

According to a recent summary compiled by the Shipbuilders Council of America, all outstanding contracts call for the construction of 90 ships—17 were to be delivered in 1958, 39 for delivery in 1959, 28 for delivery in 1960, and 6 for delivery in 1961. Of these 90 ships, 18 are being built for foreign flag, leaving a total of 72 being built for American flag lines.

Even if the volume of shipbuilding contracted for increases materially over the next 3 years, the 60-ship-a-year program envisioned by the Maritime Administration will not be achieved.

The mandate of the Government is clear: It must assist more actively in the replacement of the fleet or else face the certainty of progressive deterioration in the quality of the American merchant marine.

At present the Government aids and participates in ship construction through programs of (1) construction differential subsidy, (2) operating differential subsidy, (3) various tax benefits, (4) mortgage aid (this is rarely extended), (5) mortgage insurance aid, (6) trade-in allowances, and (7) U.S. cargo preference provisions.

Items Nos. 1, 5, 6, and 7 above are available to all American operators. Items Nos. 2 and 3, however, are available only to operators who have agreed to (a) the recapture of profits in excess of 10 percent of capital necessarily employed to the extent of subsidy paid to him; (b) the establishment of reserve funds to provide for (1) replacement and acquisition of ships, (2) prompt payment of his obligations to the United States, and (3) continued maintenance and operation of subsidized vessels; (c) the use of articles, materials, and supplies produced in the United States, and the repair of subsidized vessels within the continental limits of the United States. The operators who bind themselves to discharge these obligations and whose applications are approved by the Maritime Administration are known as the subsidized operators. Their status requires them to make certain tax-exempt deposits in capital reserve and special reserve funds, and entitles them to make voluntary tax-deferred deposits in these funds over and above the amounts required.

Fortified as they are with Government assistance, can the private operators themselves initiate a program of phased replacement?

Offsetting the large measure of Government assistance are the vastly increased costs of construction and operation, which have far outdistanced the corresponding increases in corporate earnings. The result is, of course, that a larger and larger share of these earnings must be deposited in depreciation funds if the capital necessary for new construction is to be accumulated. The following figures were quoted in the 1954 House Merchant Marine Review of maritime subsidy:

"The allowance for depreciation in subsidized cargo ships for the 13 operators receiving subsidy amounted to $15,455,889 in 1952, or 14.3 percent of profit, before depreciation and taxes, but after gross subsidy accrual. This compares with an estimated allowance for depreciation on the ships required in the replacement of these vessels of $55,950,250, or 51.9 percent of 1952 profit. Including passenger-carrying ships in this statement would further increase the percentage of replacement depreciation to profits. It is clear that operators of subsidized ships will have to produce substantially higher earnings in order to maintain this 1952 rate of profit and cover the depreciation charges of new vessel replacement."

The low level of depreciation allowances results from the fact that most of the ships now active were purchased under the provisions of the Ship Sales Act of 1946. Under this act war tonnage of questionable value was offered at prices commensurate with this value; the purchasers then fixed the depreciation allowances accordingly, i.e., at the annual rate of 5 percent of the purchase price. The consequence of all this has been that the accumulated depreciation funds now on hand are woefully inadequate when measured against the expense of constructing modern tonnage.

It is obvious that the private operators cannot replace tonnage ahead of schedule when they are so hard put to finance even scheduled replacement. Partially matured depreciation funds are obviously unable to provide the capital which fully matured funds are unable to provide.

If the 60 ships-a-year program prescribed as essential by the Maritime Administration in 1954 is to be established, the Government must come immediately to the project's aid. Were the Government to authorize the construction of vessels at this time, the result would be doubly advantageous. In the first place, to the extent that these vessels incorporated the speed and efficiency features which are the product of modern design, they would upgrade the quality of the merchant marine. In the second place, as these vessels are absorbed into the industry and take the place of other vessels now working on certain essential routes, they would force into the reserve fleet ships which are now actively in service. By so doing, they would cause the quality of the reserve fleet to be upgraded.

There is approximately a 30-vessel difference between the 60 ships a year called for by the Maritime Administration and the number constructed in 1958 and under contract for delivery in 1959. This difference must be compensated for Government-authorized construction of vessels of such type as will remedy the present deficiencies of the merchant marine.

If the deterioration of our merchant marine is permitted to continue, this Nation will eventually be able to mount neither a commercial effort in time of peace nor a defense effort in time of war; our fleet will be driven in mockery from the seas by more modern and efficient foreign vessels, and our national strength and prestige will suffer incalculable damage.

Accordingly, I am introducing a bill providing for the construction of 30 modern merchant vessels by the Maritime Administration. I believe that it is essential that Congress give this problem immediate attention.

RESEARCH PROGRAM TO DETERMINE MEANS OF IMPROVING CONSERVATION OF CERTAIN GAME FISH

Mr. FULBRIGHT. Mr. President, I introduce for appropriate reference a bill to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs.

I ask unanimous consent that the bill, together with a statement I have prepared explaining its purpose, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and explanatory statement will be printed in the RECORD.

The bill (S. 1262) to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs, introduced by Mr. FULBRIGHT, was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior shall establish a program of research and experimentation in order to determine means of improving the conservation of game fish in dam reservoirs.

SEC. 2. For the purpose of carrying out the provisions of this Act, the Secretary of the Interior is authorized (1) to acquire by purchase, condemnation, or otherwise such suitable lands, to construct such buildings, to acquire such equipment and apparatus, and to employ such officers and employees as he deems necessary; (2) to cooperate or contract with State and other institutions and agencies upon such terms and conditions as he determines to be appropriate; and (3) to make public the results of such research and experiments conducted pursuant to the first section of this Act.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

The explanatory statement presented by Mr. FULBRIGHT is as follows:

STATEMENT OF SENATOR FULBRIGHT

I am introducing a bill today to authorize the Fish and Wildlife Service of the Interior Department to carry out a research program designed to improve fishery conservation practices in Government reservoirs.

Sports fishing is becoming more popular each year in this country. One only has to look at a trout stream or a good bass lake on the first day of the season to realize the tremendous interest in this sport. It is one sport in which the young and old can participate on equal terms. The old term "gone fishing" is literally true today as millions more each year find an elusive peace of mind by sitting on the bank of some quiet stream or in a boat bobbing in a secluded cove. Somehow the pressures and conflicts of our day to day existence seem to dissolve when the line hits the water. It is a much more pleasant and, probably healthier, interlude than a session on the psychiatrist's couch. It is impossible to single out any one factor responsible for the increased enthusiasm for this sport. Greater leisure time, better transportation, better physical facilities in fishing areas, population growth; all these and many other factors have had their effect. I believe, however, that the water resource programs of the Federal Government have contributed more to the expansion of sport fishing than any other single factor.

It is difficult to realize that the water impounded by Corps of Engineer and Bureau of Reclamation dams now cover over 3 million acres of once dry land. Other State, municipal, and private reservoirs bring the total of artificial impoundments to about 13 million acres. Most of the Federal projects have been completed since World War II and although they have been constructed primarily for flood control and power generation, they have also provided outdoor recreation-minded Americans with excellent fishing and boating opportunities.

In 1957 over 95 million visitor-days were recorded at Federal lakes and about 14 million persons went fishing. The attendance at the six Federal lakes in Arkansas was nearly 5½ million in that year. For Corps of Engineer reservoirs nationwide there was an almost 20 percent increase over attendance in 1956. There is every indication that attendance at these Federal projects increased substantially in 1958, but these figures have not yet been compiled. Although the majority of the visitors at large reservoirs do not fish, their exposure to the lures of fishing has resulted in many new converts. It is reasonable to expect that with the development of fishing facilities and improved access, angling activity will probably double in the foreseeable future.

Although additional fishing areas are created each year by completion of new reservoirs, we do not attain a corresponding net increase in total fishing yield. Initial fishing in new reservoirs is usually phenomenal, but, at the same time, fishing yields in older reservoirs decline. As the reservoirs age the catches tend to taper off to a stable, and many times undesirable, level.

The vexing problems involved in trying to maintain or improve fishing in reservoirs, especially the large Federal projects, has been too great a problem for State fish and game agencies. The State agencies must spread their limited budgets so thin that it is impossible for them to approach the problem in an adequate manner. Without proper research, game-fish population in reservoirs will continue to decline as time passes. Unless careful study is given to the development of fishery conservation practices in reservoirs, the growing demand for good fishing will not be met.

The bill I am introducing authorizes a research program designed to solve the problem of declining reservoir yields. It is a simple bill but it will have nationwide applicability. It would give the Secretary of the Interior authority to conduct a nationwide study of reservoirs; Federal, State, local, or private, to determine methods for maintaining and increasing fishery assets. There is much that is unknown about the causes of declines in fishing yields as reservoirs age. The objectives of this bill are to find these causes and develop conservation practices to offset or eliminate them. I have left the language sufficiently broad to allow the Secretary to develop the research program in any way he deems proper in order to achieve the desired objective. The problems encountered will undoubtedly be different in various sections of the country, and even from reservoir to reservoir in the same area. It is not contemplated that the program will involve actual research in each reservoir in the country or even a fraction of them. Although the actual work may be conducted at only several representative lakes, the results will be applicable to all.

This will, of necessity, be a long-range project. I anticipate that it will take 10 or 15 years to carry out the research needed. A conservation program cannot be developed to solve the reservoir aging problem without actually studying aging over a period of years. Of course, much helpful information will be discovered as the project proceeds. I have been advised that a limited project along the lines I propose could be carried out for about $250,000 a year. This sum is minute in comparison to the benefits which will accrue to the sports fishing enthusiasts throughout the country. I urge all Senators to give support to the bill in order to get the project underway as soon as possible.

EXTENSION OF CERTAIN PRIVILEGES AND IMMUNITIES TO JUDGES OF INTERNATIONAL COURT OF JUSTICE

Mr. FULBRIGHT. Mr. President, by request, I introduce for appropriate reference, a bill to extend certain privileges and immunities to judges of the International Court of Justice. This bill was submitted to the Vice President by letter on February 17, 1959.

The proposed legislation has been requested by the Acting Secretary of State, and I am introducing it in order that there may be a specific bill to which Members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask unanimous consent that the bill may be printed at this point in the RECORD, together with the letter from the Acting Secretary of State to the Vice President in regard to it.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and letter will be printed in the RECORD.

The bill (S. 1263) to extend certain privileges and immunities to judges of the International Court of Justice, introduced by Mr. FULBRIGHT (by request), was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the judges of the International Court of Justice, other than nationals of the United States, shall be entitled in the territory of the United States to the same privileges and immunities as are accorded to diplomatic envoys accredited to the United States.

The letter presented by Mr. FULBRIGHT is as follows:

DEPARTMENT OF STATE,
Washington, February 17, 1959.

The Honorable RICHARD M. NIXON,
President of the Senate.

DEAR MR. VICE PRESIDENT: The International Court of Justice, to whose statute the United States is a party by virtue of its membership in the United Nations, sits at The Hague. Its 15 judges, representing the main forms of civilization and the principal legal systems of the world, frequently choose to reside in countries other than their own in order to enable them expeditiously to travel to The Hague when needed.

The General Assembly of the United Nations, on December 11, 1946, adopted Resolution 90(I), which provided in part as follows:

"The General Assembly * * *

"2. Recommends that if a judge, for the purpose of holding himself permanently at the disposal of the Court, resides in some country other than his own, he should be accorded diplomatic privileges and immunities during the period of his residence there."

The U.S. delegation voted in favor of this resolution.

Implementation of this resolution has been undertaken by some United Nations members. France and Italy, for example, grant diplomatic privileges and immunities to judges not nationals of the state of residence.

Although the United States has not yet taken steps fully to implement this resolution, a substantial measure of privileges and immunities is presently granted in the United States to judges of the International Court of Justice. Under article 19 of the Statute of the Court, judges engaged on the business of the Court enjoy diplomatic privileges and immunities. In addition, under section 7(b) of the International Organizations Immunities Act [Public Law 291, 79th Cong., 1st sess. (1945)] judges are immune from suit and legal process relating to acts performed by them in their official capacity and falling within their functions. However, these provisions might not protect a judge while in residence in the United States, even if he had taken up residence here in order to be readily accessible to The Hague.

Accordingly, there is submitted for your consideration and favorable action a draft bill to give judges of the International Court of Justice, other than nationals of the United States, the privileges and immunities which the United States now grants to envoys accredited to it. The granting of such privileges and immunities would be in conformity with the recommendation of the General Assembly. It would also symbolize the importance attached by the United States to the impartial and independent functioning of international judicial tribunals.

The Department has been informed by the Bureau of the Budget that there is no objection to the submission of this proposed legislation.

Sincerely yours,

CHRISTIAN A. HERTER,
Acting Secretary.

CLARIFICATION OF TITLE 23, SECTION 131, UNITED STATES CODE

Mr. KERR. Mr. President, on behalf of myself, and Senators HRUSKA, RANDOLPH, and SCHOEPPEL, I introduce, for appropriate reference, a bill to amend title 23 of section 131 of the United States Code, being the Federal-Aid Highway Act of 1958. I ask unanimous consent that the bill lie on the desk until the close of business on Monday next, to enable other Senators who wish to be cosponsors, to add their names.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Oklahoma.

The bill (S. 1266) providing for the amendment of title 23, section 131 of the United States Code (sec. 122 of the Federal-Aid Highway Act of 1958), to clarify the said section with relation to municipalities and areas zoned under the laws of the States, and to recognize the laws of the States relating thereto, introduced by Mr. KERR (for himself, Mr. HRUSKA, Mr. RANDOLPH, and Mr. SCHOEPPEL), was received, read twice by its title, and referred to the Committee on Public Works.

NOTICE BY STATES TO FEDERAL GOVERNMENT RELATING TO LEASING OF CERTAIN MINERAL LANDS

Mr. MCNAMARA. Mr. President, on behalf of myself, the Senator from Montana [Mr. MURRAY], and my colleague, the junior Senator from Michigan [Mr. HART], I introduce, for appropriate reference, a bill to provide for notice to States owning surface of lands in which minerals are reserved to Federal Government of proposals to lease such minerals.

This bill would require the Secretary of the Interior, upon receipt of applications for the lease of Federal mineral rights in State-owned land, to promptly notify the affected State.

The State then would have 30 days in which to present its views on whether the lease should be granted.

The need for such legislation was pointed up recently by a situation which occurred in the Swan Creek Wildlife Refuge in southwestern Michigan.

The surface of this land is owned by the State of Michigan, while the Federal Bureau of Land Management retains the oil and mineral rights.

Oil rights were leased some time ago to a private concern, but the first notice the State had of it was when the private concern sought a drilling permit.

The State of Michigan had no opportunity to express its views on whether the lease should ever have been granted in such an area.

Notice to the States of lease applications is particularly necessary when the land is in public use as a park or for conservation purposes, as is Swan Creek.

Commercial operations could rapidly destroy its attractiveness as a haven for migratory birds.

I am sure there was no deliberate intent on the part of the Bureau of Land Management to prevent the State from expressing its views before the lease actually was granted.

However, it is very important, for the sake of sound Federal-State relations,

for the Bureau of Land Management to work closely with the States in these matters.

State land is owned by the citizens, just as is Federal land. Therefore, the States should have something to say about how its property is to be used.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1268) to provide for notice to States owning surface of lands in which minerals are reserved to Federal Government of proposals to lease such minerals, introduced by Mr. MCNAMARA (for himself, Mr. HART, and Mr. MURRAY), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

USE OF GREAT LAKES VESSELS ON THE OCEAN

Mr. DIRKSEN. Mr. President, by request, I introduce, for appropriate reference, a bill to authorize the use of Great Lakes vessels on the ocean. I ask unanimous consent to have printed in the RECORD a memorandum relating to the proposed legislation.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the memorandum will be printed in the RECORD.

The bill (S. 1270) to authorize the use of Great Lakes vessels on the oceans, introduced by Mr. DIRKSEN (by request), was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The memorandum presented by Mr. DIRKSEN is as follows:

MEMORANDUM

Subject: Legislation to remove restrictions on certain Great Lakes vessels

The purpose of the attached bill is to remove a restriction limiting to the Great Lakes and its connecting waterways the operation of certain vessels sold under the Ship Sales Act of 1946, as amended. If this bill is enacted, such vessels would be permitted to be used on the oceans during the winter months when the lakes season is over.

When legislation authorized the sale of vessels for Great Lakes use, it provided that these ships should be operated for exclusive use on the Great Lakes. At the time of that legislation, this was academic as there was no method by which the vessels could be taken in or out of the lakes. Actually, to get these vessels originally into the Great Lakes, it was necessary to remove all of their superstructure and float them on pontoons up the Mississippi River. But now that the St. Lawrence Seaway will soon open, these ships will be able to reach the high seas without any difficulty and other vessels will be able to go into the Great Lakes to compete with them.

Of the ships to which this bill might apply, five are converted to bulk carriers and the sixth to a passenger and automobile carrier. As the five bulk carriers probably cannot qualify for operation on the oceans in view of their type of conversion, this bill would as a practical matter affect only the vessel *Aquarama*. The *Aquarama* has facilities for carrying up to 2,500 passengers and 180 automobiles. The vessel has no sleeping accommodations for passengers so that she is limited to use on short voyages. She is presently employed carrying passengers and cars between Cleveland and Detroit. The season on this run is limited to the summer months and the vessel in the past year operated only 84 days. As a result of the limited season, the ship, which cost the owners $4,500,000, has lost money every year. During the season, approximately 250 people are employed in the operation of this vessel. During the off season, however, almost all of these must now be discharged.

Enactment of this proposed bill will enable the ship to be put into a useful winter trade in a warm climate on a day-ship basis. The increased utilization of the vessel should permit it to achieve profitable operations. It will also permit the employment of the ship's personnel on a year round rather than a short seasonal basis. Because of the fact that the ship must be limited to a short run it should offer no competition to any established American liner company.

This bill involves no subsidy or any other expense to the Government. It may, however, result in revenue to the Government in the event that the removal of the restriction permits profitable rather than loss operation, as such profits would, of course, be subject to tax.

AMENDMENT OF SUBSECTION B OF SECTION 349 OF THE IMMIGRATION AND NATIONALITY ACT

Mr. DODD. Mr. President, I introduce and ask for appropriate reference of a bill to amend subsection B of section 349 of the Immigration and Nationality Act. I should like to briefly explain this amendment.

There are a large number of Americans, born in this country of immigrant parents, who as children were taken back to the country of their parents during the difficult years of the great depression. This is particularly true of Portuguese Americans, who brought this problem to my attention. Connecticut is fortunate to number among its citizens a large number of Portuguese Americans and I have a deep interest in their problems.

The American-born children who grew up abroad were in due course drafted into the armies of foreign countries. Many of them, after completing military service and attaining maturity, wished to return to America, the country of their birth. However, they found their reentry into the United States barred.

Under our immigration laws, service in the army of a foreign nation and the taking of the required oath of allegiance to that nation are causes for forfeiture of American citizenship.

A long list of court cases ensued, and the decisions affirmed again and again that an American citizen can forfeit his citizenship only through willful, voluntary acts.

Being drafted into a foreign army is so obviously an involuntary act that the Passport Division of the State Department has for a long time granted reentry into the United States to those who can offer reasonable proof that their foreign military service was forced upon them by foreign laws.

However, section 349B of the Immigration and Nationality Act, which became law in 1952 takes this determination out of the hands of the Passport Division in cases where the person in question has resided for 10 years or more in a foreign country. Under the terms of that section, the foreign military service of such a person is automatically and arbitrarily presumed to be voluntary, if he had resided abroad for 10 years prior to his military service. This section does violence to common sense and basic justice.

An act is either voluntary or it is involuntary. It is the element of intent, not the element of time that should govern.

The bill which I offer today would change the "conclusive presumption" to a "rebuttable presumption." This gives an opportunity to the individual in question to establish whether or not the act that threatens his citizenship was a voluntary act or an involuntary act. If they are proved to be involuntary, his citizenship would not be affected. Each of us can trace his freedom, his security, and his way of life to a simple blessing that has come to him through his American citizenship.

Everyone who is born in this country must from time to time thank a kind Providence for the good fortune that, through no virtue or effort of his own, has elevated his lot above that of all other peoples of the world. We did not earn the heritage which came to us at birth. It was a gift, the most valuable temporal gift we have. We should therefore, seek to protect the rights of our fellow citizens with a zeal born of our gratitude for this gift.

We should surround it with special safeguards because we appreciate the tragedy of its loss. We should protect it against administrative decrees or legislative oversight.

No one born in this country should have his citizenship taken away because of acts beyond his control, or because of minor acts or omissions done in complete ignorance of their consequences.

The bill which I offer today would give every such citizen protection against the arbitrary nullification of his citizenship by giving to him the opportunity to prove that he has not forfeited that citizenship through any willful act. Every person born in this country is entitled to such an opportunity. We owe this much to ourselves. We owe it to each other. And above all, we owe it to our concept of the worth of our common citizenship.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1280) to amend the Immigration and Nationality Act, introduced by Mr. DODD, was received, read twice by its title, and referred to the Committee on the Judiciary.

PRESERVATION AND DEVELOPMENT OF DOMESTIC FLUORSPAR INDUSTRY

Mr. ALLOTT. Mr. President, the fluorspar industry is presently closed down with the exception of three captive operations—mining operations owned by metals or chemical manufacturing firms. This is a result of an international surplus of fluorspar resulting principally from the actions of the United States Government to stimulate production at home and abroad. Domestic producers have enjoyed the benefits of the stockpiling program, while

the foreign producers have had the advantage of loans and grants to assist in financing the development of fluorspar mines and minerals. The foreign producers have participated in the stockpiling program and also have shipped substantial amounts of imported fluorspar under barter contracts. The Public Law 733 program has been completed and today the domestic production of fluorspar has practically ceased.

Fluorspar is perhaps one of our most strategic minerals. At the same time our civilian economy is requiring greater and greater quantities of this mineral. Fluorspar is indispensable to the production of steel, aluminum, hydrofluoric acid, atomic energy, and fluorine gas. Fluorine, the commercial derivative of fluorspar, is the most perfect oxidizing agent we have for our rockets and missiles. It is essential to the operation of either solid or liquid fueled equipment. Consumption, particularly of acid grade fluorspar, is increasing at an astounding rate, greater than that of any other mineral.

Mr. President, on behalf of myself and Senators MURRAY, BARTLETT, BENNETT, BIBLE, COOPER, DIRKSEN, GRUENING, MANSFIELD, MORTON, and MOSS, I introduce for appropriate reference, a bill to provide for the preservation and development of the fluorspar industry and ask that it lie on the table through March 11.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Colorado.

The bill (S. 1285) to provide for the preservation and development of the domestic fluorspar industry, introduced by Mr. ALLOTT (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

Mr. ALLOTT. Mr. President, this proposed legislation is offered in an attempt to maintain some domestic production of fluorspar and simultaneously to prevent unnecessary injury to foreign producers. It would divide the present domestic consumption approximately on a 50–50 basis between importers and domestic producers. Foreign producers would be given, under this bill, approximately three-fourths of the rapidly increasing consumption, so that within 2 or 3 years the foreign producers will have somewhere between 60 and 75 percent of the domestic market. Foreign producers through their quotos and barter contracts would import at about the same record high level maintained over the last 3 years and slightly more than they imported last year. The barter material would go to supplemental stockpile.

The consumer's interest is protected by a ceiling price.

Under the proposed legislation domestic producers would be permitted to furnish 200,000 tons of the consumption requirements of fluorspar containing more than 97 percent calcium fluoride—acid grade—with imports providing the balance of requirements. Each year foreign producers would have their share of the market increased by receiving 75 percent of the increase in consumption until imports had reached the level of the average imports for the years 1956, 1957, 1958. Thereafter they would receive 60 percent of such increase.

Domestic producers would be permitted to furnish 125,000 tons of the consumption requirements of fluorspar containing not more than 97 percent calcium fluoride—metallurgical grade—with foreign producers providing the balance of requirements. Each year foreign producers would have their share of the market increased by receiving 75 percent of the increase in consumption until imports had reached the level of the average imports for the years 1956, 1957, 1958. Thereafter they would receive 60 percent of such increase.

On the basis of 1957 consumption, domestic producers would have furnished 200,000 tons of acid grade fluorspar and 125,000 tons of metallurgical grade fluorspar; foreign producers would have provided 140,000 tons of acid grade fluorspar and 200,000 tons of metallurgical grade fluorspar.

Additionally, in order to prevent any injury abroad, the Director of Commodity Credit Corporation is directed, to the extent possible, to enter into barter contracts for fluorspar in an amount which when added to commercial imports will bring the total of imports up to the average level for the years 1956, 1957, 1958.

The Secretary of the Interior allocates foreign quotas on the basis of the average imports for the years 1956, 1957, and 1958. However, to permit new countries to participate, 20 percent of the total foreign quota is held for 60 days. If no country makes application, this 20 percent is prorated among the original countries.

The Secretary of the Interior is authorized to increase either domestic or foreign quotas as the need may be, in order to assure an adequate supply of fluorspar to consumers.

In order to assure the consumers of fluorspar of reasonable prices, this legislation places price ceilings on both domestic and foreign fluorspar. General Services Administration prices on metallurgical grade fluorspar and Public Law 733 prices on acid grade fluorspar are used, except for a $2 per ton increase in acid grade fluorspar, to allow for drying and transportation to barge or car. For stockpiling purposes, acid grade fluorspar could not be in dry form and was purchased f.o.b. mill with deduction for moisture content. These prices are to be adjusted annually, being tied to the Department of Labor Nonferrous Metals Index and subject to its fluctuations.

Mr. BARTLETT. Mr. President, will the Senator from Colorado yield?

Mr. ALLOTT. I am glad to yield to the Senator from Alaska.

Mr. BARTLETT. Mr. President, my colleague, the distinguished junior Senator from Alaska [Mr. GRUENING], and I are gratified to be cosponsors of the bill introduced by the distinguished Senator from Colorado [Mr. ALLOTT] which calls for applying the principles of the National Sugar Act to fluorspar, one of this Nation's sick strategic minerals industries.

While many Senators may not realize it, Alaska has rich resources of fluorspar. In fact, I am informed that the tailings of a tin operation in Alaska constitute one of the best fluorspar mines on the basis of the richness of the ore contained in the tailings.

We in Alaska, because of our geographic location, are also intensely aware of the importance of an "at home" supply of fluorspar which the missile experts have told us is the base, the vital ingredient in the ultimate rocket and missile fuel.

I hope that the Interior Committee will see fit to quickly hold hearings on this bill and report it out for floor action.

Mr. ALLOTT. I thank the distinguished Senator from Alaska for his statement.

Mr. MURRAY. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield to the distinguished Senator from Montana.

Mr. MURRAY. Mr. President, I am happy to join with the distinguished Senator from Colorado and others in the sponsorship of a bill designed to keep open the fluorspar mines of this Nation.

The approach to the problem provided in this bill is patterned after the Sugar Act which has proven highly successful in the past. I see no reason why this same approach would not operate successfully in the case of fluorspar and other strategic minerals.

Last year Dr. Wernher von Braun, the great missile and rocket expert, advised the Senate Interior and Insular Affairs Committee that fluorine, which comes from fluorspar, is a vital ingredient in the ultimate fuel which we must and shall develop for the propulsion of our advanced missiles, rockets, and satellites.

Since January 1 of this year, every fluorspar mine in the United States, with the exception of one and possibly two captive mines, have been closed down—forced to close down by excessive foreign imports.

In view of the statement by Dr. von Braun, we cannot afford as a Nation to permit this situation to continue much longer.

I believe that this so-called Sugar Act approach is a workable one. It will provide stability in production, stability in price for the protection of the ultimate consumer, protection of the national security, and provide employment for hundreds of American miners now idle.

Mr. President, I ask unanimous consent that three recent newspaper articles taken from the Salt Lake Tribune, American Metal Market, and the Journal of Commerce, reporting on the first public announcement made by the distinguished junior Senator from Utah, Senator Moss, that the Sugar Act approach to our minerals problem was

being contemplated, be printed in the RECORD:

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Salt Lake Tribune, Feb. 7, 1959]

MOSS BIDS FOR PROGRAM TO ASSURE U.S. METALS

DENVER, February 7.—A Federal mining program patterned after the Sugar Act "to assure at all times domestic production of the major minerals and metals" was proposed by Senator FRANK E. MOSS (Democrat, Utah) when he addressed the National Western Mining Conference.

The new Utah Senator said Chairman JAMES E. MURRAY, of the Senate Interior Committee, agrees with him that there should be a staff study to determine the advisability of such legislation.

Senator Moss, who also belongs to the Interior Committee which handles the mining legislation, held that such a study is in the interest of national security, in the interest of employment in the metal and mineral mines of this Nation and in the interest of the mining industry in general.

The Utahan also used the occasion to criticize the Eisenhower administration's current economy program and determination "to keep the Federal Government out of the red by keeping Federal revenues up."

"I fervently agree with the commendable objective, but I must point out that a sick mining industry paying little or no income tax to the Federal Government is not in a very good position to help keep Federal revenues up," he said.

[From the American Metal Market, Feb. 10, 1959]

SENATOR MOSS PROPOSES MINERAL LAWS LIKE THOSE FOR SUGAR

WASHINGTON, February 9—Legislation patterned after the Sugar Act was proposed by Senator Moss (Democrat, of Utah), Saturday at Denver as a solution to the problem of assuring at all times domestic production of major minerals and metals.

Speaking before the National Western Mining Conference, Senator Moss said that he and Senator MURRAY, chairman of the Senate Interior and Insular Affairs Committee, have agreed that a staff study should be held to determine if such legislation is advisable.

The freshman Senator from Utah said that he and Senator MURRAY are concerned that metals lost ground in 1958.

Senator Moss said he was disturbed by a recent speech of the Under Secretary of Interior with a "thread running through his remarks to the effect that if the budget is to be kept balanced, there is little or no aid to be given to the sick mineral industry."

Although the objective of balancing the budget is commendable, Senator Moss said, a sick mining industry paying little or no income tax to the Federal Government is not in a very good position to help keep Federal revenues up.

The Sugar Act has often been discussed as a possible solution to the problem of keeping the domestic mining industry in a stabilized condition, but this is the first time it has reached the stage of a proposed staff study by the Senate Interior and Insular Affairs Committee.

[From the Journal of Commerce, Feb. 9, 1959]

PATTERNED ON SUGAR ACT: PLAN VISUALIZES INSURED MARKET FOR U.S. MINERALS

(By Robert F. Morison)

WASHINGTON.—Plans are taking shape among westerners in Congress to make the most ambitious move yet to insure to U.S. producers of a wide range of minerals and metals a major share of the domestic market through an arrangement similar to the 10-year-old Sugar Act.

These plans are expected to be completed within 2 weeks and, at this stage, are expected to include such materials as fluorspar, iron ore, aluminum and oil and oil products, including residual oil.

Whatever final mechanism is decided upon to administer the overall program—and informed sources say a three-man top-level board will probably be proposed—the plan will provide:

Determination of domestic producers' share of the U.S. market.

The difference between consumption and domestic supplies to be divided among foreign producers.

PROVIDES GUARANTEES

An annual review so import quotas can keep pace with U.S. growth, except that at all times domestic producers' share will be guaranteed.

Supporters of this approach—who have failed in the past to obtain import quotas, higher tariffs, subsidies or other aids for domestic extractive industries—believe it will give producers here and abroad, as well as consumers, stable prices and dependable supplies.

First public disclosure of this new approach came Saturday in Denver, at the annual meeting of the National Western Mining Conference.

Senator FRANK E. MOSS, Democrat, Nevada, disclosed that he and Senator JAMES E. MURRAY, Democrat, Montana, chairman of the Senate Interior Committee, "are in agreement that there should be, in the interest of national security, in the interest of employment in the metal and mineral mines of this Nation, and in the interest of the mining industry in general, a staff study to determine if it is advisable that Congress enact legislation patterned after the Sugar Act to assure at all times domestic production of the major minerals and metals."

STUDY WELL ALONG

The staff study, it is learned, is well along and prime movers supporting the program hope to have it completed shortly.

The administration's professed liberal trade policy, plus the Democratic leadership in Congress which also generally favors freer trade, have been the chief obstacles to protection for these industries.

Further, control of the key Senate Finance Committee and House Ways and Means Committee, through which quota and tariff legislation must go, has virtually assured defeat for these proposals in past years.

However, this sugar act approach may be able to bypass these two committees.

The Sugar Act itself, which is up for extension this year, is handled by the Agriculture Committees in the House and Senate. The hope is that the Interior Committees may be able to handle the new plan.

CITES NEW ATTITUDE

Supporters are also counting for help indirectly on the administration's weakening on import quotas—as in the case of lead, zinc, and oil—and its switch in attitude on international commodity problems.

State Department officials, it is learned, have been filled in on what details have been firmed up on the minerals' program, but there is no indication what the official reaction will be.

The administration is not expected to be happy with this approach, but may find it difficult to oppose in light of the restrictive actions on lead, zinc, and oil and its willingness the past year to discuss—without making any commitments—international commodity problems on cocoa, coffee, lead, zinc, and copper.

Approaching the mining industries' problems this year in this fashion, sources say, may encounter additional advantages.

GRANTS TO STATES TO ASSIST IN PROVISION OF FACILITIES AND SERVICES FOR DAY CARE OF CHILDREN

Mr. JAVITS. Mr. President, I introduce, for appropriate reference, a bill entitled "The Day Care Assistance Act of 1959," to authorize a program of Federal aid for the day care of children outside the home not to exceed $25 million annually with half that amount to be allotted to States on a matching dollar-for-dollar basis and the remainder to be administered to impacted areas in which specific Federal activities like defense work or military bases have created a special need for such facilities.

State plans for day care centers and services are to meet standards set by the Department of Health, Education, and Welfare and on approval Federal funds would become available under the bill to assist in providing care for the children of working mothers and also for those children who require special attention because they or their parents are mentally or physically handicapped.

Hundreds of thousands of children throughout the United States will continue to be the chief losers so long as we fail to recognize that providing suitable day care for the children of working mothers is a national problem which urgently requires Federal aid to activate State and local efforts in this field and to back up the outstanding voluntary programs now in effect. Until a Federal program such as the one contemplated in my bill is enacted, we are not looking after the needs of these children in households where economic necessity forces the mother to work outside the home. In cases where adequate adult supervision is not available, children are exposed to influences which lead to juvenile delinquency and the serious rise in youth crime. Also, we are not meeting the needs of an expanding national economy which cannot fully utilize the highly trained skills and services possessed by thousands of American mothers with small children who may wish to join the work force.

Six and a half million to seven million children in the United States under the age of 12 have mothers who work outside the home. Initially, the great majority of them not now served would be the direct beneficiaries of professionally staffed, well equipped day care centers established by States and municipalities under a national program. It would also lend support to the activities pioneered by voluntary groups such as the Day Care Council of New York currently carrying so much of the burden in supplying essential facilities.

To categorically blame the waywardness of the children on the delinquency of the parents in homes where children do not receive sufficient care during the

day, especially after school, is grossly unfair in many instances. One-fifth of our young working mothers have little choice but to hold down full-time jobs because they are either widowed, divorced, or separated and there is no male breadwinner in the household. In addition, in families where the husband's yearly salary is under $1,500, at least one wife and mother out of every four is working to help supplement her family's meager income so that her children may receive the bare necessities. The percentage of cases where the mother leaves her children unattended so that she can earn money to purchase luxuries is very low.

Federal assistance for children's day care is not a new concept. The Lanham Act passed in the early 1940's set up such a program but it was allowed to lapse after the close of World War II. However, there are approximately 2 million more women in our labor force today than there were during the record war production year of 1944 when civilian manpower and womanpower was fully mobilized. Today, one out of every three workers is a woman and the proportion of young working mothers is bound to increase as we step up our entire level of industrial and business activity to meet the cold war challenges, both economic and military, posed by the Soviet Union.

The national interest will demand to an increasing degree that child day care centers and services become an integral community function especially in highly industrialized areas where working mothers are contributing to our total defense effort. Federal impetus supplied through the operations of a sensibly scaled program, allotting half to its annual authorization of $12.5 million to the States on a matching fund basis and the rest to federally impacted areas, offers the best means for attaining that objective.

Under the terms of the legislation, the Department of Health, Education, and Welfare is charged with the responsibility of administering the program through its Children's Bureau. The bill further provides that any of the $12.5 million in matching funds granted to States for day care and not spent for that purpose, shall be repaid; also should any State find that it does not require all of these funds allocated to it, the Secretary of the Department may reassign such surplus amounts to other States. A system of appeal and judicial review of ruling by the Secretary is also provided.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1286) to authorize the Secretary of Health, Education, and Welfare to make grants to the States to assist in the provision of facilities and services for the day care of children, introduced by Mr. JAVITS, was received, read twice by its title and referred to the Committee on Labor and Public Welfare.

AMENDMENT OF SOCIAL SECURITY ACT, RELATING TO INCREASED OUTSIDE INCOME

Mr. HUMPHREY. Mr. President, I introduce a bill to amend title II of the Social Security Act so as to increase from $1,200 to $1,800 a year the amount of earned income a person may receive without having his social security benefits reduced.

The law now provides that persons who are 72 years of age or older may earn any amount without having their social security benefits reduced. For persons under 72, however, the maximum annual income per year which they may earn without losing any benefits is $1,200. For each $80 or fraction of $80 over $1,200 in yearly earned income, 1 month's benefits can be lost.

For example, a person who earns $110 each month, loses 2 months' benefits each year; a person earning $175 each month, loses all his benefits.

I believe, Mr. President, that this present limitation on earnings is far too low. Few people would argue that social security benefits are so high that outside income is not only desired by beneficiaries, but in many cases is an absolute necessity to maintain a decent standard of living. To raise the earnings limitation by $600 a year seems to me a most modest proposal.

I think it should be noted, also, Mr. President, that my bill would lower the barrier facing beneficiaries who do not wish to retire completely and would like to continue doing at least part-time work. Many of our older citizens have valuable skills acquired through long years of training and experience. Our Nation needs these skills, and we should be offering greater incentive to such people who do desire to work. My bill would be a step in this direction.

There is another point which also should be noted: Under present law, the $1,200 annual income limitation pertains only to earned income, and not to pensions, dividends, interest, and insurance. For example, while a beneficiary with an annual income from investments of $5,000 is entitled to full social security benefits, a beneficiary with an annual income of $5,000 in the form of wages or net income from self-employment normally loses his benefits entirely.

There is, to my mind, a serious question, as to the justification for such a distinction. While my bill does not do away with the present differentiation between earned income and investment income, it does at least modify it.

For these reasons, Mr. President, I believe that my amendment would be a great improvement in the present law. I hope it will be favorably considered.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1288) to amend title II of the Social Security Act to increase from $1,200 to $1,800 the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits payable to them under such title, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Finance.

EXTENSION OF SPECIAL MILK PROGRAM FOR CHILDREN

Mr. HUMPHREY. Mr. President, on behalf of myself, my colleague from Minnesota [Mr. MCCARTHY], and the Senators from Wisconsin [Mr. WILEY and Mr. PROXMIRE], I introduce, for appropriate reference, a bill that will make additional funds available for use in the special milk program for the balance of this fiscal year, and will provide for a needed expansion in 1960 and 1961.

It will be remembered that this special program to increase the consumption of milk by schoolchildren was first authorized in the Agricultural Act of 1954. In late June of 1958, Congress authorized a 3-year extension of the special milk program, with an annual authorization of $75 million.

Previously, when I sponsored the extension of this program, I asked for an increasing authorization to provide for expanded school enrollment and participation. We now learn from the Department of Agriculture that the authorization provided last year is already proving insufficient.

The Department of Agriculture has revealed that State estimates of needs, compared to apportionment of the $75 million, will result in a deficit in 38 States—amounting to an indicated total deficit of $3,378,569 if the program were to be carried on at the current level until the end of this fiscal year.

Unless we increase the authorization soon, States will have to tell their schools to cut down the milk supply to children who need it.

Therefore, the bill I am introducing today asks for the addition of $5 million to the current authorization, to wipe out the deficit for this fiscal year, and to increase the authorization for 1960 and 1961 by $10 million and $15 million, respectively, in order to provide for further expansion of school enrollment in the Nation.

Our school enrollment keeps going up as our population increases. We simply must realize that these health programs for our young people must be expanded, in order to keep pace with that growth.

I ask unanimous consent that a table, provided by the U.S. Department of Agriculture, showing the apportionment of funds, estimated State needs, and indicated deficit for fiscal 1959, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SPECIAL MILK PROGRAM

Apportionment of funds, State estimated needs, and indicated deficit, fiscal year 1959

Administrative unit	Apportionment [1] (1)	State estimated needs [2] (2)	Indicated deficit (3)
State agencies:			
Alabama	$1,075,610	$1,095,680	$20,070
Alaska	17,715	18,675	960
Arizona	326,033	357,223	31,190
Arkansas	641,539	658,127	16,588
California	7,211,353	7,892,289	680,936

[1] Division of funds among States is based on the pattern of expenditures in fiscal year 1958.
[2] Estimates received in late February 1959, based on actual expenditures through December 1958.

SPECIAL MILK PROGRAM

Apportionment of funds, State estimated needs, and indicated deficit, fiscal year 1959—Continued

West	359,592	382,483	22,891
Total area officers	5,170,929	5,489,239	318,310
Grand total	74,308,900	77,687,469	3,378,569

Mr. HUMPHREY. Mr. President, I want to point out that California will be $680,936 short of meeting its estimated milk fund needs this fiscal year. New Jersey has an estimated deficit of $390,086; Ohio needs $219,632; Rhode Island needs $329,052; New York needs $202,707.

Fortunately, we in Minnesota appear to have an adequate apportionment to fulfill our own needs; but we are just as much concerned that young people everywhere shall have the opportunity to participate in this milk program.

This special program was initiated in September of 1954; and in the first year almost 450 million half pints of milk were consumed by the schoolchildren. In the fiscal year 1956, as the program became more firmly established, more than 1,394 million half pints of milk were consumed. It is interesting to note that, in 1959, about 29 percent more schools and other outlets participated in the program than in 1956, and 50 percent more milk was consumed.

I ask unanimous consent that a table, prepared by the U.S. Department of Agriculture, be printed, at this point in the RECORD, so that all may readily see how this program has expanded to reach more and more children.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SPECIAL MILK PROGRAM

Participation, milk consumption, and expenditures, fiscal years 1955–59

Fiscal year	Number of outlets participating	Milk consumption (½ pints)	Expenditures	Increase in expenditures over previous year
		Million	*Million*	*Percent*
1955	41,094	449.8	$17.1	
1956	62,266	1,394.2	45.9	168.4
1957 [1]	71,239	1,752.7	60.5	31.8
1958	76,478	1,918.2	66.3	9.6
1959 [2]	[3] 80,000	2,100.0	[4] 74.3	12.1

[1] In addition to schools, program was extended by Congress to summer camps and other child-care institutions.
[2] Estimated.
[3] Does not include summer camps. Summer camps in summer of 1957, 2,220; summer of 1958, 3,026.
[4] Maximum funds available. State estimated needs for funds amount to $77.7 million.

Mr. HUMPHREY. Mr. President, I feel that this proposal for the expansion of this valuable program merits immediate action. As a Member of the Senate Committee on Agriculture and Forestry, I shall urge that it be given priority. I trust that my colleagues will join with me in considering this one of the important moves we can make for the welfare and health of the nation's young people.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1289) to increase and extend the special milk program for children, introduced by Mr. HUMPHREY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

PROHIBITION OF EAVESDROPPING IN CERTAIN CASES

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to prohibit eavesdropping under certain circumstances, and for other purposes. I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

Mr. President, the bill is designed to protect the right of privacy against unauthorized invasion and, at the same time, to facilitate the fullest use of scientific methods of crime detection by law-enforcement agencies. The bill represents the first effort in Federal legislation to deal comprehensively with the new methods of electronic monitoring of conversations and other communications.

Under the terms of the bill, unauthorized eavesdropping would be a Federal criminal offense if it occurred in any area under Federal jurisdiction, or was for the purpose of aiding or abetting the perpetration of any Federal offense, or involved the use of facilities of interstate commerce.

However, the bill contains detailed provisions under which law enforcement agencies can obtain court orders for eavesdropping under procedures paralleling those applicable to warrants for searches and seizures.

One important provision of the bill would overturn the Supreme Court decision in the Benanti case and make it clear that evidence obtained by authorized State wiretapping would be admissible in Federal and State courts.

We cannot avoid coming to grips with this subject any longer.

While the present laws erect substantial and unreasonable impediments to effective police action against organized crime, they are almost entirely ineffective in dealing with blackmailers and other unscrupulous interlopers. This incredible situation demands legislative attention. I am hopeful that this bill will serve as a framework for consideration of needed revision of the law in this field.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1292) to prohibit eavesdropping under certain circumstances, and for other purposes, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That part I of title 18 of the United States Code is amended by adding thereto a new chapter:

"CHAPTER 28—EAVESDROPPING

"Sec.
"570. Definitions.
"571. Eavesdropping prohibited.
"572. Possession of eavesdropping instruments.
"573. Ex parte order for eavesdropping.
"574. Admissibility of evidence.
"575. Exceptions.
"576. Duty to report violations.

"§ 570. Definitions

"As used in this chapter—

"(1) 'Eavesdropping' refers to a situation in which a person—

"(a) not a sender or receiver of a telephone or telegraph communication willfully and by means of instrument overhears or records a telephone or telegraph communication, or aids, authorizes, employs, procures or permits another to do so, without the consent of either a sender or receiver thereof; or

"(b) not present during a conversation or discussion willfully and by means of instrument overhears or records such conversation or discussion, or aids, authorizes, employs, procures or permits another to do so, without the consent of the party to such conversation or discussion; or

"(c) who, not a member of a jury, records or listens to by means of instrument the deliberations of a jury or who aids, authorizes, employs, procures or permits another to do so.

"(2) 'Person' means any individual, partnership, corporation, or association including the subscriber to any telephone or telegraph service involved but excluding any law enforcement officer while acting lawfully and in his official capacity in the investigation, detection, or prosecution of crime.

"(3) 'Instrument' means any device, contrivance, machine, or apparatus or part thereof designed or used for acoustical detection including but not limited to wiretapping equipment, microphones, detectaphones, dictaphones, radio transmitters, and recorders.

"§ 571. Eavesdropping prohibited

"A person who engages in eavesdropping—

"(1) in the District of Columbia or any Territory or possession of the United States; or

"(2) for the purpose of aiding or abetting or perpetrating any Federal offense; or

"(3) where the conversation, discussion, or communication overheard or recorded is by wire or radio; or

"(4) for the purpose of obtaining information concerning any activity under Federal regulation; or

"(5) where the information overheard or recorded is to be transmitted in interstate commerce or outside the United States; or

"(6) where the instrument employed to overhear or record the conversation, discussion, or communication utilizes or involves facilities in interstate or foreign commerce, shall be fined not more than $5,000 or imprisoned not more than one year and a day, or both.

"§ 572. Possession of eavesdropping instruments

"A person who has in his possession any eavesdropping instrument under circumstances evincing an intent to use or employ or allow the same to be used or employed for unlawful eavesdropping under section 571 of this chapter, or knowing the same to be so used, shall be fined not more than $1,000 or imprisoned for not more than six months, or both.

"§ 573. Ex parte order for eavesdropping

"(1) An ex parte order for eavesdropping may be issued by any judge of any United States Court of Appeals or a United States District Court or any judge of the Municipal Court of Appeals for the District of Columbia or the Municipal Court for the District of Columbia or any Commissioner of the United States, upon oath or affirmation of an authorized agent of any Federal law enforcement agency that there is reasonable ground to believe that evidence of Federal crime may be thus obtained and particularly describing the person or persons whose communications, conversations, or discussions are to be overheard or recorded and the purpose thereof, and, in the case of a telegraphic or telephonic communication identifying the particular telephone number or telegraph line involved. In connection with the issuance of such an order the judge may examine on oath the applicant and any other witness he may produce and shall satisfy himself of the existence of reasonable grounds for the granting of such application. Any such order shall be effective for the time specified therein but not for a period of more than two months unless extended or renewed by the judge who signed and issued the original order upon satisfying himself that such extension or renewal is in the public interest. Any such order together with the papers upon which the application was based, shall be delivered to and retained by the applicant as authority for the eavesdropping authorized therein. A true copy of such order shall be retained in his possession by the judge issuing the same, and, in the event of the denial of an application for such an order, a true copy of the papers upon which the application was based shall in like manner be retained by the judge denying the same.

"(2) Orders for eavesdropping must be obtained before the eavesdropping commences, except as hereinafter in this section provided. A law enforcement officer may eavesdrop without a court order obtained, pursuant to this section only when he has reasonable grounds to believe (a) that evidence of crime may be thus obtained, and (b) that in order to obtain such evidence time does not permit an application to be made for such a court order before such eavesdropping must commence. In any such case an application for a court order pursuant to this section must be made within twenty-four hours after such eavesdropping commenced. In computing said twenty-four-hour period legal holidays shall not be considered. The application for such a court order must contain, in addition to the requirements set forth in this section, the time when such eavesdropping commenced. If such application is granted, the order shall be made effective from the time the eavesdropping commenced. If the application is denied, the eavesdropping must cease immediately.

"(3) Except in any trial, hearing or other proceeding, a person who willfully discloses to any person, other than a carrier whose facilities are involved, or other authorized agent of any law enforcement agency, any information concerning the application for, the granting or denial of orders for eavesdropping, or the identity of the person or persons whose communications, conversations, or discussions are the subject of an ex parte order granted pursuant to this section shall be fined not more than $1,000 or imprisoned not more than six months, or both.

"§ 574. Admissibility of evidence

"Evidence obtained by any act in violation of this chapter, and evidence obtained through or resulting from information obtained by any such act, shall be inadmissible for any purpose in any civil action, proceeding or hearing: *Provided, however,* That any such evidence shall be admissible in any disciplinary trial or hearing or any administrative action, proceeding or hearing conducted by or on behalf of any governmental agency.

"§ 575. Exceptions

"(1) Nothing contained in this chapter shall prohibit eavesdropping by any law enforcement officer or agency of any State or any political subdivision thereof, or the introduction in any court of evidence obtained by such eavesdropping, where the eavesdropping is authorized by the laws of such State and is carried out in conformity with such laws.

"(2) There may be introduced in any court of the United States evidence relating to the existence, contents, substance, purport, effect, or meaning of any communication by wire or radio which has been intercepted by any law enforcement officer or agency of any State or political subdivision thereof, where the interception of such communication was authorized by the laws of such State and was carried out in conformity with such laws.

"(3) Information obtained prior to the effective date of this chapter by any authorized agent of any Federal law enforcement agency through or as a result of the interception of any communication by wire or radio upon the express written approval of the Attorney General of the United States in the course of any investigation of any Federal offense shall, notwithstanding the provisions of section 605 of the Communications Act of 1934 (48 Stat. 1103), be deemed admissible in evidence in any criminal proceedings.

"§ 576. Duty to report violations

"It shall be the duty of every carrier subject to the Communications Act of 1934 (48 Stat. 1103) to report to the law-enforcement agency having jurisdiction, any information coming to his attention with regard to violations of this chapter. Any willful violation of this section shall be punishable by a fine of up to $500."

SEC. 2. The proviso contained in section 605 of the Communications Act of 1934 (48 Stat. 1103) is amended to read as follows: "*Provided*, That this section shall not apply to the interception, receiving, divulging, publishing, or utilizing the contents of (a) any radio communication broadcast or transmitted by amateurs or others for the use of the general public or relating to ships in distress, or (b) any eavesdropping by any person in accordance with chapter 28 of title 18 of the United States Code."

SEC. 3. The Communications Act of 1934 (48 Stat. 1064), as amended, is amended by adding the following new section:

"§ 223. Authorized interceptions

"All carriers subject to the provisions of this chapter are hereby authorized to permit eavesdropping by any person in accordance with chapter 28 of title 18 of the United States Code."

SEC. 4. If any provision of this chapter or the application of such provision to any circumstance shall be held invalid, the validity of the remainder of this chapter and the applicability of such provision to other circumstances shall not be affected thereby.

READJUSTMENT OF SIZE AND WEIGHT LIMITATIONS ON FOURTH-CLASS MAIL MATTER

Mr. MONRONEY. Mr. President, I introduce for appropriate reference a bill to adjust the size and weight limitations on fourth-class—parcel post—mail matter. I feel strongly that this is important legislation urgently needed by the Post Office Department and by tens of thousands of small businesses—manufacturers, wholesalers, retailers, and service establishments—which must use parcel post regularly.

The legislation I propose would immediately reestablish a large measure of uniformity in the limits of size and weight of parcels mailed between all post offices in the United States. My proposal, if enacted by the Congress, would eventually bring a return to complete uniformity of permissible size and weight of parcel-post packages at the level which served the Post Office Department and the people of the United States so well through the 20 years preceding 1952.

In the closing weeks of the 85th Congress, I introduced a bill having the same objective of parcel-post size and weight uniformity as I now propose. The provisions incorporated in that bill, S. 3899, had been previously approved by the Post Office and Civil Service Committee as part of a general postal rates bill, now Public Law 85–426. The parcel-post size and weight provisions, however, were deleted by the Senate from the general postal rates increase bill to permit separate consideration. To that end I introduced S. 3899. Unfortunately, strictures of time before adjournment of the 85th Congress prevented Senate consideration of my proposal.

This present proposal, while directed to the same end of achieving parcel-post

size and weight uniformity, differs from S. 3899 in the maximum limitations proposed.

In talking with mail users and postal officials in their home States, Senators have undoubtedly found, as I have in the State of Oklahoma, overwhelming demand for adjustment and standardization of size and weight limits on parcel post mail.

Remedy, so long overdue and so urgently needed by the Post Office Department and mailers, is contained in my present proposal. I hope other Members will join me in curing this sorry situation early this session.

Parcel post provides a convenient, reliable, and economical means for small package shipment all over the country. It is a major factor in the promotion of our Nation's commerce and trade. Parcel post brings buyers and sellers of the United States into close contact with each other no matter how far they may be separated by distance.

For small business, particularly, parcel post is an almost indispensable business tool.

Prior to 1952, for 20 years there had been one uniform regulation governing the size and weight of packages permitted to be shipped by parcel post to and from every post office throughout the United States. The Post Office Department and the users of parcel post conveniently geared their operations to that single uniform parcel post regulation.

Beginning with 1952, however, through the enactment of Public Law 199 of the 82d Congress, that single, uniform regulation was replaced by three differing parcel post regulations.

Operating confusion and heavy added expense has been experienced by both the Post Office Department and parcel post users as a result of Public Law 199. The Post Office Department suffered a net revenue loss in excess of $70 million in the first year of operation of Public Law 199, according to testimony of Department representatives, to Congress.

The Department further informed Congress "that Public Law 199 (65 Stat. 610) imposing nonuniform weight and size limitations on parcel post has created operational difficulties, losses of postal revenues, and widespread public misunderstanding and dissatisfaction."

The users of parcel post through the intervening years have paid heavily in increased expense for labor and materials and in higher postal rates as a result of Public Law 199.

I was a member of the Post Office and Civil Service Committee when Public Law 199 was enacted by the 82d Congress. May I repeat in part my statement to the Senate in the 85th Congress in presenting S. 3899. My statement last year on the background of Public Law 199 applies equally to my present proposal except that the need for relief from the penalties of Public Law 199 has since become even more acute:

I am not very proud of the patchwork pattern of ratemaking that we provided in the bill, but it was the best that we could do at the time. There were various reasons why we had to provide for three distinct rates. The committee had no way of knowing how much difficulty they would cause.

Under Public Law 199 parcels shipped between first-class post offices in the first two zones (approximately 150 miles from point of mailing) were limited to 40 pounds and 72 inches combined length and girth. Parcels shipped between first-class post offices, zone 3 through zone 8, were limited to 20 pounds and 72 combined inches. We retained the old maximum limits of 70 pounds and 100 combined inches for parcels shipped between post offices other than those of the first class. In addition, we exempted agricultural products, books, and certain other items, so you might say that we really have four rates.

This was not good ratemaking and we realized it. However, we did not want to eliminate this service to areas where it was otherwise unobtainable.

The committee felt that this legislation should be reviewed about every 2 years. It has now been 6 years since it has been reviewed. Certainly, time has demonstrated that we need to correct some of the inequities and undue penalties resulting from the practical operation of Public Law 199.

As you know, one of the reasons for passage of Public Law 199 was to assist the Railway Express Agency in overcoming its deficit and loss of business. I think it is rather interesting to note that while we passed the bill we apparently did no great service to the Railway Express Agency. Their complaint in 1951 was that their employment had declined by 32,000 from 1946 to 1950 because of competition of parcel post. Of course, part of the decline was caused by reductions in volume of business after the war. Actually, Railway Express had an all-time employment high of 81,000 in 1946 as a consequence of wartime business. Prewar (1940) employment had been 44,000, which was about the same as in 1951.

In 1952, when Public Law 199 became effective, Railway Express employment increased to 46,000. Since that time it has continued to decline and by 1957 it had dropped to 37,000. The fact that employment has dropped about 7,000 since the bill was passed does not support the Railway Express Agency's testimony before the committee in 1951, which I am sure was quite sincere, that their business troubles were largely the result of the competition of parcel post.

Railway Express less-than-carload shipments dropped to 78 million in 1951 from a wartime high of 231 million, and it is interesting to note that 6 years later shipments were still only 80 million.

Parcel post also lost a large amount of business in that same period, dropping from 7,485 million pounds in 1951 to 5,238 million pounds in 1957.

Obviously, Public Law 199 brought neither Railway Express nor parcel post any gain in business from the other's loss. Both lost business in a period when American business generally was experiencing large and prosperous growth.

During this 6-year period, the Interstate Commerce Commission has approved, and I think quite properly so, increases in Railway Express rates in five successive steps, from a 93-cent minimum to a $2.20 minimum, with proportionate increases in other rates.

It would seem to me that the arguments which were cogent at the time, and given in all good faith, simply do not stand up in the light of experience.

I think the parcel post size and weight legislation embodied in Public Law 199 has placed an unduly costly operating burden on the Post Office Department. These regulations are very confusing to the postal workers, and judging from the letters I get from my constituents, extremely confusing to the public.

I believe my proposal is a reasonable solution to what I consider an unreasonable situation. I hope the bill I am introducing will be reported by the committee and given consideration by the Senate early this session of Congress.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and summary explanation will be printed in the RECORD.

The bill (S. 1306) to readjust the size and weight limitations on fourth-class mail matters, introduced by Mr. MONRONEY, was received, read twice by its title, referred to the Committee on Post Office and Civil Service, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to readjust the size and weight limitations on fourth-class (parcel post) mail," approved October 24, 1951 (65 Stat. 610; 39 U.S.C. 240a), as amended, is further amended by striking out so much thereof as precedes the first semicolon and inserting in lieu thereof the following:

"That on fourth-class matter the limit of size shall be one hundred inches in girth and length combined and the limit of weight shall be over sixteen ounces and not exceeding fifty pounds until midnight on June 30, 1960, after which the upper limit of weight shall not exceed seventy pounds."

The summary explanation presented by Mr. MONRONEY is as follows:

SUMMARY EXPLANATION OF BILL

Present law provides upper limits of weight for parcel post packages of 40 pounds in the first and second zones, and 20 pounds in the third through eighth zones. The proposed bill would establish a uniform upper limit of 50 pounds, regardless of zone, until June 30, 1960.

Present law makes exceptions for packages mailed to or from Army or Fleet post offices; second, third, and fourth class post offices; or rural and star routes; and for packages containing agricultural commodities and books. In these cases, the upper limit of weight is now 70 pounds. These exceptions would be continued under the proposed bill until June 30, 1960.

After June 30, 1960, the upper limit of weight of all parcel post packages would become uniform at 70 pounds.

Present law provides an upper limit in girth of 72 inches, except for packages mailed to or from Army or fleet post offices; second, third, and fourth class post offices; or rural and star routes; and for packages containing agricultural commodities and books. In the latter cases, the upper limit of girth is now 100 inches. The proposed bill would establish a uniform limit of girth of 100 inches, effective immediately.

EXCLUSION FROM GROSS INCOME OF FULL AMOUNT OF ANY ANNUITY RECEIVED UNDER CIVIL SERVICE RETIREMENT ACT

Mr. LANGER. Mr. President, I am introducing a bill to amend the Internal Revenue Code of 1954 to provide that the full amount of any annuity received under the Civil Service Retirement Act shall be excluded from gross income.

Mr. President, I fully realize that it is difficult to suggest to Congress additional exemptions under the Federal income tax laws, under present budgetary conditions. However, Mr. President, under the Langer-Chavez-Stevenson bills which was passed by the Congress, I had placed an exemption in it for the

civil service annuities from the payment of income tax.

However, when the Civil Service Retirement Act was passed, not so many people earned enough to pay income tax, since the salaries were less than they are today and the personal exemptions were higher. For the foregoing reason, the exemption of the civil service annuities was knocked out of the Langer-Chavez-Stevenson bill before it was enacted into law.

Mr. President, when the Railroad Retirement Act was passed, the payment of income tax was an important subject and Congress did grant exemptions therein as they did in the social security law.

Mr. President, the purpose of this bill would be to place the civil service annuities on the same level as the railroad retirement and social security payments in relation to exemptions under the Federal income tax law. I ask that this bill be referred to the appropriate committee.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1309) to amend the Internal Revenue Code of 1954 to provide that the full amount of any annuity received under the Civil Service Retirement Act shall be excluded from gross income, introduced by Mr. LANGER, was received, read twice by its title, and referred to the Committee on Finance.

AMENDMENT OF RAILROAD RETIREMENT ACT OF 1937

Mr. MORSE. Mr. President, at the request of Thomas Stack, I am introducing a bill for the amendment of the Railroad Retirement Act. Mr. Stack is president of an organization known as the National Railroad Pension Forum, Inc.

I want to make clear my purpose in introducing this bill. I have very great misgivings about the soundness of this legislation which represents the program of the National Railroad Pension Forum, Inc. Nevertheless, I want the record to show that all points of view will have been considered in our deliberations concerning amendments to the Railroad Retirement Act.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1314) to amend the Railroad Retirement Act of 1937, introduced by Mr. MORSE (by request), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

GENERAL PULASKI MEMORIAL DAY

Mr. SALTONSTALL. Mr. President, I send to the desk a joint resolution which I have had the honor to submit for a number of years, authorizing the President of the United States to proclaim October 11, 1959, General Pulaski Memorial Day, for the commemoration of the death of Brigadier General Pulaski.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 62) authorizing the President of the United States of America to proclaim October 11, 1958, General Pulaski's Memorial Day for the observance and commemoration of the death of Brigadier General Pulaski, introduced by Mr. SALTONSTALL (for himself and Mr. WILLIAMS of Delaware), was received, read twice by its title, and referred to the Committee on the Judiciary.

DESIGNATION OF THE ROSE AS THE NATIONAL FLORAL EMBLEM

Mr. SCOTT. Mr. President, I introduce for appropriate reference a joint resolution to designate the rose as the national flower of the United States.

The rose is the universal symbol of peace, loyalty, love, devotion, and courage. It would be a fitting companion to the eagle as an American national symbol.

The rose goes far back into American history. Fossilized rose blooms have been found in Oregon and California. Their age is estimated at 35 million years. When the *Mayflower* landed at Plymouth it was recorded: "The shore was fragrant like the smell of a rose garden and the happy children gathered strawberries and single wild roses."

A national poll conducted a few years ago indicated that Americans prefer the rose by some 18 to 1 over any other flower.

The symbolism and popularity of the rose gives it the highest qualifications for the national flower of the United States.

Mr. President, I may add that the distinguished Senators from New York [Mr. JAVITS and Mr. KEATING] join me in sponsoring this joint resolution.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 63) designating the rose as the national flower of the United States, introduced by Mr. SCOTT, for himself, Mr. JAVITS, and Mr. KEATING, was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. ALLOTT. It seems to me that the Senator has come up with too little too late.

Mr. SCOTT. I have had the benefit of the observations of a number of Senators with regard to their preferences. I submit that the rose is never too little, since it is one of our most abundant flowers. It is never too late, because no matter what time of the year or season the rose may be in bloom in any part of the country, it gives joy, pleasure, hope, and inspiration to all those who observe it and enjoy its lovely fragrance.

Mr. ALLOTT. I hope the Senator realizes that the carnation is a much more distinguished flower. It is extensively worn by both men and women, and is peculiarly adapted for designation as the national flower.

Mr. SCOTT. Mr. President, what I have said has not been in derogation of the carnation. However, recently I have heard the statement made on the floor that the carnation was the most popular flower to be found at funerals. Therefore it does symbolize memory and appreciation of those gone before. I believe the rose, on the other hand, is a beloved symbol of the future, as well as of the present and the past.

PROPOSED AMENDMENT OF CONSTITUTION, RELATING TO TREATYMAKING POWER

Mr. DIRKSEN. Mr. President, for a number of Congresses prior to the 86th Congress, the Senate has considered what is known as the Bricker joint resolution. Long hearings were had on the joint resolution in the Committee on the Judiciary. The matter was also thrashed out on the floor of the Senate. It lost by one vote, as I recall.

Because of the interest in it all over the country, I think the joint resolution ought to be reintroduced. So, under my own name, I introduce the last version of the Bricker joint resolution, and ask for its appropriate reference.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 65) proposing an amendment to the Constitution of the United States, relating to the legal effect of certain treaties and other international agreements, introduced by Mr. DIRKSEN, was received, read twice by its title, and referred to the Committee on the Judiciary.

CENTENNIAL CELEBRATION OF ESTABLISHMENT OF LAND-GRANT COLLEGES AND STATE UNIVERSITIES AND ESTABLISHMENT OF DEPARTMENT OF AGRICULTURE

Mr. EASTLAND. Mr. President, I introduce for appropriate reference a proposed joint resolution on behalf of myself, Mr. CHURCH, Mr. SYMINGTON, Mr. BENNETT, Mr. RANDOLPH, Mr. ENGLE, Mr. CANNON, Mr. STENNIS, Mr. AIKEN, Mr. SPARKMAN, Mr. MORTON, Mr. HUMPHREY, Mr. TALMADGE, Mr. YARBOROUGH, Mr. NEUBERGER, Mr. HRUSKA, Mr. BARTLETT, Mr. YOUNG, Mr. JACKSON, Mr. HILL, Mr. MCGEE, Mr. WILEY, Mr. MAGNUSON, Mr. MOSS, Mr. CHAVEZ, Mr. MURRAY, Mr. MORSE, Mr. CARLSON, Mr. JAVITS, Mr. CASE of New Jersey, Mr. ANDERSON, Mr. DIRKSEN, Mr. PASTORE, Mr. KEFAUVER, Mr. CASE of South Dakota, Mr. HART, Mr. MUSKIE, Mr. WILLIAMS of New Jersey, Mr. MUNDT, Mr. HICKENLOOPER, Mr. MCCARTHY, Mr. CARROLL, and Mr. COOPER, to provide for the centennial celebration of the establishment of the land-grant colleges and State universities and the establishment of the Department of Agriculture, and for other purposes.

I ask that a letter of transmittal from the Secretary of Agriculture to the President of the Senate recommending this proposed joint resolution be printed in the RECORD at this point.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without ob-

jection, the letter will be printed in the RECORD.

The joint resolution (S.J. Res. 66) to provide for the centennial celebration of the establishment of the land-grant colleges and State universities and the establishment of the Department of Agriculture, and for other related purposes, introduced by Mr. EASTLAND (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary.

The letter presented by Mr. EASTLAND is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., January 29, 1959.

THE PRESIDENT OF THE SENATE,
U.S. Senate.

DEAR MR. PRESIDENT: The Department recommends the passage of the attached joint resolution that provides for centennial celebrations in 1962 of the U.S. Department of Agriculture, and of the land-grant colleges and State universities. Both founding acts were passed in 1862 and now stand as landmarks in legislative history. They have attained progressive significance with the growth and development of the USDA land-grant college system of Federal-State cooperation. From this teamwork has come the leadership that produced an unparalleled agricultural revolution. From the Morrill Act has come a national system of higher education uniquely designed to expand educational opportunity and the search for and dissemination of basic and applied knowledge in the arts and sciences.

The proposed joint resolution establishes a Commission to commemorate these important events, with the President, Vice President, the Speaker of the House, the Secretary of Agriculture, and the president of the American Association of Land-Grant Colleges and State Universities as honorary members, and members to include Senators, Representatives, representation from the executive agencies involved, and individual representatives of interested organizations.

The Commission would coordinate and approve suitable plans for the centennial celebration in which observances may be developed jointly and separately by the Department and the land-grant colleges and State universities. For instance, the Department has working relationships with the State departments of agriculture that do not concern the colleges, and the land-grant colleges and State universities have relationships with the Departments of Defense, and of Health, Education and Welfare, that do not concern agriculture. The Commission would make a special effort to encourage participation by farm organizations, industry and business associated with agriculture, as well as by appropriate bodies of the State, and the legislatures of such States, in local, regional, and national celebrations.

The Commission, in carrying out the purposes of the resolution would be authorized to employ such employees as may be necessary, accept donations of money and property, cooperate with public or private organizations with assistance through grants or otherwise, in relation to activities approved by the Commission. An executive committee is provided to carry out the functions of the Commission under its general direction.

The resolution authorizes and directs the Secretary of Agriculture to prepare plans for the appropriate commemorative celebration of the founding of the U.S. Department of Agriculture and to join in celebrating the centenary of the land-grant colleges and State universities. The Secretary of Defense is authorized to prepare plans for celebrating the ROTC relationships with the land-grant colleges and State universities. The Department of Health, Education, and Welfare, through its Office of Education, is authorized to prepare plans for celebrating the long association with the land-grant colleges and State universities in resident instruction. In so doing, these Federal agencies are to use funds and authorities otherwise available to them.

It is believed that approximately $200,000 would be needed to carry out the provisions of this proposed legislation.

The Bureau of the Budget advises that there is no objection to the submission of this proposed legislation to the Congress for its consideration.

Sincerely yours,

E. T. BENSON.

PROPOSED NEW JERSEY TERCENTENARY CELEBRATION COMMISSION

Mr. WILLIAMS of New Jersey. Mr. President, on behalf of my colleague, the senior Senator from New Jersey [Mr. CASE] and myself, I introduce, for appropriate reference, a joint resolution providing for the establishment of the New Jersey Tercentenary Celebration Commission to formulate and implement plans to commemorate the 300th anniversary of the State of New Jersey, and for other purposes.

Mr. President, New Jersey has 300 years of significant and very meaningful history to celebrate. State legislators have already taken steps to make certain that the celebration will be worthy of the Garden State. Cooperation, at a national level, as proposed in this resolution is essential, too.

Ample precedent exists for such action at the national level. In 1935, a similar commission was established for the 300th anniversary of the founding of Connecticut; for the 300th anniversary of the Massachusetts Bay Colony in 1930; for the Tennessee Centennial in 1896; and for the 100th anniversary of Texas in 1935.

The first deed of lease signed in 1664 by James, Duke of York, to John Lord Berkeley was for those lands "bounded on the east part by the main sea, and part by Hudson's river, and hath upon the west Delaware bay or river, and extendeth southward to the main ocean as far as Cape May at the mouth of Delaware bay; and to the northward as far as the northernmost branch of the said bay or river of Delaware, which is forty-one degrees and forty minutes of latitude, and crosseth over thence in a strait line to Hudson's river in forty-one degrees of latitude; which said tract of land is hereafter to be called by the name or names of New Caesarea or New Jersey."

The Commission would have 15 members. Four Senators would be appointed by the Senate President. Four Representatives would be chosen by the House Speaker, and seven would be appointed by the President. The President would designate one member as Chairman. Commission members would receive no salary. The Commission would expire upon the completion of its duties, no later than March 1, 1965.

Mr. President, I ask unanimous consent that the text of the proposed joint resolution, along with the joint resolution already passed by the New Jersey State Legislature, be printed in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution, together with the joint resolution of the New Jersey Legislature, will be printed in the RECORD.

The joint resolution (S.J. Res. 68) providing for the establishment of the New Jersey Tercentenary Celebration Commission to formulate and implement plans to commemorate the 300th anniversary of the State of New Jersey, and for other purposes, introduced by Mr. WILLIAMS of New Jersey (for himself and Mr. CASE of New Jersey), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

SENATE JOINT RESOLUTION 68

Joint resolution providing for the establishment of the New Jersey Tercentenary Celebration Commission to formulate and implement plans to commemorate the three hundredth anniversary of the State of New Jersey, and for other purposes

Whereas the year 1964 will mark the tercentenary of the patent conveying all the lands between the Connecticut River and the east side of the Delaware River from Charles II to James, Duke of York; and

Whereas the year 1964 will also mark the three hundredth anniversary of the execution of deeds of lease and release by the said James, Duke of York, to John Lord Berkeley, Baron of Stratton, and Sir George Carteret, of Saltrum, of those lands "* * * bounded on the east part by the main sea and part by Hudson's river, and hath upon the west Delaware bay or river, and extendeth southward to the main ocean as far as Cape May at the mouth of Delaware Bay, and to the northward as far as the northernmost branch of the said bay or river of Delaware, which is forty-one degrees and forthy minutes of latitude, and crosseth over thence in a strait line to Hudson's river in forty-one degrees of latitude; which said tract of land is hereafter to be called by the names or names of New Caesarea or New Jersey * * *" and of the right of government herein; and

Whereas the year 1964 will also be the tercentenary of the signing and publication by John Lord Berkeley and Sir George Carteret of "The Concessions and Agreement of the Lords Proprietors of the Province of New Caesarea or New Jersey to and with all and every the Adventurers and all such as shall settle or plant here", a declaration of the organic law of the colony and, truly, "the Magna Carta of New Jersey"; and

Whereas these foregoing events mark the beginning of the separate history of New Jersey as a colony; and

Whereas it is fitting and desirable that we commemorate the beginnings of the State of New Jersey, together with its subsequent history and its present and future role in the family of the United States, for the benefit of all the people of our Nation; and

Whereas such a commemoration, with careful planning, can be of enduring, rather than transitory, worth to our people: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) there is hereby established a commission to be known as the New Jersey Tercentenary Celebration Commission (hereafter referred to in this joint resolution as the "Commission") which shall be composed of fifteen members as follows:

(1) Four members who shall be Members of the Senate, to be appointed by the President of the Senate;

(2) Four members who shall be Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives;

(3) Seven members to be appointed by the President.

(b) The President shall, at the time of appointment, designate one of the members appointed by him to serve as Chairman. The members of the Commission shall receive no salary.

SEC. 2. (a) The functions of the Commission shall be to develop and to execute suitable plans for the celebration of a series of anniversaries occurring between 1959 and 1964, both years inclusive, commemorating the three hundredth anniversary of the State of New Jersey.

(b) In carrying out its functions the Commission is authorized to cooperate with and to assist the New Jersey Tercentenary Commission and any other agency created or designated by the Legislature of the State of New Jersey for the purpose of planning and promoting the New Jersey Tercentenary Celebration. If the participation of other nations in the celebration is deemed advisable, the Commission may communicate to that end with the governments of such nations through the Department of State.

SEC. 3. The Commission may employ, without regard to the civil-service laws or the Classification Act of 1949, as amended, such employees as may be necessary in carrying out its functions. Service of an individual as a member of the Commission or employment of an individual by the Commission, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of sections 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes of the United States (5 U.S.C. 99).

SEC. 4. (a) The Commission is authorized to accept donations of money, property, or personal services; to cooperate with patriotic and historical societies and with institutions of learning; and to call upon other Federal departments or agencies for their advice and assistance in carrying out the purposes of this joint resolution. The Commission, to such extent as it finds to be necessary, may, without regard to the laws and procedures applicable to Federal agencies, procure supplies, services, and property and make contracts, and may exercise those powers that are necessary to enable it to carry out efficiently and in the public interest the purposes of this joint resolution.

(b) Expenditures of the Commission shall be paid by the executive officer of the Commission, who shall keep complete records of such expenditures and who shall account also for all funds received by the Commission. A report of the activities of the Commission, including an accounting of funds received and expended, shall be furnished by the Commission to the Congress within two months following the celebration as prescribed by this joint resolution.

(c) Any property acquired by the Commission remaining upon termination of the celebration may be used by the Secretary of the Interior for purposes of the national park system or may be disposed of as surplus property. The net revenues, after payment of Commission expenses, derived from Commission activities, shall be deposited in the Treasury of the United States.

SEC. 5. The Commission shall expire upon the completion of its duties, but in no event later than March 1, 1965.

SEC. 6. There are authorized to be appropriated such sums, not to exceed $75,000, as may be necessary to carry out the provisions of this joint resolution.

The joint resolution of the Legislature of the State of New Jersey, presented by Mr. WILLIAMS of New Jersey, is as follows:

ASSEMBLY, No. 548, STATE OF NEW JERSEY

Providing for the establishment of the New Jersey Tercentenary Celebration Commission to formulate and implement plans to commemorate the 300th anniversary of the State of New Jersey, and for other purposes

Whereas the year 1964 will mark the tercentenary of the patent conveying all the lands between the Connecticut River and the east side of the Delaware River from Charles II to James, Duke of York; and

Whereas the year 1964 will also mark the 300th anniversary of the execution of deeds of lease and release by the said James, Duke of York, to John Lord Berkeley, Baron of Stratton, and Sir George Carteret, of Saltrum, of those lands "* * * bounded on the east part by the main sea, and part by Hudson's River, and hath upon the west Delaware bay or river, and extendeth southward to the main ocean as far as Cape May at the mouth of Delaware Bay; and to the northward as far as the northernmost branch of the said bay or river of Delaware, which is 41° and 40′ of latitude, and crosseth over thence in a strait line to Hudson's River in 41° of latitude; which said tract of land is hereafter to be called by the name or names of New Caesarea or New Jersey * * *" and of the right of government therein; and

Whereas the year 1964 will also be the tercentenary of the signing and publication by John Lord Berkeley and Sir George Carteret of "The Concessions and Agreement of the Lords Proprietors of the Province of New Caesarea or New Jersey to and with all and every the Adventurers and all such as shall settle or plant here", a declaration of the organic law of the colony and, truly, "the Magna Charta of New Jersey"; and

Whereas these foregoing events mark the beginning of the separate history of New Jersey as a colony; and

Whereas it is fitting and desirable that we commemorate the beginnings of the State of New Jersey, together with its subsequent history and its present and future role in the family of the United States, for the benefit of all the people of our Nation; and

Whereas, such a commemoration, with careful planning, can be of enduring, rather than transitory, worth to our people: Now, therefore,

Be it enacted by the Senate and General Assembly of the State of New Jersey, That 1. There is hereby created the New Jersey Tercentenary Commission to consist of 11 members, 2 to be appointed from the membership of the Senate by the President thereof, 2 to be appointed from the membership of the General Assembly by the Speaker thereof, and 7 citizens of the State to be appointed by the Governor, who shall serve without compensation and who shall constitute a commission for the purpose of formulating and implementing plans to observe appropriately the tercentenary of the beginning of New Jersey. The Senate and General Assembly members of the commission shall serve only while members of the Senate or General Assembly, respectively; the citizen members shall serve for the duration of the commission until December 31, 1964. Vacancies in membership of the commission shall be filled in the same manner as the original appointments were made.

2. The commission shall meet at the call of the Governor and organize by the selection of a chairman from among its members and a secretary who need not be a member of the commission.

3. It shall be the duty of the Commission to formulate and implement a 5-year program for the proper observance of the beginnings of New Jersey and its subsequent role in the lives of the people of this State and Nation. This program shall be planned for its lasting effect, for its contributions to the preservation and interpretation of New Jersey's heritage, and to stimulate and coordinate the activities of Federal, State, municipal, and private agencies and organizations. This program shall include such activities as the Commission deems desirable and practicable and may include the publication of a tercentenary history of New Jersey and other materials, the arrangement of public ceremonies observing a series of anniversaries occurring between 1959 and 1964, the microfilming or duplicating of source materials located outside of New Jersey, the resumption of the publication of "New Jersey Archives," the arrangement for the rehabilitation of the State's historic sites, buildings and markers, and the establishment and maintenance of a publicity service to further the objectives of the Commission.

4. The Commission shall be entitled to employ an executive director and such other assistants as it may require and to incur necessary traveling and other necessary expenses in order to perform its duties, and as may be within the limits of funds appropriated or otherwise made available to it for said purposes.

5. The Commission may receive gifts of money or property for carrying out the purposes of this act.

6. The Commission may meet at such place or places as it shall designate and shall report on the progress of its program and any recommendations it may have to the Governor and the legislature as soon as practicable after its organization and, thereafter, whenever it shall deem it advisable but at least once every year.

7. For the fiscal year 1958–1959, there is hereby appropriated for the purposes of the Commission the sum of $25,000. Any part of such appropriation not expended during the fiscal year 1958–1959, unless otherwise provided, shall be reappropriated for its use during succeeding fiscal years.

8. This act shall take effect immediately.

ADDITIONAL FUNDS FOR SPECIAL STUDY BY JOINT ECONOMIC COMMITTEE

Mr. DOUGLAS. Mr. President, I submit a concurrent resolution to provide for a study by the Joint Economic Committee of the problems of providing maximum employment and an adequate rate of economic growth, as well as maintaining price stability and preventing inflation. This resolution was given final consideration at a meeting of the full Committee on March 3, and was approved unanimously. The study would be conducted under the general responsibilities assigned to the Joint Economic Committee by the Employment Act of 1946.

I ask unanimous consent that the resolution be referred to the Committee on Rules and Administration.

The concurrent resolution (S. Con. Res. 13) was referred to the Committee on Rules and Administration, as follows:

SENATE CONCURRENT RESOLUTION 13

Resolved by the Senate (the House of Representatives concurring), That the Joint Economic Committee, or any duly authorized subcommittee thereof, as authorized by the Employment Act of 1946, as amended, is authorized and directed to conduct a full and complete study and investigation into the

problems of providing maximum employment and an adequate rate of economic growth, as well as maintaining price stability and preventing inflation, including among others, the following subjects:

(1) Historical and comparative rates of unemployment, production, and prices;

(2) Inflation and deflation caused by increases and decreases in the effective supply of money and credit and the effects of these and of interest rates on growth, employment, and economic stability;

(3) The effect of monopolistic and quasi-monopolistic practices upon prices, profits, production, and employment;

(4) The effect of increases in wages, salaries, and the prices of personal services, together with union and professional practices, upon prices, profits, production, and employment;

(5) The effect of governmental expenditures, taxation, and budgetary surpluses and deficits, and of monetary and debt management policies upon price levels, production, and employment;

(6) International influences affecting prices, production, trade, and employment; and

(7) Constructive suggestions for reconciling and simultaneously obtaining the three objectives of maximum employment, an adequate rate of growth, and substantial stability of the price level.

SEC. 2. For the purposes of this resolution, the joint committee, or any duly authorized subcommittee thereof, is authorized through January 31, 1960, (1) to appoint and fix the compensation of such experts, consultants, or organizations thereof, and clerical and stenographic assistants as it deems necessary and advisable; and (2) to hold such hearings, to sit and act at such times and places, to require by subpena or otherwise the attendance of such witnesses, and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures, as it deems advisable. Subpenas shall be issued under the signature of the chairman or vice chairman of the joint committee, and shall be served by any person designated by them.

SEC. 3. The joint committee shall from time to time report its findings and recommendations to the Senate and the House of Representatives and shall make its final report at the earliest practicable date, but not later than January 31, 1960.

SEC. 4. The expenses of the joint committee under this resolution, which shall not exceed $200,000, through January 31, 1960, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the joint committee.

Mr. DOUGLAS. Mr. President, I should like to ask the ranking minority member of the Joint Economic Committee to speak about this matter, if he cares to do so.

Mr. BUSH. Mr. President, I thank the acting majority leader [Mr. MONRONEY], and my friend, the Senator from Illinois [Mr. DOUGLAS].

I did not hear all that the Senator from Illinois said, but I assume that he has just submitted a resolution, on behalf of the Joint Economic Policy Committee.

Mr. DOUGLAS. That is correct; and I said it had been approved by the minority members as well as by the majority members of the Joint Economic Committee.

Mr. BUSH. Mr. President, not only do I confirm that statement, but I also hope the Senate will approve the resolution. It calls for the authorization of the appropriation of a substantial sum of money—a matter which we discussed very fully in the committee. We concluded that although the committee might very well do with less money than is called for, we would unite in attempting to hold down the expenses of the committee, but that it is in the interest of the overall project that the budget called for in the resolution be approved, and that our request for its approval is a proper one for the committee to make.

So the action was unanimous.

Mr. DOUGLAS. I thank the Senator from Connecticut.

REVISION AND RENEWAL OF INTERNATIONAL WHEAT AGREEMENT

Mr. KENNEDY. Mr. President, I have been concerned over the progress of the negotiations for renewal of the International Wheat Agreement. That agreement, unless renewed, will by its terms expire on July 31, 1959. Representatives of the participating countries have been meeting in Geneva since January 26 in an effort to negotiate new understandings. Unfortunately, there is as yet no sign of general agreement.

I believe our negotiators must be made aware of the urgency of their mission, of its importance as an instrument of foreign policy, of its use as an aid to the solution of domestic farm problems, and of new and expanded uses which it can serve. That is why I am submitting, for appropriate reference, on behalf of myself, and Senators BIBLE, CARROLL, CHURCH, HART, HARTKE, HUMPHREY, JACKSON, MAGNUSON, MANSFIELD, MCCARTHY, MORSE, MOSS, MURRAY, NEUBERGER, PASTORE, YOUNG of North Dakota, and YOUNG of Ohio, a resolution expressing the sense of the Senate that:

First. The International Wheat Agreement be renewed;

Second. In any renewal there should be maximum prices to wheat importing countries and minimum prices to wheat exporting countries;

Third. The International Wheat Council be continued as part of the agreement; and

Fourth. The International Wheat Council be empowered to encourage and coordinate the distribution of additional supplies of wheat on concessional terms to countries unable to purchase sufficient supplies in the commercial market to meet the nutritional needs of their people.

In the past, this agreement has been of important assistance in the orderly international distribution of wheat. It has an even greater potential in the future. Today, when the wheat surplus is termed by many writers as our number one farm problem, there must be provision for international consideration of the distribution problem.

Some two-thirds of the human race are underfed. I believe that so long as there is a single undernourished family the wheat surplus problem is, at least in part, a wheat distribution problem. Assuming the entire United States food surplus were distributed to the hungry people of the world, it would mean the equivalent of only two teacupfuls of rice every 17 days. If we attempt unilaterally to fashion our wheat exporting policies, we run obvious risks of either alienating our wheat producing friends by selling for too low a price or of directing insufficient supplies to needy nations by selling for too high a price. Our Public Law 480 program, under which immense quantities of our surplus have moved into food deficit countries, is a magnificent demonstration of the productivity, the generosity, and the resourcefulness of the American people. However, unilateral action is a delicate and difficult feat. Even the recipient countries hesitate to become heavily indebted to a foreign power, despite the good faith of the exporting country.

Never has the world had to cope with the quantities of surplus wheat held in storage today. The roster of surplus countries and needy countries is a list of our friends, our allies, and those we must support if we are to win the battle against international communism. I understand that the Soviet Government is planning a systematic increase in grain production and, according to a report just released by the Netherlands Government, it is probable that the Soviet Union will soon start dumping wheat as an instrument of political pressure. Such practices can be disastrous to the free world as producers of tungsten, tin, and other minerals have recently learned. These forays have a single purpose—to disrupt free-world trade. That is why it is especially important that we continue to meet together in an International Wheat Council to find the solution to our surplus problems and, at the same time, to serve the cause of world peace.

I should like to call particular attention to the provision of the proposed resolution empowering the Council to coordinate and distribute supplies of wheat on concessional terms to needy nations. Here, in one place, will be gathered the responsible officers of the wheat exporting and wheat importing countries. Here there is presented the opportunity to decide how wheat can best be used to raise the standard of living of suffering nations. Under appropriate procedures, the Council can use surplus wheat to promote world peace.

All major free-world wheat nations are represented. Forty-eight nations ratified the present agreement. Although the United Kingdom was not one of these, it has expressed a strong desire to join the agreement if the jurisdiction of the agreement can be broadened in a manner similar to that suggested in this resolution.

Mr. President, I hope the same type of International Council can be formed and utilized, ultimately, to deal with other international food problems. In the very near future, too, I expect to join in cosponsoring, with many of my colleagues, changes in Public Law 480 to make it a "Food for Peace" Act. The new Public Law 480, under this proposed bill, would emphasize the foreign policy objectives of farm surplus disposal.

At any rate, it is essential that the International Wheat Agreement be renewed, and I hope the Senate will take prompt action upon the resolution.

The resolution (S. Res. 90), was received and referred to the Committee on Foreign Relations, as follows:

SENATE RESOLUTION 90

Resolved, That the President is hereby urged, by such means as he deems appropriate, to effect a revision and renewal of the International Wheat Agreement, ratified by 48 importing and exporting countries, including the United States, and which agreement will expire on July 31, 1959.

SEC. 2. It is further the sense of the Senate that, with widest possible participation on the part of wheat importing and exporting countries, any revision and renewal of the International Wheat Agreement should (1) continue to assure supplies of wheat to importing countries at not more than agreed maximum prices, and markets for wheat exporting countries at no less than agreed minimum prices; and (2) continue the existence of the International Wheat Council heretofore established.

SEC. 3. It is further the sense of the Senate that the International Wheat Council be empowered under the new International Wheat Agreement to encourage and coordinate the distribution of additional supplies of wheat on concessional terms to countries unable to purchase sufficient supplies of wheat in the commercial market to meet nutritional needs of their people.

AMENDMENT OF CIVIL RIGHTS ACT OF 1957—AMENDMENT

Mr. BUSH. Mr. President, I send to the desk an amendment to S. 960, the bill to extend for 2 years the life of the President's Commission on Civil Rights, and ask that it be appropriately referred.

Mr. President, my amendment would authorize and direct the Commission on Civil Rights to study and investigate discrimination in employment and in labor organizations by reason of color, race, religion, and national origin.

Whether practiced by employers or by labor unions, discrimination on grounds of race, creed, color, or national origin which bars a person from an occupation for which he is qualified is offensive to those who believe in steady forward progress in the field of civil rights. Equally offensive are practices which result in segregated employment rights.

The need for an impartial investigation of this problem as it involves labor organizations has been emphasized by an official complaint made by the National Association for the Advancement of Colored People to the AFL–CIO.

Mr. Roy Wilkins, executive secretary of the NAACP, wrote to President George Meany, of the AFL–CIO, on December 19, 1958, charging that a pattern of racial discrimination and segregation exists in many affiliated unions.

Mr. President, I ask unanimous consent that Mr. Wilkins' letter to Mr. Meany, and a memorandum from Herbert Hill, NAACP labor secretary, to Boris Shiskin, director, AFL–CIO civil-rights department may be printed in the RECORD following these remarks.

Mr. President, I hope the Committee on the Judiciary will give serious consideration to my amendment when it conducts hearings on bills which I have cosponsored to implement President Eisenhower's recommendations on civil rights.

I believe the proposed study and investigation by the Commission on Civil Rights will help to create a climate of public opinion which will make possible more rapid progress toward elimination of the discrimination of which the NAACP complains, and also of similar discrimination by employers.

There being no objection, the letter and memorandum were ordered to be printed in the RECORD, as follows:

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
New York, N.Y., December 19, 1958.

Mr. GEORGE MEANY,
President, AFL–CIO,
Washington, D.C.

DEAR GEORGE MEANY: Please find enclosed copy of memorandum from Herbert Hill, NAACP labor secretary, to Boris Shishkin, director, AFL–CIO civil rights department. This memorandum contains complaints from members of the National Association for the Advancement of Colored People charging racial discrimination and segregation by unions affiliated with the American Federation of Labor-Congress of Industrial Organizations.

For the past 3 years the association has cooperated diligently with the civil rights department and with affiliated international unions in attempting to resolve problems of discrimination and segregation. In addition, representatives of the NAACP national office were active in efforts to defeat "right to work" legislation in Ohio, California, and elsewhere. I received a kind letter from James L. McDevitt, national director of the AFL–CIO committee on political education, thanking the association for the efforts of our labor secretary in helping to defeat "right to work" proposals in Ohio.

We recall that the merger convention of the AFL–CIO incorporated the following provision into its constitution: "To encourage all workers without regard to race, creed, color, or national origin to share in the full benefits of union organization."

However, 3 years after the merger agreement there is clear evidence that many unions continue discriminatory racial practices. Some affiliated international unions which have eliminated constitutional provisions limiting membership to white persons today exclude Negroes by tacit consent. Other AFL–CIO affiliates limit Negro membership to segregated or "auxiliary" locals. Some international unions have moved sincerely to eliminate inequalities but progress has been slow.

Increasingly, we are receiving complaints against trade unions from our members and from Negro workers throughout the country charging racial discrimination and segregation. Careful investigation by our staff has in most instances sustained these individual charges and, in addition, has revealed a pattern of racial discrimination and segregation in many affiliated unions.

Among the valid complaints received by us are those against the International Brotherhood of Electrical Workers, United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry, Communication Workers of America, International Hod Carriers, Building and Common Laborers Union of America, United Paper Makers and Paperworkers Union, International Brotherhood of Pulp, Sulphite, and Paper Mill Workers, International Union of Operating Engineers, Brotherhood of Railway Carmen of America, International Brotherhood of Boilermakers, Brotherhood of Maintenance of Way Employees, etc. I am sure you are aware that the Brotherhood of Locomotive Engineers and the Brotherhood of Railroad Trainmen continue to exclude nonwhite persons from union membership by constitutional provisions.

A typical example is the complaint received from Barry J. Henderson, who for many years has been a leader in the NAACP in East St. Louis, Ill. Solely because of his race, Mr. Henderson and other Negroes in the St. Louis-East St. Louis area are forced to belong to segregated local lodges maintained by the Brotherhood of Railway and Steamship Clerks, AFL–CIO. As Mr. Henderson states in the affidavit submitted to the AFL–CIO civil rights department, "the system of segregated local and segregated seniority rosters denies Negro workers equal seniority rights and does serious harm to their economic status."

I am sure you realize that the NAACP is obligated to its own membership to press vigorously for the elimination of discriminatory practices within trade union organizations. In previous memoranda and in discussions with responsible AFL–CIO officials we have expressed our conviction that the problem is of such magnitude that it cannot be resolved by the present procedure of taking up random individual complaints. We believe discrimination can be eliminated only through a systematic program on the part of the leadership of the AFL–CIO to enforce its basic policy of nondiscrimination throughout the organized labor movement.

This problem will be cited in our staff reports to the annual meeting of the NAACP January 5, 1959, and may be treated in a resolution by our board of directors meeting later that same day.

We would be pleased to have any comment of yours which could be cited with our January 5 report on the situation as we see it.

We are not unaware of some of the difficulties faced by the AFL–CIO in implementing the just policy it has set for itself. Some of these difficulties stem from long-established, but unjust traditions and practices within certain international unions themselves. Some are rooted in the present climate of opinion in the South and in other sections of the country. Some undoubtedly are connected with politics within unions and with the general program and priorities of the organized labor movement.

We remain convinced, however, that the only way to attack is to attack, and, as in the school desegregation problem (which presents similar obstacles) to make a beginning. As I have indicated, we have certain inescapable responsibilities to our members. We must present their cases and press them toward a solution. Naturally, we stand ready, as always, to cooperate fully in an active and continuing program looking toward elimination of those practices which both our organizations deplore and denounce.

With kind personal regards, and with greetings of the holiday season, I am,

Very sincerely yours,

ROY WILKINS,
Executive Secretary.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
New York, N.Y., December 4, 1958.

Memorandum to: Boris Shishkin, Director, Civil Rights Department, AFL–CIO
From: Herbert Hill, labor secretary, NAACP

Please find attached affidavits and other data from members of the National Association for the Advancement of Colored People charging racial discrimination and segregation by unions affiliated to the American Federation of Labor-Congress of Industrial Organizations.

AFFIDAVIT OF BARRY J. HENDERSON VERSUS BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS INTERNATIONAL UNION

Mr. Henderson is a member of Local Lodge 6115 of the Brotherhood of Railway and Steamship Clerks in East St. Louis, Ill. Local Lodge 6115 is a segregated local of Negro workers employed by the Wabash Railroad in the St. Louis area. White persons

are in Local Lodge 5221 which denies membership to Negroes. In the St. Louis area there are 14 all-colored locals and 14 all-white locals.

In addition to the rigid pattern of segregation in local lodges there is maintained a pattern of segregated joint councils, as the East St. Louis and St. Louis joint council is composed of the segregated Negro locals and the St. Louis district council is composed of the all-white locals. As Mr. Henderson indicates in his affidavit "the system of segregated locals and segregated seniority rosters denies Negro union members equal promotional rights and does serious harm to their economic status."

"Investigation by the NAACP indicates that the Brotherhood of Railway and Steamship Clerks maintains segregated local lodges in the North as well as in the South. The existence of segregated local lodges and separate racial seniority rosters seriously limits Negro job mobility and violates the seniority rights of Negro union members.

"Repeated efforts by Negro members of this international union to secure the elimination of discrimination and segregation have been to no avail and, therefore, they have now requested the assistance of the NAACP."

SEGREGATION AND DISCRIMINATORY RACIAL PRACTICES, BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, TULSA, OKLA.

Officials of local lodge 6257, which is a segregated Negro lodge, affiliated to the Brotherhood of Railway and Steamship Clerks in Tulsa, Okla., have requested the assistance of the NAACP national office in attempting to eliminate discriminatory practices suffered by Negro workers employed by the St. Louis-San Francisco Railroad in Tulsa. The Brotherhood of Railway and Steamship Clerks maintains lodge 777 for white employees of the railroad and lodge 6257 for Negro employees.

On March 3, 1956 the president of the Negro local in a letter to the general chairman of the union's Frisco system board requested the elimination of segregated locals and stated, "At a meeting held February 15, members of this organization decided that it would be to our best interests to merge with lodge 777 and surrender our charter. Since the schools of our city and State have integrated without incidents, we are sure the same would happen between our lodges." The brotherhood has refused the request of the Negro lodge to merge with lodge 777 and continues to maintain racially segregated lodges for white and colored workers employed by the same railroad.

Negro workers belonging to lodge 6257 have frequently charged violation of their seniority and promotional rights by the white local. The collusion of the all-white local, lodge 777, with the railroad has caused great harm to many Negro railway workers, some with 12, 17, and 37 years of seniority and is typical of the discriminatory practices engaged in by the Brotherhood of Steamship and Railway Clerks throughout the United States.

An analysis of the union's operation in Tulsa and elsewhere indicates quite clearly that because Negro workers are admitted into membership only in segregated local unions they are denied equal representation and bargaining rights and are in fact denied the full benefits of trade union membership. Because representatives of the Brotherhood of Railway and Steamship Clerks have repeatedly refused to eliminate the discriminatory practices suffered by Negro workers attorneys for the NAACP in Tulsa are prepared to initiate legal action if the practices of discrimination and segregation are not eliminated by March 1, 1959.

It is necessary to note that the Brotherhood of Railway and Steamship Clerks, together with other international unions, engages in discriminatory racist practices in violation of the stated civil rights policy of the AFL–CIO and unfortunately alters these practices only when forced to by State statutes or courts of law. An example of this was the year-long refusal of lodge 364 in Minnesota to accept one Negro worker into membership. This complaint was filed with the Minnesota State fair employment practices commission which directed that the Negro complainant be accepted into membership by the Brotherhood of Railway and Steamship Clerks with seniority beginning on the date of acceptance. The respondent union accepted the Negro into membership more than a year after the initial complaint was filed and only after the State of Minnesota, through its fair employment practices commission, indicated its intent to use the full penal power of the law. It is ironic to note that the president of this union, Mr. George Harrison, is a member of the civil rights committee of the AFL–CIO.

AFFIDAVIT OF WILLIAM GAMBLE AGAINST INTERNATIONAL HOD CARRIERS, BUILDING AND COMMON LABORERS UNION OF AMERICA

Since 1953 Mr. Gamble has attempted to secure membership in local 100 of the International Hod Carriers, Building and Common Laborers Union in East St. Louis, Ill. Officials of local 100 have continuously denied him such membership and in addition refused to honor the traveling permit issued to him by local 110 in St. Louis, Mo.

As Mr. Gamble states in his affidavit, "This is in violation of the established practices of the international union and has prevented me from securing employment. Membership in other locals and traveling permits held by white persons are recognized."

Negro workers are currently denied employment in the major construction projects in the St. Louis and East St. Louis area because of the discriminatory practices of unions affiliated to the Building Trades Council of the AFL–CIO. If within 90 days Mr. Gamble and other qualified Negroes are not admitted into membership by this union, attorneys for the Illinois State Conference of NAACP branches will initiate legal action.

AFFIDAVIT OF JETHRO SMITH VERSUS INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

Mr. Jethro Smith is a qualified electrician and has worked as such for over 13 years. Because the union has consistently refused to admit him into membership he has been permitted to work only on minor jobs within Negro residential areas and has been prevented from securing employment in major construction installations including Federal Government projects in the St. Louis area. Membership in Local 309 of the International Brotherhood of Electrical Workers is limited to white persons only.

If within 90 days Mr. Smith and other qualified Negro electricians are not admitted into membership, attorneys for the Illinois State Conference of NAACP branches are prepared to initiate legal action.

AFFIDAVIT OF HENRY DENSMORE VERSUS OPERATIVE PLASTERERS AND CEMENT MASONS INTERNATIONAL ASSOCIATION OF THE UNITED STATES AND CANADA

Local 90 of this union like several others in the St. Louis and East St. Louis area maintains a rigid policy of excluding Negroes from membership thereby preventing qualified colored mechanics from securing employment on major construction projects.

Mr. Densmore states in his affidavit that, "Mr. L. H. Ellis, the business agent on the premises, refused to give me an application form and after some discussion I was told to appear at a meeting on August 8 at the Broadview Hotel to apply for membership. Upon my arrival at the designated time and place, I found there was no meeting, nor had any such meeting been arranged for."

If within 90 days Mr. Densmore and other qualified Negro mechanics are not admitted into membership attorneys for the Illinois State Conference of NAACP branches are prepared to intiate legal action.

AFFIDAVIT OF FRANK T. LYERSON VERSUS UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPEFITTING INDUSTRY OF THE UNITED STATES

Local 630 of this union like the majority of those affiliated to the Plumber's Union limits membership to white persons exclusively thereby preventing qualified Negro workers from securing employment in their chosen trade. Local 630 has repeatedly refused membership to Mr. Lyerson and all other Negroes in the East St. Louis area.

If within 90 days Mr. Lyerson and other qualified Negro mechanics are not admitted into membership attorneys for the Illinois State Conference of NAACP branches are prepared to initiate legal action.

The complaints cited above are typical of the continued discriminatory practices engaged in by building trades unions throughout the country. Union membership is a condition of employment in the construction industry, therefore, the refusal to admit into membership because of color completely denies qualified Negroes the right to work in their chosen trade. It is essential that the National AFL–CIO vigorously proceed to eliminate the well-known pattern of discrimination and segregation in the many unions affiliated to the AFL–CIO Building Trades Council.

UNITED PAPER MAKERS AND PAPERWORKERS UNION AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE, AND PAPER MILL WORKERS

Members of the National Association for the Advancement of Colored People who are members of both the United Paper Makers and Paperworkers Union and the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers have requested the assistance of the association's national office in eliminating the rigid pattern of segregation and discrimination maintained by these two international unions. At the present time a great many local unions affiliated to the United Paper Makers and Paperworkers and the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers are segregated and deny equal seniority and job rights to Negro workers.

Typical of such practices where these two unions hold joint collective bargaining agreements and maintain a rigid pattern of racially segregated local unions with separate seniority lines limiting Negro employment to laborer classifications and denying Negroes seniority and other rights is at the Union Bag-Camp Paper Corp. in Savannah, Ga. All of the Negro workers are limited to membership in two segregated locals, Local 601 and Local 615, affiliated to the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers. All white workers hold membership in Local 388 and Local 435 of the same union and Local 408 of the United Paper Makers and Paperworkers Union.

These unions maintain segregated locals with discriminatory seniority lines, negotiated into the collective bargaining agreement in many other manufacturing plants. Among these are the plants of the International Paper Co. in Mobile, Ala.; Georgetown, S.C.; Natchez and Moss Point, Miss.; and Bastrop, La.; at the Hudson Pulp and Paper Mill in Palatka, Fla.; and at the Crown Zellerbach Corp. plant in Bogalusa, La.

OIL REFINING AND CHEMICAL INDUSTRY

At the present time there is pending with the President's Committee on Government Contracts many complaints against trade unions. Among these are actions filed by the NAACP against the Galveston (Tex.) Metal Trades Council, AFL–CIO, and Local 347 of the International Union of Operating

Engineers charging collusion with the Carbide and Chemical Co. (division of Union Carbon and Carbide Corp.), in maintaining separate lines of progression for Negro and white workers which limits Negro employment to some few menial jobs, wage differentials based upon race, and other forms of job discrimination. Similar complaints are pending against the Lake Charles (La.) Metal Trades Council, AFL–CIO and the Cities Service Refining Corp. in maintaining also a rigid pattern of separate seniority lines which limits Negro employment to laborer classifications and which denies seniority and other rights. The same condition exists at the Lion Oil Co. plant in El Dorado, Ark., where the collective bargaining agreement is held by Local 381 of the International Union of Operating Engineers, AFL–CIO.

COMMUNICATIONS WORKERS OF AMERICA-WESTERN ELECTRIC CO., GREENSBORO, N.C.

In some industrial unions which generally maintain desirable civil-rights policies there is often found to be significant examples of discrimination and segregation at the workplace. The NAACP national office filed complaints with the President's Committee on Government Contracts charging collusion between the Western Electric Co., Greensboro, N.C., and Local 3062 of the Communications Workers of America, AFL–CIO.

In the complaint filed with this Federal agency the association described a rigid pattern of job discrimination based on separate lines of progression, the limiting of all Negroes, however well qualified, to menial job classifications, and the denial of equal seniority rights. A similar situation currently exists at the Atlantic Steel Co. in Atlanta, Ga., where the collective-bargaining agreement is held by the United Steelworkers of America, AFL–CIO. In this plant, because of the operation of separate seniority lines, hundreds of Negro workers suffer dishonest and false job classifications, and are denied the right to develop job skills which would permit employment in more desirable production jobs.

In addition to the Brotherhood of Firemen and Enginemen and the Brotherhood of Railroad Trainmen which exclude Negroes by constitutional provision many international unions affiliated to the AFL–CIO continue to exclude Negroes by tacit consent and other AFL–CIO unions limit Negro membership in most instances to segregated or auxiliary locals. Among these are:

International Association of Railroad Telegraphers.

International Brotherhood of Electrical Workers.

United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada.

Brotherhood of Maintenance of Way Employees.

Brotherhood of Painters, Decorators, and Paperhangers of America.

Brotherhood of Railway Carmen of America.

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers, and Helpers.

International Union of Pulp, Sulphite and Paper Mill Workers.

Sheet Metal Workers' International Association.

United Brotherhood of Carpenters and Joiners of America.

United Brotherhood of Paper Makers and Paperworkers.

In many industries in basic sectors of the American economy the racial practices of the trade union certified as the collective bargaining agent will be the decisive factor in determining the status of Negro workers. All too often there is a significant disparity between the declared public policy of the National AFL–CIO and the day-to-day reality as experienced by Negro wage earners in the North as well as in the South.

Today many affiliated unions are blatantly violating the declared civil-rights policies of the AFL–CIO and increasingly Negro workers are experiencing a significant alienation from the organized labor movement. As I have urged in previous memoranda it is totally inadequate for the Civil Rights Department to proceed from individual random complaints which often take years to resolve if ever. What is clearly necessary is a direct frontal attack against segregation and discrimination within trade unions conducted on a systematic basis by the AFL–CIO. Obviously a policy has meaning only to the degree that it is enforced, otherwise one must conclude that it is simply a matter of empty ritual.

The National Association for the Advancement of Colored People, in fulfilling its obligations to its own membership and to all Negro workers, will continue to bring these matters to the attention of the responsible leaders of the AFL–CIO, to call upon public opinion when it is deemed necessary and finally to initiate litigation against trade union organizations responsible for discriminatory practices which deny Negro workers equal job rights and do serious harm to the well-being of the entire Negro community.

The PRESIDING OFFICER. The amendment will be received, printed, and referred to the Committee on the Judiciary.

TAXATION OF INCOME OF LIFE INSURANCE COMPANIES—AMENDMENTS

Mr. BUTLER submitted amendments, intended to be proposed by him, to the bill (H.R. 4245) relating to the taxation of the income of life insurance companies, which were referred to the Committee on Finance, and ordered to be printed.

HAWAIIAN STATEHOOD—ADDITIONAL COSPONSOR OF BILL

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the name of the Senator from Nebraska [Mr. CURTIS] be added as a cosponsor of Senate bill 50, the bill dealing with statehood for Hawaii.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953—ADDITIONAL COSPONSOR OF BILL

Mr. HUMPHREY. Mr. President, I have been informed that the name of my respected colleague from Minnesota [Mr. MCCARTHY] did not appear as a cosponsor on the bill to amend Reorganization Plan No. 2 of 1953 so as to return full authority to the Administrator of the Rural Electrification Administration (S. 144). This omission is my fault. I am very sorry.

I ask unanimous consent that the name of the junior Senator from Minnesota [Mr. MCCARTHY] be added as a cosponsor of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROPOSED LEGISLATION RELATING TO INTERSTATE COMMERCE—ADDITIONAL COSPONSORS OF BILLS

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the Senator from Illinois [Mr. DOUGLAS], the Senator from Maine [Mrs. SMITH], the Senator from Montana [Mr. MANSFIELD], and the Senator from West Virginia [Mr. RANDOLPH], be added as sponsors to two railroad-safety measures which I introduced on February 6, namely, S. 995, to amend the Interstate Commerce Act so as to provide for the protection of railroad employees by regulating the use of track motor cars, and for other purposes; and S. 996, to promote the safety of employees and travelers upon common carriers to maintain tracks, bridges, roadbed, and permanent structures for the support of way, trackage, and traffic in safe and suitable condition, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROMOTION OF MINING AND DEVELOPMENT RESEARCH FOR BERYL, CHROMITE, AND COLUMBIUM - TANTALUM — ADDITIONAL COSPONSOR OF BILL

Mr. ALLOTT. Mr. President, I ask unanimous consent that my name be added to the list of cosponsors of S. 1245, introduced by the Senator from Oregon [Mr. MORSE] on Monday of this week. This is the bill to allow the continuance of our beryl, chromite, and columbium-tantalum industries, which was title II of the bill, S. 2375 of the 85th Congress, proposed by Secretary Seaton and introduced by Senator Watkins on June 24, 1957.

I am glad that my good friend, the Senator from Oregon, has brought this measure before us again. If he had not done so, I was planning to, but the important thing is that this bill receive the consideration it deserves by this 86th Congress.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. SYMINGTON:

Address delivered by Senator MUSKIE at the annual Jackson Day dinner in Springfield, Mo., on February 21, 1959.

By Mr. KUCHEL:

Address delivered by him entitled "The REA and Trinity Power," before the 17th annual meeting of the National Rural Electric Cooperative Association, February 9, 1959.

Address delivered by him entitled "Think Anew—Act Anew," before the San Francisco County Republican Central Committee, San Francisco, Calif., February 10, 1959.

By Mr. HUMPHREY:

Excerpts from address entitled "All-Out U.S. Effort To Combat Soviet Penetration of Asia, Africa, and the Mideast," delivered

by him before the World Affairs Council, at Troy, N.Y., on December 12, 1958.

By Mr. CASE of New Jersey:

Address delivered by Secretary of Agriculture Ezra Taft Benson at New Jersey Republican State Committee fund-raising dinner, at Newark, N.J., on February 25, 1959.

NOTICE OF PUBLIC HEARINGS BY SENATE CONSTITUTIONAL RIGHTS SUBCOMMITTEE ON CIVIL RIGHTS BILLS

Mr. HENNINGS. Mr. President, as chairman of the Standing Subcommittee on Constitutional Rights of the Committee on the Judiciary, I wish to announce that the subcommittee has agreed to begin public hearings on Federal civil rights proposals on Wednesday morning, March 18, 1959.

The hearing is set for 10 a.m., in room 318—the caucus room—of the Old Senate Office Building, Washington, D.C.

The following are the bills referred to the subcommittee to date: S. 435, S. 456, S. 499, S. 810, S. 957, S. 960, and S. 1084.

The following is the general order for appearances of witnesses: U.S. Senators, sponsoring, supporting, or opposing legislation; the Attorney General of the United States and other executive department spokesmen; representatives of organizations supporting legislation; State officials—Governors and attorneys-general; representatives of organizations opposing legislation; individuals.

Anyone wishing to testify or file a statement for the record should communicate immediately with the office of the Senate Constitutional Rights Subcommittee so that the schedule of witnesses can be prepared; the telephone number is Republic 7-7500—or Government Code 181, extension 2363. It would be helpful if requests were also submitted in writing; the mailing address is: Senate Constitutional Rights Subcommittee, U.S. Senate, Washington 25, D.C.

NOTICE OF HEARING ON NOMINATION OF THOMAS C. MANN TO BE REPRESENTATIVE ON COMMISSION ON INTERNATIONAL COMMODITY TRADE OF ECONOMIC AND SOCIAL COUNCIL OF UNITED NATIONS

Mr. FULBRIGHT. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that the Senate today received the nomination of Mr. Thomas C. Mann, of Texas, Assistant Secretary of State for Economic Affairs, to be representative of the United States of America on the Commission on International Commodity Trade of the Economic and Social Council of the United Nations.

Notice is given that the Committee on Foreign Relations, at the expiration of 6 days, in accordance with the committee rule, will give consideration to this nomination.

NOTICE OF HEARINGS TO BE HELD BY THE COMMITTEE ON BANKING AND CURRENCY

Mr. ROBERTSON. Mr. President, there are pending before the Committee on Banking and Currency the following bills:

First. S. 1062—introduced by myself, Mr. FULBRIGHT, and Mr. CAPEHART—to amend the Federal Deposit Insurance Act to provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking;

Second. S. 860—introduced by Mr. PROXMIRE to amend section 19 of the Federal Reserve Act with respect to the use of vault cash holdings as required reserves against deposits; and

Third. S. 1120—introduced by myself, Mr. FULBRIGHT, and Mr. CAPEHART—to amend section 19 of the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits.

It is my intention, subject to the concurrence of the committee, that these bills will be the subject of hearings before the committee beginning on or about March 18, 1959.

All persons who wish to appear and testify at hearings on these bills are requested to notify Mr. J. H. Yingling, chief of staff, Committee on Banking and Currency, room 303, Senate Office Building, telephone Capitol 4-3121, extension 3921, as soon as possible, and in any event, before the close of business on Monday, March 16, 1959.

LACK OF A FARM BILL—STATEMENT BY SENATOR LANGER

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement by me in connection with the lack of a farm bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LANGER

During the recent campaign in North Dakota the opposition to the Republican Party was profuse in paid advertisements showing the price the farmer received for his product in 1952 as compared to that he was receiving in 1958 and also what he was paying for farm machinery in 1952 and what he had to pay in 1958. These advertisements were printed in every county newspaper and undoubtedly had a profound effect on the election results.

Since November 4, I have been patiently waiting for the introduction of the farm bill. I say patiently because hundreds of farmers have written to me asking when this new farm legislation was going to come before Congress and whether it was going to be passed before seeding time. The Democrats have approximately a two-thirds majority in the House and in the Senate. They have been condemning the various farm proposals offered by the administration and yet November, December, January, and February have gone by and we are into March and still no sign of a farm bill.

Mr. President, I simply don't believe in hyprocrisy. If these farmers were being robbed and cheated and put out of business, as was so strongly stated by the Democratic opposition last fall. Why haven't they done something to remedy the situation; why haven't they at least reported a bill out of the committee which they control 2 to 1? Certainly the farmers of the Midwest are entitled to better treatment than they have been getting. Because I know they should get a better deal, I wish to add my voice to those of the farming population who are asking for a square deal from the Congress. I, also, wish to assure the Democratic leadership that if they will report out a decent farm bill, I will not only vote for it, but, if the President vetoes it, I will vote to override the veto.

RETIREMENT OF HARRIS ELLSWORTH AS CIVIL SERVICE COMMISSION CHAIRMAN

Mr. MANSFIELD. Mr. President, I want to take a few moments today to comment on the retirement of the Chairman of the Civil Service Commission, Harris Ellsworth, who has discharged his duties in this position in an extremely fine and meritorious manner. I am confident that the hundreds of thousands of civil service employees in the Nation are better off for his years of service.

During the time Mr. Ellsworth has been Commissioner, competence and general efficiency within the Civil Service Commission have been of the first order. Under his guidance, the relationships between the Government employees and the various organizations which represent them have improved. Also there has been more coordination between the various agencies of the Government.

I have very fond memories of my association with Mr. Ellsworth, for we became Members of the Congress in 1943. I know him as a kind and gentle man of great intellect. During the time he served in the House, he was devoted to the cause of his constituents and the State of Oregon. He took these fine traits with him to the Civil Service Commission, and they were very evident during his career as an administrator.

We shall miss Harris Ellsworth in Washington, but we know he will enjoy returning to his home State of Oregon. I take this opportunity to wish him and Mrs. Ellsworth and their family good luck and Godspeed.

Mr. President, I now desire to turn to another subject.

The PRESIDING OFFICER. The Senator from Montana has the floor.

FEDERAL RESPONSIBILITY TOWARD INDIANS

Mr. MANSFIELD. Mr. President, on Monday of this week my distinguished colleagues, the senior Senator from Montana and chairman of the Committee on Interior and Insular Affairs [Mr. MURRAY] and the junior Senator from Oregon and chairman of the Subcommittee on Indian Affairs [Mr. NEUBERGER], submitted Senate Concurrent Resolution 12, which calls for a restatement of Federal responsibility toward Indians and their tribal organizations.

These two Senators are to be highly commended for their initiative in attempting to revitalize and improve our present Federal Indian policy. In recent years the relationship between the Indians living on reservations in this country and the Federal Government has deteriorated at an alarming rate. I would not be honest if I did not openly admit that I have been quite critical about certain Bureau of Indian Affairs policies as they affect the Indians in my State. This disagreement has arisen largely from the misinterpretation of Senate Concurrent Resolution 108, as adopted during the 83d Congress.

I think all will agree that the Federal Government has a very definite responsibility to the Nations first citizens, the Indians. We have a responsibility to help them improve their economic and social status, so that they can compete with others in our society. We also have a responsibility to see that the Indian children are provided with adequate education and health facilities. Education and good health are vital if the Indian is to meet his other responsibilities.

There is general agreement that eventually the Federal Government will relinquish all responsibility to the Indians, other than the responsibility our Government has to every citizen. The major disagreement is over the matter of timing. Federal responsibility over an Indian tribe should never be terminated until the Indians themselves agree to it, and until they have fully demonstrated their ability to assume their new role.

In my estimation, the Bureau of Indian Affairs is trying to move too fast; and many of its policies on welfare, land sales, and relocation tend to thrust responsibilities on many Indians before they are ready, and to dissolve traditional Indian relationships. The answer to many of our problems pertaining to the Indians is through education, so as to show the younger people a better way of life. Much progress has been made in this area, but we must also have coincidental advancements in the area of welfare and administration of Federal policy. I think we must recognize that we are going to have to take care of some of the elder Indian citizens for the remainder of their years, and I think we are responsible for discharging that responsibility well.

There are in Montana seven Indian reservations, with as many varied backgrounds and problems. We have a very unhappy situation at the present time; and it is my hope that a reversal of Senate Concurrent Resolution 108 and the speedy adoption of Senate Concurrent Resolution 12 will redirect and reinterpret our Federal Indian policy.

We are not recommending anything new or drastic in the area of Federal-Indian relationships. What we are actually doing is placing the views of the Secretary of the Interior on Indian policy in the form of legislation, and what I sincerely hope will be new administrative policy. Senate Concurrent Resolution 12 is still open for cosponsorship; and I hope that a number of my colleagues in the Senate will indicate their interest in sponsoring this measure.

INFLATION

Mr. BUSH. Mr. President, I ask unanimous consent that there may be printed in the body of the RECORD following these remarks a copy of an advertisement printed a few days ago over the name of the International Latex Corp., the title of the advertisement being "Inflation's Time Bomb." I ask that following the advertisement an editorial from the Wall Street Journal, entitled "The Modern Fallacy," be printed.

Both these matters have to do with the general subject of inflation, which I think is not as well understood as it should be. I shall have more to say about the subject from time to time and week by week.

There being no objection, the advertisement and editorial were ordered to be printed in the RECORD, as follows:

INFLATION'S TIME BOMB

There is a new factor—and a very disturbing one—which now affects the will of the Nation to resist inflation. Until very recently there was no respected member of the academic world in this country, or any responsible political leader, who openly argued for inflation as a way of life.

But this has now changed. The arguments for the advantages of creeping inflation and a gently rising price level are vigorously presented almost weekly by Prof. Sumner Slichter of Harvard University, who has standing in the academic world. The Slichter thesis on the benefits of rising prices is repeated and amplified by many lesser lights in the academic world, and by some political leaders.

It is therefore a cause of satisfaction when other academic figures who have great influence in financial, industrial and political circles enter the lists to offset the inflationists. Dr. Marcus Nadler of New York University needs no introduction to the business community nor does Dean G. Rowland Collins.

They are the authors of a brief but most interesting study entitled "The Problem of Inflation," which has been issued as the first bulletin of the C. J. Devine Institute of Finance, recently established at the NYU Graduate School of Business Administration. No more fitting monograph could have been issued by the newly established Devine Institute of Finance. Here is a sound analysis of the current situation, with specific reference to Dr. Slichter's theories.

It should be noted that Dr. Slichter did not talk about the benefits of inflation, and the advantage of rising prices when he first began to condone the current inflation many years ago. His reasoning at that time ran something like this: Since powerful labor unions will get wage increases greater than is warranted by increased productivity, there will be a tendency for prices to rise. The increase in prices must, in time, cause decreased sales and unemployment unless the money supply is expanded by the Government and monetary authorities. This new money ought to be provided, said Dr. Slichter, in order to insure continuing prosperity. The only other alternative—curbing the monopoly power of unions—is not advisable, Dr. Slichter said. So being unwilling to curb union power, he was willing to condone inflation.

But then the good doctor made a long, theoretical leap. In recent articles, he not only condones inflation but he praises it. Dr. Slichter says (1) inflation does not cause widespread distress, and only "well heeled" people protest about it. The opposite is true. What about pensioners, ministers, civil servants, etc., who are cruelly affected?

(2) Inflation is necessary for substantial growth and prosperity. What about many great periods of prosperity when prices were declining, such as 1875 to 1892 and 1923 to 1929?

(3) Creeping inflation can continue forever without becoming "galloping." How does he know this? Creeping inflation has always accelerated into national disaster throughout history.

Dr. Nadler meets the Slichter statements head on. He says that "creeping inflation" is dangerous. At the present moment it reveals itself in the stock market, in real estate markets, and in the demoralized condition of the bond market. Consumer and industrial prices are resting for a short while.

But the fear of inflation can turn a "creep" into a "gallop." People are not dumb—they will become convinced of the inevitable loss in purchasing power of their savings. Then they would save less and spend more. A boom would result in consumer goods and in capital goods, and a big demand for expanded bank credit and long-term capital.

But inflation would dry up the flow of funds into savings institutions and bonds. At the same time the Federal Reserve Board would have to clamp down on bank credit, in order to dampen down the rising prices. Home building and capital goods expansion would suffer and the inflationary boom would inevitably come to a halt.

A recession and large-scale unemployment would result. Then, says Dr. Nadler, there would be the real danger of a tremendous new inflation to cure unemployment and revive the boom once again.

Specifically how do we meet the problem now? Here Dr. Nadler stresses a point repeatedly mentioned in this column. "Inflation," he says, "can be sustained only if the money supply is large enough to support the expanded volume of business at rising prices. If, through central bank restriction of credit, the growth of the money supply is stopped and the velocity of deposits cannot be further appreciably increased, the boom comes to an end."

Plainly the way to stop a future depression is to prevent the inflationary boom that precedes it. This requires the Federal Government to balance the budget and the monetary authorities to prevent a credit spree. It is encouraging to have stout allies like Dr. Nadler and Dr. Collins of New York University waging this battle.

(Presented as a public service by International Latex Corp., Playtex Park, Dover, Del.)

[From the Wall Street Journal, Mar. 4, 1959]

THE MODERN FALLACY

For an insight into the modern political philosophy now dominant in Congress, consider some comments made by one of its more articulate spokesmen, Senator JOSEPH CLARK, of Pennsylvania.

As quoted in the current issue of the Atlantic magazine, Mr. CLARK expresses annoyance that the word Government is sometimes equated with other nouns having an evil connotation—such as waste, extravagance, socialism, bureaucracy. Such an identification, in the Senator's opinion, is a pernicious tendency. More specifically, he objects to the fallacy that private spending is inherently good and public spending is inherently bad—and therefore public spending should always be minimized and private spending increased.

Now, put in this somewhat negative way, the viewpoint seems innocuous enough. Obviously, the concept of government as such is not evil, and obviously, public spending as such is not necessarily bad. We know of no thinking person who contends they are.

But the real point is the clearly implied one: That Americans should learn to regard growing government and growing government spending as positive and good things; as another of the moderns in Congress has expressed it, the danger may be not that we

have too much government but too little. Hence the effort to suggest that public spending is at least as good as, and quite possibly much better than, private spending; that anyway they are just two sides of the same coin.

Well, let's see. Some rather marked—and inherent—differences between public and private spending occur at once. Private spending comes from the money individuals are able to accumulate through their own work. Public spending cannot come from anything generated by the Government itself; it comes from what the Government is able to extract from those same individuals either in actual taxes or in the more sinister tax of inflation.

The more the Government spends, the more it must take through either of these routes, and the proportionately less the individuals have to spend or save, as they see fit. Thus public spending is not merely another form of spending; it is a positive depressant on private disposition of income, as any taxpayer and/or inflation victim can readily attest.

Beyond these elementary differences are others. The vast bulk of public spending is nonproductive; that is true not only of defense but of many other things the Government does. The Government is by and large a consumer of huge hunks of the economy, while private individuals are producer-consumers. The latter combination is what makes the economy grow. Moreover, the bigger the Government becomes the more it competes with the private economy, and in this pressure against the available limit of supplies is a special inflationary force.

And because Government operates without the built-in restraints of the private economy, it is a peculiarly powerful incubator for precisely the evils Senator CLARK thinks should not be associated with Government—waste, extravagance, bureaucracy. The bigger the Government the worse the evils.

Finally, what is the political result of encouraging Government growth and growing Government spending on the theory that, after all, they are not really bad? The end result must be the triumph of the State over the individual, whether that condition be called socialism or something else.

There is an appalling air of naivete about the expressed views of some of the "modern" political philosophers. It is impossible that they are unacquainted with the history of man's struggle against the all-encompassing State, which is also the very heart of today's conflict with Communist tyranny. Can it be, then, that they are incapable of relating past and present human experience to their own country?

For men deliberately to propagate this fallacious philosophy would be regrettable. But it is perhaps even sadder if they truly cannot see that what they call "modern" and "liberal" are rooted in concepts most ancient and most illiberal.

SCARCITY OF WATER

Mr. WILEY. Mr. President, the increasing scarcity of water in some parts of the world, and in some parts of the United States, is properly causing concern. This is a matter of world interest, as well as of national importance.

The Secretary of the Interior, Mr. Fred Seaton, has just announced progress toward an important breakthrough in desalting seawater. He has announced a process to be used in a new plant pursuant to legislation passed during the last session of Congress. I was glad to join with the distinguished Senator from New Mexico [Mr. ANDERSON] and the distinguished Senator from California [Mr. ENGLE] in sponsoring and pushing this legislation.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point a news article from the Washington Post and Times Herald of March 3 and an editorial from the New York Times with reference to this important scientific progress.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Mar. 3, 1959]

CHEAPER CONVERSION OF SEA WATER ACHIEVED

A multiple-effect distillation process will be used in the Government's first saline water conversion demonstration plant.

Plans call for the plant to convert sea water to fresh at the rate of 1 million gallons a day. The estimated cost of less than $1 a thousand gallons is about half the cost in the most efficient plants now operating, Secretary of the Interior Fred Seaton said yesterday in announcing selection of the process.

The site of the plant has not been chosen. It will be one of three Congress has authorized for construction on the east, west, and gulf coasts.

Congress also has authorized construction of two plants to treat brackish waters, to be located in arid areas of the Southwest and in the Northern Plains.

The process selected for the first plant is known as long-tube vertical multiple-effect distillation. A pilot plant using the process has been operated almost continuously at Harbor Island, near Wilmington, N.C., since November 1957.

"This process gives promise of achieving a remarkable breakthrough in saline water conversion," Seaton said.

[From the New York Times]

UNSALTING THE SEA

As the world's population grows, mankind is more and more in the position of the Ancient Mariner, who complained that there was water, water everywhere, nor any drop to drink. Most of the world's water is salt. For many years scientists have been trying to take the salt out of water at a cost low enough for water users to pay. The United States has had a saline water conversion program, or its equivalent, since 1952.

Now comes an announcement by Secretary Seaton of the Department of the Interior of a remarkable breakthrough in making salt water fresh. Mr. Seaton believes that a new process known as long-tube vertical multiple-effect distillation can get the cost down to less than $1 per 1,000 gallons. This compares with about 30 cents per 1,000 gallons now charged for water used in American homes. It may also be compared with the cost of $3 per 1,000 gallons, which was the best that could be done 3 or 4 years ago. A further cheapening would be necessary if sea water, or other saline water, were to be used for irrigation, but we seem to be on the way. Atomic power might someday enter into the picture, though not tomorrow or the day after.

Along certain coasts in the world an economic method of purifying sea water would be the equivalent of countless new homes and families. Los Angeles, for example, and the whole of southern California will have a definite limit to their population if they continue to depend on natural fresh water. In many other parts of the world, such as the northern coast of Chile, great sections of Australia, Palestine, and other regions of the Middle East, and much of the northern coast of Africa, an abundant supply of sea water would mean a dense population where few are able today to make a living. The sea is the mother of all living things. Perhaps the day is near when she will nourish her children as she has never done before in all human history.

TAXATION ON LIFE INSURANCE COMPANIES

Mr. WILEY. Mr. President, I have received a very challenging letter from Harold F. Bowes, of the Phoenix Mutual Life Insurance Co., of Hartford, Conn. Mr. Bowes is now located in Milwaukee.

Among other things, the letter reads:

I am writing you today regarding bill H.R. 4245 which has to do with the proposed increase in taxation on life insurance companies. I am amazed to learn that this bill would increase income taxes on life insurance companies approximately 70 percent.

Mr. President, I do not know anything about the bill. I hope to investigate it. But I wish to say that there are in this country many people who are savers, who have put their savings into insurance policies. We have already taken away from them about 50 percent of the value of their insurance policies as a result of inflation. Now the question is whether or not those who have saved are to be penalized further. I feel the matter requires real study.

I ask unanimous consent to have printed in the RECORD the letter to which I have referred, and that it be thereafter returned to my office.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PHOENIX MUTUAL LIFE INSURANCE CO.,
Hartford, Conn., March 3, 1959.

Hon. ALEXANDER WILEY,
Senator of the State of Wisconsin,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: I visited with you several times in Washington a number of years ago, and on one or two occasions in Milwaukee. I've enjoyed and appreciated being on your mailing list and note with interest the good job you have always done for us in Washington.

I am writing you today regarding bill H.R. 4245 which has to do with the proposed increase in taxation on life insurance companies. I am amazed to learn that this bill would increase income taxes on life insurance companies approximately 70 percent.

I suggest that this places too heavy a burden on the thrift of our citizens and that every effort should be made to keep tax on policyholders funds within more reasonable limits.

Today in this period of increased living costs and high income taxes, it is extremely difficult for the average person to have an estate other than through life insurance. If our welfare had to take care of all people who lost their wage earner and who had no insurance, the rest of the people would be taxed and you can agree that they would have no funds left over to save themselves. Through the purchase of life insurance, a man can provide for his family.

Through inflation we have decreased the purchasing power of the dollar by 50 percent and are now contemplating taxing heavily his life insurance in that he will necessarily have to pay increased premiums.

You have always been a great believer in the institution of life insurance, and we have on record what you have said about the institution on several occasions. We are hopeful that you will take a strong

position in regard to this increase in taxation which penalizes thrift and tends to discourage a man doing the job himself.

I shall appreciate anything that you can do to protect the best interest of thousands of our citizens of this State who rely upon you to protect their best interests.

Sincerely and faithfully yours,

HAROLD F. BOWES,
Manager.

DEFENSE FACILITIES PROTECTION ACT OF 1959

Mr. BUTLER. Mr. President, on January 29 I introduced Senate bill 776 which would authorize the Federal Government to guard strategic defense facilities against individuals believed to be disposed to commit acts of sabotage, espionage, or other subversion.

To illustrate the sensitive problem to which this legislation is pointed, I ask unanimous consent to have printed in the body of the RECORD, at this point, an eye-opening speech which was delivered several months ago by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the Department of the Army.

In making this request, I should like to emphasize General Trudeau's theme that "there is documentary evidence of the excellence of Communist industrial espionage," and to urge that S. 776 be scheduled for hearing and consideration at the earliest possible moment.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY LT. GEN. ARTHUR G. TRUDEAU, U.S. ARMY, CHIEF OF RESEARCH AND DEVELOPMENT, DEPARTMENT OF THE ARMY, BEFORE THE FOURTH GENERAL CONVENTION OF THE AMERICAN SOCIETY FOR INDUSTRIAL SECURITY, SHOREHAM HOTEL, WASHINGTON, D.C., SEPTEMBER 16, 1958

I quote from the Constitution of the United States of America—article III, section 3. This section of our Constitution defines treason, as follows:

"Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort."

It is unthinkable that any good American in his right mind would deliberately commit treason. Yet some otherwise good Americans actually do give aid and comfort to the enemy—through their deficiencies in industrial security. These deficiencies do not occur by accident. They are caused by either inexcusable ignorance or willful carelessness. Even more distressing, some Americans give aid and comfort to the enemy knowingly, deliberately, and with malice in their hearts.

In withholding aid and comfort from the enemy, I stand shoulder-to-shoulder with you, the members of the American Society for Industrial Security. Together, we strive for ever greater industrial security, and thereby greater security for our beloved Nation.

After more than three decades of Army service, I think I know the danger that faces us from communism. And I hope I know the importance of security in our military hardware in every phase from inception of a weapon or an item of equipment; through research and development; production and procurement; storage, maintenance and distribution; to ultimate use on the battlefield.

As you know, I have served as Assistant Chief of Staff, Intelligence, or G–2, with principal responsibility for Army intelligence and counterintelligence.

In my present assignment as Chief of Research and Development, I work in the beginning and very critical phase of the Army hardware cycle. As a combat commander in Korea, I saw the terminal or combat phase of the Army hardware cycle—in which we counted on our weapons and equipment to destroy a fanatical enemy. I had similar experience in combat operations in World War II, in the Southwest and Western Pacific. Research and development and combat are certainly the Alpha and Omega, the beginning and the beginning of the end of our mission to preserve the security of our weapons and equipment.

I know that all of us are well agreed that maintaining security is no childish game of cops-and-robbers. Nor is it only an intellectual exercise of matching wits with the enemy.

Security is actually one of the most important elements of our struggle for survival as a free nation in a free world, and we are woefully weak as a nation in preserving it.

Our freedom is challenged today by an enemy who is powerful, fanatic, shrewd, ruthless and unscrupulous. The Communists regard the struggle between themselves and us as a matter of life or death—as it truly is.

As Lenin said: "We are living not merely in a state but in a system of states, and the existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end."

Listen to Lenin again:

"A funeral dirge will be sung over the Soviet Republic or over world capitalism."

Joseph Stalin frequently repeated these warnings.

Listen to Dmitri Z. Manuilsky, Soviet economist and representative at the United Nations. Manuilsky says:

"War to the hilt between communism and capitalism is inevitable. The bourgeoisie will have to be put to sleep. * * * As soon as their guard is down, we will smash them with our clenched fist."

Now listen to how Nikita Khrushchev states the Communist determination. Krushchev says it in five syllables:

"We will bury you."

From these warnings, I think it is plain that we must regard the struggle between the Communists and the free world in exactly the same way as the Communists consider it—as literally a matter of life or death, a matter of national survival.

As I have pointed out, security is actually one of the most important elements in this struggle for survival. And at no time is security more important than in the research and development phase, for R. & D. is the fountainhead of all our weapons and equipment. An item compromised in the research and development phase is compromised straight through the production, distribution and use phases; and the enemy has plenty of time to prepare his defenses against it.

We just can't accept any risk that our industrial base is thus jeopardized.

The importance of our industrial base as one of the cornerstones of our national security has been recognized since the days of our Founding Fathers. Alexander Hamilton put it this way, in the Federalist Papers:

"Not only the wealth but the independence and security of a country appears to be materially connected with the prosperity of manufactures * * *. Every nation, with a view to those great objects, ought to endeavor to possess within itself all the essentials of national supply. These comprise the means of subsistence, habitation, clothing, and defense. The possession of these is necessary to the perfection of the body politic; to the safety as well as to the welfare of the society."

Still quoting from Alexander Hamilton, he continued:

"The extreme embarrassments of the United States during the late war, from an incapacity of supplying themselves, are still matters of keen recollection; a future war might be expected again to exemplify the mischiefs and dangers of a situation to which that incapacity is still, in too great a degree, applicable * * *. To effect this change, as fast as shall be prudent merits all the attention and all the zeal of our public councils; 'tis the next great work to be accomplished."

What he has to say is just as fresh, just as applicable, today as it was when he first uttered it. As he points out, a future war might be expected again to exemplify the mischiefs and dangers of our present situation.

But the Communists consider themselves perpetually at war—last year, this year, next year, always. They even define peace as a condition that can exist only on their terms of a classless world.

Their intelligence and counterintelligence, accordingly, is practically on a wartime basis. And their espionage, particularly their industiral espionage, is rated as superior by our own intelligence professionals.

There is documentary evidence of the excellence of Communist industrial espionage. It was most effective against Germany during the 1920's and 1930's. It was effective in this country during World War II—and would have been far more effective but for the yoeman work done by the Federal Bureau of Investigation, the military services, and the scientific and industrial organizations themselves.

As a specific example of the effectiveness of foreign espionage—including that inspired by the Communists—we have only to recall how much came to light as the result of the defection of Igor Gouzenko, the Soviet Embassy clerk who had the cold courage to go to the Canadian Government with his story of the true proportions of Communist espionage. Herbert Philbrick, who was a Communist for the FBI in this country, similarly testifies to the effectiveness of Communist espionage.

For another example, during the Spanish Civil War, about 2,000 Americans and Canadians volunteered to fight for the Loyalist. Each of these volunteers was required to surrender his passport to the Communists. We have to assume that these passports have been used time after time by Soviet agents to assume validated and accepted identities as American citizens. In one well-known case, a Soviet agent assumed the identity of a Canadian citizen, then was naturalized as an American citizen, and in this disguise penetrated a sensitive installation. It is safe to assume that we are still being hurt by these agents.

For still another example, consider the case of the Farben Industries in Germany in the 1930's. Communist agents were extremely active within it, and remarkably successful. It was a long time before investigation revealed the extent of their penetration of the Farben Industries.

In this connection, I wonder seriously just how many of us can say that our organizations have never mislaid a classified document? The word "mislaid" is, of course, a euphemism. Actually, whenever a classified document is mislaid, or unaccounted for, it is completely out of security control. It takes only a minute or two for an agent to photograph a document and return it with no indication that it has been compromised.

In most cases of mislaid classified documents, the only safe assumption is that security has been violated. Smart agents do not steal documents if they can photograph

them. Reporting the loss will not repair the damage that has been done. It will help greatly, however, to prevent a recurrence.

As we all know, espionage is not nearly so much a business of a sinister-looking agent slitting a throat to make off with a briefcase full of top secret war plans, as it is the patient putting together of numerous bits of information to complete the grand design. The typical industrial espionage agent today is much more apt to be an industrial expert than a cloak-and-dagger expert.

As a specific example of the importance of safeguarding classified information in smaller matters as well as large, let me cite an experience I had on one of my recent visits to a contractor working on a very sensitive project. I will not identify the company further. I noted example after example of what seemed to me very loose security handling, particularly in ignoring established control procedures. Some of these deficiencies, even though not too serious in themselves, could have quickly added up to an extremely critical threat.

On my return to Washington, I called the matter to the attention of the Assistant Chief of Staff, Intelligence. Fortunately, the problem had already come to his attention and he was taking corrective measures.

What bothered me is that probably some damage had already been done at this particular plant. Our only sure knowledge of how badly we are being hurt in such cases comes from defectors from the Communist cause or when they develop equal or superior items of equipment from the knowledge gained.

What bothered me even more is that if this particular plant is a fair sample, similar laxities and deficiencies probably exist at other plants. Thus, in spite of our best security efforts, and no matter how well we may think we are doing, we still have very serious security problems.

Not all our security problems come from the formal Communist intelligence apparatus. Soviet-inspired espionage in the United States falls into two general categories—legal networks and illegal networks. A legal apparatus is one in which the control agent has entered the United States legally. He may have diplomatic status as a military or commercial attaché, or he may be a member of a trade commission or a visiting cultural group.

An illegal apparatus is one in which the control agent has entered the United States illegally under such cover as a false name, forged passport, or false birth certificate.

In either case, his mission is to establish an espionage ring in a given target area or to take over control of one already established.

In the case of the legal net, the control agent is able to work from the cover of a diplomatic establishment. If his insidious activities are discovered, he has the protection of the Soviet Union. The worst that can happen is that the individual may be subjected to a persona non grata action, and recalled home.

A recent example of this is the case of the Soviet commercial attaché whose espionage activities were exposed by the FBI.

In the case of the illegal apparatus, the control agent does not have the protection of his government. In fact, his government will deny any relationship with him. When exposed, he is subject to prosecution under the espionage laws of the United States. A recent example of this is the Soviet master spy Colonel Abel, who is serving a prison term for his longtime espionage activities.

Since these agents must have sources and information, they must establish rewarding contacts within their particular target area. It is here we find the traitors who for many reasons sell their services, and perhaps their souls, to the cause of Communist espionage.

Such individuals may be members of the Communist Party. If they are, it is considered their duty to accept any espionage mission assigned to them by their Soviet masters. Other individuals may have compromising matters in their background which they would not dare to have made public. Such "skeletons in the closet" of persons in the target area are assiduously sought by the Communist recruiters. The threat of exposure is used to blackmail the victim into furnishing information to the Communist control agent.

If a prospective informant is known for his ultraliberal views, the Communist approach is tailored to fit his views. Here we find the "Science knows no boundaries" or the "We work only for peace" approaches.

Unfortunately, there are Americans gullible enough to be taken in by these approaches.

Another standard approach to the intended informant is the social approach. Here some mutual interest, perhaps stamp collecting, photography, or sports, is pretended and exploited.

In every approach and recruitment, the entrapment proceeds slowly. At first, the requests for information appear to be innocuous. Usually information is requested which is available from open sources.

Then, under some legitimate-appearing pretext, payment is offered, perhaps small sums at first. When the payments are accepted, the trap is sprung.

If the informant is reluctant to furnish classified information, he is threatened with exposure to the authorities. This method is used even with American Communists, since it is suspected that they may still have in their veins a drop or two of patriotic blood.

The important aspects to remember are: First, that the intended source or informant must be in the target area and must be in a position to gain access to the desired information; and second, that the agents will ruthlessly exploit every conceivable approach to the victim.

Bribes, blackmail, sex, alcohol, narcotics, and every other tool of Satan are their stock in trade. Like spiders, they gradually weave a web around their victim, using his own weaknesses to help them, until he is completely at their mercy—and they have no mercy.

The end result is always the same—Communist espionage has gained still another channel of information.

I wish I could speak out even more strongly on this subject, using some recent cases we know of, because it's a subject on which I feel most strongly; but I am unable to do so in a public address at this time.

However, I say without fear of contradiction, that the advanced state of Soviet technology today is due more to Soviet success in espionage and subversion than it is to their scientific apparatus, good as it is.

I should like now to make two requests of you members of the American Society for Industrial Security.

My first request is to the industrial security officers. I ask that you always inform us immediately if classified papers are mislaid or lost. I ask also that you inform us immediately if you sense a pattern of an office or an individual consistently asking to see classified documents which are outside the normal area of interest of the office or individual—in other words, when there is no real need to know. A pattern of espionage may be developing which, together, we can recognize and correct—as in the example of the Farben Industries I mentioned earlier.

My second request is to the executives of our contracting firms. I ask that you give your complete support to your industrial security personnel. By this I mean not only policy guidance and executive direction, but also all the resources necessary to accomplish their mission, such as manpower and funds.

I suggest that these efforts will be well spent—not only from the standpoint of our national security, but also from the standpoint of giving better protection to your own trade secrets and proprietary information.

Now, let me restate and summarize my remarks today. I have made five main points:

1. The Communist threat to our Nation is real and proximate. We are in a life or death struggle. To win, to survive, we must develop a greater sense of urgency.

2. Our industrial base is essential to our national security. It is therefore a principal target of Communist espionage and sabotage.

3. The Communist espionage apparatus is formidable. We must assume that their capacity for sabotage is equally formidable.

4. Industrial security is the key to defending our industrial base against Communist espionage and sabotage.

5. Industrial security is the primary responsibility—and proud privilege as well—of both management and the individual who has the classified information in his hands.

If he can't be trusted, safes are useless and security manuals are ridiculous—for our industrial security is compromised and our national survival is jeopardized.

It's our task, yours and mine, to help that individual person keep his trust and keep classified information secure.

I can think of no greater contribution we can make to keeping our Nation the land of the free because it's the home of the brave—and the trustworthy.

Thank you very much.

RECENT DECISIONS OF THE SUPREME COURT

Mr. BUTLER. Mr. President, last Monday morning in the Baltimore Sun there was published a very informative editorial in connection with some of the recent decisions of the Supreme Court of the United States. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW THE AMERICAN BAR ASSOCIATION

(By C. P. Ives)

Of course no comment on the current Supreme Court could exceed in relevance and gravity the historic remonstrance put out last summer by the conference of State chief justices. This was protest from within the household, by men unhappy with the High Court's recent behavior just because they share that Court's ultimate responsibility for the rule of law.

Nevertheless, the resolutions now published by the house of delegates of the American Bar Association also have their weight. Here again we have particular competence to speak, and automatic assurance that what is said has been measured prayerfully against professional obligation.

There is a certain fortunate accident even in the timing of the American Bar Association statement. Prior organization scheduling forced the State chief justices to speak at a moment when the desegregation controversy happened to be at one of its peaks. This allowed a dissenter to suggest, what was untrue, that the unstated animus of the chief justices' protest was white supremacist objections to *Brown* v. *Board of Education*. The American Bar Association scheduling released its statement during a desegregation lull.

This stresses the most notable thing about the current criticism—that it would exist had *Brown* v. *Board* never been announced.

Many reflective Americans feel, after all, that the desegregation cases are beyond the normal orbit of juridical discourse and will be absorbed in pragmatic terms as the national history unrolls over a period of years. The State chief justices and now their lawyer brethren have things to say wholly aside from and independent of this other matter.

Nor should it be supposed that the lawyerly discussion of the current Supreme Court is limited to the practicing branches of the legal profession. Some of the most telling protest has come from the great law schools.

Thus Professor Alexander M. Bickel, of Yale, has spoken of the Court's default in rational justification of key decisions. No criticism could be more searching, none more damaging, and this from the very nature of the Court. For it is beyond political accountability, and depends wholly for its acceptation among the people on persuasions addressed to the mind. And yet, says Professor Bickel (in 1957).

"The Court's products has shown an increasing incidence of the sweeping dogmatic statement, of the formulation of results accompanied by little or no effort to support them in reason, in sum, or opinions that do not opine and of per curiam orders that quite frankly fail to build the bridge between the authorities they cite and the results they decree."

Equally grave is the comment last October of Harvard's law dean, Erwin N. Griswold, a passionate defender of some of the current Court's decisions: "In the field of interstate commerce, Congress has refused to pass a workmen's compensation act, but has instead left in force the Employer's Liability Act, which bases liability on negligence and fault. Yet over a series of years, the Court has, by one extreme decision after another, largely transformed this statute into a workmen's compensation act, with unlimited liability.

"Closely related to this has been the substantial elimination of any effective judicial restraint in civil jury trials, so that State courts are repeatedly required to allow juries to find verdicts on an amount of evidence which can hardly be called scintilla."

These direct and palpable erosions of property rights are not, however, the things most worrisome to many of the Court's critics. More troubling far are decisions involving the deadliest foe property—and liberty—have ever had, namely world communism.

The quality of the Court's judgment in this area has been pretty well dramatized by Prof. Bernard Schwartz, of the New York University Law School, citing the recent Du Pont and Yates cases. In the Du Pont case the Court pushed antitrust theory to an extreme in outlawing corporate stock acquisitions of some 40 years before. In the Yates case it declined to touch Communist organization activities of only 12 years before, urging a 3-year statute of limitations.

"What are we to think," wonders Professor Schwartz, "of a tribunal which rushes in to make a decision against Du Pont, but withdraws into its shell of narrow, literal construction when a decision against the Yates defendants is at issue? At the very least, there is a disturbing inconsistency in the High Tribunal's approach to the two cases."

It was of the Yates and other subversion cases that the dean of all our commentators, Professor Corwin, of Princeton, was speaking when he referred sadly to "a recent tenderizing of the judicial mind toward the American Communist Party."

The ground may differ, but the State chief justices, the American Bar Association, the Corwins, Griswolds, Bickels, Schwartzes, make a rising consensus of dismay. Yet the Court is wholly dependent on such men for defense against critics less informed, much more numerous and infinitely more virulent.

CALIFORNIA WATER PROJECTS

Mr. KUCHEL. Mr. President, the phenomenal growth of the State of California has been accompanied by the construction of a variety of public works, some of them literally monumental in size and effect, to conserve, regulate, and control our often difficult-to-manage water resources.

On several occasions I have remarked that the job of building America is by no means finished. On the contrary, our steady increase in population and rising standard of living present successive problems to meet the needs of our people. Foremost among these in California is the urgent demand for continuing programs to assure sufficient supplies of water for agricultural, industrial, domestic, and municipal purposes, to equalize the maldistribution of our State's extensive water resources, and to safeguard our people and their homes, businesses, communications lines, transportation systems, industries, and other installations against the ravages of uncontrolled floods.

California notably has a complex water problem. Its solution calls for energetic efforts of Federal, State, county, and local governments, together with numerous semigovernmental agencies created by forward-looking citizens. Ambitious programs have been devised and initiated to satisfy the sometimes conflicting requirements of California with regard to water.

Because the urgency of solving this problem is increasing rather than diminishing, I have obtained from several Federal agencies comprehensive data in the form of inventories of projects authorized but still unstarted which would help greatly in meeting my State's demands for better control and utilization of its available water. I believe these tabulations will be of widepsread interest and will provide a better understanding of what California is attempting to accomplish. Therefore I request unanimous consent to have them printed in the RECORD as part of my remarks.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

CORPS OF ENGINEERS

Uncompleted active authorized projects in the State of California

A. PROJECTS ON WHICH CONSTRUCTION HAS NOT BEEN STARTED

Project	Total estimated Federal cost	Estimated cost preconstruction planning	Appropriations through fiscal year 1959	Balance to complete after fiscal year 1959
Navigation:				
Los Angeles and Long Beach Harbors	[1] $519,000	$43,000	[2] $13,000	$506,000
Newport Bay and Harbor	1,241,000	41,000	[2] 1,000	1,240,000
Noyo River and Harbor:				
Breakwater in harbor	2,250,000	70,000	14,000	2,236,000
Extension of channel	419,000	16,000	[2] 10,000	409,000
Redwood City Harbor:				
30-foot depth, San Bruno shoal entrance and Redwood Creek channels	1,380,000	12,000	[2] 2,000	1,378,000
Channel extension and 2d turning basin	560,000	17,000	[2] 10,000	550,000
Sacramento River, shallow draft channel	[3] 421,000	22,000	[3] 7,000	414,000
San Diego Harbor, area M	477,000	12,000	[3] 2,000	475,000
San Francisco Harbor and Bay, drift removal plant	1,400,000	29,000	[3] 3,000	1,397,000
Santa Cruz Harbor	1,740,000	110,000	110,000	1,630,000
Beach erosion control:				
Carpinteria to Point Mugu	90,000	[4] 5,000	[4] 5,000	85,000
Humbolt Bay, Buhne Point	50,000	[4] 2,000	[4] 2,000	48,000
Point Mugu to San Pedro Breakwater	5,313,000	[4] 30,000	[4] 30,000	5,283,000
Santa Cruz County:				
Cliff Drive Seawall, vicinity 49th Ave	14,000	----------	----------	14,000
Beach erosion control—Continued				
Santa Cruz County—Continued				
Twin Lakes Beach	$460,000	[4] $7,000	[4] $7,000	$453,000
West Cliff Drive Seawall	196,000	[4] 3,000	[4] 3,000	193,000
San Diego County:				
Imperial Beach	115,000	[4] 6,000	[4] 6,000	109,000
Ocean Beach	12,000	[4] 4,000	[4] 4,000	8,000
Ocean Side	181,000	[4] 1,000	[4] 1,000	180,000
Seal Beach, Anaheim Bay Harbor	108,000	[4] 13,000	[4] 13,000	95,000
Surfside, Anaheim Bay Harbor	192,000	[4] 13,000	[4] 13,000	179,000
Flood control, local protection:				
Sacramento River, Chico Landing to Red Bluff	1,760,000	100,000	[2] 8,000	1,752,000
Mill Creek levees	1,740,000	107,000	107,000	1,633,000
San Jacinto River and Bautista Creek levees	5,770,000	215,000	215,000	5,555,000
Stewart Canyon debris basin	1,670,000	150,000	88,000	1,582,000
Flood control, reservoirs:				
Hodges Reservoir [5]	2,410,000	110,000	[2] 99,000	2,311,000
Hogan Reservoir	19,300,000	740,000	740,000	18,560,000
New Melones Reservoir	80,600,000	1,600,000	193,000	80,407,000
Oroville Reservoir [5]	[6] 50,000,000	200,000	[2] 75,000	49,925,000
Tuolumne River Reservoirs: Exclusive of Cherry Valley (New Don Pedro Reservoir) [5]	3,170,000	110,000	45,000	3,125,000

[1] Exclusive of work performed by local interests for which reimbursement was provided in Public Works Appropriation Act for fiscal year 1958.
[2] Amount shown is cost incurred for preauthorization studies only.
[3] Exclusive of completed work.
[4] There are no Federal preconstruction planning costs after project authorization. Amount shown reflects costs incurred for preauthorization studies only.
[5] To be constructed by local interests with payment by the Federal Government for flood control storage.
[6] Preliminary estimate.

B. PROJECTS ON WHICH CONSTRUCTION IS UNDER WAY

Project	Total estimated Federal cost	Appropriations through fiscal year 1959	Balance to complete after fiscal year 1959
Navigation:			
Halfmoon Bay Harbor	$5,210,000	$1,083,000	$4,127,000
Playa del Rey Inlet and Basin	3,231,000	1,762,000	1,469,000
Port Hueneme Harbor	[1] 6,115,000	879,000	5,236,000
Sacramento River deep water ship channel	45,600,000	14,031,000	31,569,000
San Francisco Harbor:			
Removal of shoals and 45-foot main ship channel	814,000	814,000	0
50-foot main ship channel and Black Point Shoal channel	684,000	684,000	0
San Joaquin River, Stockton deep water ship channel	10,990,000	1,861,000	9,129,000
Flood control, local protection:			
Devil, East Twin, Warm, and Lytle Creeks	10,700,000	3,582,000	7,118,000
Eel River	944,000	436,000	508,000
Los Angeles County drainage area	338,000,000	193,945,000	144,055,000
Lower San Joaquin River and tributaries	12,300,000	3,127,000	9,173,000
Middle Creek	1,550,000	900,000	650,000
Flood control, local protection—Con.			
Sacramento River, major and minor tributaries	$23,000,000	$3,705,000	$19,295,000
Sacramento River flood control project	78,200,000	61,612,000	16,588,000
San Antonio and Chino Creeks	12,900,000	8,040,000	4,860,000
San Lorenzo Creek	6,240,000	2,144,000	4,096,000
San Lorenzo River	4,333,000	4,059,000	274,000
Santa Clara River	2,930,000	567,000	2,363,000
Santa Maria Valley levees	11,400,000	694,000	10,706,000
Truckee River and tributaries, California and Nevada	1,200,000	329,000	871,000
Flood control, reservoirs:			
Black Butte Reservoir	18,300,000	1,187,000	17,113,000
Carbon Canyon Dam and channel	6,000,000	2,544,000	3,456,000
Pine Flat Reservoir (including Kings River channel improvements)	41,200,000	39,068,000	2,132,000
Russian River Reservoir	13,802,000	11,290,000	2,512,000
Success Reservoir	14,200,000	7,148,000	7,052,000
Terminus Reservoir	23,600,000	6,125,000	17,475,000

[1] Corps of Engineers cost only. In addition, Navy share of cost is $1,425,000.

BUREAU OF RECLAMATION

Projects under construction in State of California—"Construction and rehabilitation" appropriation

Name	County	Estimated total obligations			Federal obligations, June 30, 1959	Remaining after June 30, 1959
		Federal	Non-Federal	Total		
Wholly within State:

Sonoma Creek. Sonoma.
Green Canyon-Santa Maria: Santa Barbara.
Bryant Canyon: Monterey.
Napa River: Napa.
Ulatis Creek: Solano.
Diaz drainage area: Santa Barbara.

Mr. KUCHEL. Mr. President, these tables show that tremendous sums are being and will be invested in a host of well-planned projects. They also reveal that substantial appropriations will be required in the future to carry the programs to a successful conclusion. I do not for a moment expect, Mr. President, that these large sums will be appropriated suddenly nor do I intend to ask that the Federal Government assume burdens which my State might properly be expected to carry.

In submitting these figures, I wish to point out that California is doing its share in financing these undertakings. Many of the outlays are in whole or in part reimbursable and a number of the projects will be financed through loans to be repaid to the Federal Treasury. Our people are helping meet the expense through purchase of water and of hydroelectric power, as well as through substantial contributions to construction costs and by taking on the obligation of operation and maintenance.

[1] Planning terminated.
[2] Planning suspended.

GENERAL PULASKI'S BIRTHDAY

Mr. JAVITS. Mr. President, Wednesday, March 4, marked the 211th birthday anniversary of the birth of Gen. Casimir Pulaski, the gallant Pole who contributed his fortune and life to the cause of the American Revolution.

General Pulaski fought for freedom in both the New and Old World. In Europe, he was a leader in the struggle for the liberty of his native Poland against the tyranny of the Russian Empire. Forced to flee Poland in 1773 because of his activities in freedom's cause, he came to France, where he met Benjamin Franklin and Silas Deane, who were recruiting volunteers for the war against the English. Casimir Pulaski offered his services "for your freedom and ours" and in 1777 joined the American forces, engaging in his first battle at Brandywine in September of that year, where he distinguished himself by his courage. He earned a brigadier general's commission and commanded the entire cavalry of the American forces.

Wounded in 1779 at the Battle of Savannah, Pulaski died on the American warship *Wasp* on October 11. The monuments since raised to his memory have been many. But perhaps his greatest monument is the freedom we enjoy today and the knowledge among the people of Poland that through General Pulaski and the almost 5 million of fine Americans of Polish extraction who have lived in America since the Jamestown settlement there is a strong bond of the love of liberty which binds our people. We have a right to hope that this inspiration will one day again light the way to making today's Poland a free society.

THE NEW SENATE OFFICE BUILDING

Mr. DIRKSEN. Mr. President, yesterday was the 170th anniversary of the meeting of the First Congress of the United States under the Republic. It met in New York. Only eight Senators appeared. There was no quorum, and they had to wait until the 6th of April before there was a quorum to transact business.

I have devoted some thought to the growth of business for the Congress from that day to this. I did so in connection with the new Senate Office Building, and have prepared a statement relative to this subject.

I have seen critical and uncritical arguments, statements, and speeches about the ornateness and lavishness of the building, and the amount of space to be made available for Senators.

I ask unanimous consent that this statement, in its entirety, be printed in the RECORD at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Much has been said about the new Senate Office Building, its cost, its embellishments, its marble fittings and other items. Some of the stories which have appeared seem to convey the impression that this structure is an unnecessary extravagance on the part of the Senate.

Probably the same argument will be made when the new House Office Building is completed for the convenience of Congressmen in the discharge of their public duties.

In pondering the matter, all this has underscored the fact that yesterday—March 4, 1959—marked the 170th anniversary of the opening of the First Congress under the Constitution. This First Congress met in New York. Only 8 Senators appeared. There was not a quorum and hence they were compelled to wait until April 6, 1789 when a quorum appeared.

That First Congress had to produce rules and regulations and establish procedures under the direction of John Adams, the Vice President, and under John Langdon, of New Hampshire, who was first president pro tempore of this body.

It was a distinguished body and among other Members it numbered distinguished people, such as Oliver Ellsworth, of Connecticut; Charles Carroll, of Maryland; Robert Morris, of Pennsylvania; Richard Henry Lee; and James Monroe, of Virginia, and others.

It was interesting to go back and examine some of the data developed by Dr. George B. Galloway, who served as Chief of Staff to the Joint Committee on the Organization of Congress in 1945 and 1946. I was a member of that committee and took particular account of the excellent work done by Dr. Galloway, who also served with the Legislative Reference Service in the Library of Congress.

Subsequently Dr. Galloway authored and published a book under the title "Congress at the Crossroads," and in that volume he alludes to the business of the First Congress.

Among other things it "established the State, War, and Treasury Departments; fixed import and tonnage duties and regulated their collection; appropriated revenue and provided for public debt; admitted Kentucky and Vermont to the Union and settled certain State accounts; established courts of justice and fixed the compensation of public officers; provided for the census of 1790 and regulated trade with the Indians; and otherwise dealt with the comparatively simple problems of the Federal Government in that remote age."

Dr. Galloway observes that the First Congress approved 96 public laws, of which 18 dealt with foreign affairs (including tariff duties), 16 with relations between the Central Government and the States, and 10 with the defense of the infant Nation. He comments also that 18 were concerned with administrative matters (including salaries), 15 with questions of public finance and 9 with the Judiciary. Only 3 were pension acts and only 2 were for the relief of private claimants.

The population of the country when the First Congress met was about 4 million.

I believe it would be interesting at this point to present a tabular summary by way of comparison between the 1st Congress and the 85th Congress. One need but examine this table to note the tremendous increase in public business, and yet it must be observed that the statistics in themselves furnish no complete clue to the growth of legislative business.

It does not account for the individuals and groups who come to Washington in the interest of legislation.

It does not take account of the tremendous correspondence which takes place between Senators and Congressmen and their constituents nor the vast amount of literature having a bearing on nearly every public and legislative matter which is submitted for consideration.

Nor does it take account of the unending investigations which are conducted by the Congress today and of the host of problems which spring from the growth in population and the growth in complexity of our economic and social life. The comparison does, however, indicate this growth and indicates, also, how the staffs of legislators have grown to cope with this business and, therefore, the necessity for additions of space from time to time the better to discharge the public business.

Let me then present to the Senate the items in this table to show a comparison in part of the workload:

Points of comparison

	1st Cong.	85th Cong.
Number of bills and resolutions introduced	268	20,706
House of Representatives	142	15,660
Senate	126	5,046
Number of laws enacted	118	1,720
Public acts and resolutions	108	936
Private acts and resolutions	10	784
Number of Members	91	534
House of Representatives (including Delegates)	65	438
Senate	26	96
Number of days in session [1]	519	547
House of Representatives	-------	276
Senate	-------	271

[1] During the 85th Cong., the House was in session for approximately 1,147 hours and 31 minutes, and the Senate for approximately 1,875 hours and 29 minutes.

Points of comparison—Continued

	1st Cong.	85th Cong.
Number of committees (standing, select, and special)	3	103
House of Representatives	2	34
Senate	1	32
Joint committees	-------	12
Joint commissions and boards	-------	25
Committee reports issued	155	5,224
House of Representatives	85	2,719
Senate	70	2,505
Executive department communications received	72	2,268
Nominations confirmed by the Senate	221	103,311
Petitions filed	650	737

RECAPITULATION OF THE 85TH CONGRESS

The total laws of the 85th Congress numbered 1,720, which were divided as follows: House bills, 937; House joint resolutions, 114; Senate bills, 649; Senate joint resolutions, 20, making a total of 936 public laws and 784 private laws.

The House passed 1,253 House bills and 120 House joint resolutions; and 669 Senate bills and 22 Senate joint resolutions together with 51 House concurrent resolutions.

The Senate passed 988 House bills, 115 House joint resolutions, 1,062 Senate bills, 37 Senate joint resolutions.

Fifty-one measures were vetoed, and only one veto was overridden.

There were introduced 13,876 House bills, 704 House joint resolutions, 381 House concurrent resolutions and 699 House resolutions.

In the Senate there were introduced 4,329 bills, 203 joint resolutions, 123 concurrent resolutions and 391 Senate resolutions.

House committees made 2,719 reports and Senate committees made 2,505 reports.

There were 415 rollcalls in the House as follows: 222 quorum calls and 193 yeas and nays. In the Senate there were 566 rollcalls divided as follows: 253 quorum calls and 313 yeas and nays.

The Congress received 2,268 executive department communications, and 737 petitions were filed.

The President submitted 104,193 nominations for confirmation by the Senate, of which 103,311 were confirmed. Fifty-four nominations were withdrawn, and 828 remained unconfirmed.

CONGRESSIONAL RECORD from January 3 through August 30, 1957:

	Pages
House proceedings	5,869
Senate proceedings	9,423
Total	15,292
Appendix	7,325

CONGRESSIONAL RECORD from January 7 through August 24, 1958:

	Pages
House proceedings	6,721
Senate proceedings	11,389
Total	18,110
Appendix	8,375

Mr. DIRKSEN. Mr. President, I should like to furnish a few figures for the information of Senators. In the First Congress there were considered in the Senate 126 bills and resolutions. In the 85th Congress 5,046 were considered.

The number of laws enacted in the 1st Congress, under the heading of public acts and resolutions, was 108; in the 85th Congress, 936. The number of private acts and resolutions enacted in the First Congress was 10, in the 85th Congress 784.

With regard to committee reports, in the 1st Congress, in the Senate, there were 70 committee reports; in the 85th Congress there were 2,505.

Let me refer to one further item. The number of nominations confirmed by the Senate in the 1st Congress was 221; in the 85th Congress the number was 103,311.

This study indicates the growth of business in every field, and the necessity for adequate space to enable the Senate properly to discharge its public responsibilities.

COTTON EXPORT PROGRAM

Mr. FULBRIGHT. Mr. President, in the past week or so rumors have been circulating throughout the cotton trade that efforts are being made by the State Department and the White House to bring about a change in the cotton export program which was announced by the Department of Agriculture early last month. The announced increase in the export subsidy from 6½ cents to 8 cents for the new cotton year was well received by the cotton industry. The increased subsidy would have been of substantial help in aiding the United States to regain our traditional share of the world cotton market. I am very disturbed about the possibility of reducing the announced subsidy rate, and I hope that the White House and the Department of State will not interfere with the Secretary of Agriculture's decision.

I ask unanimous consent to have printed in the body of the RECORD an article entitled "Benson's Handling of Cotton Program Is Complete Failure," written by Mr. Leland DuVall, and published in the Arkansas Gazette on March 1. This article presents a thorough summary of the effects of Secretary Benson's cotton policies. It is apparent from reading this article that the world cotton market for our country will deteriorate unless the announced export program is carried out. We simply cannot compete in the world market at the present subsidy rate, and our cotton surpluses will undoubtedly increase substantially in the coming cotton marketing year unless the scheduled subsidy increase is allowed to stand.

I also ask unanimous consent to have printed in the body of the RECORD my telegram to Mr. Don Paarlberg, Economic Adviser to the President, protesting any changes in the announced cotton export program.

There being no objection, the article and telegram were ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Mar. 1, 1959]

BENSON'S HANDLING OF COTTON PROGRAM IS COMPLETE FAILURE

(By Leland DuVall)

The U.S. Department of Agriculture has painted itself into a corner in the matter of maintaining an export market for its cotton. Despite the national policy that calls for American cotton to be offered to the world market under competitive prices, the situation has deteriorated badly in recent months.

There are three basic reasons:

1. Foreign buyers (and the domestic trade, for that matter) are aware of the fact that the selling price of American cotton will drop sharply at the beginning of the new market year August 1. They would be stupid businessmen if they carried an inventory into that period.

2. The crop will be considerably larger this year, if the weather is favorable, and this could dump excessive amounts of cotton on the market and reduce the price still further.

3. Foreign producers and merchants who handle foreign cotton are also aware of this condition so that they are underbidding American cotton on the world market. The theory here is that they can make more money selling just under the present American market price than they will be able to make when the American price drops at the end of this market year.

Each of these facts must be considered in more detail.

The August 1 decline in the cotton market is predestined by the terms of the new Government production control and marketing system. The new law makes it mandatory for the Government to offer to buy all cotton grown within the acreage allotment at about 34.1 cents a pound, basis middling one inch. This cotton will be offered for sale in the open market at around 31.2 cents a pound.

Middling one-inch cotton is now propped at about 35 cents and the average free-market price at 14 Southern markets has been hanging just above 34 cents. All buyers and others who deal in the fiber know that cotton now selling just above 34 cents will be available August 1 at around 31 cents—and maybe less. Naturally they will carry as small an inventory as possible into the new crop year.

This situation has had a direct influence on the amount of the 1958 crop that has moved into the loan and also into export sales. Last week the International Cotton Advisory Committee revised downward its estimates of American cotton exports in the 1958–59 marketing year. The committee said the export total might not reach 3 million bales in the 12 months that will end July 31. Earlier the group had said that exports might be as high as 3,500,000 bales.

Last season, U.S. cotton exports were 5,700,000 bales and in the 1956–57 season sales to foreign countries reached 7,900,000 sales.

The obvious reason for part of the decline is that cotton merchants know the price will come down at the beginning of the new market year.

The larger cotton crop that is expected this year is also a factor in keeping the pipelines as empty as possible.

Last year domestic cotton production was about 11,600,000 bales from about 12,400,000 planted acres. The national allotment was above 17 million acres but the acreage reserve of the soil bank and other factors reduced the planting.

This year there will be no acreage reserve of the soil bank and the national allotment will be about 16,300,000 acres. In addition to this, each cotton farmer will have the privilege of adding 40 percent to his allotment under plan B of the new cotton law. Theoretically, the cotton crop could be up to 23 million acres if all farmers exercised their option but, of course, this will not happen. The best guess now seems to be that actual planted acreages will be slightly above the base allotment but there are estimates that the planting could reach 18 million acres.

If yields should be up around the 1958 level the 1959 crop could run 15 million to 16 million bales. This means that the Government will have a heavy supply of cotton for sale in the new crop year, a fact that

the domestic and foreign cotton trade understands quite well.

Foreign producers and merchants who handle exports are obviously making their plans on the basis of this situation. The result is that a large amount of the foreign market needs is being supplied by cotton from other sources. Recently, for example, a well-liked grade of U.S. cotton was quoted at 35 cents in a Western Europe market. Mexican cotton of a roughly comparable grade was being sold at 28.7 and Nicaraguan cotton was offered at 26.5.

The U.S. Government is required by law to keep American cotton priced competitively in the world market. The present policy of the USDA attempts to accomplish this with an export subsidy of 6.5 cents a pound. As this works out, a U.S. shipper who sells in the world market can claim a subsidy of this amount in the form of cotton from the CCC stocks. As can be seen from the figures above, this is not quite enough to move American cotton. Consequently, the level of exports has dropped.

However, Secretary of Agriculture Ezra Taft Benson has revealed that the export subsidy will be boosted at the beginning of the new cotton year to 8 cents a pound. This, coupled with the known price reduction that is coming as a result of the lower supports, has tipped off the world cotton traders that they can expect to be able to buy American cotton next year much cheaper than the present going price.

By using the present export subsidy of 6.5 cents, shippers can offer cotton at American docks for around 28 cents. The larger subsidy and the lower price supports will make this same cotton available next year at around 23 to 24 cents.

Secretary Benson has insisted that he is dedicated to the job of getting the Government out of the commodity business but the Government's own figures show that he has failed. At the end of fiscal 1952 the price support inventories of the United States amounted to about $1 billion. At the end of this fiscal year it will be around $6 billion and the Commodity Credit Corporation has predicted that at the end of fiscal 1960 the inventory will be just under $10 billion.

The most obvious conclusion that can be drawn from this is that the Benson program has been a complete failure. The handling of the cotton situation is a fair example of why it has failed.

WASHINGTON, D.C., *February 27, 1959.*

Hon. DON PAARLBERG,
Economic Adviser to the President,
The White House,
Washington, D.C.:

I am deeply concerned by reports that the White House and State Department are bringing pressure upon the Department of Agriculture to modify the cotton export program. It seems clear to me that under Public Law 480 it is the responsibility and duty of the Secretary of Agriculture to determine the prevailing world price of cotton and to establish the U.S. export price at that level. I believe that Secretary Benson acted in good faith in establishing the export price, and I think that he should be supported in his decision.

Export sales under Public Law 480 have been helpful not only to American agriculture, but I also believe that the program has been beneficial in maintaining friendly relations with other nations. The export program must be continued even if it does not happen to meet with the approval of the large cotton companies operating in Mexico which for years have been sheltered under the umbrella of our domestic price support program.

This matter is of vital importance to the economy of my State as well as other cotton-producing areas. Arkansas Farm Bureau Federation and other agricultural leaders strongly support this position.

J. W. FULBRIGHT,
U.S. Senator.

CABINET RESPONSIBILITIES

Mr. FULBRIGHT. Mr. President, last summer in delivering the commencement address before my daughter's college graduating class, I sought to explain some of the reasons why this country has in recent years failed in its role as leader of the West. With respect to one point which I sought to make, I quote from my speech on that occasion:

In this, the most critical period of our history, when the full reserve of American political ability should be at the disposal of the national community, hardly 10 percent of the chief posts of Government are now filled by men with any previous experience in political affairs. The rest are amateurs, pitted in a worldwide contest against adversaries who are carefully trained political professionals.

As has happened all too often in our history, our Secretaries of Defense, of Treasury, of Commerce, of Agriculture, of Labor, of Interior—all except the Secretary of State—had negligible, if any, experience in governmental affairs prior to assuming their Cabinet responsibilities. And the same pattern holds true throughout the realm of Under Secretaries, Assistant Secretaries, and the heads of independent boards and agencies. Except for the pomp and circumstance involved, few show any liking or talent for Government itself. Rather, most come to Washington bewailing the sacrifices of their personal fortunes for the public good, and declaring their intention to return to private business at the earliest possible hour. And in truth, too many of them do return to their businesses just as they begin to understand their jobs in Washington.

Since last summer, it seems obvious that we are if anything in an even more critical period. Our country urgently needs the services of men of ability, intelligence, and experience. We need in the highest seats of the Government men who not only understand the forces at work in this complex world, but who also have been trained in and have mastered the highly complex art of government.

I must, therefore, express my regret that one of the key persons in the present administration, Secretary of Defense McElroy, has indicated that he will return to private business in several months—certainly before the expiration of the President's term.

The far-reaching effect of the administration's policy of bringing in businessmen for a rotating tour of duty in Washington was the subject of a column by the eminent columnist Mr. Walter Lippmann on March 3, 1959. I ask unanimous consent that Mr. Lippmann's column be printed at this point in the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MCELROY AFFAIR

(By Walter Lippmann)

The news that Secretary McElroy may be resigning in a few months raises a serious question about the prevailing standards of public service.

It appears that when the President approached Mr. McElroy about appointing him to what is surely one of the most difficult and most responsible offices in the Government, they came to an understanding that Mr. McElroy might serve for a very limited period only. The reason for this seems to have been that Mr. McElroy could take only so much leave of absence from his business without sacrificing certain financial benefits for which he is eligible.

When we remember that what is at stake is the Office of Secretary of Defense, it is necessary to ask whether Mr. McElroy should have laid down or that the President should have agreed to the conditions under which his appointment was made.

For this limited period of service was just about long enough to enable Mr. McElroy to begin to learn to be Secretary of Defense. He is a bright and intelligent man, but when he took office he had no background of experience in the Military Establishment and no important experience in public life.

The Defense Department is an enormously complex organization, and the great issues on which the Secretary must pass are highly technical ones in the field of strategy, tactics, engineering, production, and research. Moreover, the Secretary of Defense is the key man in the relations between the armed services and the Congress.

Eighteen months are perhaps enough for a reasonably good introduction to the work of the Office. But, as Mr. McElroy's recent testimony before the congressional committee showed, while he has learned many lessons, yet he is far from having mastered the job.

Now, with the problem of American armed power at the center of the world situation, Mr. McElroy is looking forward to leaving in order to go back home and make more money. A successor must be found who can then look forward to about 18 months in office before he goes home. Mr. McElroy expects to leave the job just as he is about ready to do it. His successor, if he comes from the outside, may be able to learn about the job just as the time comes for him to leave the job; if his successor is promoted from within the Department of Defense, he is more likely than not to be a caretaker and not much more.

All this adds up to the fact that with so much at stake a very serious Office has not been treated seriously enough. This is against the national interest which requires a highly competent Secretary of Defense, and it is a bad example of how the public service should be valued by our people.

Broadly speaking, there are two kinds of opinion as to how the highest offices of the Government should be recruited. There are those who believe that for the most part—although there are exceptions to all such rules—the big offices can be filled most successfully by men who have made a success in private business. The theory here is that there is no great difference between public and private life, and that experience in business is not really different from experience in Government. With the conspicuous exception of Secretary Dulles, who has combined a lifetime of public service with a highly successful law practice, President Eisenhower has shown a predilection for successful corporate executives.

The other school of opinion holds that the public service is in itself a vocation and a professional career and that it cannot be treated, like Sunday painting or Sunday golf, as an interlude for amateurs. Those who think this way regard it as a fundamental fallacy to suppose that success in corporate business is preparation for success in the public business. They believe that on the whole it is better to fill the higher offices with men whose main work in life has been in politics and the public service.

Those of us who take this view believe that public service is a profession and an art which must be acquired by long experience

in public life. For the art of governing men is a great art itself—perhaps the greatest as it surely is the most momentous, of all the arts, and a lifetime is not too long a time in which to learn it.

TELEVISION FOR RURAL AREAS

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that in the remarks I am about to make I may exceed the 3-minute limitation.

The PRESIDING OFFICER. Without objection, the Senator may proceed.

Mr. FULBRIGHT. Mr. President, I should like to take a few minutes to discuss a problem which appears to be a matter of considerable concern to both the House and the Senate at this time. I have noted comment in the CONGRESSIONAL RECORD calling upon the Congress to overrule a decision of the Federal Communications Commission issued on December 30, 1958. This Commission decision would require certain unlicensed and, therefore, illegal television transmitters, called boosters, operating in several Western States on VHF—very high frequency—television channels 2 through 13 to be converted to so-called translator stations which operate on UHF—ultrahigh frequency—channels, 70 through 83.

The booster stations or reflectors, as they are sometimes called, according to information furnished me, receive the weak signals of distant television stations on a mountain or high elevation near a community which cannot receive the television station directly, amplifies the signal or signals and rebroadcasts them on the same channel or on some other channel in the VHF band. The Commission has never assigned channels for these boosters and has never licensed them, although there are some 1,500 of them estimated to be in operation today.

A translator station, according to the Commission's rules and regulations, is a low-power television broadcast station which the Commission has established for the specific purpose of receiving signals from distant stations and rebroadcasting them on one of the top 14 UHF television channels to small towns where television reception might not otherwise exist.

The Commission's order did not, as some would have us believe, require that the illegal stations be converted to translator operation within 90 days. It simply required that applications be filed with the Commission for authority to convert within 90 days. Now, this period has been extended to 6 months.

I can appreciate the genuine concern of Members of the Congress about the difficult problem of providing television reception to small towns remote from television stations. However, before accusing the Commission of being callous and of having no regard for the needs of persons residing in rural areas for television, or stating that the Commission's action in requiring the booster stations to convert to translator operation was precipitate, ill-considered, and was taken without proper study of the best methods for providing rural area television, I think we should ascertain the facts.

Proponents of the booster stations have stated that there is no other economic and technically feasible method of providing television service to these rural communities, and that if the Commission's decision is allowed to stand many of our rural citizens will be absolutely deprived of television. There are now 25 bills or joint resolutions before the House and at least two before the Senate which, if adopted, would express the sense of Congress to be that the Federal Communications Commission should authorize the operation of VHF television boosters.

It seemed incredible to me that the Commission would arbitrarily deny television service to persons residing in fringe areas. I could see no reason why the Commission would not want to make every possible effort to make television service available in rural areas by the most economic and practicable means available. Neither have I been able to comprehend what ulterior motive the Commission might have in refusing to license VHF television boosters and reflectors, if it would be in the public interest to do so.

Since the Congress is being asked to set aside a decision of the Commission and to substitute its judgment for that of the Commission on a highly technical engineering matter, I felt that it was incumbent upon me to obtain all of the facts I could with respect to the Commission's action.

I, for one, do not want to be placed in the position of pressing the Commission to set aside a decision, or of forcing it to adopt policies, which in its expert judgment, it believes are not in the public interest. On the other hand, if the Commission is not doing its job properly, I want to know this too.

This Congress cannot expect the Commission to make the independent decisions for which it was created, and to command the respect of the public and of the Congress if the Congress itself is guilty of undue interference in matters requiring the expert judgment of an expert agency.

Far from being precipitate and ill considered, I find the Commission's order to have been based upon several years' study and upon two formal records of investigation in which all interested parties had full opportunity to participate.

I find that the Commission's order is based upon its expert opinion, and that of its staff, that the illegal boosters and reflectors constitute a potential and practical source of interference to communications services assigned for the protection of life and property, and that such boosters are a potential and practical cause of destructive interference to television reception on home television receivers.

In addition, the record shows that the Commission has developed and promoted the UHF translator service as a substitute for the boosters, and the Commission's studies have convinced it that the translators provide an excellent means for obtaining rural area television service.

My investigation shows that the Commission has not only grappled with this problem for at least four years, but that it has issued three separate rulings, one based on law and two based on engineering considerations, seeking to force the boosters to cease operating. In view of this history of the matter, I wanted to know why the Commission feels the way it does.

Here are some of the facts which I have developed from the Commission's files.

The television boosters got their start in 1954 in the Western States as a sort of do-it-yourself method of securing television in areas where the distant stations could not be received. While "do-it-yourself" is in the best American tradition, neither construction permits nor licenses were obtained from the Federal Communications Commission for the stations. Some months after the Commission was first advised of the development of the stations, in March of 1955, it took formal action against an unlicensed station by the issuance of a cease and desist order directed against an organization known as C. J. Community Service, Inc., at Bridgeport, Wash. This action directed that organization to show cause why an order should not be issued commanding it to cease and desist from operating the booster station in violation of the licensing and other provisions of the Communications Act. Similar orders were directed at this time to the operators of unlicensed stations at Nespelem and Quincy, Washington.

At the hearing in the show cause orders, jurisdiction of the Commission over these stations was challenged by the operators on the theory that the stations operated wholly within the borders of one State and were, therefore, not subject to the Commission's jurisdiction. In October of 1955, the Commission Hearing Examiner, who heard the case, ruled that even though the stations might be operating in violation of law, the Commission could permit them to operate on the assumption they created no harmful interference.

The Commission overruled its hearing examiner by a decision adopted in February of 1956, and found that the booster stations were operating in violation of three separate provisions of the act. Subsequently, the Commission's decision was appealed to the U.S. Court of Appeals for the District of Columbia Circuit. Finally on May 3, 1957, more than a year after the Commission's decision, the court of appeals ruled that the Commission had jurisdiction, but soundly criticized the Commission for what the court thought was the failure of the Commission to take any steps to provide television facilities for rural areas.

In the meantime, however, during the pendency of the proceeding before the court, the Commission had undertaken an investigation of the rural area television problem and at the conclusion thereof in May of 1956, had established the UHF translator service as the Commission's answer to a low-cost method of providing television service to the rural areas.

Two months after its jurisdiction over the boosters was upheld, by the court of appeals on July 2, 1956, the Commission issued a memorandum opinion as an outgrowth of its investigation of the use of the UHF boosters by UHF television stations, and at the same time ruled on the proposals made in that case by the supporters of the illegal boosters. In its report and order in this case, known as docket No. 11331, the Commission stated its continuing concern about the important problem of extending the benefits of the television art to the many small isolated communities beyond the normal range of television stations. In rejecting the proposals for licensing the VHF boosters, the Commission first pointed to its previously established translator service and said:

We firmly believe that translators offer excellent means for bringing service to communities and areas without service. Our experience in the administration of the translator rules since their adoption last June confirms our view. Some 75 translator stations have already been granted with many translators already in operation and providing excellent service. Over 50 applications for additional translators are pending and the flow of new applications continues at a rapid rate. We see no reasons why translators cannot be employed by any community beyond the range of existing television stations as a means of providing service.

With respect to the proposals for licensing VHF boosters, the Commission said in part that the bulk of the comments suggesting such a service were not supported by engineering data. The Commission also was highly critical of the VHF booster engineering, saying that no attention was given in the design of the apparatus to important matters such as limiting the band width to insure that only the desired channel is transmitted, or to other engineering techniques to minimize the dangers that the transmissions of the boosters would interfere with other vital communications services outside the television channel.

The Commission explained that the same relaxed engineering standards could not be applied to VHF boosters as are applied to the UHF translators. The reason for this is that the translators operate in the upper 14 UHF channels where the spectrum is not congested, where there is little danger of interference between television channels, and where communications services devoted to the protection of life and property do not operate. Thus, it was possible, said the Commission, in the case of translators to reduce the technical and supervisory requirements for the equipment to the barest minimum.

On the other hand, the Commission noted that the VHF boosters operated in the highly congested VHF portion of the spectrum. The VHF television channels allocated for broadcast services are not in a continuous band, and certain frequencies between channels 4 and 5, and between channels 6 and 7, are allocated for important radio safety services intended for the protection of life and property. The Commission said that if it imposed the restrictions and safeguards necessary for the VHF booster service, it would make their operation economically impractical.

Even after this forthright and detailed explanation of why the VHF boosters could not be operated, the Commission, upon the request of interested parties that adequate opportunity had not been accorded VHF booster proponents to show that boosters are preferable and practical, set aside its previous decision and instituted a new investigation of boosters which it called docket No. 12116. In this investigation, the Commission set up a series of proposed minimum rules to provide the basis for comments by interested parties, looking toward possible establishment of a booster service.

Very extensive comments were filed by the proponents of the boosters, as well as the opponents. Again, on December 30, 1958, the Commission issued its final report and order terminating its latest investigation, and rejecting the VHF booster concept.

According to the Commission, a majority of comments filed in this proceeding were in the nature of mere expressions of opinion favoring the licensing of VHF boosters, but contained no technical data indicating the boosters could be satisfactorily operated and meet public requirements for service on the basis proposed by the Commission.

To the contrary, although the Commission had stated that its proposed rules were the barest minimum of which the Commission could conceive for such a service, many of the comments said the rules were far too stringent and the Commission found that none of the existing boosters could even meet its bare minimum requirements.

The Commission noted that in its new proceeding there was no information which tended to show that the translator stations in the UHF television band are not suited to various types of terrain or that such devices will not perform as well, if not better, than the low-power devices proposed in the VHF band. The Commission repeated that it was convinced that the service being provided by the translator stations is superior in quality of signal and extent of coverage to that provided by the majority of the existing unlicensed boosters.

In the meantime, the Commission had adopted rules which permitted an increase in the maximum power of the translator stations to approximately 10 times that of the original translators.

With respect to cost, the Commission found that on the whole, the UHF translator installations in many cases would be less expensive, and in few, or no cases, could they be expected to be more expensive to the public than VHF installations. Directing its attention in its report, again to the VHF boosters, the Commission said with respect to those currently in operation that such apparatus tends to lose its stability when amplification is high and that extreme care must be exercised in the design and installation of boosters to prevent improper operation and interference to other stations and services. Even when properly operated, according to the Commission, they are believed to be inherently a source of interference to the direct signals of the stations they are retransmitting. According to the Commission, the VHF boosters could be made to work only with extensive engineering and complex apparatus, and that because of the costs involved, the Commission could not consider them an acceptable solution to the problem of inadequate television in small, remote areas. Little point would be served in going into all of the details of the Commission's criticism of the VHF booster proposal. However, I am asking that the Commission's full report and order be printed in the RECORD so that all Members of Congress having a genuine interest in this problem can have the opportunity to study the Commission's report.

It is inconceivable to me that anyone can urge that the Commission has not carefully and thoroughly considered this problem. Those criticizing the Commission's decision do not seek to meet the issues raised by the Commission with respect to the boosters. This is a highly technical and complex field and nobody has suggested any reason to me why the Commission would not have licensed the VHF boosters years ago if it were technically feasible to do so. Perhaps the easiest solution to the entire problem for the Commission if it had not thought the public interest would be most adversely affected would have been to license the boosters immediately.

I, for one, do not believe that the Commission is deliberately trying to prohibit people in the rural areas from having television service and I am willing to rely upon the expert judgment of the Commission that the translator service is an excellent low-cost method of providing television service, and that the VHF booster service is inherently dangerous to the present television allocation plan, to television reception in congested areas and to other communications services which had been allotted channels in the VHF spectrum and which are intended to be used in the protection of life and property.

I was absolutely astounded a few days ago to learn that in spite of 4 years of grappling with this problem during which the Commission has permitted the number of illegal boosters to grow from a mere handful to more than 1,500, it has again given evidence that it may continue this incredible situation for an additional period of time.

The record shows that there have been a large number of applications filed for translator stations and that many such stations are in operation. One of the original stations against which the Commission issued a cease and desist order, Quincy, Wash., has filed an application to convert their illegal booster to a translator. I am certain that all of the citizens of the United States receiving their television from these unlicensed stations, if they could be made to understand that a superior type of service is available, and that the boosters are dangerous and not in the public interest, would readily comply with the requirements that their stations be converted to licensed operations.

I was surprised to read a public notice dated January 27, 1959, in which the Commission says it will extend from 90 days to 6 months the time within which it will require the VHF booster operators to convert to UHF operation and that, in the meantime, it will study further the legal and engineering considerations involved. This looks as if the Commission may be bowing to pressures from the Congress and considers itself forced to abandon its own convictions as to what is in the public interest. I strongly urge that all Members of Congress carefully study the record of the Commission's handling of this matter, and that it note the Commission's continuing insistence that the VHF booster will not serve the public interest and that it is inherently dangerous so that each Member of Congress can then inquire in his own mind why it is the Commission cannot be left alone to do what it thinks is best on a matter of extreme technical complexity.

Let us leave the Commission alone and let it administer the Communications Act without undue interference, and let us back it up when it makes a decision on the merits of a problem instead of forcing it to do what it believes is unsound and not in the public interest. It must be remembered that it is the Commission's job to provide a television service for the entire Nation on a sound engineering basis. It is charged by law with protecting the airway on a nationwide basis and serving the public interest of the entire country.

RETIREMENT OF GEN. EDWIN W. RAWLINGS

Mr. SYMINGTON. Mr. President, on February 28, 1959, Gen. E. W. Rawlings, who has been commander of the Air Materiel Command for 7½ years, retired.

General Rawlings brought to the Air Materiel Command, the buying and logistics arm of the U.S. Air Force, an unusual understanding of management techniques and a comprehension such as characterizes the most progressive private businesses in the country. As a result, the growth and development of the U.S. Air Force logistic system has been impressive.

General Rawlings is an able administrator, and has great skill in encouraging people to work for the good of the enterprise.

It is appropriate at this time to mention a few of the major contributions of this fine officer—contributions not only to the Air Force, but to the Department of Defense and to America.

In 1951, a Special Weapons Office was set up in Headquarters Air Materiel Command to centralize the command's participation in the atomic energy program.

In 1952, Air Materiel Command started to decentralize as a solution to the management problems of bigness. Workloads were broken down into more manageable segments and top management was left with more freedom to do its overall job of managing. In addition, actions were taken to reduce pipeline time lags and to standardize logistics for oversea operations. As an example, aerial resupply alone cut pipeline time for filling requisitions and reduced inventory levels by millions of dollars.

In 1953 a new technique, that of monetary inventory accounting, was tested in the Air Materiel Command, with the result that the system was adopted throughout the whole Air Force.

In 1954 Air Materiel Command installed electronic data processing equipment which translated the voluminous detail of logistics into more manageable terms and made possible logistics operations of unprecedented speed and flexibility.

In 1955 a worldwide transceiver network was installed to speed up the distribution of supplies needed by units of the Air Force wherever they might be.

In 1956 the Air Materiel Command Ballistic Missiles Office was set up—a milestone in logistics thinking and a prototype of a new era of space-age support.

In 1957 the logistics program was further streamlined so that much of our oversea military operations could be supported directly from this country—thereby reducing substantially the size and expense of our oversea logistic establishments.

In 1958 the Air Materiel Command Aeronautical Systems Center and the Air Materiel Command Ballistic Missiles Center were established to decentralize weapon system management and central buying functions.

This, then, is but a brief chronology of a few of the major contributions which General Rawlings has made to defense efficiency in recent years.

As one who has worked with General Rawlings, I am proud to say, from personal knowledge, that his is a record of brilliance and of devotion to duty that should be imitated but would be difficult to equal.

Mr. BRIDGES. Mr. President, will the Senator yield to me on this subject?

Mr. SYMINGTON. I am very glad to yield to the distinguished senior Senator from New Hampshire.

Mr. BRIDGES. I wish to join with the distinguished Senator from Missouri in his statement on General Rawlings, and to add my word of tribute to a great public servant and a great American leader.

Mr. SYMINGTON. I thank the distinguished Senator from New Hampshire for his kind remarks with respect to a great American patriot.

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared on this subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BRIDGES

This month our Nation is losing the valued services of an outstanding military figure. I refer to Gen. Edwin W. Rawlings, who is retiring after 30 years of distinguished service in the Army and Air Force. I have known Ed Rawlings for many years and I know that his departure will be felt keenly not only by the Air Force but by the Department of Defense as well. However, General Rawlings is a young man in both age and outlook, and I know that he will continue to make a substantial contribution to his country, notwithstanding that he will no longer be in active service. I know the Air Force and the Military Establishment will continue to build on the firm logistic foundation and around the logistic framework which General Rawlings molded and shaped with such consummate skill during his long, successful years as commander of the Air Materiel Command.

When General Rawlings first went to the Air Materiel Command, he was not unfamiliar with Air Force logistics or with staff operations. Immediately before going to Air Materiel Command he had distinguished himself in his capacity as Air Force Comptroller, in Headquarters, U.S. Air Force. In this position, he brought a vitalized financial management consciousness to the Air Force. He had been groomed for this Washington post through a number of challenging and carefully selected positions as well as through the opportunity he had had to attend the Graduate School of Business Administration at the Harvard School of Business. The lessons which General Rawlings' staff assignments and graduate studies in business administration provided were well learned. The patterns of thinking which he had developed in these assignments found full fruition in his work as head of the Air Materiel Command.

I would like to discuss very briefly a few of the management techniques and improvements which General Rawlings brought to the Air Force logistics system. But before I do that, I would like to point out that this officer never left a stone unturned in the search for new ideas and for truth, in his desire to improve systems, in his endeavor to encourage his commanders and subordinates, to bring out the best in the individuals associated with him in the Air Force logistics operation—and there were some 200,000 logisticians and administrators, military and civilian, in this worldwide organization. He studied the techniques which had been developed by American business leaders. He was an avid listener. He contrived to set up learning situations from which he and his commanders and their staffs could profit. He sought out the ideas of military and political leaders, union leaders, businessmen, professors, scientists, and he elicited information and ideas from these sources which could be used by the Air Materiel Command. At the same time he insured that the USAF paid its way through the free flow or interchange of ideas. Many techniques presently employed in American industry have been developed as a result of this interplay of ideas on management and management improvement.

Among the administrative techniques which General Rawlings fostered in the Air Materiel Command were decentralization, direct support, and the utilization of the latest developments in electronic data processing equipment, and in communications and transportation. He developed management methods which have improved the effectiveness of the entire logistics system. Among these were the programs for the development of executives and managers through schooling, a system of managing by exception—whereby managers devoted their attention only to problem areas rather than areas already functioning as desired.

Perhaps one of General Rawlings' greatest assets was his own ability and willingness to accept new ideas, to evaluate them soundly and to place these ideas in operation when they had passed a sufficient service test. Exemplifying his philosophy concerning new ideas, General Rawlings recently voiced the following views on the challenge that has mushroomed out of the space and nuclear age: "There are three rules which we may consider reliable constants for our guidance.

First, we must learn, seek out, and be receptive to new ideas—and be creatively imaginative in grasping the relationship of new knowledge to the fundamental resources of management. Second, we must clearly keep in view the paramount importance of the human element in management. Third, and possibly the hardest guideline to follow, we must cultivate a willingness to change. We must be willing to yield the old to the new, to change our methods, and to change the very patterns of our personal thought which may have cost us blood, sweat and tears in their genesis. It is always easier to look forward than to move forward. But theory without practice can yield only a mirage of progress."

Another indispensable asset to General Rawlings has been his unwavering integrity. During his tenure as commander of Air Materiel Command, he was directly responsible for the expenditure or obligation of public funds in excess of $85 billion. He performed this task of high responsibility to the best advantage of the Air Force and to the Nation. His own integrity has been an inspiration to the many military and civilian officials who have assisted him in his great and complex task.

Today, on the eve of General Rawlings' retirement, I wish to commend him to the Nation and to express appreciation to him as well as to his associates who have aided General Rawlings in the effective performance of the tasks which the Department of Defense and the Air Force placed upon him. Gen. E. W. Rawlings has won an undisputed place in the hall of fame of the U.S. Air Force.

THE BUDGET

Mr. BRIDGES. Mr. President, at this time we hear a good deal of pious talk about cutting the budget and balancing the budget. I submit that no budget has ever been cut or balanced by talk alone. Action is necessary, and in that regard I should like to cite a couple of examples from my own thrifty, dollar-conscious State of New Hampshire.

At this point, I ask unanimous consent to have appear in the body of the RECORD an editorial entitled "Reduced Budget," which appeared in the February 20, 1959, issue of the Union-Leader, Manchester, N.H. The examples of the city of Keene and the State of New Hampshire should be followed by all those budget cutters, who would practice what they preach.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDUCED BUDGET

Every little bit helps. Consider the fact, for instance, that the Keene city council has reduced the budget and that a tax cut is now in order. Not by any great amount, that is true. Indeed, the reduction is so small that some people—but not Keene taxpayers—may scoff at it.

The essential truth is, however, that the budget has been cut and that therefore some alleviation in the tax burden has been made possible. That is news indeed in these days of everincreasing spending by Government.

The Keene budget might have upped, and would have been had there been a lot of additional spending. But the council held the line, just as Governor Powell is doing on the State level.

Where there's a will, there's a way to economy.

THE SHOOTING DOWN OF AN UNARMED AIR FORCE TRANSPORT PLANE OVER SOVIET ARMENIA

Mr. BRIDGES. Mr. President, I ask unanimous consent to have appear in the body of the RECORD a United Press International story entitled "United States Sends Another Uncollectible Bill," which appeared in the February 20, 1959, issue of the Union-Leader, of Manchester, N.H.

The story refers to our attempt to collect for the unconscionable shooting down by the Soviet Union of our unarmed planes. While payment for these planes could in no way atone for the loss of human lives involved, at least payment for the property damage would be some indication of the Soviet Union's intention to recognize moral and legal obligations. No better example of Soviet Russia's hardened ruthlessness can be found than in these continuing atrocities and the refusal to make even property damage amends, slight token as they might be.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES SENDS ANOTHER UNCOLLECTIBLE BILL

WASHINGTON.—The United States will send Russia a bill for about $3 million for the Air Force transport plane downed in Soviet Armenia last September 2, officials said yesterday.

Its chances of collecting are virtually nil. Since World War II, U.S. claims of nearly $8 million have been lodged against Moscow for five U.S. planes shot down by Soviet fighters. Russia has paid only $724,947, or half of one claim.

The United States took two of the claims to the World Court but Russia refused to recognize the Court's jurisdiction.

CUTTING THE BUDGET

Mr. BRIDGES. Mr. President, I ask unanimous consent to have appear in the body of the RECORD an editorial entitled "Cutting the Budget" which appeared in the Union-Leader, of Manchester, N.H., on February 20, 1959.

I submit this because it is another excellent graphic presentation of the staggering cost of Federal Government to the local taxpayer. Seventy-seven billion dollars is a figure which can be mouthed all too glibly but when broken down in figures of local cost the impact is tremendous. An example of this is the fact that the people of my State of New Hampshire are taxed at the present time for Federal Government over five times what they are taxed for their State government. I feel that these figures will be informative, not only to the people of New Hampshire, but they can be readily translated into corresponding figures for the other States of the Union.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Union-Leader, Manchester, N.H., Feb. 20, 1959]

CUTTING THE BUDGET

Senators KARL MUNDT, STYLES BRIDGES, and SPESSARD HOLLAND, all members of the Senate Appropriations Committee, have made interesting comment on the Eisenhower budget.

HOLLAND and MUNDT have voiced their opinion that domestic spending programs should be cut if it develops that the $41 billion outlay for defense proposed by the President is not sufficient. And Senator BRIDGES, ranking Republican member on the committee, says he believes there are ways to cut the budget beyond what the President did.

The point is this: If there are ways to cut the budget for fiscal 1960, it would seem that cuts in nondefense spending should be made even if additional funds are not needed for defense. We heartily join with the Council of State Chambers of Commerce in declaring that the President's budget, far from constituting a penny-pinching approach to Government spending, actually could stand some cutting—particularly in nondefense items.

This newspaper has heard few complaints from the American people about having to pay taxes to provide for national defense. The American people realize that the Communist threat to the Nation must be met. But, by the same token protests over Government paternalism and extravagance, the mislabeling of other expenditures under the heading "Defense," the waste and extravagance in foreign aid, and the spending of millions of dollars to bolster the economies of Communist nations, are daily becoming more vocal.

The astronomical figures in the President's $77 billion budget are beyond the grasp of the average person, but when you break down these expenditures on the State level—as the chamber of commerce did recently in its publication, Taxpayer's Dollar—the results are alarming. Take the States of Massachusetts and New Hampshire, for instance.

New Hampshire's estimated share of the fiscal 1960 budget is $246,500,000. Of this amount, $146,600,000 will go for major national security; $25,900,000 for the interest on the national debt; $19,200,000 for agriculture; $16,300,000 for veterans' affairs; $13,200,000 for labor and welfare; $7,200,000 for commerce and housing; $6,800,000 for foreign affairs; $5,600,000 for general government; and $5,500,000 for natural resources.

Massachusetts' share of the total national budget is $2,719,200,000. Of this amount, $1,616,900,000 goes for major national security; $285,800,000 for interest on the national debt; $211,600,000 for agriculture; $179,600,0000 for veterans' affairs; $145,800,000 for labor and welfare; $79,200,000 for commerce and housing; $75,100,000 for foreign affairs; $61,300,000 for general government; and $6,400,000 for natural resources.

When presented with this graphic picture of the growth of Federal bureaucracy, especially when we compare these figures with the amounts spent by State governments, it is easy to see why so many of the States are starved for revenue to run their own affairs.

THE SOFT APPROACH TOWARD COMMUNISM

Mr. BRIDGES. Mr. President, recently former British Prime Minister Clement Attlee spoke in the great-issues course at Dartmouth College in my State of New Hampshire. He again repeated his soft-approach policies toward communism by advocating the United States recognition of Red China.

In the lead editorial of the Union-Leader, of Manchester, N.H., of February 19, 1959, there is a most telling and thoughtful evaluation of the consequences of a policy of Red China recognition. I ask unanimous consent to have this editorial appear in the body of the RECORD, because it is such a complete answer to Clement Attlee's proposal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Union-Leader, Manchester, N.H., Feb. 19, 1959]

ATTLEE'S VISIT TO DARTMOUTH

Dartmouth College students who recently heard former British Prime Minister Clement Attlee advocate U.S. recognition of Red China should soberly evaluate the inevitable results of such a policy. Indeed, Attlee's lecture in Dartmouth's great issues course carried the appropriate title, "World Government or World Chaos?" Attlee seems to favor both.

Dartmouth students should consider, first of all, that Attlee always has favored the soft approach toward communism, an approach that has been shunned by Congress. It is worth remembering, also, that the Kelly resolution opposing recognition and U.N. membership for the Peiping regime was passed 391 to 0 in the House and 86 to 0 in the Senate, and that presidential candidates of both parties have run on platforms containing almost identical planks against such recognition and U.N. membership. A recent nationwide poll of 8,752 Protestant clergymen showed 87 percent opposing diplomatic recognition of Peiping.

It goes without saying that admission of Red China to the U.N. would be a violation of chapter II, article 4, of the U.N. Charter, which states that members must be peace loving. On February 1, 1951, by a vote of 44 to 7, the General Assembly approved a resolution declaring that "the Central Peoples' Government of the People's Republic of China, by giving direct aid and assistance to those who were already committing aggression in Korea, and by engaging in hostilities against United Nations forces there, has itself engaged in aggression in Korea." The designation as an aggressor still stands, as does Red China's role in aiding aggression in Vietnam and its repeated attacks on Matsu and Quemoy and its threat to take same, by force if necessary, just as they ruthlessly obtained—and retain—control over the 600 million people of mainland China. Mao Tse-tung's 1937 promise of free elections in China has never been kept.

Admission of Red China to the U.N. would threaten the existence of free China and threaten British control of Hong Kong, a prospect which might interest Mr. Attlee. Millions of Chinese now in Hong Kong, Formosa, and southeast Asia would be betrayed, a prospect which obviously does not interest Mr. Attlee.

All of the 18 essential human rights named in the U.N. Declaration of Human Rights have been arrogantly violated by the Peiping butchers.

U.S. recognition of Red China would be a mortal blow to the survival of non-Communist governments in the Far East, disheartening the latter and opening up new fields of subversion to the former. Attlee's argument that we must recognize Red China because it exists is as phony as a three-dollar bill. There is not now and never has been a principle of international law which approves recognition on such a shallow basis. Red China has violated all established principles of international law and civilized conduct. While millions of Chinese are dying of starvation, rice is exported for political purposes. While the population increases by 13 million a year, 12 million of these are added each year to the roving bands of hungry, landless serfs. Human degradation on such a scale has never before occurred in history.

We do not pretend that Red China does not exist, as Attlee asserts. When expedient we have negotiated with it for particular purposes, at Panmunjom, at the Geneva Conference on Indochina, in bilateral negotiations at Geneva, and even now at Warsaw.

Dartmouth students should consider well these words of Walter S. Robertson, Assistant Secretary of State for Far Eastern affairs: "Let no one say we are denying representation of 600 million Chinese. The defiant Marxist imposters in Peiping come no closer to representing the true interests, aspirations and will of the Chinese people than William Z. Foster comes to representing the will and aspirations of the American people."

We trust that directors of the Dartmouth great issues course, in the great liberal tradition, will now invite another prominent public official to present rebuttal to Mr. Attlee's position on Red China.

WASTE AND EXTRAVAGANCE IN GOVERNMENTAL AFFAIRS

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the body of the RECORD at this point an editorial appearing in a recent issue of the Hampton (N.H.) Union.

This editorial, in referring to New Hampshire's Gov. Wesley Powell, mentions his "uncompromising attitude toward waste and extravagance in governmental affairs." Already he has put his "uncompromising attitude" into action by slashing $10 million from departmental requests in New Hampshire's biennial budget.

Last fall, when Republican political fortunes were at the lowest ebb in years, this young man, at the age of 42, became Governor of the State of New Hampshire. He did so by espousing good solid Republican principles of a balanced budget and a pay-as-you-go policy in regard to State finances.

It is on the young leaders of our party, such as Governor Powell of New Hampshire, that will fall a great deal of the work of revitalizing grassroots republicanism. I am confident that, with men of his caliber, following the clear principles on which the Republican Party was founded and grew great, we can look forward to 1960 not only with hope, but with anticipation of Republican political success.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hampton (N.H.) Union]

POWELL'S BUDGET

No one with the least knowledge and understanding of Gov. Wesley Powell and his uncompromising attitude toward waste and extravagance in governmental affairs, whether on the local, State or national level, should have been surprised when he slashed $10 million from State department spending in presenting his proposed $44.5 million budget for the coming fiscal year.

The Powell budget does not cut nor diminish any of the present State services. What it does, in effect, is to serve notice on the various State agencies that rather than simply ask for more money to operate their departments, they should look for economies and more efficient methods of operations, which will allow them to furnish the desired services within the means of State's pocketbook.

Powell's "hold-the-line" budget won the acclaim of both Republicans and Democrats in the house and senate who are, for the most part, conservative Yankees at heart and members of a political party by choice.

Even his detractors now grudgingly admit that Powell has handled budgetary matters with efficiency and courtesy to all department heads but with determination to keep within the spending limits which the people can afford.

This also should come as no surprise at all in view of Powell's valuable experience in Washington as top aid to Senator BRIDGES, top ranking Republican on the Senate Appropriation Committee. This is big league training in governmental budgetary matters, the likes of which few men have the opportunity to experience.

Governor Powell also displayed his long-held beliefs in conservatism, which, like the raccoon coat, is coming back in style after years of being considered a badge of disgrace for reactionaries.

True conservatism is an entirely different breed of cats, however, and simply means spending within an ability to pay, whether it be for local, State or Federal services or in one's own family or personal affairs.

This is Powell's philosophy of good government for New Hampshire and is one which most of us heartily support.

INTERNAL SECURITY

Mr. BRIDGES. Mr. President, the February 27, 1959, edition of the Chicago Tribune contains an editional which merits thoughtful consideration. The editorial is particularly timely in view of the recommendations of the American Bar Association, resulting from their mid-winter meeting in Chicago on February 24, 1959.

This editorial recalls to memory some of the more notorious examples of the need for continuing vigilance in the internal security field. I commend its reading to my colleagues, and ask unanimous consent that it be printed in the body of the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune, Feb. 27, 1959]

THE RED NEW DEALERS ARE STILL WITH US

Frank Coe, former $20,000-a-year secretary of the International Monetary Fund and before that monetary research Director of the Treasury Department, accused in 1948 of being a Communist and an accessory to Soviet espionage, has bobbed up again. His resignation from his post with the fund was obtained in 1952 after he had taken refuge in the fifth amendment when questioned about Communist attachments by the Senate Internal Security Subcommittee.

Coe reappears as a contributor to a Chinese Communist magazine, China Reconstructs, published in Peiping. He is described as "now visiting" Red China, although the State Department doesn't know how he got there.

Coe's article extols industrial progress achieved in Communist China's "leap forward," which was marked by severe regimentation of the populace. He says this was made possible by "ideological rectification," for which translate guns and terrors.

This tawdry American was first exposed in 1948 as a Communist operative by Elizabeth Bentley, who repented after serving Communist espionage as a courier. Those were the days when charges were first flying around about services to communism performed by Alger Hiss, a former high official in the State Department who went on to a fat job with the Carnegie Endowment for International Peace.

Hiss was busy issuing denials, and Coe followed suit, denying under oath that he had ever been a Communist. Before his next appearance before a congressional committee in 1952, Hiss had been hooked for

perjury; so Coe, moved to caution, pleaded the amendment against self-incrimination. Back again in 1956 before the Senate subcommittee, he denied that he had ever been a Communist spy, but again pleaded the fifth rather than respond when asked if he was, or had ever been, a Communist.

Coe was only one of dozens of men who rose high in the New Deal only to be unmasked later as Soviet agents. There was a mess of these people in the Treasury Department, where they thrived under the benevolent protection of Harry Dexter White, assistant secretary, who later moved on to the post of U.S. Executive Director of the International Monetary Fund. The fact that White was already under fire as a Communist did not prevent President Truman from permitting his appointment to go forward. In the Fund, he was again in association with Coe, as he had been in the Treasury.

White died mysteriously a few days after he had made the expected denial before the House Committee on Un-American Activities that he was or had been a Communist. Later papers in his own hand for transmission to the Soviet spy ring were produced by Whittaker Chambers, who blew the lid off the Hiss case.

All of these Communist stooges were originally brought to public notice either thru the House committee or the Senate subcommittee. There have been persistent efforts of late to kill or cripple these investigating bodies. Although no Communist scandals have been brought home to the present Republican Administration, it would be naive, in view of the tremendous number of New Dealers who carried over into the new administration, to believe that there are no longer Communists in Government service.

For this reason, and becauce of their invaluable services to the country, the committees merit the support given them this week by the house of delegates of the American Bar Association. The association's governing body aptly says that "the continuation of the work of these committees is essential to the enactment of sound and adequate legislation to safeguard the national and State security." As the continuing investigations of these committees show, there will always be work for them to do.

THE BERLIN CRISIS

Mr. JAVITS. Mr. President, I ask unanimous consent that I may proceed for 5 minutes on the Berlin situation, instead of the 3 minutes allowed under the unanimous consent agreement.

The PRESIDING OFFICER. (Mr. MCNAMARA in the chair). Without objection, the Senator may proceed.

Mr. JAVITS. Mr. President, current developments in the Berlin crisis dictate that the Senate should proceed with immediate consideration of S. Res. 85, submitted by me, and S. Res. 82, submitted by the Senator from Connecticut [Mr. DODD], and cosponsored by me, which both deal with the Berlin crisis. I emphasize the fact that we are not slaves to our specific resolutions. However, a resolution on this subject, backing up our policy, ought to be adopted.

Congress no less than the Executive should have to make up its mind about a crisis of this character, which is likely to call for action—at least within its constitutional responsibility for appropriations—but not without preparation and deliberation well in advance of that event. Senator DODD's resolution and mine serve notice that the Congress and the Executive are a unit in their determination that, as the President said yesterday, "We will not retreat from the exercise of the rights that are ours with respect to Berlin, and we will carry the responsibilities that are laid upon us by these international agreements until eventually there is a new solution for the German problem."

At the same time the President added:

But, our readiness to negotiate with respect to German peace and everything else has not only been emphasized time and again, [and] if there were indeed no room for negotiation there, then there certainly would be no reason for any kind of a meeting.

On the other hand, Premier Khrushchev, speaking at almost the same time in Leipzig, Germany, was underlining the Soviet intention to proceed unilaterally to conclude a peace treaty with its own puppet Communist state, East Germany, just as it was proposing to proceed unilaterally with respect to the Western Powers getting access to Berlin. Premier Khrushchev said, "If the Bonn republic does not want to sign, there will be a treaty for the German democratic republic alone." Premier Khrushchev then very emotionally added: "What we want is peace, peace, peace."

We want peace, too, Mr. President. However, we do not want the peace of surrender, the peace of slavery, and the peace of the tomb. It has been properly stated that the United States could walk away from its responsibility in Berlin, and that would be, I assume, Premier Khrushchev's definition of "peace." But it would also mean the beginning of the end for a Germany which is a part of free Europe, and the opening of the opportunity for a Germany which can be gradually subverted and taken over into the Communist empire. Let no one underestimate what this could mean. For the addition of the German industrial complex to the growing Communist industrial complex would at once transform the Communist bloc into an industrial power equal to, and, in view of interior communications, perhaps greater than, that of the Western World. From then on the fate of the free world might be sealed.

It seems to me that the Congress should play its proper role in shaping the foreign policy that faces us now as the Congress did by resolution in the Formosa crisis in 1955 and the Mideast crisis—Eisenhower doctrine—of March 9, 1957, and in respect of the dispatch of U.S. troops to Lebanon in August 1958. The reasons are these:

First. We do face a real crisis on Berlin and every bit of information which can be given to the people to enable them to support advisedly appropriate measures which may have great risk in them is of inestimable aid to the cause of the free world.

Second. Hearings directed to specific resolutions meet the objection that the authority of the United States should not be confused by "uncoordinated and perhaps conflicting advice" as the chairman of the Senate Foreign Relations Committee has defined it. Hearings would undoubtedly be preceded by executive sessions; thereby national security is fully protected. This is the only present substitute we have for the kind of debate which is available openly and publicly under a parliamentary form of government such as that prevailing among our European allies in which cabinet level officials may be heard. The British and French Parliaments have these debates all the time.

Third. There is little doubt that the nature of the Berlin crisis and the danger it represents will compel Senator after Senator to address himself to this subject, as well as other prominent citizens, public and private, to do the same. How much better to channel all of the thinking in an orderly way into hearings on specifics where it can do the most good.

Fourth. The traditional way in which we pound out foreign policy in this country is not by passive agreement to keep mum (practically, of course, this is an impossibility)—but by the very process of debate which the hearing I suggest would produce in an orderly way.

Finally, I call attention to the fact that one aspect of my own resolution calls for a special committee of seven Senators—which could be changed to a congressional delegation—to go to Berlin to express to the *Senat* of West Berlin the spirit of understanding and support on the part of the U.S. Senate of the trials of the people of West Berlin in the present crisis. This is very important and very desirable. If we in the United States think this is a great crisis, just imagine how the people of Berlin feel, who have the heat right on them.

Mr. President, peace will not be bought by surrender, nor will peace be bought by yielding to the fundamental issue of this matter. But peace, in my mind, will be attained if we shall take advantage of our responsibilities, and if the American people are given an opportunity to say that they expect to back these responsibilities as traditionally they have backed their sacred obligations always, with all the resources of the country, all of its prestige, as well as all its power.

We, too, want peace, peace, peace. But we do not want a peace which can only lead into slavery or to a world war III. I think we have now reached the bridge which we must guard in that respect.

OREGON STATE SENATE JOINT MEMORIAL NO. 1 FAVORS STATEHOOD FOR HAWAII

Mr. NEUBERGER. Mr. President, I was pleased to be able to participate this week in the favorable and unanimous reporting by the Senate Interior Committee of the bill, S. 50, providing statehood for our friends and fellow Americans in Hawaii.

Today I present to the Senate, on behalf of the distinguished president of the Oregon State Senate, the Honorable Walter J. Pearson, Senate Joint Memorial No. 1 of the 1959 session of the Oregon State Legislative Assembly.

This memorial urges us of the Congress to admit Hawaii as the 50th State of the Union, a step our Interior Com-

mittee already has taken under the leadership of the distinguished senior Senator from Montana [Mr. MURRAY] and the able junior Senator from Washington [Mr. JACKSON], who is chairman of the Territories Subcommittee.

I ask unanimous consent, Mr. President, that State Senator Pearson's letter and Oregon State Senate Joint Memorial No. 1 be printed in the body of the RECORD.

There being no objection, the letter and memorial were ordered to be printed in the RECORD, as follows:

STATE OF OREGON,
OREGON STATE SENATE,
Salem, Oreg., March 3, 1959.

HON. RICHARD NEUBERGER,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR DICK: Enclosed is Senate Joint Memorial No. 1 relative to statehood for Hawaii signed by the president of the senate and the speaker of the house on February 25. We are hopeful that Hawaii will this year become the 50th State of the Union. I know that you, personally, have been active in this endeavor for a long time.

Best regards,

WALTER J. PEARSON,
President of the Senate.

ENROLLED SENATE JOINT MEMORIAL NO. 1

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the 50th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas there have been, from the earliest hours of our history as a State, the closest ties and relationship between the people of the Sandwich Islands, now the Territory of Hawaii, and the people of Oregon; and

Whereas these fine Americans have long ago fully demonstrated their capacity to govern themselves as a free Commonwealth within the American Union; and

Whereas we know and respect the people of Hawaii as a result of close association through commercial, cultural, recreational, and social exchanges; and

Whereas the State of Oregon, alone among the States, has enriched our association and strengthened our bonds with the people of Hawaii through the free interchange of Territorial students in our State system of higher education; and

Whereas this February 14 is the 100th anniversary of the admission of Oregon to the Union; and

Whereas the admission of Oregon's respected friend Hawaii to the sisterhood of States of the Union would further strengthen these bonds and would give added cause for jubilation on the commemoration of our own statehood: Now, therefore, be it

Resolved by the Senate of the State of Oregon, the House of Representatives jointly concurring therein: That the Congress of the United States be memorialized to grant immediate statehood, under legislation now pending, to our sister Hawaii, as the 50th State of the United States; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, to the President of the Senate and the Speaker of the House of Representatives of the United States, to the delegate in Congress from Hawaii, and to all Members of the Oregon congressional delegation.

SMALL BUSINESS INVESTMENT ACT GETTING INTO HIGH GEAR

Mr. SCHOEPPEL. Mr. President, as a member of the Senate Select Committee on Small Business, I have been particularly interested in progress of the agency's new Investment Division which was created by the Congress late last year. This may well become one of the most popular and effective projects of the Small Business Administration.

Getting this act into operation is a difficult and involved matter and Administrator Wendell B. Barnes of SBA is to be complimented for the forceful and effective way he has tackled the problem. He has selected as his Deputy Administrator in charge of the Investment Division a man of wide experience and proven ability in Duncan H. Read, president of the Middleburg, Va., National Bank and formerly a partner and longtime associate of the well-known investment firm of Dillon, Read & Co.

Administrator Barnes and Deputy Administrator Read have carefully mapped the objectives, regulations, and operational procedure to be followed by the Division which should be of vast help to small businesses everywhere. They have acquainted commercial bankers, investment firms, and individual investors with the plan and how it will work. This has resulted in widespread interest and formation of a number of small business investment companies which will work closely with SBA in financing small businesses on an equity-type and long-term loan basis. They have held briefing sessions in several major cities, at which many hundreds of interested financial people were present.

These efforts have brought a number of applications for licenses to operate small business investment companies. Mr. Barnes informs me that conditional "go-aheads" have been given to 17 applicants for licenses, this being tantamount to approval of the companies' applications when they comply with the agreed-upon conditions.

One of the Investment Division briefing sessions was held in Kansas City a short time ago. It was largely attended and the interest it aroused was beyond expectations. More than 700 attended. A large publication, Bank News, which covers the States of Missouri, Kansas, Texas, Nebraska, Colorado, Wyoming, and New Mexico, carried a most comprehensive article about the Investment Division in its issue of February 15.

I feel sure that Members of this body will find the Bank News article of much interest, just as it will be to banking and investment people throughout the Middlewest. I ask unanimous consent that the article be printed in the body of the RECORD:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL BUSINESS INVESTMENT PROGRAM STARTS TO ROLL

(By Lloyd C. Riggs)

With the first licenses for small business investment companies expected to be issued this month, the program for long-term equity financing for small business is starting to roll.

The Small Business Investment Act of 1958, signed into law by President Eisenhower last August 21, makes this program possible by appropriating an additional $250 million to the existing revolving fund of the Small Business Administration. This money may be used for the purchase of subordinated debentures of small business investment companies, and for loans to them.

Thus, indirectly, Government funds are made available to help fill what generally has been recognized as a gap in the national economy, financing for companies needing money for a longer period than banks should lend, and who are too small to offer their securities through regular investment banking channels.

In December, the SBA released the final regulations under the act, and great impetus was given to the program through a series of three meetings across the Nation in January, at which all phases of the program were explained to bankers and others interested by Washington officials of the SBA, including Administrator Wendell B. Barnes and Securities and Exchange Commission representatives.

All three of these gatherings—in Kansas City, Los Angeles, and Philadelphia—attracted overflow crowds, comprised mostly of bankers, which exceeded expectations of host officials.

The Kansas City meeting, sponsored by the Kansas City Chamber of Commerce and held at the Hotel President on January 19, was attended by about 800 persons, and C. I. Moyer, regional director of the Kansas City SBA office, reports that interest in the program has gained considerable momentum since that time.

Any number of bankers have shown interest in the possibility of participating in the establishment of a small business investment company, Mr. Moyer advises, and about 50 requests for proposal forms had been received by his office early this month.

There are at least three reasons why various types of investors have shown an interest in small business investment companies. These are:

1. For profit. Many investors in high tax brackets are impressed by the tax advantages offered.

2. Public relations. Many banks, investment firms, insurance companies and other financial institutions feel an obligation to make every effort to help provide long term capital financing and equity capital to small business concerns.

3. Community development. Bankers and businessmen have evidenced an interest in organizing small business investment companies for the basic purpose of helping their communities from an economic standpoint. Mr. Moyer states that most bankers with whom he has visited have shown the greater interest because of this third point.

ABA'S POSITION

Carl M. Flora, chairman of the ABA Small Business Credit Commission and vice president of the First Wisconsin National of Milwaukee, gave an excellent talk on this subject at the ABA's National Credit Conference in Chicago January 23, and he reviewed some of the background of the admittedly controversial Small Business Investment Act.

He stated that "the number of new small business units formed since the war and the large volume of credit extended to small business demonstrated that the banks were doing their job in this field."

"However," he added, "since 1949 committees of the Senate and the House have considered many bills to provide credit and equity and financing to small business concerns. Banking has been faced with the political problem of trying to convince these committees that adequate credit was available to small business through banks and other private lenders.

"Fortunately, the report made last spring by the Federal Reserve System to the Senate and the House committees shows that adequate credit is available to small business from banks and private sources. However,

the report indicates that there is a gap in the field of equity or capital financing.

"When it appeared last year that Congress would pass legislation to furnish equity capital and long term capital financing to small business, a special ABA committee was appointed to study this legislation. The report of this committee was approved by the Administrative Committee and the Executive Council and became the official position of the ABA.

"In making its recommendations, the special committee had in mind three primary factors:

"1. That there is real need at this time to stimulate the availability of capital funds to small business.

"2. That the taxpayers' money should be used for such purposes to the least extent possible.

"3. That the banking system should participate in the program to the greatest extent possible consistent with sound banking principles."

Further explaining ABA position, Mr. Flora added:

"If legislation was to be passed to try and make equity capital more readily available to small business, we recommended to Congress that it should embody the following general principles:

"Federal legislation should temporarily stimulate the flow of investment funds through existing development credit corporations and encourage the creation of additional development credit corporations where needed.

"Any long range, constructive solution to the need of small business for equity and long term capital financing should basically depend on the availability of and access to the resources of private financial institutions and investors, and any governmentally sponsored program should be intended as a temporary stimulant and supplement to private financing facilities.

"The primary source of any equity funds needed to inaugurate any such program should be local private financing resources.

"The responsibility for the management and administration of any instrumentality created to carry out any such program at the State or local level should lie with local private citizens."

Mr. Flora asserted that, "The act, as passed by Congress, conforms with the principles advocated by the ABA and contains many of the provisions we recommended."

The Wisconsin banker concedes that the act is an experiment, but that it is "a sincere and intelligent attempt to solve the problems of making equity capital more readily available to small business concerns." He acknowledged that whether this new method will close the gap that exists in equity financing to small business will be determined only from experience.

HOW TO PROCEED

How does one go about establishing a small business investment company? How does it operate?

Following are brief answers to pertinent questions. Bankers or others desiring more detailed information should contact the appropriate regional SBA office, as indicated in the box on page 20.

Small business investment companies organized to operate under this act should be chartered by the State in which the company is to operate, unless the State does not issue charters of this kind. In that event, the charter application should be submitted to the SBA.

Organizers fill out and file with SBA a proposal or preliminary application on Form 414, copies of which may be obtained from any SBA regional or field office. The proposal is filed with the appropriate regional office, and after a preliminary check, is sent on to the SBA's Small Business Investment Division in Washington. Form 414 is a detailed document, which may be filed either before or after the company has been incorporated. After consideration of the proposal, the proponents will be notified by SBA whether the proposal may justify issuance of a license. If so, SBA will notify the parties who filed the proposal to proceed with all action necessary to qualify their company for execution of a formal license application on Form 415 for final consideration by SBA as a licensee.

If chartered by the SBA, incorporators must number at least 10 persons or existing corporations—such as a bank. Otherwise, State laws apply.

Paid-in capital and surplus must be at least $300,000. The SBA is authorized to purchase the debentures of any such company in an amount equal to not more than $150,000. Such debentures are deemed a part of the capital and surplus.

Shares of stock in such companies are eligible for purchase by national banks, and by State bank members of the Federal Reserve System and by FDIC member banks to the extent permitted under applicable State law. However, no bank may invest more than 1 percent of its capital and surplus in such stock.

Each small business investment company has authority to borrow money and to issue its debenture bonds, promissory notes, or other obligations under such general conditions and subject to such limitations and regulations as the SBA may prescribe.

In addition to the debentures which it may purchase, the SBA is authorized to lend funds to such investment companies, but the total amount of such borrowings from the SBA at any one time may not exceed 50 percent of the paid-in capital and surplus of an investment company.

The small business investment companies may provide a source of needed equity capital for small business concerns by purchasing debenture bonds of such concern which shall—

1. Bear interest at such rate, and contain such other terms, as the company may fix with SBA approval;

2. Be callable on any interest payment date, upon 3 months' notice, at par plus accrued interest; and

3. Be convertible at the option of the company, or a holder in due course, up to and including the effective date of any call by the issuer, into stock of the small business concern at the sound book value of such stock determined at the time of the issuance of the debentures.

Or, small business investment companies may make loans to small business concerns, for maturities of up to 20 years, renewable for additional periods not to exceed 10 years.

It is understood that the interest rate in each case stands on its own merit, except that the rate must not be more than the legal maximum authorized by State law.

Not more than 20 percent of the combined capital and surplus of a small business investment company may be loaned to and/or invested in the securities of any one small business concern, without the approval of the SBA.

Wherever practicable the operations of a small business investment company, including the generation of business, may be undertaken in cooperation with banks or other financial institutions, and any servicing or initial investigation required for loans or acquisitions of securities by the company under the provisions of the act may be handled through such banks or other financial institutions on a fee basis. Any small business investment company may receive fees for services rendered to banks or other financial institutions.

TAX ADVANTAGES

Small business investment companies offer these tax advantages:

Taxpayers investing in their stock will be allowed an ordinary-loss deduction rather than a capital-loss deduction on losses arising from worthlessness or sale of such stock. Small business investment companies will also be allowed an ordinary-loss deduction, rather than a capital-loss deduction, on losses sustained on convertible debentures, including stock received pursuant to the conversion privilege. The loss deduction will include losses due to worthlessness as well as those arising from sale or exchange of the security.

Such companies will also be allowed a deduction of 100 percent of dividends received from a taxable domestic corporation rather than the 85-percent deduction allowed corporate taxpayers generally.

ALUMINUM PRODUCTION AS A SOVIET ECONOMIC WEAPON

Mr. NEUBERGER. Mr. President, a look at the effects of economic penetration of free world markets for aluminum and aluminum products by Soviet Russia and its satellite producers is suggested in a recent editorial in the Oregon Journal of Portland. I call this editorial review to the attention of the Senate because this product—upon which my own region is heavily dependent for payrolls and industrialization—has become somewhat of a bellwether for activation of the Soviets' cold war, which is based on economic weapons.

The economy of Soviet Russia is a form of government capitalism by which portions of the nation's productive capacity can be diverted to achieve political goals in the field of foreign affairs. Our own economic system does not provide equivalent flexibility for implementing foreign policy objectives by manipulation of production and marketing of essential products. For this reason that we must be more dependent on and responsive to the needs and programs of our allies if we are to counteract the effects of calculated Soviet efforts to undermine portions of our productive capacity. In meeting the issue of Soviet economic penetration, a relationship of interdependence exists among nations of the free world.

The editorial in the Oregon Journal emphasizes that there must be more cooperation both by the aluminum industry and governments of the free world in solution of present marketing problems if the threat of Soviet economic warfare is to be met. So that my colleagues may know of the views expressed in this editorial analysis, I ask unanimous consent to have printed at this point in the RECORD the Oregon Journal editorial of March 1, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Mar. 1, 1959]

ULTIMATE ANSWER TO ALUMINUM DILEMMA

The U.S. aluminum industry would be happier if foreign imports now cutting seriously into its own domestic market could be curtailed, but, to its credit, it does not see this as the long-range answer to its problems.

Because per capita consumption of aluminum products in the United States is 21 pounds per year compared to an average of 6.2 pounds in Western Europe and Canada and 0.7 for the rest of the world, the U.S. market has become extremely attractive to

aluminum producers and fabricators in other parts of the world.

A background memorandum prepared by the U.S. aluminum industry for Government agencies and officials states that the United States now is importing more aluminum than it exports. The invasion from abroad of the U.S. market, plus the curtailment of foreign markets for U.S. producers, has idled 30 percent of existing aluminum production facilities and halted work on additional nearly completed facilities. This obviously has serious implications for the Pacific Northwest, where aluminum production has become so important a part of our economy.

The memorandum doesn't say so, but obviously the biggest foreign seller in our domestic market is our good friend Canada, and any attempt to restrict her sales would lead to an even worse disruption of our relationship than any of those which have caused ruffled feelings in the past. However, increasing supplies are coming in from Western Europe, and the memorandum alleges that dump-priced Soviet aluminum is being used in Belgian, German, British, and Austrian mills to fabricate sheet, rod, and foil which find their way into the U.S. markets.

The rapidly growing Soviet aluminum industry is seen as a one element of Russia's economic warfare threat, and Soviet boss Khrushchev's statement, "We value trade least for economic reasons and most for political purposes," is recalled. Also his "declaration of war" in the peaceful field of trade.

The mobilization of free-world economic forces to meet this threat is not a bright prospect for the immediate future. The competition among friendly nations of the West is still too keen, but the aluminum industry says, "Unified free-world action is essential to combat Soviet economic warfare."

This view was taken by Senators WARREN MAGNUSON, and HENRY JACKSON, Democrat, of Washington, in a Vancouver meeting last fall on the aluminum problem, and JACKSON was to present the challenge at a NATO meeting in Paris.

"The ultimate answer to both aluminum world trade problems and to the threat of Soviet exports," says U.S. aluminum producers, "is the energetic development of world aluminum markets * * * in spreading the benefits of aluminum to more people in all parts of the world, including Russia. Everybody benefits from this approach, instead of robbing Peter to provide Paul with an aluminum market."

The prospect is that new U.S. aluminum products in the offing will increase substantially the U.S. per capita consumption, but not until these new uses are shared by peoples abroad will there be adequate markets for present and growing productive capacity. This will be a job both for the industry and Government and will require in the long run a higher degree of cooperation among the producers and governments of our free-world friends than we now have.

IMPORTANCE OF BASIC RESEARCH

Mr. ALLOTT. Mr. President, it is my firm conviction that our quest for knowledge is our most important effort as a people. In this regard, our program of basic research must take a high priority. Awareness of this is becoming more general, but such awareness is not bringing appropriate action.

The total research of industry is increasing, but it is largely practical research or developmental work. Perhaps pursuit of knowledge for its own sake must of necessity be left to the public sector of the economy—universities, foundations, and State and Federal agencies.

An Air Force official, whose responsibility is in the research field, recently said it is unrealistic to expect to determine in advance the direct relationship between basic research and specific military needs. However, instead of stopping there, he went on to conclude that the country must, nonetheless, support research in those areas which are related to "future military technological capabilities."

Like so many others, he has missed the point. The importance of basic research lies not only with the military capabilities of this country; nor does it lie with just industrial use. Real basic research can lead down many paths.

A recent editorial in the Denver Post goes a long way toward delineating the real need. I ask unanimous consent that it be printed in full at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Denver Post, Feb. 16, 1959]

WE NEGLECT BASIC RESEARCH AT OUR PERIL

Featured in Sunday's editorial section was an account of basic research about the planet Jupiter.

Very fascinating, some may say, but why bother? Jupiter is so cold nothing can live on it. Man probably can never visit it. Why not just let it wander its frigid way unnoticed?

Generalized, the question being asked here is: Why should we try to know anything that has no direct usefulness? Isn't it just like mountain climbing—something done without practical purpose, just because it's there?

This is the key question that must be answered by those who say basic research is essential to civilization.

It is true, of course, that not everything important to us need be useful. Music and art, for example, are not useful except to lift the human spirit and probe the true meaning of life.

In the same sense, basic research gives meaning to life, too. The reach of the fully alive mind always exceeds its grasp—it is always stretching beyond the limits of its own understanding.

But this is not enough for the hard-headed businessman, who insists on something of value for his dollar. Here is the answer he seeks as to: What good is basic research?

Very little first-rate basic research has not led to substantial, and often epoch-making, practical developments.

Franklin, with his kite and his key in the thunderstorm, was only satisfying his yearning to know. Yet his discovery was basic to the practical development of electricity, which has changed the world more in 100 years than it had changed in the previous millenium.

Einstein, when he developed the famous formula, $E=mc^2$, was only searching for unity in the basic forces of nature, with no practical end in mind. Yet this formula was the key to atomic power and the atomic bomb, the Dr. Jekyll and Mr. Hyde of physical force that are leading humanity who knows where.

Sometimes it takes only a few years or decades, sometimes hundreds of years, but basic discoveries, often just happened upon by men with the rare talent of noticing the totally unexpected, eventually pay off.

That is why Dr. Hans Selye, the famous medical scientist, wrote in the Saturday Evening Post recently:

"The future welfare of humanity depends largely upon the recognition of first-rate research in its earliest stages, when it lacks practical applicability."

In short, if the hard-headed businessman wants results from the basic research, he cannot insist on knowing what they will be in advance or when they will flower into practicality.

Those are the terms. Without agreeing to them, there is no such thing as basic research, nor ultimately any such thing as progress.

Dr. Selye predicts that our era will undoubtedly go down in history as the age of basic research. Man has gained unprecedented power through investigation of natural laws. This power can lead us to the brightest chapter in human history—or the final chapter.

The answer to which of these fates awaits us depends in part on our response as a society to the best of human values.

The pursuit of applied science may preserve, for a time, our military and economic superiority over the Russians.

But the neglect of basic research—knowledge for its own value—carries the seeds of destruction, in practical as well as spiritual terms.

RESTORATION OF FULL LOAN-MAKING AUTHORITY TO REA ADMINISTRATOR

Mr. HUMPHREY. Mr. President, I wish to inform the Senate that last Wednesday the Reorganization Subcommittee of the Senate Government Operations Committee favorably reported Senate bill 144 to the full committee. Senate bill 144 is one which I introduced, on behalf of myself, the Senator from Montana [Mr. MANSFIELD], and other cosponsors, to restore the full loanmaking authority of the Administrator of the Rural Electrification Administration.

I want to take note of the action of the subcommittee, because of the widespread interest in the bill, which is cosponsored by 23 Senators.

I also want to take this opportunity to thank the distinguished majority leader for his kind remarks about this bill at the recent annual meeting of the National Rural Electric Cooperative Association, held here in Washington. Senator JOHNSON of Texas has always been a great friend of the American farmer and the rural electrification program; and this warm friendship has been recognized, treasured, and respected by the people in the rural areas who have benefited from REA.

I am informed, Mr. President, that the 7,500 people who attended the NRECA meeting jumped to their feet and shook the rafters with applause after Senator JOHNSON had delivered a ringing and challenging address. In addition, I am told that during the course of his remarks, the audience interrupted him time and again with enthusiastic applause.

I had hoped, Mr. President, to place Senator JOHNSON'S remarks in the RECORD; but, upon inquiry, I found that he had spoken extemporaneously, and no complete transcript was available. I do have available a few paragraphs, however, in which the majority leader discusses the administration's efforts to jack up the REA interest rate and send the rural electric systems to Wall Street for their loan funds. He also gave a splendid endorsement to the bill which the Senator from Montana [Mr. MANSFIELD] and I, joined by 22 of our colleagues, have introduced.

This bill, Mr. President, restores to the REA Administrator the loanmaking authority which was stripped from him by Secretary of Agriculture Ezra Taft Benson. I have discussed this bill and its background several times on the floor of the Senate, both in this Congress and the prior one; and I am sure Senators are familiar with it. It is a moderate measure, designed only to insure that the REA Administrator, and only the REA Administrator, shall have final authority over individual REA loans. It does not take the REA out of the Department of Agriculture and set it up as an independent agency, nor does it interfere with the general policy control of the Department of Agriculture.

Mr. President, I should like to quote some of the remarks the distinguished majority leader made on these subjects to the rural electric people. He said:

> We are not going to raise the interest rates. We are not going to require you to go to Wall Street for your money. And we are going to pass HUBERT HUMPHREY'S bill that gives the REA Administrator the power Congress intended him to have, and that he ought to have.
>
> The privately owned, business-managed rural electric cooperative is here to stay, and stay as we set it up. Your organization is the best people's organization in Washington, D.C.

The majority leader closed his remarks, Mr. President, with this statement:

> This is going to be our program. This is the kind of program that I predict most of the Congress will favor.

Mr. President, I appreciate this fine endorsement of Senate bill 144 just as much as the rural electric people did. I introduced the measure, in the first place, partly because of their deep concern about the arbitrary action of the Secretary of Agriculture. I understand the bill has been unanimously endorsed by the last two annual meetings of the National Rural Electric Cooperative Association, and by the last two series of regional meetings held in every part of the country. In addition, I have received countless letters endorsing the bill from individuals and State associations. It is clear beyond any doubt that this is the moderate, corrective action the rural electric people seek.

As Senators know, the distinguished junior Senator from Nebraska has introduced a bill which would take the REA out of the Department of Agriculture altogether, and would set it up as an independent agency. This bill is cosponsored by the distinguished senior Senator from Georgia.

At this time I do not wish to discuss that specific bill. However, I, too, had been invited to address the NRECA annual meeting; and in my prepared speech I discussed my reasons for thinking an independent status for REA would not be in the overall best interests of the rural electrification program. Unfortunately I was delayed, due to heavy snows in my home State, and was unable to get to Washington in time to deliver the address—a fact which distressed me, because I had looked forward eagerly to the occasion.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the portion of my speech which dealt with this question.

There being no objection, the excerpt from the speech was ordered to be printed in the RECORD, as follows:

EXCERPT FROM SENATOR HUMPHREY'S ADDRESS PREPARED FOR THE ANNUAL MEETING OF THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, FEBRUARY 10, 1959

The proposal has been made and bills have also been introduced this year to set REA up as an independent agency altogether. I thoroughly considered this approach before deciding on the bill as now drafted and as, I am glad to say, you have supported in State, regional, and national resolutions throughout the last year and a half.

Here are some of the factors I took into account:

First, I admit I had a strong desire to get REA completely out from under Secretary Benson's domination. However, we had to temper this understandable desire with a realization of the fact that Benson will not be in this agriculture post forever. Over the years, REA has definitely benefited from being a part of the Department of Agriculture. It has benefited by having a spokesman at the Cabinet level. It has benefited by the association with the Department of Agriculture in obtaining funds and in sound administration of those funds.

Second, you as farmers or rural residents are benefiting from REA's close association over the years with the Department of Agriculture. The program objectives have been oriented toward people instead of toward kilowatts alone, as might well be the case if REA were operated as a power agency. This, I am sure you will agree, is highly important.

Third, as part of the Department of Agriculture, REA has had the benefit of working with committees of the Congress most friendly to rural electrification and rural telephony. This raises no question as to the attitude of other committees toward REA. My point is simply that you know where you stand with your present committees. This is a benefit to REA I would not want to be responsible for jeopardizing.

Fourth, sound administration certainly suggests that this Government must be simplified rather than be made more complex. Is it in the national interest to establish a new independent agency when it is possible to accomplish our objective without doing so? Personally, I don't believe it is. My bill retains REA as a part of the Department of Agriculture. The Secretary of Agriculture continues to be the man in charge of broad policy and to serve as the Cabinet-level link between REA and the President. But my bill establishes in no uncertain terms that no one shall interfere with the Administrator's duty and responsibility in handling your loan applications. As I said, we want no politics of any kind injected into those considerations.

Isn't that the kind of administration of REA that you want?

Mr. HUMPHREY. I also ask unanimous consent to have printed in the RECORD a resolution, unanimously adopted by the NRECA delegates, which endorses Senate bill 144. Senators will note that the resolution specifically mentions that the bill does not take the REA out of the Department of Agriculture. I understand that no resolution which called for independent status was proposed or discussed.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION NO. C-5 ADOPTED BY THE DELEGATES TO THE ANNUAL MEETING OF THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, FEBRUARY 12, 1959

Subject: Reorganization of REA.

Whereas the original Rural Electrification Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and all loans of whatever amount to new borrowers, be reviewed by the Secretary's office; and

Whereas the Humphrey-Price bill would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, without divorcing REA from the Department of Agriculture: Now, therefore, be it

Resolved, That we urge the Congress to pass the Humphrey-Price bill as early as possible in the 86th Congress.

J. J. SINGH AND THE INDIA LEAGUE OF AMERICA

Mr. HUMPHREY. Mr. President, every now and then, in this world whose governments all too often seem unable or unwilling to get along together, an individual shines through as a beacon of good will, showing the way to human brotherhood to all who are willing to see. Such a human being is Mr. J. J. Singh, the remarkable president of the India League of America. It has been a genuine pleasure—as well as enlightening and inspiring—to know this great spirit during much of his stay in this country. As he prepares to return to his native India, I want to tell my colleagues a little about the contributions of Mr. Singh and of the India league. I want to acknowledge here the debt that all Americans owe this friend of our people and of all peoples.

The India League of America, which has devoted 22 years to the improvement of Indian-United States relations, now brings its operations to a close. The primary aims of this uniquely valuable organization were to inform the American public about India, and to secure support for the cause of Indian independence. It is good to realize that these aims have been realized to the point that the sponsors of the league believe another organization can take over and can continue the fostering of good will between the two countries.

The life of the India league cannot be separated from that of Mr. Singh, one of its founders, its long-time president, and its undauntable moving force. The 1926 Philadelphia Sesquicentennial Exposition brought him to this country, to arrange the Indian part of the exhibit. After finishing that, he decided to start an import business in New York City. Success in the American free enterprise system meant to him only the opportu-

nity to work more effectively for better understanding between his homeland and his adopted country. The tributes from many Americans in public and private life, as Mr. Singh at the age of 61 prepares now to return to India with his family, are some indication of the results of his efforts.

Until 1947, Mr. Singh and the India League concentrated on informing the American people about the principles that underlay the movement for Indian independence. Their intelligent efforts helped to acquaint the American people with the methods of passive resistance and with the names of Gandhi and Nehru, and spurred support in the United States for Indian independence. This sympathetic support, created, in turn, in India a deep reservoir of good will for America, and should today serve as a model to us as we shape our policies and attitudes toward the efforts of other people to achieve independence and international respect for their rights as human beings.

The India League did not limit its activities to politics. In 1943, the 50 million inhabitants of the Indian State of Bengal were faced with a sweeping famine. Largely through Mr. Singh's efforts, Bengal was placed within UNRRA's jurisdiction, to receive emergency food shipments; and literally millions of Indians were saved from the grim certainty of death by starvation.

Indeed, wherever energies have been spent to help strengthen friendship and cooperation between the United States and India, there could be found the good offices and selfless efforts of Mr. Singh and of the India League, who have worked constantly to modernize immigration laws, solve foreign aid problems, solve political misunderstandings, and, above all, to help in the priceless areas of human relationships across seas and within communities.

Since India's independence, the letters-to-the-editor columns of many American newspapers have often contained Mr. Singh's wise and sympathetic explanations of India's position in international affairs. These letters have discussed everything from Goa and Kashmir to Algeria and American economic aid. How fortunate for us that on his return to India, Mr. Singh's letterwriting will be directed to Indian newspapers, in his continued efforts to deepen the ties of Indian-American understanding.

We know we shall be the poorer for his leaving us, so we cannot help but regret his departure. But we know, too, how much we have to be grateful for, in having had his companionship and wise insight in our midst for one-third of a century; and we understand his yearning for his own beautiful homeland. We salute him and his India League on the conclusion of so many years of such a great service; and we wish him Godspeed on his journey and in his renewed work for peace and love, in times which are so sorely in need of both.

Mr. President, I ask unanimous consent that an article entitled "United States Loses Envoy to Call of India," which appeared in the New York Times on January 18, 1959, and an editorial entitled "An Unofficial Envoy," which was published in the New York Times of February 18, 1959, be inserted at this point in the RECORD.

There being no objection, the article and the editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 18, 1959]

UNITED STATES LOSES "ENVOY" TO CALL OF INDIA—J. J. SINGH, A "NONOFFICIAL" AMBASSADOR, WILL RETURN HOME AFTER 33 YEARS

(By Joseph Morgenstern)

A man from India who got to be "ambassador extraordinary" without the benefit of an ambassadorship or an embassy is going home to New Delhi after 33 years in the United States.

J. J. Singh, president of the India League of America, has decided to leave his handsome house on East 61st Street and raise his children in New Delhi.

Until now, he has divided his time between an import business and anyone or anything offering him the opportunity to explain India and the United States to each other.

The 61-year-old Sikh from northern India, who wore a turban and a beard in his early days here, began acting like an ambassador to the United States when India had no official envoys of her own. He continued doing so, to the advantage of both countries, after India won her freedom.

NONOFFICIAL ADVANTAGE

"A nonofficial has an advantage over an official in this kind of work," he said. "People often open up more and speak frankly."

In addition to being a nonofficial, Mr. Singh was a nondrinker until 1942, is still a nonsmoker, and "not the sort of person who stays inactive." Lobbying in Washington, writing articles and scores of letters to newspapers, sitting in on United Nations meetings, appearing on radio and television forums, and presiding over informal dinner forums in the quiet elegance of his own home: These have helped to keep him from inactivity's clutches.

When Mr. Singh leaves New York in March with his wife and two sons, the India League will be dissolved. He became its president in 1941.

"I do hope that some other organization will continue the league's work of friendly interpretation between the United States and India," he said.

EXPOSITION FAILS

When he is asked about himself, Mr. Singh usually replies by discussing India. He said he has been gratified by the steady growth of knowledge about India in the United States.

"Originally, when people found out that I came from India, they were disappointed that I couldn't do the rope trick or produce a snake," he said.

That was in 1926 and shortly thereafter, when Mr. Singh arrived as one of the organizers of the Indian section of the Philadelphia Sesquicentennial Exposition.

"The exposition was a flop and I lost my shirt," he recalled, "so I decided to stay and recover that shirt."

Moving to New York, Mr. Singh opened the wholesale office of an importing firm specializing in Indian textiles. Subsequent business success enabled him to revive the India league with money and new ideas.

NEHRU HIS IDOL

At the center of his political convictions is a belief that India and the United States have a common bond in freedom.

During the period of British rule in India, which Mr. Singh calls "the era when we were not free," he sought to rally supporters for the cause of Indian independence.

"You were once under British rule," he used to tell Americans, "and the British are ruling us." The response, he said, was usually quick and affirmative.

Convinced that India will not take orders from world communism, Mr. Singh says that modern India would long ago have torn itself into pieces but for Nehru. Prime Minister Jawaharlal Nehru is one of Mr. Singh's idols.

DENTS IN VITAL ISSUES

"A private citizen dealing with governments can only make dents on vital issues," Mr. Singh said. One of the many substantial dents he made in Washington legislative circles led to congressional approval of United Nations Relief and Rehabilitation Administration aid for victims of the general famine of 1943.

Another of his campaigns to influence the influencers led to an amendment of U.S. immigration laws permitting a hundred Indians a year to enter this country and become permanent residents and citizens.

In 1951 Mr. Singh married the former Malti Saksena, the daughter of the High Commissioner for India in Canada and Consul General for India in New York. Although Mr. Singh and his wife both speak Hindustani and English, their two sons will have to learn an Indian language in India.

A STUDY OF INDIA

Before he came to the United States by way of Britain, Mr. Singh was active in Indian politics. As a young man he "did what many young men did—leading mobs, getting beaten up, getting shot at—the privileges of those who fought for India's freedom." At 24 he was the youngest member of the All-India Congress Committee.

Whether he will reenter the political life of his country is a decision for the future. "My first job will be to study India," Mr. Singh said.

"With small disappointments," he said, "my faith in the United States has not been shaken."

In a few months, when Mr. Singh's new home is completed in New Delhi, the United States will, in its turn, have an unofficial ambassador to India in an unofficial embassy.

[From the New York Times, Feb. 18, 1959]

AN UNOFFICIAL ENVOY

In giving a farewell luncheon for J. J. Singh, Mayor Wagner has recognized the distinguished part that this unofficial envoy from India has played in the life of our community. We hope that it is not farewell but merely au revoir, and that J. J.—as he is affectionately known to thousands of Americans—will come back to visit soon and often.

After 33 years in this country, Mr. Singh has decided to take his charming family back to his native India and to retire there. No one who knows him can accept the idea of his retiring without the broadest reservation. He will continue to work on behalf of his country and on behalf of better understanding between India and the United States. Perhaps he may even form an American league in India since he was the life and soul of the India league here for 20 years, and as he leaves the India league has disbanded, saying "Mission accomplished."

He has been singularly successful in presenting the cause of his people to this country. One reason is that he has understood and liked Americans and made them like him. His urbanity, good humor, commonsense, and patriotic devotion have endeared him to everyone who had reason to know him.

J. J. Singh has been an honor to India and a most pleasant visitor here. More like him would do us all good.

CAREER SERVICE AWARDS TO OUTSTANDING CIVIL SERVICE EMPLOYEES

Mr. CARLSON. Mr. President, last Monday evening the National Civil Service League presented career service awards to 10 of our outstanding career civil service employees.

The National Civil Service League was organized in 1881, and is a nonpartisan citizens' group which is working to improve public service through better personnel at all levels of Government—Federal, State and local.

The president of the National Civil Service League, Nicholas Kelley, was chairman of the dinner meeting; and the address was delivered by the Honorable Frank Pace, Jr., president of the General Dynamics Corp. and former Director of the Bureau of the Budget, and former Secretary of the Army.

Mr. Pace stressed the importance of our Federal Civil Service employees in relation to the economic and political problems of our present day world.

A message of greeting was received from the President of the United States, and it reads as follows:

Please extend my greetings to all attending the National Civil Service League's fifth annual career service awards presentation and my heartiest congratulations to the 10 outstanding Federal employees being honored.

The magnitude of Government activities and the vast responsibilities that it bears make it imperative that this Nation have and maintain a public service of high competence and complete integrity. The 10 individuals chosen for these awards exemplify the exceptional competence and the devotion to the principles of public service so necessary to the attainment of this goal.

The National Civil Service League is to be commended for its efforts to strengthen the public service and for its program of bringing national recognition to significant careers in the Federal Service.

(Signed) DWIGHT D. EISENHOWER.

Career service awards were presented honoring the following, who were selected from their departments for outstanding service and special recognition:

Lyle T. Alexander, Department of Agriculture; John B. Barnwell, Veterans Administration; James C. Evans, Department of Defense; William F. Finan, Bureau of the Budget; Lyle S. Garlock, Department of the Air Force; Paul W. McDaniel, Atomic Energy Commission; Robert J. Myers, Department of Health, Education and Welfare; Richard W. Weiss, Department of the Army; Joseph E. Winslow, Executive Office of the President; Conrad L. Wirth, Department of the Interior.

EDITORIALS IN SUPPORT OF THE BILL TO STRIKE THE LOYALTY OATH REQUIREMENT FROM THE NATIONAL DEFENSE EDUCATION ACT OF 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a number of editorials commenting on the bill, which the Senator from Pennsylvania [Mr. CLARK] and I have introduced, to strike the loyalty oath requirement from the National Defense Education Act of 1958. These editorials make it abundantly clear that this loyalty provision furthers neither the objectives of the Education Act itself nor our Nation's security against Communist dangers. I am very much pleased that the Education Subcommittee of the Senate Labor and Public Welfare Committee will soon hold hearings on this bill. I hope we shall act soon on the bill and that we shall remove this unnecessary obstacle to American educational progress.

Mr. President, I also ask permission to have printed in the body of the RECORD a letter which on November 1, 1958, was sent to the Senate Labor and Public Welfare Committee by the American Association of University Professors.

There being no objection, the editorials and letter were ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times, Feb. 10, 1959]

SENATOR KENNEDY STRIKES NEEDED BLOW AT SCHOLASTIC OATH

Senator JOHN KENNEDY, Democrat, of Massachusetts, has, with Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, introduced a bill to repeal a provision of the National Defense Education Act which requires any recipient of its benefits to sign an oath of loyalty and an affidavit declaring that he did not believe in, belong to, or support any subversive organization.

We are glad to see Senator KENNEDY come forward with his proposal to repeal a law that is obnoxious to academic principles as well as to general political principles. It is not easy for Senator KENNEDY to take this position since he comes from a State that was a hotbed of McCarthyism. He deserves credit for taking the stand he has.

The provision he wants repealed was another manifestation of McCarthyism. It reflected again the hysterical suspicions that were aroused toward education during the McCarthy era.

This kind of an oath in order to qualify for scholarship aid is not required of other groups that receive aid. It is flatly discriminatory against scholars and in that sense helps to defeat the very purpose of the Education Act.

Even if there were some practical way to enforce it, it would still be offensive. It penalizes the very people we want and expect to have the searching, inquiring minds that are most apt to be asking the challenging questions that need to be asked if freedom is to provide the long-range benefits intended.

This loyalty oath has caused nothing but trouble for education administrators and with scholars who naturally resent it. As Senator KENNEDY has pointed out, the oath can only have the effect of keeping scholars out of the scientific fields into which the act was designed to encourage entrance.

[From the San Francisco Sunday Chronicle, Feb. 22, 1959]

PROTESTS ON STUDENT OATH GROW

The faculty of the University of California, as represented by the Berkeley chapter of the American Association of University Professors, is again joined in battle with the nine-lived, multiform special loyalty oath.

This time the professors are asking the administration to withdraw from the student loan program of the National Education Act of 1958. It requires applicants to sign a non-Communist affidavit as well as an oath of allegiance.

In this fight they have abundant and active allies. Six institutions—Antioch, Bryn Mawr, Haverford, Princeton, Reed, and Swarthmore—have already declined to accept funds under the act. Presidents of five others—Bates, Bowdoin, Colby, Emory, and the University of Wisconsin—have spoken out against the act. So has Arthur Flemming, secretary of Health, Education, and Welfare, and he has been publicly commended for it by presidents Pusey of Harvard and Griswold of Yale.

None object to the requirement for an oath of allegiance. All resent the special requirement of a non-Communist affidavit, holding it a threat to academic freedom, a slur upon all college students, a useless obeisance to the diehard vestiges of McCarthyism. President Gould of Carleton College observes wryly: "We give $6 billion to the farmers but don't expect any loyalty oath."

The educators are not alone in their opposition to this special requirement—written into the act by Senator MUNDT, of South Dakota. Three bills for its repeal have been introduced in the House. Senators KENNEDY of Massachusetts and CLARK of Pennsylvania have cosponsored a repeal bill in the Senate.

For all the reasons cited above, and doubtless for others, this special non-Communist requirement is offensive and mischievous. The UC administration should join the academic revolt against it and throw its weight into the swelling pressure for its early repeal.

[From the Washington (D.C.) Post and Times Herald, Feb. 1, 1959]

MEANINGLESS OATH

Congress surely ought to repeal the loyalty oath requirement of the National Defense Education Act. As Senator KENNEDY noted when he introduced his bill to terminate this unnecessary provision, card-carrying members of the Communist Party have no hesitancy about perjuring themselves in such an affidavit. The requirement, which has hastily written into the legislation by Senator MUNDT on the Senate floor last summer, is an insult to the students and teachers applying for loans and other benefits available under the act.

Loyalty oaths have a way of hanging on like leeches, but this one may be an exception. Health, Education, and Welfare Secretary Flemming has acknowledged that the provision would do little or no good because genuinely subversive individuals have no scruples about signing such an affidavit and taking such an oath. The American Association of University Professors, the Association of American Colleges, and the presidents of such universities as Harvard, Yale, Princeton and Wisconsin have all protested the requirement. The list of opponents of the oath is as impressive as the logic of their argument.

[From the Boston (Mass.) Morning Globe, Jan. 31, 1959]

EXCESS BAGGAGE

Senator KENNEDY is on strong ground in asking Congress to eliminate a provision of the National Defense Education Act which requires students who get Federal grants to take a loyalty oath.

Arthur S. Flemming, Secretary of Health, Education, and Welfare, has openly criticized this requirement, especially a section which compels such students to sign a statement that they do not belong to any subversive organization. Nine universities and colleges have expressed opposition to this provision; Haverford and Bryn Mawr refuse to take part in the loan program while this requirement remains in the law.

In a letter to Mr. Flemming which has the support of President Pusey of Harvard, President Griswold of Yale well expressed the case against loyalty oaths. Experience, he said, has taught education to regard

such tests as at best odious symbols, at worst potential threats. They are ineffective as Communists never hesitate to take them. Belief cannot be compelled by law. Such requirements are distasteful to young people—most of them about 18—embarking on an enterprise in scholarship.

As Senator KENNEDY says, the oath may keep from the program inquiring young minds. Congress should remove from the act this excess baggage.

[From the Pittsburgh, (Pa.) Post-Gazette, Feb. 3, 1959]

NO AID TO EDUCATION

As the new National Defense Education Act goes into full operation, Senator JOHN F. KENNEDY, of Massachusetts is moving to divest it of a feature that could limit its effectiveness. With the cosponsorship of Senator JOSEPH S. CLARK, of Pennsylvania, Senator KENNEDY is introducing a bill to repeal a requirement of a loyalty oath by recipients of Federal aid under the act.

The loyalty oath provision was tagged onto the bill from the floor at the last moment before passage, with scant debate and little publicity. Since its existence has become more widely known, it has been criticized by Arthur S. Flemming, Secretary of Health, Education, and Welfare, and by the presidents of Harvard, Yale, and Princeton Universities, and Bryn Mawr, Haverford, Swarthmore, Bates, Bowdoin, and Colby Colleges. The American Association or University Professors has called for elimination of the oath, and Bryn Mawr and Haverford have refused to participate in the education aid program unless the requirement is dropped.

Senator KENNEDY put the reasons for repeal succinctly. He said it would not keep out actual members of the Communist Party because they would "have no hesitancy about perjuring themselves." At the same time, he added, it might defeat the very purposes of the act by excluding "the most inquiring minds," by repelling nonconformists and dissenters and those who find test oaths distasteful or who are against them for reasons of conscience.

Now that it has had time to reconsider what it adopted so hastily, Congress should abolish the unnecessary and offending oath.

[From the Pittsfield (Mass.) Berkshire Eagle, Feb. 3, 1959]

EDITORIALS

It is good to find Senator KENNEDY adding his voice to the scattered but articulate chorus criticizing the loyalty oath provision of the 1958 National Defense Education Act. His statement that the provision is "an unnecessary, futile gesture toward the memory of an earlier age" that might defeat the very purpose of the education bill by discouraging "the most inquiring minds" is a well-phrased indictment of this latest restriction upon academic freedoms.

Senator KENNEDY thus joins a goodly company, including the presidents of Harvard, Yale, Princeton, Bryn Mawr, Swarthmore, Haverford, Bates, Bowdoin, and Colby. Along with the Association of American Colleges and the 40,000-member American Association of University Professors, these educational leaders have taken the most serious exception to the oath provision, which requires any applicant for financial aid under the act to sign a non-Communist affidavit and swear his allegiance to the United States.

As Dr. Hugh Borton, president of Haverford, declared 2 weeks ago, filing the disclaimer is "tantamount to signing away one's right to freedom of thought as well as endorsing a Government action which makes the individual's opportunity for education contingent upon his personal beliefs." Dr. Borton's Pennsylvania Quaker institution will refuse to take part in the program until the oath provision is removed, but will make loans to students at comparable rates.

The academic atmosphere induced by such a provision was the particular target of the presidents of the three Maine institutions—Bates, Bowdoin, and Colby—who asserted that it would replace "a fearless and honest search for truth" with "a feeling of hesitancy and fear and a consequent restriction on the free inquiry and association that are the heart of academic freedom."

Moreover, they noted, to require such an oath solely of young people who are studying at institutions of higher learning is invidious, since it implies that they are members of a suspect group.

And, of course, all who have considered the practical side of the matter, apart from its vote-winning aspects, agree that the disclaimer does not do what it pretends to do: It does not separate the subversives from the loyal citizens. For as Secretary of Health, Education, and Welfare Arthur S. Flemming admitted in a discussion of the Republican-sponsored bill December 15, real subversives "have no scruples about signing such an affidavit and taking such an oath."

At the moment there are at least three bills in Congress, introduced by Republicans as well as Democrats, aimed at excising the loyalty-oath provision from the Defense Education Act. It is to be hoped that our representatives in Washington will lend their weight to the move before this futile gesture toward the memory of an earlier age causes any of the trouble that has been so eloquently foreseen.

NOVEMBER 1, 1958.

Sent to Members of the Senate Labor and Public Welfare Committee and the House Education and Labor Committee

The American Association of University Professors has in mind petitioning the Senate Committee on Labor and Public Welfare of the 86th Congress to reconsider the requirement of section 1001(f), title X, of the National Defense Education Act of 1958, which reads:

"No * * * funds * * * shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods."

This disclaimer requirement, which will apply to large numbers of young people seeking loans, fellowships and grants to carry on their education, and to many teachers and to consulting experts, seems thoroughly harmful. It singles out persons in education as objects of suspicion; it imposes a test oath repugnant to our traditions; and it exposes those signing the affidavit to the possibility of perjury prosecutions resting on vague allegations or improper and intimidating inquiries about their conduct and their beliefs.

The affidavit requirement appears certainly to affect at least these persons:

1. Undergraduate students receiving loans (including minors).
2. Graduate students receiving fellowships.
3. Secondary school guidance and counseling personnel who attend training institutes.
4. Staff of language research centers.
5. Foreign scholars teaching at language research centers.
6. Individuals receiving stipends for advanced training in foreign languages.
7. Staff of language institutes.
8. Individuals attending language institutes who receive stipends.
9. Members of the Advisory Committee on New Educational Media.
10. Special personnel under title VII (TV, radio, cinema).
11. Members of the Science Information Council.

The American Association of University Professors believes that the requirement which it opposes is subject to the following specific objections:

1. Vagueness: A person required to execute a disclaimer statement is given no guidance as to the organizations which are of the designated variety, and no definition of the "support" to such organizations which he must disclaim. We submit that it is a denial of due process of law to compel an individual to gage his conduct by such vague criteria, when criminal liability may turn on his action.

2. Unconstitutionality of the substance of the disclaimer: There is ground for grave question concerning the validity of requiring a disclaimer of the sort specified in the act, as a condition of enjoying governmental benefits. The justification which a majority of the U.S. Supreme Court held to be present with relation to the requirement of the Labor-Management Relations Act involved in *American Communications Association* v. *Douds* (339 U.S. 382), is of doubtful applicability here. Moreover, the provision here in question is not in terms limited in "knowing" support of the specified type of organization; without such a limitation, the provision probably falls under condemnation of the view of the U.S. Supreme Court in *Wieman* v. *Updegraff* (344 U.S. 183).

It is difficult to leave unquestioned legislation which borders so closely on unconstitutionality in a first amendment area, and which may well overstep the line.

3. The invidiousness of the requirement: A disclaimer requirement or "test oath" by its nature cannot fail to be invidious. If an individual refuses to sign, he raises a suspicion that he is unworthy of public trust or benefit. If he signs, he endorses the pertinency of the general suspicion about him and his kind which is embodied in the requirement. Social safeguards should be directed to specific dangers; they should not, as in this instance, take the form of inescapable and unwarranted derogatory implications directed toward a whole class of persons and all its members.

This association, with a membership of 40,000 college and university teachers, is particularly concerned about the application of the disclaimer to education. In the past, the Federal Government has made available numerous benefits to individuals and organizations whose activities have been of national importance, and who have had a clearly established special need; rarely has there been a requirement of an affidavit or statement disclaiming subversive belief or association. Now, in 1958, we are shocked and alarmed to find that students and teachers, when they are to receive funds, are placed in a special category and must enter a humiliating disclaimer. The act seems to say to members of the educational community: "You are an important part of American life and you have an admitted real need, but let there be no mistake about the fact that you are a particularly suspect part of the population and will have to pass a special test that other citizens need not take." This is a prejudgment of the teachers and students of America which we cannot believe the Congress intended to make.

We respectfully request that you give consideration to the objections stated in this letter. It is our hope that you will conclude that the position of the American Association of University Professors is correct and that you will be able to share it with us.

Sincerely yours,

BENTLEY GLASS,
President.

WILLIAM P. FIDLER,
General Secretary.

UNEMPLOYMENT COMPENSATION

Mr. KENNEDY. Mr. President, at the end of this month the law providing temporary unemployment compensation benefits will expire. The law was designed for a very limited purpose and had a very modest effect. Only one out of every four people receiving compensation are affected at all by it.

It was enacted at a time when our unemployment crisis was so critical, our business decline so severe, and our economy so in need, that a stopgap measure had to be enacted to cover the most glaring inadequacies in our system of unemployment compensation. Under it, 17 States have enacted laws extending benefits for a 50-percent longer period of time.

It was hoped—but I confess that in the minds of many of us there was not much more than a hope—that by the time the temporary law expired, unemployment would be reduced substantially, and that the experience gained under this law would enable us to proceed with permanent, long overdue legislation.

We have had that experience. Every study has conclusively proved the value of unemployment compensation both to the individual recipients and to the economy. Only this week, the University of Michigan released a study showing it helped cushion the recession, meet individual hardships, and prevent some of the economic loss that normally accompanies large-scale unemployment.

Unfortunately, however, the temporary law is scheduled to expire before the anticipated drop in unemployment occurs. According to the latest available figures, we still have almost 5 million unemployed. Even with the temporary extension of benefits, exhaustions are averaging approximately 200,000 per month. When the temporary law expires, between 300,000 and 400,000 additional jobless workers will suddenly be deprived of any unemployment-compensation benefits at all.

This has led to a suggestion in the other body that the temporary unemployment-compensation law be extended. Of course, every consideration should be given to a full program which will take care of those presently unemployed as well as those who will lose their jobs in the future. But any temporary extension of the present law must be considered only as a transition to a permanent bill. We must not postpone any longer consideration of the establishment of permanent standards such as those contained in the bill introduced by the junior Senator from Minnesota, the senior Senator from New Jersey, myself, and 31 other Senators. I do not believe the answer to the present crisis is a crash program. I do not believe the answer to a defective Federal statute is a series of temporary extensions of temporary laws. This is but evidence of the inadequacies of the basic statute. I will never oppose any temporary assistance to the unemployed, little as it is, but it must not be regarded as a solution to the problem.

Mr. President, I hope the announcement of the movement to extend the temporary law does not forestall or delay consideration of S. 791, the bill to provide for adequate permanent standards of unemployment compensation. In the near future I intend to discuss fully the hardships caused by the tragic delay in enacting the permanent unemployment-compensation bill.

Mr. President, I am associated in these remarks by the Senator from Pennsylvania [Mr. CLARK], the junior Senator from Minnesota [Mr. MCCARTHY], and the Senator from Indiana [Mr. HARTKE]; and I am confident the senior Senator from Minnesota [Mr. HUMPHREY], who is a cosponsor, also joins me.

There is no point in merely reenacting the law providing temporary benefits unless we do something about providing Federal minimum standards for unemployment compensation. The President has recommended these standards since 1954. No State has adopted them in toto. I think it is time, with almost 5 million unemployed, that the Government adopt Federal minimum standards in order to assist those States which honestly desire to reach such standards to assist their unemployed, without providing a competitive advantage to States which do not wish to have such standards in attracting industries to those States.

Mr. HART subsequently said: Mr. President, I wish to congratulate the Senator from Massachusetts [Mr. KENNEDY] who is continuing the drive for which he has long been noted to require minimum unemployment compensation standards in the States, with respect to the contest for industry and the approaches made in soliciting that industry by offering cheap unemployment compensation programs.

Mr. President, I ask unanimous consent to have printed at this point in my remarks some comments extracted from a speech I made last Saturday on this subject, and, since I think it is also appropriate, I ask unanimous consent to have an article which was published in the Ann Arbor, Mich., News of March 2, 1959, printed in the RECORD. The article reflects the judgment of three very distinguished economists on the necessity for Federal unemployment compensation standards.

I, of course, associate myself with the remarks made by the distinguished Senator from Massachusetts [Mr. KENNEDY].

The PRESIDING OFFICER (Mr. KENNEDY in the chair). Is there objection to the request of the Senator from Michigan?

There being no objection, the excerpts and article were ordered to be printed in the RECORD, as follows:

The unemployment situation in my State of Michigan, and in far too many other States must somehow be dramatized.

The President says this isn't the time to do anything different because we are on a curve of rising prosperity.

Let me say that one subject that I am qualified to speak on in Washington, or anywhere else in the Nation, is the very serious human situation that prevails back home today.

Just a few simple facts might set this thing in its proper perspective:

We have over three-quarters of a million people in Michigan today who are eligible to receive the very limited surplus food packages Mr. Benson is willing to let go out of his food stocks.

The city of Detroit ran out of welfare funds 6 months through the current fiscal year and has had to turn to the State for help.

In mid-January we had over 405,000 persons unemployed in the State.

Over 243,000 of these unemployed workers exhausted their unemployment benefit payments during 1958, and over 100,000 have exhausted their extra payments under the temporary unemployment compensation program.

So difficult is the situation at the automobile plants that a worker has to have 8 years seniority to be employed at Ford, and at the Dodge main plant it was up to 12 years seniority.

But Michigan isn't the only State with serious problems. New Jersey, Pennsylvania, West Virginia, to name just a few, find a level of unemployment this winter which cries out against the administration's fancy predictions.

The recession, which we are told is now passing, has hit millions of Americans. They have been in the path of a great storm, and the wreckage that is left behind is not more nor any less a disaster for them than had they been in the path of a flood or hurricane.

These men and women were not responsible for the disaster that has swept over them. Far too many of them—some 900,000 will have exhausted their temporary unemployment compensation benefits by April 1 of this year.

Over 1.8 million of the persons unemployed in this country are not eligible for temporary programs or have exhausted all employment insurance rights.

This Congress, I feel, should put a new roof on the unemployment compensation program. This can be no dishpan program to meet the aftermath of the disaster, and prepare for future crises.

There has been a steady deterioration of the unemployment compensation program since 1939. We must have a bill, such as has been introduced in both houses, to build meaningful Federal standards into the programs. We must stop the unhealthy situation where one State competes with another for industry because of variations in their unemployment compensation laws.

We must also do something very soon to be sure that those who have not been covered or who have exhausted all their benefits are not left as castaways on the economic road to recovery but receive the same humane treatment any victim of disaster receives.

Just because this economic disaster didn't hit with the suddenness of a flood or hurricane doesn't mean that the wreckage of families left in its path is any less severe.

[From the Ann Arbor (Mich.) News, Mar. 2, 1959]

UNIVERSITY OF MICHIGAN MEN SAY MORE UNEMPLOYMENT FUNDS SHOULD HAVE BEEN PAID OUT IN 1958 RECESSION

More unemployment compensation money should have been paid out to jobless workers during the 1958 recession and coverage of compensation plans should be broadened in the future, three university professors have recommended.

Profs. Fedele Fauri, William Haber and Wilbur Cohen declared Saturday that urgent improvements in Federal and State legislation "are vitally needed while the lessons of the recession are still fresh in our memory." A recession study showed the Nation failed to make full use of jobless insurance plans to relieve family hardships and shore up the economy, they said.

They urged extension of the temporary Federal-aid jobless program, which expires at the end of March, until States improve their compensation laws. State action the

professors recommend includes expanded coverage to take in more workers, increased duration of benefits and larger benefit payments.

PROGRAM EXTENDED

Under the temporary Federal program enacted last year, duration of unemployment compensation benefits was extended to a maximum of 39 weeks. Most States normally pay benefits for 26 weeks of unemployment.

The Federal Government lent the States interest-free money to finance the program. Loans are to be repaid by 1964 unless some future Congress cancels them.

The Michigan professors, who are specialists in the fields of economy and social work, said the temporary program should be extended "until permanent Federal standards and supporting State legislation are enacted to improve the benefit duration and financing arrangements of State laws."

Professor Fauri is dean of the University of Michigan School of Social Work and chairman of the Labor Department's Federal advisory council on employment security. Haber is an economics professor, a member of the advisory council and an authority on jobless insurance. Cohen is professor of public welfare administration and an adviser to the commission on social security.

BILL INTRODUCED

A bill to extend the temporary Federal program 6 months from the scheduled April 1 expiration has been introduced in the House.

The Michigan professors based their findings on continuing studies by the University's Survey Research Center on the nationwide impact of the recession during 1957–58.

The professors said more money should have been paid out to the jobless.

"The tragic part of the situation," they said, "was that there was $7 billion in unemployment insurance reserve funds which were not touched during the recession. If State and Federal unemployment laws had been more adequate and had permitted $1½ to $2 billion of these reserves to be used to pay benefits to the unemployed many personal hardships could have been avoided. There would still have been about $5 billion of reserves left if unemployment insurance benefits had been more adequate."

NOT SATISFACTORY

The professors declared, "the experience of the recession indicates that the existing built-in stabilizers in our income maintenance programs were not—and still are not—satisfactory to meet another similar recurrence."

"A free enterprise economy," they said, "must make more effective provision than we now have for meeting the employment hazards which occur from the free play of economic forces in the market place."

Their recommenadtions included:

Broadening unemployment insurance coverage to take in 1,800,000 employes in small firms, who are not covered in 33 States, and some groups of hired farm laborers.

Increasing maximum duration of benefits to at least 30 weeks in a benefit year in all States.

Establishing an equalization fund "to reduce the excessive costs of unemployment insurance in States suffering from a high incidence of unemployment caused by national economic conditions."

Providing benefits equal to half their normal full-time gross weekly earnings to "the great majority of eligible claimants." They said States and employees should be given six years to reach this objective.

Including dependents, benefits as an integral part of each State unemployment insurance program.

Making Federal and State funds available for direct relief to "assure all needy persons a floor of protection against want in all localities."

The professors said, the Survey Research Center's studies show "both unemployment insurance and public assistance programs made an important contribution to meeting some of the hardships and economic losses caused by unemployment during the recession."

B'NAI B'RITH WOMEN CELEBRATE 50TH ANNIVERSARY

Mr. HUMPHREY. Mr. President, one of our leading Jewish women's organizations, B'nai B'rith Women, will celebrate its 50th anniversary on March 9. I wish to commend to the attention of the Senate these gallant women who will observe this milestone in keeping with their long tradition of service. They have renounced fanfare and elaborate festivities; instead they are commemorating their anniversary with acts of special service to the Nation and the community.

On March 9, B'nai B'rith Women, throughout the United States and Canada, will gather to make mass blood donations at Red Cross or other community blood banks. Since the organization has some 137,000 members, it is easy to realize that its contribution will substantially boost our critical blood reserve. Undoubtedly, it will also serve as an example to other organizations, and a graphic reminder to us all that March is Red Cross Month.

The dedication of these ladies to giving service is again illustrated by their sponsorship of a national youth conference in Washington, D.C., April 12 to 14. Representatives of 150 national women's organizations have been invited to participate in the conference, which has adopted the theme: "Building our Youth for the Future—Building the Future with our Youth."

B'nai B'rith Women at its half-century mark has 856 chapters in the United States, Canada, and 15 other countries. In recent years, it has raised more than $1 million annually for its philanthropic projects and programs. Though it is a Jewish organization, its benevolent undertakings have always been carried out without regard to race, religion, or creed.

Time after time, the organization has been cited for special achievement in the educational, humanitarian, patriotic, and philanthropic causes to which it devotes itself. It has received awards from the U.S. Treasury Department, Veterans' Administration, Crusade for Freedom, National Foundation for Infantile Paralysis, and many others.

Knowing what B'nai B'rith Women has accomplished in the past 50 years, I feel certain that it will go on to even greater achievements in the next half century.

RESIGNATION OF HON. EARL E. T. SMITH AS AMBASSADOR TO CUBA

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an editorial which appeared in the New York Journal-American commending the service in Cuba of our recent Ambassador, the Hon. Earl E. T. Smith. The editorial reflects the recent commendation given to Mr. Smith by Secretary of State Dulles. I join in the sentiments expressed therein.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JOB WELL DONE

The 20 months in which Earl E. T. Smith served as our Ambassador to Cuba required a precarious kind of high-wire diplomacy. We think he kept his balance remarkably well.

Soon after he took office Ambassador Smith visited Santiago where he saw Batista's police roughing up men and women gathered in a demonstration against the dictator. Mr. Smith was outspoken in voicing his abhorrence of police brutality, and Secretary Dulles said he wished we had more Ambassadors of that stamp.

This was not the conduct of a man personally in sympathy with the Batista regime, nor was Ambassador Smith's conduct toward Batista himself. He was correct and formal, which he had to be as the envoy of the United States to an established government. Had he been otherwise he would have been neglecting his assignment.

Finally, Mr. Smith's voluntary resignation "because there is bound to be an unfavorable reaction against an Ambassador to an overthrown government" displays a sensitivity of feeling that goes beyond diplomatic correctness. We think he did a good job in a difficult situation.

FORTY-SECOND ANNIVERSARY OF THE GRANTING OF CITIZENSHIP TO THE PEOPLE OF PUERTO RICO

Mr. KEATING. Mr. President, it is with great pleasure that I join with the many other friends of the Commonwealth of Puerto Rico in extending greetings on the 42d anniversary of the granting of American citizenship to the people of the island, which fell on March 2. As we look back over the years since March 2, 1917, we can feel a justifiable pride in the way in which the people of Puerto Rico have accepted the responsibilities and obligations of citizenship, and have contributed to the welfare and strength of the United States.

The people of Puerto Rico regard their citizenship as something precious and dear, and they have amply demonstrated their patriotism by their ready response to the call to arms in two World Wars and the Korean conflict. In these conflicts Puerto Ricans fought side by side with their brothers from the mainland, and together with them, many paid the supreme sacrifice.

In Puerto Rico today, in spite of great obstacles and the comparatively small size of the island, great progress is being made. During my recent visit to the island, I was amazed at the progress which has been made in this area which only a few years ago was appropriately labeled "underdeveloped." New industries are being created with breathtaking speed. The agricultural segment of the economy is being diversified. The standard of living is rising rapidly.

On all sides, one can sense a feeling of dynamic action in the air. Much of the credit for these near miracles of progress is due to the intelligent, wise, and enlightened leadership with which the island has been blessed over the years. But the greatest credit is due,

I think, to the people of Puerto Rico, who have been responsive to their leadership and who have, above all, shown a fundamental good sense, a grim determination to better their lot, and a willingness to put in a great deal of good, hard work.

The close ties of Puerto Rico with the continent and the kinship of the island's citizens with their fellow Americans have also helped greatly in this surge of progress. Through the success of Operation Bootstrap, now 12 years old, the people have demonstrated that no challenge—economic, social, or political—is too great for a democratic government backed by loyal and enterprising people like our Puerto Rican neighbors.

Unquestionably, Operation Bootstrap is being closely watched by the leaders of the underprivileged people of Asia and Africa—many of them included among the so-called uncommitted nations. They are learning that economic progress and political freedom are inseparable, and that each can act as a catalyst for the other.

Puerto Rico's progress has shown the world an example of the highly democratic development of an underdeveloped area in free association and cooperation with the United States. It is an important lesson for all the world to ponder—and for the United States to publicize—in this day of grim cold war economic competition.

In this connection, it is important to note that the deep religious fervor of the Puerto Rican people, which no visitor to the island can overlook, has contributed materially to the progress of the Commonwealth. These strong religious ties also serve as a sure-fire bulwark against the inroads of the atheistic Communist conspiracy in Puerto Rico.

The people of my State of New York have special bonds of friendship with the Puerto Ricans because of the great numbers from the island who have come to live in our State. Like many newcomers to our shores, they have often found it difficult to adjust to our fast-moving civilization and unfamiliar ways, but they are determined to achieve all that is rightfully theirs as good citizens.

Progress has been slow but sure. In New York State, legislative enactments and recognition and appreciation of the capabilities and qualities of Puerto Ricans have helped much to improve their status. In spite of the lack of privileges, in spite of prejudices and discrimination, Puerto Ricans in this country today are coming into their own.

But there are many hurdles still to be overcome. We must work to remove those inequities and injustices which still prevent our Puerto Rican citizens from enjoying full equality with other Americans. I am fully aware that this involves many profound problems which will take time to overcome. It will certainly require patience, good will, and cooperation from all of us.

The important thing is that we continue to move forward in the battle to achieve equality for all citizens. As this battle has progressed, as they have conquered language difficulties, and as they have gradually overcome deep-seated prejudices, Puerto Ricans have begun to make great contributions in our country in a wide variety of fields. We can surely look for even greater results in the years ahead, based on the strong traditions and rich heritage which these people bring to our land. These friendly, progressive people, both on the mainland and on the island, combine well the traditions of old Spain and the modern influences of the New World.

It is significant that March 1 to 8 has been proclaimed by Gov. Nelson A. Rockefeller, of New York, as Puerto Rican Week. In his message of proclamation, the Governor said, in part, the following:

> The people of Puerto Rico, those who have remained at home as well as those who have come here, have worn their citizenship with dignity and patriotism. In three major wars they have borne their share of the task of defending American freedoms.
>
> In times of peace they have also proved their right to the same privileges as those enjoyed by people of any of the 49 States of the Union, including that of equality of opportunity for all, without reservation and without exception.

In varied commemorations this week in New York State, tribute will be paid to Puerto Rico and its people on the occasion of this significant anniversary.

It is my hope that this anniversary will merely mark the beginning of many more years of progress for Puerto Rico. I am sure all Members of this body join with me in wishing the people of Puerto Rico continued prosperity, success, and happiness, in the true spirit of democracy and friendship which binds our peoples together.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. KEATING. I yield to my colleague from New York.

Mr. JAVITS. I should like to join my colleague in congratulations to the people of Puerto Rico. I am very much pleased that my colleague has taken the initiative in making the remarks on the Senate floor which he has just submitted. The Commonwealth of Puerto Rico is one of the most interesting and enlightening experiments in the world. It shows how the United States deals with people who would otherwise be independent. The United States leaves those people free, and gives them every kind of benefit, as well as the privileges of citizenship. Our treatment of Puerto Rico represents to the other American countries and to those of the Caribbean the real attitude of this Nation toward the people of that vast area of the world.

I am glad my colleague from New York has presented his views. I am delighted to join with him in the sentiments he has expressed.

Mr. KEATING. I appreciate the remarks of the Senator.

RADIOACTIVE WASTE—A PERIL OF THE ATOMIC AGE

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article entitled "Radioactive Waste: A Peril of the Atomic Age," written by David Shea Teeple, and published in Human Events.

Mr. Teeple expresses thoughts and fears I have been concerned about for some time, and of which I wish to bring to the attention of the Senate and those who read the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RADIOACTIVE WASTE: A PERIL OF THE ATOMIC AGE

(By David Shea Teeple) [1]

Radioactive wastes—under an AEC program deceptively called waste disposal—are today being accumulated at a rate which may very well threaten the future of mankind.

Radioactive wastes are the residues produced from the operation of atomic reactors and chemical processing plants. They may be classified as either low-level or high-level wastes (depending on the amount of radiation). At the present time we are dumping the low-level wastes into the ocean, allowing them to evaporate in pits or filter themselves through soil formations. It has been estimated that up to this point the United States alone has released over 2 million curies into the ocean, and by 1980 will have dumped over 1 billion curies. A curie is defined as the quantity of radiation roughly equivalent to one gram of radium. (Just for comparison, some authorities have estimated that 2 million curies exceeds the radiation of all the radium in the world prior to 1925.)

No responsible scientist suggests that we and the rest of the world can continue to dump this low-level residue into the world's water supply indefinitely without deleterious effect upon sea life. These effects will eventually be transmitted to humanity.

High-level wastes are produced as a result of the fission products which build up within the fuel elements of atomic reactors. Periodically these fuel elements have to be replaced. In certain types of reactors they are in solid form, in others, liquid.

Regardless of the type, these fuel elements have to be chemically processed to recover the uranium–235 which did not burn (fission) as well as to extract the plutonium for which the Government pays a subsidy up to $35 per gram. As a result of the chemical processing a liquid residue remains which is toxic, corrosive and highly radioactive.

The extent of the problem is difficult to visualize. At Hanford in the State of Washington, for example, we now have a minimum of 52 million gallons of this material. The stopgap measures now in use consist of storing the material in stainless steel tanks buried in the ground. Since the material creates heat (around 25 B.t.u.'s per hour) it must be cooled, which of course adds to the problem. At Hanford alone we have $114 million worth of steel tanks and a conservative estimate is that it costs us over $2 million annually to maintain and watch the equipment.

It must be emphasized that this is not a "dead storage" but an operation which requires meticulous instrumentation and constant observation. Obviously, stainless steel tanks, like any other manmade product, have a limit to their existence. Some of them are now 15 years old. Sooner or later we may expect trouble.

Additionally, Hanford is not the only storage site. Similar conditions prevail at the atomic plants at Idaho Falls, Savannah River, Oak Ridge, Paducah, Fernald, and others.

[1] David Shea Teeple, a specialist in atomic matters and consultant to industry and government, first called attention to the dangers of America's civilian atomic program in "Nuclear Nonsense," an article appearing in Human Events for Feb. 11, 1956.

The total amount of waste material on hand can only be estimated, but certainly it exceeds 150 million gallons. Storage tanks at present have cost over $200 million with an annual upkeep of at least $10 million. AEC figures indicate that, if we proceed at the present rate, by the year 2000 (just 40 years away) we will have between 40 million and 50 million gallons annually to deal with. (These figures do not include the Soviet Union, Great Britain, France, Canada, or others now engaged in reactor operation.)

If this material should escape its container vessel and reach the environment in which we live, contamination would be serious. This can occur by the rupture of a tank either as a result of corrosion, a disturbance of the elements (earthquake), or induced sabotage. It also could easily occur while the material was being transported from the reactor site to the chemical processing plant or from the processing plant to the storage site.

In the first instance—from the reactor to the chemical plant—most of the material would be in solid form and would be far less of a hazard. From the plant to the storage site it would be in liquid form and would constitute a cargo with more potential danger than any ever transported by man. The same hazard would apply in the instance of those reactors (known as homogeneous) which produce liquid wastes.

At this point one might well ask if the Government is not aware of these conditions and is not controlling shipments in such a way as to protect the public interest. Unfortunately, the answer is "no." In the first place, the AEC has assumed the responsibility for all radioactive wastes produced in Government and civilian powerplants. At the present time, no Government agency outside itself regulates shipments made by the AEC. And no State has a comprehensive statute to cover the situation. As one prominent scientist stated in a recent seminar: "The AEC can get away with a lot of things that private corporations could not."

Dedicated geologists, geophysicists, and health physics experts are hard at work attempting to find satisfactory solutions for the problem of waste storage. They are investigating the possibility of fixing these materials in inert matter such as ceramics, plastics, glass, and special cements. They are experimenting with various separation processes to remove the most hazardous elements and they are seeking adequate reliable safe storage sites for these dangerous liquids. They are fully aware of the nature of the problem and are utilizing every resource at their disposal in an attempt to find answers.

At the present time no satisfactory answer is in sight. If it is to be found it will only be by the efforts of this unglamorous band of men who are cognizant that in the final analysis the work which they are doing may be the most important in the whole atomic energy project. They are the unsung heroes in this struggle between man and the atom.

Research to date on waste storage, while not providing an overall solution, has given us certain indisputable facts. They are: (1) Chemical processing plants should be located adjacent to storage sites, (2) reactors, insofar as possible, should be close to storage sites, (3) because of geological factors certain areas of the country are not suitable for waste storage and no atomic plants should be located therein, (4) the production of waste materials should be minimized as much as possible until such a time as solutions are found for storage, (5) research and experimentation on waste separation and storage should be pursued on a scale far exceeding the present operation, (6) the primary criteria for the location of atomic plants should be the question of the feasibility of waste storage at the site.

Those who are determined to get the Government into the production of power for civilian uses and thereby use the atom as a force for socialism proceed merrily ahead without any regard for the points cited above. Their present plans are for the United States to launch a program of civilian power reactors all over the country, at a cost of about a billion dollars in the next 5 to 7 years.

In no instance has the question of waste storage been among the criteria used for location. No scientists, for example, would have had the audacity to locate the Shippingport reactor in the Pittsburgh area; waste material cannot be stored there, but must be shipped, thus increasing the hazard. For the same reason no person in his right mind would have built the gigantic Savannah River plant at Aiken, S.C.; but political persuasion prevailed.

Knowing what we now know about this problem of radioactive waste, we would never locate the great plants of Oak Ridge and Hanford on the great watersheds they now occupy.

Who can justify the location of the Lagoona Beach reactor adjacent to Detroit? Professor Gomburg, of Michigan, has warned us that if this ever melts down it could kill 145,000 people. Who wishes to defend the reactor at Hallam, Nebr.? (Nebraska has the largest underground waters in America.)

We must realize that there are certain great corporations who make money out of the construction of these economic monstrosities and who have powerful political lobbies which push some of these deals through. Also, certain States—including New Mexico, which is represented by Senator CLINTON ANDERSON, chairman of the Joint Committee on Atomic Energy—reap a harvest of hundreds of millions of dollars a year from our atomic activities.

The time has come to call a halt. The advice and counsel of our men of science must be heeded. The public interest must be protected. The hucksters must be stopped, be it by injunction or by State regulation of those matters which concern the health of our people. The AEC, producer and shipper of the wastes, should not be allowed to monitor its own activities. This is a public health function.

We have an ample supply of electric power in the United States. As a matter of fact, if there should be any shortage, it could be traced to the Atomic Energy Commission, which, is now using over 15 percent of the total installed electrical capacity of the United States annually.

Even the most ardent advocates of the socialistic atomic power program do not deny that our fossil fuels will last us for a century. The power bill which the American consumer pays is the last thing which worries the collectivists. Atomic power is 10 times as expensive and hazardous and its backers are using it to promote socialism.

No other factor more clearly exposes the fraudulent claims for atomic power costs than the question of waste storage. If the costs of such storage were borne by the operators of atomic power plants instead of by the Government (as they should be in any honest project), the rate per kilowatt for atomic power would zoom out of sight. Furthermore, these costs are permanent and ever-increasing. We are still paying to store the wastes from materials used 15 years ago.

It is time, therefore, that the people of this country took a hand in the matter and demanded that this technology be developed in such a way that it may be of service to man, and not an instrument for his destruction.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

ADDITIONAL FEDERAL REVENUES TO PROTECT FREE WORLD AND AVOID GOVERNMENTAL DEFICITS

Mr. NEUBERGER. Mr. President, today I make my contribution to the national discussion over the budget and fiscal matters.

I have every faith that the American people will respond to this appeal with their customary courage, responsibility, and maturity.

I am introducing four bills to increase the revenues of the Federal Government.

These bills are as follows:

First, a bill to increase temporarily the Federal highway fuel taxes by 1½ cents a gallon on gasoline, diesel fuel, and special fuels. It would raise approximately $724 million in additional revenues in fiscal year 1960.

Second, a bill to lower the special depletion allowance for oil and gas companies from 27½ percent to 15 percent. It would raise approximately $325 million in additional revenues annually.

Third, a bill to allow the Post Office Department to set postal rates based on due consideration of cost of both public and nonpublic services. Under the postal policy established by Congress in 1958, this measure would enable the Department to raise approximately $350 million in additional revenues in fiscal year 1960.

Fourth, a bill to reinstate the excess profits tax of 1950. While this bill is not so susceptible to an accurate ascertainment of revenues, it produced $1.6 billion in 1953, the last year of operation.

NO EASY PATH TO FOLLOW

Mr. President, this is not an easy program. It holds out no illusions that the way ahead is strewn with rose petals. It asks sacrifices of the high, the low, and the in-between. It recognizes the grim fact that we are engaged in a cold war with a mighty colossus, the Soviet Union, and that the survival of the free world may depend upon our capacity for sacrifice and unselfish service.

Actually, two of the bills I have introduced are necessary to balance even the shaky budget sent to us by President Eisenhower. These are the measures to increase highway fuel taxes and to provide for some form of raising postage rates. I have added two others which will ask big business and big corporations to share the additional load that has been proposed by the White House.

Mr. President, action on these revenue measures which I submit today cannot constitutionally be initiated by the Senate. I present them in the hope that they will stimulate congressional and public interest and discussion of the revenue policies of the Federal Government. The House, of course, has a constitutional duty to originate all revenue legislation.

I have been a Member of the Senate only 4 years, since early in 1955. During that time I have observed that it is far easier to vote for appropriations and spending than to support proposals for bringing money into the Treasury. Perhaps that is one reason why the Federal debt is so huge today that the second largest item in the budget—outranked only by national defense expenditures—is that providing for debt service charges.

Surely nobody can say to the people of this country that tax reduction lies ahead, at a time when the leaders of our Armed Forces have asked for between $10 billion and $20 billion more than is included for the military in the President's $77 billion budget. What if these people are correct? What if our defense is inadequate even with the huge sums included in the budget? Can we rest our heads on our pillows contentedly as the Berlin crisis approaches ever nearer?

UNITED STATES MUST PREPARE FOR FUTURE

I am offering these bills today because I believe the time has come when we must confront the long-range implications of the need to pay for the governmental services made essential by the urgency of the 20th century. Like the British a decade and a half ago, we must be prepared for blood, sweat, toil and tears. And if we are thus prepared, the future may not be so jolting or disturbing when it actually arrives.

I have in mind the successful candidate for Governor of my State in the recent 1958 elections. He glibly promised the voters lower taxes and a smaller budget. These promises proved impossible from the time he took the oath of office, and disillusionment has steadily set in. Both he and our State would have been benefited if he had candidly told the voters that increasing numbers of school children and college students made lower taxes and smaller budgets in Oregon out of the question.

I have great respect for the intelligence of the average citizen. I think he would rather be told the truth than a palpable falsehood. For example, I doubt if there are very many motorists who think the Federal Government can go on putting up 90 percent of the cost of the impressive new four-lane Interstate express highways without raising Federal taxes on motor fuels to cover increased costs of this program. Yet today 29 State Governors have announced their opposition to any increase in the Federal gasoline tax. Only last year 47 State Governors informed the Senate Public Works Committee that it would be tragic to extend the Interstate construction program beyond completion date authorized in 1956 and urged completion in accordance with the original schedule.

Some may claim that it is not the path of true liberalism to suggest that revenues be collected in order to pay for governmental benefits. I challenge such a contention.

FDR SOUGHT TAX INCREASES

During the ordeal of World War II, President Franklin D. Roosevelt suggested repeatedly to Congress that taxes be increased so the burden would not be so completely shoved off on future generations. He proposed a $25,000 ceiling on incomes of those at home while men were perishing at the front for $2 a day. Congress rejected his proposal. Congress passed over President Roosevelt's veto a tax bill which he regarded as utterly inadequate to pay for the great burden of history's most terrible war.

In 1947 and 1948 we all recall the unwise and premature tax reductions enacted by the 80th Congress, during a period of great national prosperity and a huge national debt. President Harry S. Truman, then in the White House, vetoed these tax reductions. Congress passed them, nevertheless, over the President's veto. But in November of 1948 the American people sustained President Truman rather than the 80th Congress.

The American people are mature, they are wise, they are very knowing. They realize that defending ourselves against the Russians, building four-lane superhighways and conserving our natural resources are things which cost money. They will not be fooled for long by any politician who claims it is possible to do these things and not to collect, eventually, the funds to finance such undertakings.

One of the real challenges today is to tell the American people the truth about the sacrifices ahead—if we are to defend the free world and to live up to our obligations with respect to schools, resources, health, and other essentials.

If the people are told the truth, they will respond affirmatively. In our State last year, I explained that new Post Office buildings and decent wages for postal employees necessitated higher postage rates when the Post Office Department was running a $700 million annual deficit. Despite the political attacks made upon me, I found that the electorate realized the facts of the case very discerningly.

TAXES PRICES OF PROGRESS

Not a day passes but what my mail from Oregon is heavy with demands for Federal funds for schools, dams, harbor improvements, National Forest roads, and trails, Post Office buildings, historic shrines, four-lane highways and fish and wildlife conservation. Most requests are for legitimate and needed expenditures. But the price must be paid. We must face up to the need for collecting revenues to pay for good works. That is the reason for the bills I am offering today.

Mr. President, one of our great political leaders, Thomas Jefferson, said long ago that each generation had to make its own fight for liberty. It is folly to presume that our fight will be any less costly and sacrificial than those which have occurred before.

Today we confront, in the Soviet Union, a vast and mighty nation—disciplined, bulging with natural resources, dedicated to the world advancement of a monolithic Communist state. Russia has 2½ times the area of our own land. I should like to emphasize that this is 2½ times the area of all 49 States, including the vast new State of Alaska, which is represented in part by the distinguished senior Senator from Alaska [Mr. BARTLETT], who is presiding over the Senate at this time.

Russia embraces 200 million people. Russian schools and colleges claim a larger share of Russia's national income than do our schools and colleges. We lead Russia by far in the number of automobiles, but Russia produces more missiles, more medical doctors, more huge power dams each year. At our present pace, we will have the finest tailfins on cars but will Russia be first to the moon?

Can we be the bulwark of the free world—militarily, economically, and culturally—and yet not tax ourselves to finance this great responsibility? I doubt it, Mr. President. Is there a thinking American anywhere, regardless of political party, who believes our rivalry with the Soviet Union can be carried on successfully without tapping his pocketbook? Who can hide his head under the covers that much?

Mr. President, I should like to discuss briefly the four tax measures which I commend to the Senate today.

HIGHWAY PROGRAM FACES HALT

Mr. President, unless Congress takes action during the current session, the highway program initiated in 1956 stands in danger of coming to a standstill. During the last Congress, we passed special stopgap legislation to cover increased costs and to insure that the program continue as nearly on schedule as possible. But the administration has indicated that there will be a deficit in the highway trust fund of $241 million by the end of fiscal year 1960 and a staggering $2.2 billion shortage by the end of fiscal 1962 if corrective measures are not taken immediately.

In considering this program, Congress might employ one of several alternative approaches. It might first increase general fund revenues to meet the bill for roads; second, extend the period over which the program will be completed; third, incur additional public debt; or fourth, increase highway fuel taxes temporarily. I favor the latter course.

If the increased costs of the highway program were paid for out of general revenue, the bulk of the burden would undoubtedly be borne by lower income taxpayers. Of moneys in the general fund, over one-half comes from individual income tax receipts. More than 60 percent of these taxes are collected from persons or family units with a taxable income of $4,000 a year or less. Furthermore, in an era when administered prices are commonplace in many markets, it is to be expected that the impact and the incidence of other Federal taxes, such as the corporate income tax and excise taxes, will not be identical. Sellers will be able to shift the tax until the ultimate burden falls on the consumer. Incidentally, President Eisenhower has called for this increase in the motor fuels tax.

I ask unanimous consent that my bill to increase highway fuel taxes by 1½ cents for a 4-year period be included in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1293) to provide a temporary 1½-cent increase in the tax on gasoline and the tax on diesel fuel and special motor fuels used in highway vehicles, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Finance, and

ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4081(a)(1) of the Internal Revenue Code of 1954 (relating to tax on gasoline) is amended by striking out "a tax of three cents a gallon." and inserting in lieu thereof the following "a tax of—

"(1) 3 cents a gallon, in the case of gasoline so sold before July 1, 1959, or on or after July 1, 1964, or

"(2) 4½ cents a gallon, in the case of gasoline so sold on or after July 1, 1959, and before July 1, 1964."

SEC. 2. (a) Section 4041 (a) of the Internal Revenue Code of 1954 (relating to tax on diesel fuel) is amended—

(1) by inserting after the first sentence thereof the following new sentence:

"In the case of any such liquid so sold or used on or after July 1, 1959, and before July 1, 1964, the tax shall be 4½ cents a gallon, in lieu of 3 cents a gallon.";

(2) by inserting after "3 cents a gallon" in the third sentence of such section (as amended by paragraph (1))", or 4½ cents a gallon, whichever is applicable"; and

(3) by inserting after "one cent a gallon" in the fourth sentence "or 2½ cents a gallon, whichever is applicable.".

(b) Section 4041(b) of such Code (relating to tax on special motor fuels) is amended—

(1) by inserting after the first sentence thereof the following new sentence:

"In the case of a liquid taxable under this subsection so sold or used on or after July 1, 1959, and before July 1, 1964, the tax shall be 4½ cents a gallon, in lieu of 3 cents a gallon.";

(2) by inserting after "3 cents a gallon" in the third sentence of such section (as amended by paragraph (1)) ", or 4½ cents a gallon, whichever is applicable"; and

(3) by inserting after "1 cent a gallon" in the fourth sentence "or 2½ cents a gallon, whichever is applicable,".

(c) Section 4041(c)(2) of such Code (relating to rate reduction in 1972) is amended by striking out "second and third sentences" and inserting in lieu thereof "third and fourth sentences".

SEC. 3. (a) Section 4226(a) of the Internal Revenue Code of 1954 (relating to floor stocks taxes) is amended by adding at the end thereof the following new paragraph:

"(5) 1959 tax on gasoline.—On gasoline subject to tax under section 4081 which, on July 1, 1959, is held by a dealer for sale, there is hereby imposed a floor stocks tax at the rate of 1½ cents a gallon. The tax imposed by this paragraph shall not apply to gasoline in retail stocks held at the place where intended to be sold at retail, nor to gasoline held for sale by a producer or importer of gasoline."

(b) Section 4226(d) of such Code (relating to due date of floor stocks taxes) is amended to read as follows:

"(d) Due Date of Taxes.—The taxes imposed by subsection (a) (other than by paragraph (5) of such subsection) shall be paid at such time after September 30, 1956, as may be prescribed by the Secretary or his delegate. The tax imposed by paragraph (5) of subsection (a) shall be paid at such time after September 30, 1959, as may be prescribed by the Secretary or his delegate."

SEC. 4. Section 6412 of the Internal Revenue Code of 1954 (relating to floor stocks refunds) is amended by redesignating subsection (e) as (f), and by inserting after subsection (d) the following new subsection:

"(e) 1964 Floor Stocks Refunds on Gasoline.—Where before July 1, 1964, gasoline subject to the tax imposed by section 4081 has been sold by the producer or importer and on such date is held by a dealer and is intended for sale, there shall be credited or refunded (without interest) to the producer or importer an amount equal to the difference between the tax paid by such producer or importer on his sale of the gasoline and the amount of tax made applicable to such gasoline on and after July 1, 1964, if claim for such credit or refund is filed with the Secretary or his delegate on or before November 10, 1964, based upon a request submitted to the producer or importer before October 1, 1964, by the dealer who held the gasoline in respect of which the credit or refund is claimed, and, on or before November 10, 1964, reimbursement has been made to such dealer by such producer or importer for the tax reduction on such gasoline or written consent has been obtained from such dealer to allowance of such credit or refund. No credit or refund shall be allowable under this paragraph with respect to gasoline in retail stocks held at the place or intended to be sold at retail, nor with respect to gasoline held for sale by a producer or importer of gasoline."

SEC. 5. Section 6416(b)(2) of the Internal Revenue Code of 1954 (relating to special cases in which tax payments considered overpayments) is amended—

(1) by inserting after "3 cents" in subparagraphs (H), (I), and (J) "or 4½ cents"; and

(2) by inserting after "1 cent" in subparagraphs (H), (I), and (J) "or 2½ cents, whichever is applicable,".

SEC. 6. Section 6421 of the Internal Revenue Code of 1954 (relating to gasoline used for certain nonhighway purposes or by local transit systems) is amended—

(1) by inserting after "1 cent" in subsections (a) and (b)(1) "or 2½ cents, whichever is applicable"; and

(2) by redesignating subsection (i) as (j), and by inserting after subsection (h) the following new subsection:

"(i) Gasoline purchased after June 30, 1959, and before July 1, 1964.—In the case of gasoline purchased after June 30, 1959, and before July 1, 1964, the applicable amount under subsections (a) and (b)(1) shall be 2½ cents for each gallon of gasoline."

SEC. 7. Section 209 (f) of the Highway Revenue Act of 1956 (relating to expenditures from trust fund) is amended by adding at the end thereof the following new paragraph:

"(5) 1964 Floor Stocks Refunds.—The Secretary of the Treasury shall pay from time to time from the Trust Fund into the general funds of the Treasury amounts equivalent to 100 percent of the refunds made under section 6412(e) of the Internal Revenue Code of 1954 in respect of gasoline subject to tax under section 4081 of such Code."

Mr. NEUBERGER. Mr. President, the Senate Public Works Committee has issued a report indicating that the 65 million cars in operation as of 1957 will soar to 100 million vehicles by 1975. Can we ignore the pressing need for better highways? Can we rationally refuse to support an assessment which will cost the average motorist less than 19 cents a week to supply these necessary roads?

Mr. President, I introduce at this time a proposal for reduction of the percentage depletion allowance on oil and gas wells from 27½ percent to 15 percent, and ask that the bill be printed in the RECORD at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1294) to reduce the rate of percentage depletion for oil and gas wells from 27½ percent to 15 percent, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 613(b)(1) of the Internal Revenue Code of 1954 (relating to percentage depletion rate for oil and gas wells) is amended by striking out "27½ percent" and inserting in lieu thereof "15 percent".

(b) The amendment made by subsection (a) shall apply with respect to taxable years beginning after the date of the enactment of this Act.

Mr. NEUBERGER. I claim no originality of legislative thought in introducing this bill. Although during my career in the Senate I have consistently supported efforts to reduce this allowance and thus narrow a gaping tax loophole, I have been a follower rather than a leader. The senior Senator from Illinois [Mr. DOUGLAS], the senior Senator from Delaware [Mr. WILLIAMS], the senior Senator from Oregon [Mr. MORSE], the senior Senator from Minnesota [Mr. HUMPHREY], the junior Senator from Colorado [Mr. CARROLL], the junior Senator from Wisconsin [Mr. PROXMIRE], and other able Senators played major roles in our attempt to rectify this inequity in the last Congress. My proposal is similar to corrective legislation again introduced this year by the Senator from Delaware [Mr. WILLIAMS].

DEPLETION ALLOWANCE INEQUITABLE

The inequities of the depletion allowance are well known. It permits a tax bonanza for the oil and gas industry. The rate has not been adjusted since 1926. Yet the maximum corporation income-tax rate is now nearly four times greater, thus tremendously increasing the value of the allowance. The deduction may continue year after year; it disregards original investment costs. It is in addition to other major tax advantages accorded the oil and gas industry.

The measure which I offer with respect to percent depletion allowance is comparatively mild. I am hopeful that increased public attention focused on this glaring tax loophole will result in affirmative action by the Senate on my proposal.

Mr. President, my proposal for charging the Post Office Department with responsibility for initiating postal rate changes is not novel. In past years a number of suggestions have been put forward for placing such authority in the hand of the Postmaster General, subject to certain limitations, or assigning this task to an independent commission. In 1931 the Senate approved an amendment which would have transferred the ratemaking function to the Interstate Commerce Commission. At the present time, the ICC possesses the power to determine rates on fourth class mail.

Under the provisions of the bill which I introduce today, the Postmaster General would be empowered to determine a fair and reasonable domestic postal rate structure, taking into account both the general and specific benefits which

accrue from operation of the postal system. Proposed changes would be published and public hearings held. Cost accounting methods would replace political logrolling.

The Postmaster General's suggestions for rate alterations would then be submitted to Congress for consideration. If Congress did not within 90 days pass a concurrent resolution stating that it did not favor the adjustment or modification recommended by the Postmaster General, the proposal would be submitted to the President of the United States and become effective if not disapproved by him within 10 days.

REVENUE ESTIMATED AT $350 MILLION

The Eisenhower administration has indicated that it will present to Congress later in this session a rate-increase proposal adequate to provide at least $350 million. It is estimated that the postal deficit in fiscal year 1960 will be $522 million.

My experience this past year in the bitter political battle over postage rates has convinced me that such an issue should not be determined by partisan or personal politics.

Congress has no direct control over the rates at which the Bonneville Power Administration sells its kilowatts or over the cost of timber stumpage in the national forests or on O. & C. lands.

What if Senators were to be pressured, day after day, over the cost of a Bonneville kilowatt to a private utility or an aluminum plant? What if we were lobbied every week over the appraised value of a stand of white pine in the Fremont National Forest or over the value put on Douglas-fir in the Willamette National Forest? Yet, that is what happens when postal rates are at issue. That is why the rates charged by the Post Office Department have lagged so far behind costs, often to the detriment and sacrifice of the families of the men and women employed by the Post Office Department.

Mr. President, I ask unanimous consent that this bill, together with a section-by-section analysis, may be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill, together with the analysis, may be printed in the RECORD.

The bill (S. 1295) to provide for the equitable adjustment of postal rates, and for other purposes, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Post Office and Civil Service, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

GENERAL STATEMENT

SEC. 101. The Congress recognizes that—

(1) adjustments from time to time of the domestic postal-rate structure are necessary and desirable in order that, to the extent consistent with the general public interest, postal revenues may be approximately equal to postal expenses; and

(2) it is necessary and desirable that provision be made whereby the domestic postal-rate structure may be revised promptly, as the need therefor arises, thus minimizing the impact of postal deficits on the Treasury of the United States.

DEFINITIONS

SEC. 102. For the purposes of this Act "domestic postal-rate structure" includes—

(1) postal rates applicable to the several classes of mail;

(2) zones, size and weight limits, and other conditions of mailability applicable to the several classes of mail.

DECLARATION OF POLICY

SEC. 103. It is hereby declared to be the policy of the Congress that (1) the American people are entitled to a postal system with the highest possible standards of tradition and service consistent with good business administration; (2) the inherent advantages of the postal service in the promotion of social, commercial, and intellectual intercourse among the people of the United States be maintained; (3) the domestic postal-rate structure be revised promptly from time to time so as to reflect reasonable charges and other conditions of mailability applicable to the several classes of mail; and (4) the revenues of the postal service shall be sufficient to insure that the postal deficit shall not exceed an amount greater than that determined to reflect the general benefits to the public accruing from operation of the postal system.

SEC. 104. (a) The Postmaster General is authorized, empowered, and directed to determine from time to time a fair and reasonable domestic postal-rate structure.

(b) In the exercise of his authority to determine a fair and reasonable domestic postal-rate structure, the Postmaster General shall give due consideration to—

(1) the preservation of the inherent advantages of the postal service in the promotion of social, cultural, intellectual, and commercial intercourse among the people of the United States;

(2) the development and maintenance of a postal service adapted to the present needs, and adaptable to the future needs, of the people of the United States;

(3) the promotion of adequate, economic, and efficient postal service at reasonable and equitable postal rates;

(4) the effect of postal services and the impact of postal rates on users of the mails;

(5) the requirements of the postal establishment with respect to the manner and form of preparation and presentation of mailings by the users of the various classes of mail;

(6) the value of mail;

(7) the value of service rendered in terms of priority, secrecy, security, speed of transmission, and other factors; and

(8) the value of time of delivery of mail.

SEC. 105. When the Postmaster General finds on experience that changes, adjustments, or modifications are necessary in the domestic postal-rate structure to meet any of the standards or requirements prescribed in this Act, he shall—

(1) promptly publish in the Federal Register a notice setting forth his findings and the proposed changes, adjustments or modifications in the domestic postal-rate structure based thereon; and

(2) under regulations prescribed by him, afford opportunity to all interested persons to present views, data and arguments, either orally or in writing, with respect to the proposed changes on a date which shall be not less than 30 days after publication of the proposed changes in the Federal Register.

SEC. 106. (a) After consideration of all relevant matter presented, the Postmaster General shall submit to the Congress a report which shall contain (1) a statement of his findings with respect to the necessity or advisability of making changes, adjustments, or modifications in the postal-rate structure, and (2) his proposals, prepared with due regard for the legislative forms and procedures of the Congress, for such changes, adjustments or modifications.

(b) If, in the case of any proposal for a change, adjustment, or modification in the postal-rate structure submitted by the Postmaster General to the Congress as provided in subsection (a) of this section, the Congress does not, prior to 90 days after the filing thereof, pass a concurrent resolution stating that it does not favor such change, adjustment, or modification, the proposal shall forthwith be submitted to the President and shall become effective on the first day of the first month beginning more than 90 days after the filing of the report if not disapproved by him within ten days (Sundays excepted) after it shall have been presented to him.

SEC. 107. (a) The provisions of this section are enacted by the Congress—

(1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such they shall be considered as part of the rules of each House, respectively, and such rules shall supersede other rules only to the extent that they are inconsistent therewith; and

(2) with full recognition of the constitutional right of either House to change such rules (so far as relating to the procedure in such House) at any time, in the same manner and to the same extent as in the case of any other rule of such House.

(b) As used in this section, the term "resolution" means only a concurrent resolution of the two Houses of Congress which states in substance that the Congress does, or does not, favor such proposal of the Postmaster General for a change, adjustment, or modification in the postal-rate structure.

(c) A resolution shall be referred to the Committee on Post Office and Civil Service of the Senate or the Committee on Post Office and Civil Service of the House of Representatives, as the case may be, and may be reported at any time prior to 60 days after the filing of the report.

(d)(1) When a resolution has been reported, it shall at any time thereafter be in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of such resolution. Such motion shall be highly privileged and shall not be debatable. No amendment to such motion shall be in order and it shall not be in order to move to reconsider the vote by which such motion is agreed to or disagreed to;

(2) Debate on the resolution shall be limited to not to exceed four hours, which shall be equally divided between those favoring and those opposing the resolution. A motion further to limit debate shall not be debatable. No amendment to, or motion to recommit, the resolution shall be in order, and it shall not be in order to move to reconsider the vote by which the resolution is agreed to or disagreed to;

(3) All motions to postpone consideration of a resolution, and all motions to proceed to the consideration of other business, shall be decided without debate; and

(4) All appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution shall be decided without debate.

(e) If, prior to the passage by one House of a resolution of that House with respect to a proposal of the Postmaster General, such House receives from the other House a resolution with respect to the same proposal, then—

(1) if no resolution of the first House with respect to such proposal has been referred to committee, no other resolution with respect to the same proposal may be reported; and

(2) if a resolution of the first House with respect to such proposal has been referred to committee—

(A) the procedure with respect to that or other resolutions of such House with respect to such proposal which have been referred to committee shall be the same as if no resolution from the other House with respect to such proposal had been received; but

(B) on any vote on final passage of a resolution of the first House with respect to such proposal the resolution from the other House with respect to such proposal shall be automatically substituted for the resolution of the first House.

The analysis presented by Mr. NEUBERGER is as follows:

EXPLANATION OF BILL "TO PROVIDE FOR ADJUSTMENT OF POSTAL RATES, AND FOR OTHER PURPOSES"

Section 101 of the bill contains a general statement of the Congress which recognizes the need for the provision of postage rates which will, to the extent consistent with the general public interest, produce postal revenues approximately equal to postal expenses and the necessity for the establishment of a simplified means of adjusting postal rates as the need arises.

Section 102 defines "domestic postal-rate structure" as including all postage rates applicable to all classes of mail and the zones, size and weight limits and other conditions of mailability. Under this section and the remaining sections of the bill, the Postmaster General would not seek approval of the Interstate Commerce Commission for changes in the rate structure for parcel post. Rather, he would determine the rates he thinks proper, as he does now, and submit those rates to the Congress. If the Congress does not reject the proposals (see sec. 106(b)), his proposals will become final, if not disapproved by the President.

Section 103. This section contains the congressional policy with respect to postal rates. It provides in short that the American people are entitled to a postal system of the highest possible standards of tradition and service consistent with good business administration; that the inherent advantages of the postal service in the promotion of social, commercial, and intellectual intercourse must be maintained; that the postal rate structure must be revised promptly so as to reflect reasonable charges for the several classes of mail; that the revenues of the Department shall be such as to insure that the postal deficit will not exceed an amount greater than that determined to reflect the general benefits to the public accruing from operation of the postal system.

Section 104. This section authorizes and directs the Postmaster General from time to time to determine a reasonable postal rate structure. It provides standards under which he will make his determinations. For example, it commands him to consider, among other things, the need for the preservation of the advantages of the postal service in the promotion of the social, cultural, intellectual and commercial intercourse among our people; the promotion of an adequate, economic, and efficient postal service at reasonable and equitable rates; the impact of postal rates on users of the mail; the requirements imposed by the postal service with respect to the manner and form of presentation of mailings by users of the mails; the value of mail and the value of service rendered in terms of priority, secrecy, security, and time of delivery.

Section 105. This section will require the Postmaster General upon his determination that there is need for readjustment of the rate structure to publish his findings and his proposed changes in the Federal Register. It further requires that he afford opportunity to all interested persons to present either orally or in writing their views and arguments with respect to the proposals.

Section 106. This section will require the Postmaster General to consider all relevant matter presented to him and then to file with the Congress a statement of his findings with respect to the necessity or advisability of making rate adjustments and his specific proposals for such adjustments. This section further establishes a procedure similar to that established for reorganization plans. Under the procedure, the rates proposed by the Postmaster General will become final unless (1) prior to 90 days after the filing, the Congress passes a concurrent resolution stating it does not favor the changes, or (2) in the event the Congress does not pass this resolution, the President withholds his approval.

Section 107 establishes the reorganization plan procedure to be observed by the Congress under the bill.

Mr. NEUBERGER. Mr. President, in this age of the nuclear threat, we know that war cannot benefit anyone, whether he be on the winning side or the losing. But if there is no one who benefits from war, there are still those who profit from armed peace.

Mr. President, in this age of the nuclear threat, we know that war cannot benefit anyone, whether he be on the winning side or the losing. But if there is no one who benefits from war, there are still those who profit from armed peace.

The last year of World War II spending was fiscal year 1946. In fiscal 1947 our national expenditures on military security, which include atomic energy and military foreign aid, were $14.6 billion, about 6 percent of the gross national product. In fiscal 1948 they were $12.3 billion, in 1949 they were $15 billion, and in 1950 they were $14 billion. In other words, in the 4 years of the Truman administration prior to the Communist attack in Korea, our defense expenditures averaged about $14 billion annually. This was approximately 5 percent of our national product, which during these same years expanded by $50 billion.

DEFENSE COSTS REMAIN HIGH

In fiscal 1952, at the height of the Korean war, we spent on defense $42 billion. Since that time annual defense expenditures have not fallen below $40 billion. There is no reason to believe that we may be able significantly to reduce these expenses in the foreseeable future if we are to fulfill our responsibilities as a world leader.

The administration's budget for fiscal year 1960 calls for the expenditure of $45.8 billion for major national security. This sum represents nearly 60 percent of all budget expenditures and almost 10 percent of the predicted gross national product for the calendar year 1959. While it would be foolish to deny that there are important secondary benefits involved, it is, nevertheless, true that the principal beneficiaries are those who own or operate firms engaged in producing defense items.

A story in the Washington Post and Times Herald of Tuesday, March 3, 1959. reported that the net income of Aerojet-General Corp., a subsidiary of General Tire & Rubber Co. and the largest solid-propellant rocket-fuel producer in the United States, rose to $6,028,000 for the fiscal year ended November 30, 1958, compared with $3,818,000 in the previous year—an increase in earnings of over 56 percent. According to the Sunday New York Times of March 1, 1959, stock in General Tire reached a 1958–59 high, some 207 percent above its low, while stock in Thiokol Chemical, next in size in this field, realized a gain of some 230 percent. The Times reported that Thiokol's sales in 1957 were $30,947,457 and estimated 1958 sales at more than $80 million—over 2½ times greater.

Yet in the same issue of the Post to which I referred, there appeared an article citing a tabulation by the First National City Bank of New York of earnings reports issued by 2,219 corporations which showed aggregate net income in 1958 down 12 percent from 1957. But this effect of the recession was little felt in many defense-related firms. Weapons soared while other corporations often suffered.

ARMAMENT BOOM BENEFITS SELECTIVE

Massive profit from defense business is, of course, not restricted to missile fuel manufacturers. Aircraft, automotive, petroleum, and other industries have gained from the armament boom.

Mr. President, I want it clearly understood that I do not challenge the need for large defense expenditures. I have supported appropriations believed to be necessary for our security in the past, and I shall continue to do so. As I indicated previously, it is possible that we are not allocating enough of our resources for the protection of the United States and fulfillment of our obligations to the free world. But I think that it is time that we recognized the financial impact of these expenditures on corporate profits. When we contemplate the incredible complexity of modern defense technology, we realize that large defense budgets are here to stay. Yet, I do not believe that we should automatically condone the type of limited prosperity which they imply.

Taxation of unreasonable, windfall profits resulting from certain defense and economic necessities facing our Government is a complex and difficult realm of policy. We have accumulated years of experience over the past decade and a half with techniques, programs, and devices in the field. I do not pose as an expert in this area. Accordingly, I am not today presenting original legislative proposals for excess profits taxation. The bill which I am introducing is one whose text and provisions previously have won the approval of the Senate.

My bill to reimpose the excess-profits tax does not attempt to redraft all of the technical and complex provisions of that law, as we last knew it. Perhaps some of these provisions would need to be redrafted in the light of changed conditions. This could easily be done by the Treasury Department and by the congressional committees which deal with taxation, if the basic decision should be made to reimpose an excess-profits tax.

PURPOSE PUBLIC DISCUSSION

For the sake of directing attention and study to the question of this basic decision, however, my bill simply proposes to reimpose the excess-profits tax of the 1950 act for the taxable years ending after June 30, 1959, and beginning before July 1, 1961. Such amendments as are incorporated in my very brief bill itself are merely intended to bring that earlier excess-profits tax act up to date by changing from provisions of the Internal Revenue Code of 1939 to the provisions of the new Internal Revenue Code of 1954, and by moving up the governing dates accordingly.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1296) to reimpose the Excess Profits Tax Act of 1950 effective for taxable years ending after June 30, 1959, and beginning before July 1, 1961, introduced by Mr. NEUBERGER, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any contrary provision of the Internal Revenue Code of 1939 or the Internal Revenue Code of 1954, subchapter D of chapter 1 of the Internal Revenue Code of 1939 shall apply to taxable years ending after June 30, 1959, and beginning before July 1, 1961.

SEC. 2. Effective with respect to taxable years ending after June 30, 1959, and beginning before July 1, 1961, subpart A of part III of subchapter N of the Internal Revenue Code of 1954 (relating to foreign tax credit) and chapter 6 of the Internal Revenue Code of 1954 (relating to consolidated returns) are amended so as to include the provisions of the amendments to the Internal Revenue Code of 1939 made by section 302 of the Excess Profits Tax Act of 1950 and by section 301 of such Act insofar as it relates to subchapter D of chapter 1 of the Internal Revenue Code of 1939.

SEC. 3. In applying the provisions of subchapter D of chapter 1 of the Internal Revenue Code of 1939 to taxable years ending after June 30, 1959, and beginning before July 1, 1961—

(1) Any reference in such subchapter to any provision or term of the Internal Revenue Code of 1939 (other than to a provision within such subchapter) shall refer to the corresponding provision or term of the Internal Revenue Code of 1954;

(2) The dates 1946, 1947, 1948, 1949, 1950, 1951, 1952, and 1953 wherever used in such subchapter shall refer to 1954, 1955, 1956, 1957, 1958, 1959, 1960, and 1961, respectively; and

(3) The provisions of subtitle F of the Internal Revenue Code of 1954 (relating to procedure and administration), other than subparagraphs (A) and (B) of section 7851(a)(6), shall apply with respect to the tax imposed by such subchapter.

Mr. NEUBERGER. Mr. President, I do not suggest that the proposals which I have advanced this afternoon are by any means the only revenue sources suitable for congressional exploration. The junior Senator from Wisconsin [Mr. PROXMIRE] pointed out on Monday that a special audit by the Internal Revenue Service has indicated that the Federal Government is losing $2.6 billion annually due to tax evasion in connection with the income tax. The Senator announced at that time that he was writing to the IRS to determine precisely what percentage of income tax returns are audited, the cost of auditing, recoveries traceable to tax auditing, and the additional revenue that may be derived from performing a more detailed audit. I look forward to his report, and hope that it will result in affirmative action by the Congress.

Likewise, I believe that we should examine carefully the tax on capital gains, various excises, and tax treatment of different groups and individuals on the basis of special distinctions.

Mr. President, I do not wish to have it thought that because of my advocacy of the four tax proposals which I have just discussed that I have become a victim of the balanced-budget fetish.

I do not believe that there is anything sacrosanct about any item now in the President's budget. Nor do I believe that a program outside the President's arbitrary framework is untouchable. The administration has created a mythical balanced budget which was achieved on paper a year and half before it was possible to actually balance the books—and with heavy reliance on revenue measures not yet law, for example, the motor-fuels tax increase.

Mr. President, I wish to emphasize the point that even the present budget, which has been sent to Congress by the White House, for $77 billion, cannot be regarded as balanced unless Congress increases motor fuel taxes and increases postal rates. Two of the bills which I have introduced today are intended to accomplish that purpose. Therefore, I believe it is wise that Members of the Senate recognize the basic, unassailable fact that we are not talking about a balanced budget of even $77 billion unless two of the revenue measures which I have introduced here are enacted into law.

The fundamental purpose of the budget is to weigh "opportunity costs," the price of giving up one thing so as to do something deemed of greater importance, the division of resources between the public and the private sectors of the economy, between competing programs within the budgetary framework.

The fact that a particular program has accumulated a hoary tradition of congressional support is no argument in itself for its continued Federal backing. The budgetary procedure is one of review and allocation. It should not be stultified by habit or pressure.

Nor do I wish to leave the impression that concern with the questions of inflation or deficit spending has caused me to lose sight of the problems of full employment and maximum growth which face us today.

EMPLOYMENT, GROWTH GOALS VITAL

In this session, as in the past, I urge enactment of a broader housing program, liberalization of unemployment compensation, passage of a depressed areas bill to relieve those living in sections of chronic unemployment, increase and extension of the minimum wage law. I again support measures to provide Federal assistance to the States in classroom construction, extend Federal help offered airports, authorize construction of water control projects. All of these measures will have a beneficial effect on growth and employment and will tend to increase tax revenues and aid in solving problems of stagnation which have appeared in the "post-recession" economy.

But while I recognize these facts, I am disturbed by the continued reluctance to seek new revenue sources. Increasing concern is being shown as to placement of the public debt. There exists the possibility that debt monetization may increase through the commercial banking system more rapidly than economic growth, thus supplying a potential source of inflation.

Interest and service charges involved in bond financing add to the cost of the program to be implemented. These costs benefit directly only the lenders. Interest payments in fiscal year 1960 are estimated at $8,096 million. In fiscal year 1955 the figure was $6,438 million. In 5 years interest costs increased over 20 percent. Today interest payments represent 10.5 percent of total budget expenditures—more than we will spend on all the Federal functions of commerce and housing, natural resources, and labor and welfare.

Mr. President, that proportion of GNP represented by nondefense expenditures by the Federal Government has declined every year since fiscal year 1954 with the exception of 1958 when special stimulatory measures were taken to aid the economy in recovering from the recession. I believe that if we are to effectively provide the goods and services which our country needs, we must consider increasing that share of resources allocated to the public sector through taxation. As Oliver Wendell Holmes once said: "Taxes are what we pay for civilized society."

I share with Governor Nelson Rockefeller of New York the view that we should not shove off onto the backs of future generations our own burdens today. They will have plenty of problems of their own. Are we self-sacrificing enough to meet the test of the 20th century? This question is implicit in the revenue-raising measures I have introduced in the Senate this afternoon.

In his thoughtful syndicated column for March 5, Mr. Walter Lippmann has called for higher taxes in order to meet our ever-rising duties in our own land and in the world. This column appeared here in the Washington Post and Times-Herald and in the Oregonian of Portland, Oreg. I ask unanimous consent, Mr. President, that it be printed in the RECORD with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STULTIFYING DOGMA

(By Walter Lippmann)

The President's budget is now a football in a political scrimmage. Both parties are pretending that they are struggling to bal-

ance the budget. In fact neither the administration nor the Congress shows any sign of being willing to vote the taxes which are absolutely essential if the budget is to be balanced.

As of now, both parties regard as untouchable the income tax rates which were fixed in 1954, the date of the Eisenhower reduction of taxes. The President's budget plan, if we accept some rather fancy calculations, can be brought into balance—but only if Congress will raise postal rates and increase the gasoline taxes. As Congress is certain to reject the new taxes, the official theory of the Democrats seems to be that they can balance the budget by cutting down on what the President has asked for in foreign aid.

Both parties have now worked themselves into a jam which, considering the state of the world, is not an inspiring thing to look at. The Republicans have gotten themselves into a position where they must save on spending for native American needs—such as education and public facilities, almost certainly also the national defense. But the Republicans, as the great savers, are implored by the President to spend abroad on foreign aid the sums they would like to spend here at home.

The Democrats on the other hand have worked themselves into the embarrassing position where they, the party of Wilson, Roosevelt, Truman, and Stevenson, are threatening to save on foreign aid in order to spend more at home.

Surely, there is something inherently absurd in a situation where the Republicans are the globalists and the Democrats are the isolationists. Could such a topsy-turvy situation have developed if politicians in both parties had not forgotten the realities of our national needs while they play politics with the budget and with taxes?

What has happened to all these earnest and patriotic men? They have become entangled in a dogma which few of the Members of Congress and none of the leaders in Washington have the courage to challenge. What is the dogma? Is it that the budget should be balanced? No. The budget should if possible be balanced, and if that is impossible, there should nevertheless be a serious attempt made to balance it.

The dogma which confuses the whole situation and the position of both parties is that the budget must be balanced without raising the income tax rates. The crux of the matter is the acceptance by both sets of political leaders of the dogma that the income tax rates of 1954 are sacrosanct.

Once that dogma is accepted, the budget cannot be balanced except by two equally unacceptable methods. One is to balance it by taxes on consumption. This is something that Congress will not now do. The other method is to balance the budget at the expense of our national defense and of our foreign policy, and of our internal public needs and development. This is something that the country cannot afford to do.

Here, having accepted the dogma about the 1954 income tax rates, we have locked ourselves in a room from which there is no decent exit.

What is in prospect now, unless there is a revival of national leadership at both ends of Pennsylvania Avenue, is, first, a budget which does not balance because Congress and the President between them will not produce the taxes necessary to balance it; second, a budget which does not support our national interests at home and abroad, and will, therefore, have to be supplemented in the near future by extraordinary appropriations.

While this is going on we shall have to pay the price of having neglected our national needs because we were too soft and too timid to tax ourselves enough.

STANDARDS OF FOREIGN LANGUAGE PROFICIENCY FOR THE FOREIGN SERVICE

Mr. SALTONSTALL. Mr. President, last Monday I introduced for myself and the distinguished Senator from Montana [Mr. MANSFIELD] a bill (S. 1243) dealing with foreign language proficiency standards and training for the Foreign Service of the United States. The bill also contains provisions designed to facilitate recruitment for the Foreign Service.

The United States has come of age in the past two decades. We have once and for all joined the world. America's detached and distant situation, as Washington called it in his Farewell Address, is gone like yesterday's snows. And gone with it is any possibility of following Washington's advice to steer clear of the foreign world.

Largely because of the recentness of our advent to the position we now occupy in the world, our country is in a comparatively immature stage in preparing its people for life as citizens of a leading international power. By and large American educational processes and family life are still inner directed relative to the rest of the world. There are, however, many developments in education which are turning our people more and more to an "outer directed" orientation vis-a-vis other nations and their people.

Let me mention a few:

In January 1948, Congress passed the U.S. Information and Educational Exchange—Smith-Mundt—Act, Public Law 80-402, which gave the Government permanent authority to engage in worldwide educational and cultural exchanges with the people of other countries. The semiannual reports of the Secretary of State and of the U.S. Advisory Commission on Educational Exchange contain a review of the manifold programs and activities under the act.

Last year marked the 10th year of educational exchanges under the world renowned Fulbright Act, Public Law 79-584.

The program of university contracts abroad for technical assistance, administered by the International Cooperation Administration, has been in operation under the Mutual Security Act since 1951.

Title VI of the National Defense Education Act of 1958, Public Law 85-864, established a program to further the teaching of modern foreign languages not generally taught in this country and to provide for studies necessary for a full understanding of the areas in which such languages are commonly used.

Several institutions in my State of Massachusetts are leaders in various fields of international studies. Among these are my own alma mater, Harvard University, which has a host of programs and activities at the undergraduate and graduate levels; the University of Massachusetts, which is participating in faculty-exchange programs in Japan and Venezuela under ICA and USIA, respectively; Tufts College and its Fletcher School of Diplomacy; Boston University, which has one of the Nation's leading African area studies programs; Massachusetts Institute of Technology and its Center for International Studies, which has done excellent work under contract to the Foreign Relations Committee; Clark University, a leader in the study of geography; Newton College of the Sacred Heart, Mount Holyoke; Radcliffe, Smith, and Wellesley Colleges with well-established international student-exchange programs; Brandeis University with its Wien international scholarship program, and its Mediterranean, Near Eastern, and Judaic studies; Amherst College with its Merrill Center for Economics at which international summer seminars on major economic problems are held.

Recently I have been corresponding with Father Vincent R. Dolbec, A.A., dean of the faculty of Assumption College, about its newly proposed summer institutes in Russian and French languages and culture. The school has a proud reputation for its foreign-studies effort.

Only a few days ago I conferred with Dr. Glenn A. Olds, president of Springfield College, and heard something of the promising new projects which he is planning there.

Plainly, more and more is being done in America in the development of programs of international education, research, and study, whose long-run effect will be felt throughout the fabric of our society in giving all our citizens an orientation consistent with the role in the world which our Nation must play. Similar influences stem from the continually expanding oversea operations of American business enterprises and the steadily increasing activities of our many nongovernmental, informal educational organizations.

However, we would be deluding ourselves if we failed to recognize that there is room for much more to be done. We are indeed fortunate that the chairman of the Committee on Foreign Relations, the distinguished Senator from Arkansas [Mr. FULBRIGHT], recognizes this. The bill (S. 1205) which he filed on February 26, to amend the National Defense Education Act of 1958 to provide advanced training in foreign countries during summer vacation for teachers of foreign languages, is an imaginative and constructive proposal which deserves prompt and favorable consideration by the Congress.

The educational activities which are going on and which are being planned in America are but a small proportion of all that will have to be done before the vast majority of our citizens will be globally oriented; before our young people will come to regard an oversea career with the same interest and alacrity as they now view domestic careers. I commend to all Senators for study the hearing of the Foreign Relations Committee held February 18 at which Dean Harlan Cleveland, dean of the Maxwell Graduate School of Citizenship and Public Affairs, Syracuse University, and two of his associates discussed in most stimulating fashion the subject of the oversea Americans.

During the course of the hearing, Dean Cleveland made the following observations in talking about the urgency of

changing the attitudes of our citizens to make them more compatible with the role of our Nation in the world:

I am also painfully aware as an educator that there is a certain cycle in growing people, as there is in other forms of agriculture, and that if we have an outstanding personnel, oversea personnel service, including the Foreign Service and other forms of oversea civilian service in a generation, we will have to operate with the greatest urgency today in growing the kinds of people that will have to make up that service.

* * * * *

So the first thing is to put it on a long-range basis, and the second thing is to establish enough training and education programs around the country to begin to produce a real pool of qualified people.

I think there is much wisdom in these observations by Dean Cleveland. Perhaps their principal significance is their implication for the Foreign Service of the United States and our other governmental oversea operations, for they must recruit their personnel from the ranks of young men and women with the outlooks and qualifications which today's American education and family life impart to them. Until time and hard work have wrought the transformation in outlook and qualification of our citizens so as to create a real pool of first-rate oversea emissaries, it seems inevitable that there will have to be considerable orientation and language training of Americans who are to serve in our Government's oversea operations.

The principal center for such training within the Government is the Foreign Service Institute, which is doing a fine job in its crucial work.

Mr. President, I ask unanimous consent to have printed at this point in my remarks two interesting, recent magazine articles about the Foreign Service Institute.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Reader's Digest, February 1959]

OUR OVERSEAS TASK FORCE IN MUFTI

(By John Stuart Martin)

In a Japanese port, a brisk, Michigan-bred woman strides into a police station near the waterfront. She exchanges greetings with her good friend, the desk sergeant, and listens to what is troubling him this evening: Some American seamen have wrecked a tavern and have been locked up. Riding herd on such cases has long been one of this lady's specialties as a U.S. consul charged with matters maritime.

In New Delhi, India, a U.S. attaché who can read and speak Hindi pores over stacks of Blitz, a virulently anti-American journal. His task: To find out the editor's grievances and then try to clear up his misconceptions.

Somewhere in Southeast Asia, a U.S. consular official broadcasts a radio warning: "Attention, all American citizens. Attention. Call the U.S. consulate at once." With Red guerrillas approaching his area, he is preparing an emergency evacuation of American residents.

In the Foreign Service of the United States are about 4,500 such people, counting those on duty in State Department offices at home. Serving about 12 years abroad to 3 stateside, they staff 278 Foreign Service posts in 87 foreign lands.

Their duties are of two basic kinds: Diplomatic—maintaining friendly relations with foreign governments; and consular—protecting American lives, rights, trade, and property throughout the world. Ranging in rank from Ambassador down through minister to first, second, and third secretary, and from consul general to consul and vice consul, they are the unarmed custodians of our national honor and interest wherever our flag flies on a guest basis.

The instruments they use are mainly psychological and economic, ranging from money grants to cultural exchanges, from information and propaganda to farm aid. The job involves everything from making arrangements for Danny Kaye or Marian Anderson on a good-will tour to explaining Little Rock, juvenile delinquency, or Hollywood absurdities.

Recently I went to Washington to learn what kinds of people are now entering our Foreign Service, and how the corps is being trained for its crucial work. I was aware of the criticism that has been directed at our overseas representatives: That they are drawn from the most privileged groups, that their training prepares them to deal more with social amenities than with the realities of the cold war.

I found that in the last few years the entire concept of foreign service has been revitalized, thanks to the potent stimulus of the Wriston report of 1954, the personnel-policy study headed by Henry M. Wriston, then president of Brown University. Except at the very top, where the President still enjoys latitude in choosing Secretaries of State and Ambassadors as his personal representatives, entry into the Foreign Service is no longer possible through influence or affluence. From the bottom up the corps is entirely career, wide open, and highly competitive.

More than 4,000 candidates annually take the tough entrance exams at 65 educational centers throughout the country. Only about 150 are selected. No college degree is required, but usually some 65 percent of the winners have not only B.A.'s but M.A.'s, and 5 percent have Ph. D.'s. Average age is 26. Men outnumber women 15 to 1, but able women are prized.

Those selected through the written exams are screened orally for an exacting combination of traits: leadership, mental and moral fiber, special flair for languages, skill in political analysis. The men and women finally chosen are a remarkable cross section of the country's young talent, and could almost certainly climb fast in other professions. In the Foreign Service their pay begins at about $100 per week, and they know that 12 or 15 years must pass before that figure is doubled. The knowledge of their eliteness, plus the realization that they are performing a vital service, must be a large share of their reward.

To the Foreign Service Institute, founded in 1946, is entrusted the job of turning these new recruits into accomplished diplomats. Operating today with a budget commensurate with its importance in our national life, the Institute has become a highly professional college, where making friends and influencing people on a world scale is approached as a fine art.

Now housed in new quarters a couple of miles up the Potomac from the Pentagon, the Foreign Service Institute is headed by Harold Boles Hoskins, 63, a sharp-witted former textile executive with years of foreign-trade experience. To its old basic-training course for new Foreign Service officers there has been added a refresher course for promising midcareer people. Atop that, there is now a course for seniors who are eligible and needed to fill the highest Foreign Service posts.

The basic course for Foreign Service recruits lasts 12 weeks. It teaches the Service's history and its place among other Government agencies. Packed in tightly are lectures and seminars on large subjects like "Answering Criticisms of the United States Abroad," "Philosophy of World Labor Groups," Middle East problems, Communist strategy, international law. For the most part, however, the instruction deals with rules and tools: how Foreign Service posts operate, how to promote American trade, how to handle routine consular duties such as visas, admission of aliens, intelligence work. There are also field trips to such government agencies as an immigration center, an Atomic Energy Commission laboratory and the Agricultural Research Center at Beltsville, Md.

Perhaps one or two expert linguists in a class of 25 will go abroad immediately; the rest will stay in Washington for a year or 18 months, working at desk jobs in the State Department and continuing their language studies. For it has finally dawned on Washington that Americans are woefully clumsy with the most potent peace tool of all: the ability to speak other peoples' languages. There is now a crash program in language learning throughout the Foreign Service. Besides its Washington classes, the Institute runs language-study centers in Mexico City, Paris, Frankfurt, Beirut, Tokyo and Taichung (on Taiwan). Using texts and tapes from home and tutors hired locally, it gives extension courses to some 2,700 U.S. employees at 158 overseas posts.

On the Institute faculty there are nearly 200 instructors, half of whom are foreign-born tutors in 22 languages. The school's corridors buzz at coffee breaks with conversations in Burmese, Cambodian, Persian, and other exotic tongues. The course is probably the world's most intensive. The method used is "overlearning"—constant reiteration to achieve speech that is instinctively correct. Hour after hour, in groups of six or less, the trainees sit in cubicles with phonetic lesson sheets before them and learn, by repeating phrases after the tutor, to coordinate tongue, ear and brain in foreign patterns. They also practice "kinesics," the motions and gestures of head, hands and body proper to the language they are learning.

In off hours the trainees have at their disposal an audio-tape practice room, nicknamed "Babel," containing three dozen booths, each with a two-track tape recorder. Turning on his machine, the student hears a tutor speak. He echoes the words into his mike, then plays back both voices. Spotting his own mistakes, he can erase his track, then try over and over again. In the tape library are rolls containing courses in 43 languages.

Wives are considered so important that, before posting abroad, they are invited to the Institute for coaching in foreign amenities—dress, deportment, handling of servants. In charge of this program is Mrs. M. Williams Blake, a Foreign Service widow with experience in nine countries.

For the Institute's mid-career course, promising officers of 10 or 12 years' service are picked, in groups of about 20, to become higher-powered administrators, analysts, negotiators. Each group is first sequestered for a fortnight on an old Army post at Front Royal, Va., where they study typical problems a mission might face. Example: What aspects of U.S. life should an American contribution to an international trade fair stress?

Back in Washington, the group plunges into sociology. Professor Marion J. Levy of Princeton, for one, expounds to them such subjects as the contrasting effects of Westernization on the old cultures and politics of China and Japan, and what lessons the contrast teaches about the modernization of underdeveloped countries today.

Then, to learn the inside facts about our national policies and our present strength, the midcareerists are briefed by top Government brass.

Gordon Gray, special assistant to the President for national security affairs, ex-

plains the workings of our highest, most secret policy body—the National Security Council. The Chiefs of the State Department's Bureau of Intelligence and Research and of the Central Intelligence Agency set forth their techniques for studying our country's friends and foes. George Allen, boss of the United States Information Agency, lectures on good propaganda and bad. ("I don't like that phrase, 'selling ourselves.' One hard fact is worth a gallon of hogwash.")

A Congressman reports congressional temperatures on foreign policy, and what determines them. Leading publicists interpret present-day U.S. culture and attitudes, which often startle Foreign Service officers after years abroad. The midcareerists may also hear authoritatively from industry, labor, the pulpit and universities.

The Institute's senior course, new last September, enrolls only a dozen Foreign Service officers of the three top ranks (average age, 43), plus maybe a half dozen seniors from other services, including the military. Among them are officers already serving or ready to serve as Ambassador, minister, consul general. Much of their 10-month course is devoted to advanced studies of foreign policy, and to preparing analytical reports on trips to U.S. labor and trade congresses, scientific conclaves, meetings of bar and medical associations, which bring them up to date on the climate of American society.

"If we are to insure our future," Senator LEVERETT SALTONSTALL, of Massachusetts, said recently, "our Foreign Service officers would appear to be our most promising overseas task force."

[From the Saturday Evening Post, Jan. 3, 1959]

SCHOOL FOR MODERN DIPLOMATS

(By Henry F. and Katharine Pringle)

Not very long ago, the typical young man who chose the United States Foreign Service as a career was a socialite, a graduate from an eastern seaboard college, had a private income and took pleasure in wearing striped pants. He limited his official and social contacts mainly to other diplomats. He spoke cultivated English and perhaps halting French or German. The mere notion of learning Arabic, Chinese, or Malayan would have filled him with well-bred distaste. Foreigners should, of course, speak English.

Happily, much of this has changed. Important in the evolution of our new, more practical style in diplomats is a unique school, the Foreign Service Institute, operated by the State Department in Arlington, Va., where successful candidates for the Foreign Service come for training. The backgrounds of the students are varied. They come from every State in the Union, plus Hawaii. They are graduates of many different colleges, some quite small and obscure. Many are ex-servicemen; some have had experience as businessmen, newspaper reporters, teachers, lawyers, and engineers. Ten percent of them are girls—a fact which would have caused yesterday's diplomat to choke on the olive in his martini. Before going abroad, all of them will, through an intensive new method, learn to speak at least one foreign language.

The primary purpose of the Foreign Service Institute is to prepare the people who represent the United States in foreign lands to do the best possible job. This requires a broad curriculum which is offered to an average enrollment of about 3,000 a year, including 1,000 full-time and 2,000 part-time students. The full-time students include recently appointed Foreign Service officers who are undergoing 3 months of basic training, followed by another 4 months of special language training if they need it. Usually there is a handful of senior officers, even an occasional Ambassador, taking specialized training. In addition, the FSI is open to personnel of a number of Government agencies concerned with foreign affairs, such as the U.S. Information Agency and the International Cooperation Administration. Also among the students, all voluntarily, are the wives of junior Foreign Service officers who want to learn something about the culture and customs of the strange posts for which they are soon to depart—places such as Addis Ababa, Saigon, Kabul, or Taihoku. All students, except the wives, of course, draw full pay while they are going to school.

The novice diplomats are instructed in everything from consular procedures to the most effective ways of answering foreigners' criticism of the United States. To the wives are unfolded the mysteries of diplomatic protocol. Informal meetings, limited to the ladies, are arranged with experienced wives who have served from Oslo to Cape Town. No questions are barred. At one such session was a bright-eyed girl with a blond pony tail. Not yet a wife, but a very earnest fiance, she was to be married to a junior officer just before he set out on his first assignment.

"Looking ahead," she said, practically, if prematurely, "will I be expected to go to official functions when I'm pregnant?"

When the older wives stopped laughing, they told her that the answer depended somewhat on the post. She would certainly be welcome in most places, particularly in Latin America, where motherhood is warmly approved. On the other hand, the tribal taboos of a few African chiefs forbid receiving women in an expectant condition.

Common-sense hints to the wives are given under the direction of Regina Olszewski Blake, widow of a Foreign Service officer, who, during the 16 years of her marriage, accompanied her husband to Warsaw, Basel, Tampico, Teheran, Rome and Dakar. A warmhearted, friendly and reassuring woman, she warns the youthful wives that their jobs abroad sometimes will be more difficult than those of their husbands, who will spend most of their working hours in the relatively American atmosphere of their offices. The wife is on her own in an alien land. She must manage the house, take care of the children, direct servants who often pretend to know more English than they really do, buy unfamiliar foods in crowded native markets and handle mechanical breakdowns. Pointing up the need for resourcefulness, she tells the story of the wife at a remote post who chewed vast quantities of gum in order to make plugs for leaks in the plumbing.

Because the thirty to forty wives in any one class may be going to thirty or forty different posts out of the total of 278 the United States maintains around the world the general lectures cannot take up specific problems peculiar to one area. But Mrs. Blake keeps in her office a Post Guidance file which all wives are urged to consult. Here is detailed information, supplied by experienced Foreign Service wives on such things as food problems and social customs in all parts of the world. And the new officers' wives are given personal briefings on practical problems in their future posts. If possible, Mrs. Blake arranges for a student who is going to, say, Afghanistan, to talk with a wife who has been there. In such a case the young wife may learn that she and her husband cannot expect to have Western-style contacts with Afghan couples because the women there are kept in strict purdah—seclusion. Questions about housekeeping get answered in these interviews. How long will a sheet last when washed on the rocks in Djakarta? About as long as when subjected to a Washington laundry, it appears. Is the water safe to drink in Teheran? Not unless it is from the Embassy's private water supply, as the city water system consists of open jubes, or ditches, which also are used for washing clothes, bathing, and rinsing dishes.

The wives' course is not limited to protocol and household hints. Along with secretaries, clerks, and men from other Government agencies assigned abroad, they may take a 2-week orientation course in the fundamentals of American oversea missions. Mrs. Florence Finne, a slim, composed, and pretty Foreign Service officer, presides over these sessions, bringing in speakers from State and other departments to discuss their specialties. They explain the organization of Embassies and consulates. They outline Communist stategy and tactics. They take students through a quick survey of the American scene in politics, labor, art, agriculture, music, and architecture to make sure that representatives of the United States abroad will be able to talk intelligently about their homeland.

The Foreign Service Institute is tackling the serious challenge of language by spending 60 percent of its $5 million budget for the teaching of foreign tongues. The system is called intensive or sometimes the Army method. During World War II it was found useful for teaching Japanese and Pacific-area languages, which had been considered extremely difficult to learn. The FSI language classes are tough.

At first, they purposely avoid teaching rules of grammar, and rely on long hours of drill until the new vocabulary and idiom are so well learned that the pupil thinks in the language.

Under the new system an astonishing number of Foreign Service officers are mastering not only Spanish, French, and German but also such tongues as Russian, Polish, Czech, Serbo-Croatian, Finnish, Greek, Turkish, Arabic, Hindustani, Mandarin Chinese, Japanese, Burmese, and Korean. A few students simply cannot adjust their vocal cords or curl their tongues in the right way. Once in a while a student, unable to stand the intensive drill, collapses into hysterics and quits. But such failures are rare.

This new emphasis on learning at least one foreign language well reflects a change in U.S. conception of diplomacy since World War II. The old idea was that our representative abroad was a delegate from our Government to the foreign government. The modern conception is that he is also our representative to the people of the host nation. It is no longer good enough for the Foreign Service officer to associate mainly with a few members of the foreign ministry. He has a basic obligation to know the people—something best achieved by talking with them in their own language.

In November 1956, Secretary of State Dulles approved a new language policy for the Foreign Service under which all officers would be expected to acquire a useful knowledge of at least one foreign language within 5 years or within the same period after appointment, and preferably fluency in a second language as well. Junior officers would not be promoted until they had met the requirement. Exceptions would sometimes be made for senior officers or others whose post did not provide opportunities for language learning. It would hardly have been feasible to force the minority of political Ambassadors to become fluent before taking up their duties. But our Ambassador to Brazil, Ellis O. Briggs, a career officer who already knew Spanish, volunteered to take 3 months of intensive training in Portuguese at the FSI. So did Mrs. Briggs.

This past year the FSI had classes going full time in 27 different tongues. In charge of this rather staggering program is Howard E. Sollenberger, dean of the School of Languages. He has been bilingual from childhood, having been raised in North China by missionary parents. Before joining the FSI, Sollenberger taught Chinese to workers of the United Nations Relief and Rehabilitation Administration and prepared them for service in the Far East.

Sollenberger has a staff of about 100 tutors or native speakers, some of them part time, and 20 full-time linguistic scientists—many of whom oversee classes in more than one language. The linguistic scientists worry the students as little as possible with textbook rules. People communicate by talking far more than by writing; besides, the way a language is written is often no key to the way it is spoken.

The new policy already is beginning to pay dividends. Take the case of a youthful consul, Robert E. Barbour, assigned to Vietnam. Before going to his post he was sent to Georgetown University, in Washington, for his preliminary work in Vietnamese, and then went through several months' grind at the FSI. When he reported to Ambassador Elbridge Durbrow in Vietnam, he was instructed to spend his first 3 months in further concentration on the language. By the time the new American consulate opened at Hué, a seaport north of Saigon, the young man had made the acquaintance of all the provincial chiefs and other officials in his area. He invited 180 of them to the opening ceremonies, where he translated the Ambassador's remarks and those of the Vietnamese representative. Durbrow reported to the State Department that the Vietnamese were deeply gratified by the new consul's fluency in their own language.

Reading and writing are not ignored in the FSI's language classes. The importance of being able to read the language of the host country was demonstrated not long ago in Indonesia. Until an officer who could read the native papers in the original language was sent to Djakarta, the State Department had not been fully aware of their anti-American tone. The Embassy's Indonesian employees had been clipping and translating only the news and editorial items which, they thought, would please their American bosses.

All this reflects the postwar American anxiety to make friends and influence people abroad. The same spirit pervades the whole FSI curriculum. An anthropologist, D. Scott Gilbert, is on hand to impress on students the importance of understanding and respecting the cultures and customs of other peoples. Gilbert shares with other Institute lecturers a tendency to toss off high-flown anthropological terms, to caution against "ethnocentricism" and "culture shock." But the talks boil down to a very sensible warning not to go abroad with the set conviction that the American way of life is superior in all ways to all others.

Another name for the FSI might be School for Dos and Don'ts in the Foreign Service. These classifications are hammered into the young men and women from 9 a.m. to 5:30 p.m., with case histories to underline the point. There was, for instance, the brash junior officer who had been assigned to visa work in Manila. An attractive young Filipino girl came to the consulate to have her passport validated. The vice consul looked at her pretty face and legs and made a wisecrack.

"I suppose you're going to the United States to snag yourself a rich husband?"

The girl's father happened to be a prominent official of the islands. She reported the vice consul's impertinence to papa, and within a couple of weeks the offending young man was on his way home, his Foreign Service career at an end.

Advice on how to make use of the customs of the country is given by experts such as William Barnes, former chief of the State Department's foreign-reporting staff. One morning last year Barnes concluded a solemn discussion of the problems of obtaining and analyzing economic data abroad with a story of his own experience in Finland. One of the best ways to collect economic information there, he had discovered, was to attend a sauna, or steam-bath party, with a group of Finnish bankers and industrialists. A sauna involves being parboiled, naked, at high temperature in a steam room, after which the participants plunge into the frigid waters of an adjoining lake. Thus stimulated, and still naked, the guests relax on a porch with their host and sip drinks. At this stage, said Barnes, they are likely to talk very frankly about their problems.

"Under the circumstances," he observed, "it is hard for them to play their cards close to their chests."

How and how not to use an interpreter is the subject of a hilarious FSI skit which acknowledges a debt to "The Teahouse of the August Moon." Performed regularly for each new group of junior officers, the purpose of the playlet is to dramatize the mistakes that an inexperienced Foreign Service officer might make.

The scene is a seaport town on Okinawa. In a performance last fall, Richard Noss, of the language staff, played the role of a newly arrived American vice counsul calling on the mayor. Two of the Institute's tutors, Kiyanao Okami and Teruki Komatsu, represented the mayor and the vice consul's interpreter. The three scholars showed surprising histrionic talent. The vice consul was brusque and in a hurry. He told the interpreter to tell the mayor he had only fifteen minutes.

"Express to the mayor some noble sentiments and all that," he said. "Keep it brief. Tell him three United States Senators are arriving next week and I'm in charge of the reception."

An interminable conversation in Japanese, the language used in Okinawa, ensued between Messrs. Okami and Komatsu, with much bowing and scraping, followed by this dialogue in English:

"VICE CONSUL. What was that all about?

"INTERPRETER. He talk and talk a long time.

"VICE CONSUL. I could see that. What did he say? Keep it short.

"INTERPRETER. Mayor expressed appreciation of kind sentiments. Said he wished to discuss important matter—American airbase expansion which robbing the farmers of their land.

"VICE CONSUL. Oh, tell him all I want is to have him go to the airport to meet the Senators, to take some important people with him. Nanki-Poo! Funny costumes! All that kind of stuff."

Okami and Komatsu engaged in another long exchange in Japanese. The interpreter then explained that the mayor was inviting the American official to his house for tea, to which the vice consul replied that he hated tea, "but I'll take a rain check."

"Rain check?" asked the puzzled interpreter. This involved the vice consul in a long explanation of the rules applying to American baseball tickets.

After the playlet ended, amid laughter, Noss summed up its lessons. The misunderstandings were not merely funny, he warned. They might have been disastrous. The consular officer should have addressed his remarks directly to the mayor, and not to the interpreter. He should have assumed that the Okinawan official understood some English, as he probably did. The vice consul should not have used American colloquialisms. And obviously he should not have ignored the expected formalities, nor rudely brushed aside the subjects which the mayor wished to raise.

The Foreign Service Institute is without doubt a livelier and more effective teaching agency today than it was a few years ago. The school was established in March 1947. With the greatest expansion of the Service after World War II, it was essential to train large numbers of new officers to get along with foreign peoples and to report their activities accurately. But within the next few years the morale of the State Department and of the Foreign Service slumped, due largely to the claim of the late Joseph R. McCarthy that Communists had infiltrated. The Institute became something of a stepchild, badly housed on C Street at a short distance from the State Department.

In March 1954, the Secretary of State appointed a distinguished committee, of which Henry M. Wriston, then president of Brown University, was chairman, to appraise the Department's personnel policies. Its report was highly critical. The Foreign Service officer corps, it found, numbered only 1,285, the lowest strength in 5 years. Only 355 officers had been appointed to the beginning-officer classification in the past 8 years. One remedy proposed by the committee was that Foreign Service officers should be recruited from all parts of the country, bringing the Service closer to a democratic ideal.

Today there is no shortage of candidates. Last year nearly 340 new junior officers were selected from among 6,500 hopefuls who took the examinations. Many are attracted by the lure of strange places, by an aura of glamour which still clings to the Foreign Service. They can be sure of fairly complete security and of salaries ranging from $4,730 at the bottom to a top of $20,000, plus some expense allowances.

In its criticisms of the Foreign Service, the Wriston report described the Foreign Service Institute as having fallen into the "intellectual doldrums." It had not measured up to the standards envisioned by Congress, which had hoped for an institution comparable to the Naval and Army War Colleges.

In March 1955 Harold B. Hoskins was made Director of the FSI, and the Institute began a rapid emergence from obscurity. Hoskins, in his early sixties, is not an educator, but a businessman of wide experience. Born in Beirut, the son of missionaries, Hoskins' hobby for years has been the role of the United States in foreign affairs. He has often served the State Department as a consultant on Middle Eastern economic problems and gone on missions to Arab nations. His ability as a salesman, acquired during his industrial career, has been of great value in explaining the FSI's budget to congressional committees.

Congress has been fairly generous. Among other things, the FSI no longer need apologize for its quarters, which are efficient, if not luxurious. Since the spring of 1957 the classrooms, offices, and auditorium have been housed in what used to be the lower-floor garage of Arlington Towers, one of the plush apartment developments on the outskirts of Washington. The space has been divided into two floors, and has a functional all-glass front that extends for about a block along one wing of the building. This setting gives more of a government than a campus atmosphere to the school.

The prestige of the Foreign Service Institute, which was quite low for a time in the eyes of State Department brass, gained ground in the last 3 years. Last September even Secretary Dulles took an hour out of his whirlwind schedule to inaugurate the first senior-officer course, the State Department's equivalent of the Defense War College.

Hoskins and his assistants are constantly pondering what should be added, subtracted or modified to keep the FSI in tune with needs of the Foreign Service. They are now concerned that the courses for midcareer officers may not be stimulating enough independent thinking. They are worried about the area specialization courses, although the very fact that the Foreign Service now has some 400 specialists trained in Near and Far Eastern and Iron Curtain country languages and problems is encouraging. Should there be more economics taught at the FSI? More on international-labor movements?

Most impartial observers of the FSI would probably agree that its intensive language training and its advice for living and working with other peoples are its major contribu-

tions to diplomacy in today's troubled world. The down-to-earth tutoring goes much deeper than protocol or the right clothes for Rangoon. The young officers, their wives and clerical personnel are all urged to keep up their hobbies abroad or develop some, for many doors to friendships will thereby be opened. They are told about the consul who was assigned to Lourenço Marques, the capital of Portuguese Mozambique. He was an avid amateur ornithologist and was delighted to find that few places in the world had so great a variety of strange birds as this outpost He made contacts with the local ornithologists and won their gratitude by giving his leisure time to helping out at the natural-history museum. Then there was the diplomat's wife who was a ham radio operator. When an earthquake tumbled buildings in Quito, Ecuador, and disrupted communications, she was able to send out messages and assist rescue expeditions. She was decorated by the Ecuadoran Government for her services.

The young people who will leave shortly for their first foreign posts are warned against yearning for London, Paris or one of the other great capitals. The work at a smaller Embassy may be much more rewarding and important. They are also cautioned against being disappointed if they are assigned to consular work, as 60 percent of them are sure to be. The consul's job may not seem dashing, but it deals closely with people.

"We've got an American dying here. What shall we do?" is one of the more troublesome inquiries a consul may have from a hotel or boardinghouse. In a case some years ago a lazy but imaginative consul in Indochina solved his problem by persuading an American at death's door to take out French citizenship, "to avoid being a damned nuisance to me when you pop off." That sort of thing is frowned on these days. The consul is supposed to see that a fellow citizen felled by illness has proper medical attention and, if the worst happens, to locate the deceased's relatives, perhaps arrange a funeral, or to settle his estate. One consul found himself handling the sale of a large herd of cattle.

Live Americans abroad, however, are even more of a problem than dead ones—at least to a consul. They may demand anything on earth, including funds to go home. The Foreign Service is trained to help as much as it can, but there are limits. That is why one of the most respected rules taught its students by the FSI is: "Never lend your own money."

Mr. SALTONSTALL. Mr. President, the Foreign Service Institute offers what is perhaps the best intensive training in more foreign languages than is available in any other educational institution in the United States.

The purpose of the bill (S. 1243) which I have introduced with the Senator from Montana [Mr. MANSFIELD] is in part to establish standards of foreign language proficiency for our Foreign Service and to assure utmost use of the Institute's facilities in achieving and maintaining such standards.

While it is important to recognize that foreign language proficiency will not in and of itself assure high-caliber performance of overseas service, it is hard to conceive of such service being effectively rendered by Americans who are blind, mute and deaf to the language of people of the countries where they serve.

Secretary of State Dulles wrote as follows in the 19th semiannual report to Congress on the international education exchange program:

True communication among people of different cultures is greatly enhanced by the ability to speak and to read each others' language.

Surely no one can disagree with this statement.

In this connection, I am reminded of a statement by the great German poet, Johann Wolfgang von Goethe, who wrote:

A man who is ignorant of foreign languages is ignorant of his own.

Goethe's statement, probably made with only semantics in mind, has special subtlety and wisdom as applied to the task of communication in our oversea representation. The same is true of a statement by Samuel Johnson, which all of us who travel from Washington by train have seen many times over the entrance to Union Station.

He that would bring home the wealth of the Indies must carry the wealth of the Indies with him. So it is in traveling: a man must carry knowledge with him if he would bring home knowledge.

The application of these statements to our people who go abroad is dramatically illustrated in the much-publicized book "The Ugly American." This book has done much to focus public attention on the deficiencies in the international orientation of our people and the handicaps which these deficiencies impose on our oversea operations.

Mr. President, I ask unanimous consent to have printed in the RECORD some excerpts which I have made from the last chapter of "The Ugly American."

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[Excerpts from ch. 22, "A Factual Epilogue," of "The Ugly American," by William J. Lederer and Eugene Burdick]

It would seem a simple fact of life that Ambassadors to at least the major nations should speak those languages. Yet in France, Italy, Germany, Belgium, the Netherlands, Norway, and Turkey, our Ambassadors cannot speak the native tongue (although our Ambassador to Paris can speak German and our Ambassador to Berlin can speak French). In the whole of the Arabic world—nine nations—only two Ambassadors have language qualifications. In Japan, Korea, Burma, Thailand, Vietnam, Indonesia, and elsewhere, our Ambassadors must speak and be spoken to through interpreters. In the entire Communist world, only our Ambassador to Moscow can speak the native language.

If Ambassadors were mere figureheads surrounded by experienced, linguistically trained career diplomats, their inability to speak or read on the job would be little more than an insulting inconvenience to the local officials. * * * Unfortunately, Ambassadors are more than figureheads; they are in charge, and, like Sears, their misunderstandings can have grave consequences. Moreover, the career men on their staffs are generally not linguistically trained for their jobs. * * *

In his masterful analysis of the Foreign Service, John Osborne states that the most important element in a good Foreign Service officer is the faculty of communication. Yet, as James Reston reported in the New York Times of March 18, 1958, "50 percent of the entire Foreign Service officer corps do not have a speaking knowledge of any foreign language. Seventy percent of the new men coming into the Foreign Service are in the same state." These figures represent those who can speak no language other than their own—not even French, Spanish, German, or Italian. The number of Americans in the Foreign Service who can speak any of the more difficult languages is miniscule.

In addition to our Foreign Service staffs, we have more than a million servicemen overseas. Only a handful can speak the language of the country in which they are stationed, and when difficult military and scientific data are involved this handful shrinks to almost zero. So be it, but that our trained representatives in Asia are little better qualified in languages is unacceptable. On the other hand, an estimated 9 out of 10 Russians speak, read, and write the language before they arrive on station. It is a prior requirement. The entire functioning staff of Russian Embassies in Asia is Russian, and all the Russians—the officials, stenographic help, telephone operators, chauffeurs, servants—speak and write the language of the host country.

In the American Embassies the servants, the messengers, and the interpreters are locally hired. The telephone operator in almost every American mission and agency in Asia is an Asian. It is, of course, a maxim of espionage that one of the most useful agents is the planted employee. * * *

Because we must rely on interpreters who are almost always non-Americans, our on-the-spot information is both secondhand and subject to minor censorship and editing without our knowledge. The recent turmoil in Indonesia emphasized this handicap. We had to rely on native translators to interpret the press, the radio, and personal conversation. Following Asian etiquette, by which one avoids telling one's employer of matters which would distress him, the interpreters gave our diplomats rose-tinted reports of local sentiment and events. Only after a dangerous delay did it seep through to our soundproofed representatives that Indonesia was in the grip of political upheaval. In Indochina our military and diplomatic missions could speak only to the French, whose view of the rebellion against them was one-sided, to say the least. One of the authors seeking to hear the Vietnamese side of the question without using either a French or Vietnamese interpreter succeeded only through an American priest, who, like the Father Finian of our book, was fluent in the native tongue. Like the Russians, but unlike ourselves, the church realizes that its work in Asia cannot be done without close communication with Asians.

Blockage of information itself is not the only penalty we pay. Think, for a moment, what it costs us whenever an official American representative demands that the native speak English or be not heard. The Russians make no such mistake. The sign on the Russian Embassy in Ceylon, for example, identifies it in Sinhalese, Tamil, English, and Russian. The American Embassy is identified only in English.

John Foster Dulles stated what was in our minds when we wrote the stories of Colonel Hillandale, the Ragtime Kid, and John Colvin, on the one hand, and of Sears and Swift and Joe Bing, on the other. He said, "Interpreters are no substitute. It is not possible to understand what is in the minds of other people without understanding their language, and without understanding their language it is impossible to be sure that they understand what is on our minds."

* * * * *

Americans like Swift, who cannot speak the language, can have no more than an academic understanding of a country's customs, beliefs, religion, and humor. Restricted to communication with only that special, small, and usually well-to-do segment of the native population fluent in English, they receive a limited and often misleading picture

of the nation about them. A recent American ambassador to Ceylon—an able, extremely popular diplomat—had an experience which pointed up this dilemma. He had become intimate with the leaders of the political party in power, a group relict of colonial days composed largely of the rich and English-educated upper class. The ambassador apparently got all his information from them, because he gave no warning to our State Department before the nationalistic political upheaval occurred which suddenly left his friends with but 8 of 101 seats in the government.

On the other side of the ledger, we have told the story of the ugly engineer and Colonel Hillandale who, speaking the language, were able to go off into the countryside and show the idea of America to the people. These characters are based on actual Americans known to the authors. There are others like them; but by and large they are not beloved of the American officials in the various Asian capitals, and are a wild exception to the rule.

While a few Hillandales and the many Russians roam the barrios and the boondocks, most Americans are restricted, both by official tethers and by language barriers, to communion with each other. * * *

* * * * *

Vice President NIXON, in his National Press Club speech on his tour of Latin America, said, "I could have concentrated on a whole round of cocktail parties and white-tie dinners. If we continue to concentrate on that area we can figure we will lose the battle." What our diplomats need to do, he said, is to get out and mingle with students, labor leaders, and opinion makers, who comprise the "wave of the future."

* * * * *

In the stories of Major Wolchek and Major Monet, "The Iron of War" and "The Lesson of War," we have tried in fiction to describe a condition of avoidable ignorance. For years both we and our allies have put in much expensive effort trying to ferret out in advance the Communist plan for both tactical maneuvers and great conquests. Yet, during the struggle in Indochina the authors could find no American (or French) military or civilan official who had read, or even studied a precis of, the overall Communist operation plan contained in "The Selected Works of Mao Tse-Tung," published by Lawrence Wishart, Ltd., London, and International Publishers in the United States. A four-volume edition was published in 1954 but the basic material was available in print as early as 1934. (A useful shorter study is "The Organizational Weapon: A Study of Bolshevik Strategy and Tactics," by Philip Selznick, McGraw-Hill, 1952.)

In his remarkable work Mao, one of the brilliant tacticians of our time, analyzes almost every campaign and battle in which his Red Armies fought. He dissects every defeat (very few) and most victories, and he explains what they taught him. In doing so he lays down a pattern of strategy and tactics which the Communists of southeast Asia have followed undeviatingly.

The battles which led to Dien Bien Phu were classic examples of the Mao pattern. And yet our military missions advised, and the French went down to defeat, without having studied Mao's writings.

Why our representatives abroad have not learned the languages they need or studied basic sources of information such as Mao's writings is a question which involves the entire American Nation. Whatever the reasons, our overseas services attract far too few of our brightest and best qualified college graduates. * * *

* * * * *

We do not need the horde of 1,500 Americans—mostly amateurs—who are now working for the United States overseas. What we need is a small force of well-trained, well-chosen, hard-working, and dedicated professionals. They must be willing to risk their comforts and, in some lands, their health. They must go equipped to apply a positive policy promulgated by a clear-thinking Government. They must speak the language of the land of their assignment, and they must be more expert in its problems than are the natives.
